It has also to be remembered that the education of our boys is divorced from religion. If every Indian boy does not turn out to be a cold-blooded atheist and a rank materialist, it is because the influences of heredity, family life and the atmosphere in which he had his being, save him from that end. His reserve fund is sufficient to leave him a balance, after continuous debit during his academic career. In his leisure hours, what is the recreation of the average boy?

He devours with keen appetite the tasty meal which is supplied in the columns of the daily papers—papers which for obvious reasons devote an unduly large part of their reading matter to politics, and politics alone.

The popularity of a paper depends on the hotness of the stuff served by it, on the temperature of the air it breathes out, and on the mercilessness of its attacks on its political opponents and persons in authority.

Subjects of the most vital importance to our well-being, and even to our existence as a community, receive such negligible attention that the young reader may be excused if he comes to believe, that physical fitness, development of trade, industry and commerce, and other vital matters are mere

trivialities compared to the dismissal of a Minister or the removal of a Statue.

The last and not the least of the important factors influencing the student's life, consists in the fact that, on coming to Calcutta, he has become one of a 'herd' or a 'crowd'. Neither of these words is used in any contemptuous or derogatory sense. They are used to convey the idea that the boy has become one of many who are gathered together for purposes of action or observation.

In this sense, the members of Parliament of one of the parties is as much a herd or a crowd, as students assembled in a Hostel or in College Square.

From the mere fact of assembling together there results new psychological characteristics, which may add to or differ very materially from the average characteristics of individual constituents of the 'crowd'.

This subject has recently been keenly discussed by some thoughtful and brilliant writers, but with the limited space in my command, a digression into this interesting topic is hardly possible. There are some conclusions in which all writers agree and which are borne out by experience.

The crowd is dominated by considerations of which it is unconscious. These considerations may be better or worse than those of the individual, explaining no doubt the fact that a crowd is often as easily more heroic or more criminal than its average constituent. "They turn aside from evidence that is not to their taste, preferring to deify error, if error seduce them. Whoever can supply them with illusions is easily their master. Whoever attempts to destroy their illusions is their Victim" (Gustave Lebon). "Given to exaggeration in its feelings, a crowd is only impressed by excessive sentiments. An orator wishing to move a crowd must make an abusive use of violent affirmations. To exaggerate, to affirm, to resort to repetitions, and never to attempt to prove anything by reasoning, are methods of arguments well known to speakers at public meetings."

When addressing a crowd, an effective orator hardly ever makes the mistake of appealing to its 'reason'—and sentiment is only the factor that counts.

If an individual student (to take an example) had been approached, and asked to go bare-footed in honour of Khudiram Bose, the chances of his acceding to the request ^{or} have been small.

The case was more fully described by "Truth" in June, 1898:

"In times past Africa was left as a field of missionary labour. Associations sought to Christianise the natives. But this attempt soon became a mere pretext for robbing them of their earthly possessions. Nowadays we seem to have given up even the pretence of spreading Christianity in the Dark Continent. We openly and avowedly want its inhabitants to buy our goods and to work for us or to give place to us. If these unfortunates inhabit a district where Europeans can live, we attribute them by means of spirituous liquor and the diseases that we drag in our train. If they inhabit a part of the continent where Europeans cannot live, we send punitive expeditions to force them to receive our goods. In either case we call upon Providence to bless us for our civilising efforts."

As the Rev. Mr. Macdonald refers in particular to the British rights of conquest in Kenya and states that the Indians are in the wrong we may refer him to Mr. Winston Churchill who has stated in his "African Journey" that Indian soldiers bore "an honourable part" in the conquest and pacification of Kenya. Mr. Churchill has strongly condemned the British policy of "deliberately squeezing out the natives of India from regions he has established himself in under every security of good faith." Lord Olivier has stated in an article on "Trusteeship":

"There flourishes, specially in Kenya, the doctrine that the White Man's trusteeship must be exercised 'educationally' through the simple method of

inducing the native to work on the white man's estate."

What is the policy pursued by the British Government? In 1923 the Duke of Devonshire declared:

"His Majesty's Government record their considered opinion that the interests of the African natives must be paramount, and that if, and when those interests and those of the immigrant races should conflict, the former should prevail."

But this, like the Queen's Proclamation of 1858, has been treated as a scrap of paper. Lord Cranworth, speaking at the Royal Colonial Institute in April, 1926, gave out that "Never must, the interests of the white population be allowed to be swamped by the interests of the natives." This represents the policy actually followed. It is worthy of remark, as stated by Mr. Andrews, that "with one or two notable exceptions, the missionaries and chaplains appear to have sided with the Europeans in an anti-Indian campaign." Archdeacon Law, in a letter to the "Times" in April, 1923, wrote:

"I doubt if there is a single missionary today in Kenya who does not contemplate with dismay the granting of the Indian claims. For, pressed to its logical conclusion, it will mean that the Government will pass into the hands of a non-Christian people."

In the light of these facts the Rev. Mr. Macdonald's defence of the British policy in regard to the Kenya highlands is understandable.

LORD SINHA

By SIR BROJENDRA MITTER,
Advocate-General of Bengal

LORD Sinha was the most brilliant advocate of the Calcutta Court within living memory. By sheer dint of merit he rose from an obscure position, without any special advantages, in the way of wealth or patronage, to be the undisputed leader of the Calcutta Bar. The call of duty took him to other spheres of activity and whatever position he was called upon to occupy, he filled it with dignity and distinction. It was a career of uninterrupted success due to his valuable endowments—physical

health, power of work, a clear and powerful intellect, a gift of ready and direct speech and above all, common sense, courage and honesty.

The public career of Lord Sinha is well-known to all. One special feature is that he was almost always the first Indian to hold the high positions he did. He was the first Indian Advocate-General of Bengal, Executive Council, the first Indian King's Counsel, the first Indian Benchers of an Inn,

the first Indian Under-Secretary of State, the first Indian Member of the English Peerage, the first Indian Governor of a Province. A man of innate modesty, he never sought any of these positions. They came to him and the man was always greater than the position he held. He never cared for popular applause, but found satisfaction in selfless and unostentatious discharge of duty. His life was rich in service to his country and the empire.

At the Bar, Sinha had his early struggles and disappointments. For a time he eked out his precarious income by teaching law in the City College. But talent like his could not long remain unappreciated. He soon came to be known as a sound lawyer and powerful advocate—incisive in cross-examination and lucid and forceful in argument. He was uniformly fair to the Court and to his opponent and he commanded the confidence and esteem of the Bench, the Bar and the litigant public in an unstinted measure.

He was called to the Bar in 1886. In 1903, he was appointed Standing Counsel and four years later, Advocate-General. In 1909 he was appointed the Law Member of the Viceroy's Executive Council. He was knighted in 1914. He reverted to the Bar and from 1915 to 1917 he was again the Advocate General. 1917 was the turning point in his career, for after that he never came back to the Bar which brought him fame and fortune. In that year he was selected to represent the Government of India in the Imperial War Conference along with the Maharaja of Bikanir and Lord Meston. In 1918 he was made a King's Counsel and in the same year he was made a member of the Imperial War Cabinet. In 1919 he was sworn in as a Member of the Privy Council and made a peer of the realm. In 1919-1920 he was Under-Secretary of State for India and in that capacity piloted the Government of India Act through the House of Lords. In 1920 he was appointed Governor of Bihar and Orissa which position he had to give up at the end of 1921 on the ground of health. In 1921 he was decorated with the insignia of K. C. S. I.

Prior to 1915 Lord Sinha had not taken much active part in politics. In that year he was prevailed upon to preside over the Indian National Congress. His presidential address was a momentous pronouncement. It is no secret now that the famous declara-

tion of policy made by Parliament on the 20th August, 1917 was the outcome of that address. In those days the ideal of the Congress was self-government within the Empire. Lord Sinha never forsook his faith in the connection of India with England. He always had a long and clear vision of India's future and his faith grew in intensity with the passage of years.

For a few years after 1921 Lord Sinha spent his time mostly in study and travel. He gained a varied and unique experience of men and affairs. With the restoration of his health, we had in Lord Sinha a man rich in knowledge, ripe in judgment and wise in counsel. He came to be regarded as a valuable Imperial asset.

Two years ago, Lord Sinha was given a seat in the Judicial Committee which the aged Lord Parmoor readily vacated in his favour. Lord Sinha was delighted to go back to his first love, the Law, and soon made himself at home in the Privy Council where he enjoyed the confidence and esteem of his colleagues and the Bar.

In his varied career, Lord Sinha made many friends in India and in England. Indeed, he had a talent for making and keeping friends. His frank and open nature was singularly loveable. His courtesy, reasonableness and fairness disarmed opposition and his sincere and ardent patriotism commanded respect. If he was great as a lawyer, administrator and statesman, he was greater as a man. His was the robust manly character of a cultured gentleman in which the best qualities of the east and the west were happily commingled.

I had the good fortune of knowing Lord Sinha intimately and I know that whatever might have been the scene of his activities or triumphs, his heart was always in the Calcutta High Court. In fact, the last afternoon he spent in Calcutta, he came to meet the members of the Bar at the Bar Library.

He has left many friends at the Bar to whom his death is a great personal loss. They will cherish many intimate and personal acts of kindness at his hands. We had hoped that he had many more years of service to his country. Sudden death has cut off an exceptional career. His memory will live long in the Calcutta Bar and the Calcutta High Court.

LORD SINHA'S POSITION AT THE BAR

In order to be able to appreciate Lord Sinha's position at the Bar, it is necessary to

the first Indian Under-Secretary of State, the first Indian Member of the English Peerage, the first Indian Governor of a Province. A man of innate modesty, he never sought any of these positions. They came to him and the man was always greater than the position he held. He never cared for popular applause, but found satisfaction in selfless and unostentatious discharge of duty. His life was rich in service to his country and the empire.

At the Bar, Sinha had his early struggles and disappointments. For a time he eked out his precarious income by teaching law in the City College. But talent like his could not long remain unappreciated. He soon came to be known as a sound lawyer and powerful advocate—incisive in cross-examination and lucid and forceful in argument. He was uniformly fair to the Court and to his opponent and he commanded the confidence and esteem of the Bench, the Bar and the litigant public in an unstinted measure.

He was called to the Bar in 1886. In 1903, he was appointed Standing Counsel and four years later, Advocate-General. In 1909 he was appointed the Law Member of the Viceroy's Executive Council. He was knighted in 1914. He reverted to the Bar and from 1915 to 1917 he was again the Advocate-General. 1917 was the turning point in his career, for after that he never came back to the Bar which brought him fame and fortune. In that year he was selected to represent the Government of India in the Imperial War Conference along with the Maharaja of Bikanir and Lord Meston. In 1918 he was made a King's Counsel and in the same year he was made a member of the Imperial War Cabinet. In 1919 he was sworn in as a Member of the Privy Council and made a peer of the realm. In 1919-1920 he was Under-Secretary of State for India and in that capacity piloted the Government of India Act through the House of Lords. In 1920 he was appointed Governor of Bihar and Orissa which position he had to give up at the end of 1921 on the ground of health. In 1921 he was decorated with the insignia of K. C. S. I.

Prior to 1915 Lord Sinha had not taken much active part in politics. In that year he was prevailed upon to preside over the Indian National Congress. His presidential address was a momentous pronouncement. It is no secret now that the famous declara-

tion of policy made by Parliament on the 20th August, 1917 was the outcome of that address. In those days the ideal of the Congress was self-government within the Empire. Lord Sinha never forsook his faith in the connection of India with England. He always had a long and clear vision of India's future and his faith grew in intensity with the passage of years.

For a few years after 1921 Lord Sinha spent his time mostly in study and travel. He gained a varied and unique experience of men and affairs. With the restoration of his health, we had in Lord Sinha a man rich in knowledge, ripe in judgment and wise in counsel. He came to be regarded as a valuable Imperial asset.

Two years ago, Lord Sinha was given a seat in the Judicial Committee which the aged Lord Parmoor readily vacated in his favour. Lord Sinha was delighted to go back to his first love, the Law, and soon made himself at home in the Privy Council where he enjoyed the confidence and esteem of his colleagues and the Bar.

In his varied career, Lord Sinha made many friends in India and in England. Indeed, he had a talent for making and keeping friends. His frank and open nature was singularly loveable. His courtesy, reasonableness and fairness disarmed opposition and his sincere and ardent patriotism commanded respect. If he was great as a lawyer, administrator and statesman, he was greater as a man. His was the robust manly character of a cultured gentleman in which the best qualities of the east and the west were happily commingled.

I had the good fortune of knowing Lord Sinha intimately and I know that whatever might have been the scene of his activities or triumphs, his heart was always in the Calcutta High Court. In fact, the last afternoon he spent in Calcutta, he came to meet the members of the Bar at the Bar Library.

He has left many friends at the Bar to whom his death is a great personal loss. They will cherish many intimate and personal acts of kindness at his hands. We had hoped that he had many more years of service to his country. Sudden death has cut off an exceptional career. His memory will live long in the Calcutta Bar and the Calcutta High Court.

LORD SINHA'S POSITION AT THE

In order to be able to appreciate Sinha's position at the Bar, it is .

refer briefly to his student days and the intellectual equipment with which he joined the great profession of Law. After passing the Matriculation examination in 1877 from the Birbhum Zilla School, Satyendra Prasanna entered the Presidency College as an undergraduate at the age of 13. His elder brother Narendra Prasanna was then a student at the Medical College. Satyendra Prasanna was a brilliant student and passed the First examination in Arts with credit. The only circumstance in connection with his studies in the Presidency College which needs mention here is that he took Latin as his second language. His knowledge of Latin was of great use to him in his subsequent studies in law in England.

In 1881 the two brothers conceived the idea of going to England. In those days the prejudice against a sea voyage was strong and they had consequently to keep their idea concealed from their family. There was a sum of ten thousand rupees lying with an English friend of their family, to the credit of their deceased father. On the strength of this modest sum the two plucky brothers quietly boarded a steamer bound for England. Their slight becoming known, a party set out in a hackney carriage to catch them at Diamond Harbour. Fortunately for the runaways, the boat had just left when the pursuers arrived.

Satyendra Prasanna joined Lincoln's Inn and Narendra Prasanna took up his medical studies. Both the brothers worked hard. Narendra Prasanna got into the Indian Medical Service. Satyendra Prasanna was a brilliant student and he carried off a large number of prizes and scholarships at Lincoln's Inn. In those days there were more scholarships and prizes than now and I have heard that no Indian student ever earned so much money at Lincoln's Inn as Satyendra Prasanna. The brothers were constantly in want of money and whenever the situation became desperate, Satyendra Prasanna sat for an examination and earned a scholarship to tide over the difficulty. During this time Satyendra Prasanna, in addition to his legal studies, learnt several continental languages and improved his Latin. He read Roman Law and several other branches of law in the original Latin, which gave him a great mastery of the fundamental principles of law. He was not only a voracious reader, but had a retentive memory. In later years I have heard him quoting Justinian with the facili-

ty of a Pandit quoting Manu or Yajnavalkya. Sinha was singular in many walks of life. Even as a student he was singular in this, that he was called to the Bar without having passed the Bar Final. At the time of the examination he fell ill and the Benchers in consideration of his unique successes at the prize examinations excused him. He was called to the Bar by his Inn at the age of 21. During his student days in London, he travelled a good deal in the continent where his knowledge of continental languages became very useful. Sinha never read in the chambers of any barrister nor did he attend the Courts in London.

He was called to the Bar in 1886 and shortly on his return to India joined the Calcutta High Court. There were giants in the Bar in those days and a young unknown barrister, without wealth or family connections, was lost in the profession. He had undoubtedly a sound knowledge of legal principles, a brilliant intellect and an indomitable will; but he had no practical experience such as is gained in chambers or in the Courts. So equipped, Sinha launched on the Sea of the Law. How he floated and eventually rode the waves are common knowledge. His early years were years of struggle and disappointment. He got few chances to prove his mettle, and received but little encouragement at the start. In fact at one time he was about to accept a munisanship. But he kept up his studies in law and literature and was ever ready to make good. He ran about in the smaller courts for small fees and picked up experience which he had lacked. In later years when he was recognized to be the most deadly cross-examiner, he used to say that his success in that line was due to the varied experience which he had gathered in the Small Cause Court, the Police courts and the mofussil courts. It gave him self-confidence and a close view of human nature which mere study in chambers or of the law Reports could never give. He came in touch with live humanity and got an insight into the springs of human conduct. While he was thus eking out a precarious income he took to teaching law in the City College. This also he regarded as a great help to him; for, he used to say that nothing clears up ideas so effectively as when you have to explain a thing to others. He retained his connection with the City College for some years after his financial condition ceased to

have need of it and he severed it only when his professional pre-occupations left him no spare time.

Theoretical knowledge of the law, Sinha had in an ample measure and during the years of struggle he acquired practical knowledge. He never let slip any opportunity, but was always ready to take advantage of it. To such a man opportunities always come. They came in a tide, which was taken at the flood and it led him on to fame and fortune.

What are the factors which carried Sinha to the top of the profession? He had a profound knowledge of legal principles as distinguished from a mere memorizing of rulings. In fact, he never cared for a ruling unless it was necessary to convince the Court. He had an extensive and varied experience of men and affairs and of human nature. He had a powerful intellect and a penetrating analytical mind. However complicated a case might be, he could, in a short time, get to the crux of it, separating the essential and irrelevant parts. His quickness in winding through mazes of fact and getting hold of the real points in a case was marvellous. A clear thinker, with an extraordinary fund of common sense, his presentation of a case was always lucid and convincing. One hearing him in court would wonder where lay any difficulty in such an obvious case. He was the greatest verdict winner in Calcutta in recent times and his successes reminded one of the remarks made of Lord Erskine that no wonder Erskine won his cases because he was always on the right side. Within living memory Sinha was far and away the best cross-examiner in Calcutta. Before he had won his way to the front rank of barristers, he was often engaged in cases where the result depended upon the successful cross-examination of some important witness. There was never anything savouring of trickiness or mere subtlety in

Sinha's advocacy. It was honest, straightforward, powerful and compelling. He never misled the Bench or took unfair advantage of his opponent. That is why he enjoyed the fullest confidence of the Bench and the Bar alike. He had a rare gift of ready and direct speech. He never wasted the time of the Court, nor raised any smoke screen to confound the Judge. In argument he would concentrate his energy on one or two vital points in the case leaving the minor points to take care of themselves. He thought quickly, boldly and clearly and as a result his exposition was clear, lucid and brief. In preparing a case he would first master the facts and then find out what the law should be, as applicable to those facts, leaving his juniors to collect appropriate authorities in support of such law. It often happened that the chain of reasoning he followed was precisely the same upon which the judgments of the highest courts rested.

As in his student days, Sinha carried off prizes and scholarship, so in the profession he became the first Indian Advocate General of Bengal, the first and only Indian King's Counsel, the first and only Benchet of an Inn and finally a member of the Judicial Committee of the Privy Council. Of his seat in the Privy Council, it may not be generally known that it was one of the two seats which are most prized. They are honorary and were held by Lord Parmoor and the late Lord Oxford and Asquith. Lord Cave, the Lord Chancellor, in order to find a seat for Lord Sinha, persuaded Lord Parmoor to resign which the latter readily did. In the short time that Lord Sinha sat in that, the highest Court in the empire, he earned the full confidence and regard of his veteran colleagues. Unfortunately he was much too short a time there.

In Lord Sinha has passed away a great lawyer and a great advocate.

LEGAL, FINANCIAL AND CONSTITUTIONAL THEORIES IN THE PERSPECTIVE OF WORLD-DEVELOPMENTS FROM THE FRANCO-PRUSSIAN WAR TO THE RUSSO-JAPANESE WAR (1870-1905)

By BENOY KUMAR SARKAR

Ideology (1) nation making (2) state-socialism, (3) local, central and federal governments, (4) progressive vs proportional taxation, (5) problem of groups, (6) constitutional movements in Asia, (7) labour a political power, (8) establishment of gold ray in currency, (9) imperialism and colonialism, (10) anarchism (11) partition of Asia and Africa, (12) 'currency principle in Reserve Banking, (13) the New East, (14) critical attitude towards democracy

1870-90 BISMARCK (1815-98) He promotes national unity and Empire building TREITSCHKE's *Politik* may be regarded as his own gospel. He combats *Marxismus*,—the 'Social Democratic' Party,—by meeting Marx half way, so to say, in and through comprehensive socialistic legislation His work embodies state-socialism on the lines of SCHULFIE's *Quintessenz des Sozialismus* and the *Kathedr Sozialismus* (professorial socialism) of Wagner, Schmoller etc organized in the discussions of the *Verein fuer Sozialpolitik* (Association for Social Politics) which is established in 1873 as a result of the congress at Eisenach

1870 FORSTER'S Education Act in England supplemented by the Act of 1876 Elementary education is rendered compulsory and universal, later it is rendered free (Act of 1891)

1871 Gold standard is established in Germany as well as in Northern Europe Silver is the only standard legalized—in India (1870)

1872 The *Communist Manifesto* is revised by the authors themselves, Marx and ENGELS, in the light of the experience of the revolutionary Paris Commune of 1871 "Especially did the Commune demonstrate that the working class cannot simply seize the available ready machinery of the state and set it going for its own ends," says

Lenin in *The State and Revolution* (1917) According to him this is a 'fundamental and principal lesson' of "enormous importance." It does not mean, as the 'moderate' socialists or "opportunists" interpret it, that Marx is here opposing a sudden seizure of power and emphasising the idea of gradual development, but exactly the reverse 'What Marx says is that the working class must break up, shatter the available ready machinery of the state and not confine itself merely to taking possession of it'

1873 SEYDVI *Grundruege einer allgemeinen Staatslehre* (Fundamentals of General Political Theory) He opposes Waitz's 'compromise theory' of 'divided sovereignty' as the characteristic of federations (cf the American Calhoun vs Webster, Madison, *The Federalist* etc) According to him sovereignty has no definite extent. He considers sovereignty to be indivisible and champions the sovereign rights of the original states in the German federation

1873 STURM (J F) *Liberty, Equality and Fraternity*. He is critical like Tocqueville and Guizot in his attitude to democracy. The emphasis is laid on discipline, political and religious rather than on liberty or progress Cf. MAINE'S *Popular Government* (1884), which in the same strain preaches the anti-democratic, authoritarian and aristocratic gospel of the state and teaches one to be cautious in regard to the extension of suffrage.

1874 TREITSCHKE (1834-96) *Politik* (Politics) According to him, war will endure to the end of history The laws of human thought and human nature forbid any alternative, nor is one to be wished for He condemns the "ravings" about "everlasting peace" "To a monarchy should appertain a house which has grown together with the nation Only such a ruling

family as this is able to rise superior to parties." In his judgment, it is individual men who make history, "such men as Luther Frederick the Great or Bismarck." "We Germans are as a matter of fact a more democratic nation than the English ever were and our official system is based upon these lines." The state does not identify itself with physical power for its own sake. It is power in order to protect and further the highest welfare of the human race. All the restraints to which states bind themselves by treaty are voluntary and all treaties are concluded on the tacit understanding *rebus sic stantibus* (other circumstances remaining the same). No courts of arbitration will ever succeed in banishing war from the world.

1874. The so-called Latin-Union (established 1865) suspends the free coinage of silver and virtually becomes monometallic on the gold basis. Bimetallism is not a question of practical politics any longer.

1874. NEUMANN. *Die progressive Einkommensteuer im Staats- und Gemeindehaushalt* (Progressive Income tax in State and Local Budgets) According to him the "faculty" or "ability" theory of taxation is virtually identical with the doctrine of "equal sacrifice." He would apportion taxes in such a manner as to correspond to the ability to contribute to public purposes with generally equal efforts and equal sacrifices as over against other needs. The phrase "equality of taxation" is rejected by him as lacking in precision. To him progressive taxation is the only legitimate system. His progression is moreover "degressive" (cf. RAU's *Finanzwissenschaft* 1832-37.)

1875. The *Reichsbank* is established in Germany; the British Bank Charter Act (1844) is accepted as the model for note-legislation (currency principle as contrasted with banking principle). But modifications are introduced which enable the German institution to function more elastically than the British. The principle is not so severe as "no gold, no note" but simply "no cover, no rate," the gold cover being compulsory only for a third of the issue (*Drittels-deckung*).

1875. GIERKE (1841-1923). *Das deutsche Genossenschaftsrecht* (German Association Law): Every individual bears a double character, personal and communal. There is a series of associations connecting the state and the individual. The associations are "real persons." In every form of association—

religious, cultural, political racial there is a real and independent "community" life, consciousness and will over against and distinct from the lives, consciousnesses and wills of the individual members of the group. The state is distinguished from other social bodies—from the minor political associations in particular,—by its position above them; for it alone there is no limit through a higher collective existence; all other political unions are subordinate to it; its will is the sovereign general will. The individual belongs only in part to the state, he has a domain of free existence unassailable by the state.

1875 German Social-Democratic Party is established at Gotha. LILKENECHT and LASSALLE, the two leaders, represent two original factions now united.

1876. Constitution is granted to Turkey by the Sultan. It languishes during the Russo-Turkish War and is stifled under Sultan ABDUL HAMID.

1877 Gold-Exchange standard is introduced in Holland and in the Dutch East Indies (Sumatra, Java etc) This standard implies essentially the dethronement of silver and the transfer of allegiance to the new power, gold.

1878-92. The Second International Monetary Conference is held at Paris. 12 countries (excluding Germany) take part. The Third International Monetary Conference is held at Paris (1891), with 19 countries (excluding Germany) taking part.

Gold and Silver Commission is instituted in England (1884).

The Fourth International Monetary Conference is held at Brussels (1892) All these Conferences and Commissions fell to establish bimetallism.

The monarchy of gold is finally accepted as the first postulate in the currency-thought of the world. The tug of war between gold and silver (1850-1892) ends in the establishment of (i) direct or 100 p c. gold *raj* and (ii) indirect or partial gold *raj* (gold-exchange standard).

1878-1883 JERENGO (1818-99) *Der Zweck im Recht* (Purpose in Law): The "nature" of law is not the only important item in political life. The purpose of every law has to be discovered. Hence the necessity of emphasising the "interests" served by the legal institutions. The formal legal machinery by which these interests are secured must not monopolize the attention of statesmen. The

jurisprudence of "conceptions", or formal apparatus of law is modified and to a certain extent replaced by the jurisprudence of the "ends," desires and wants of human beings. The doctrine of absolute and natural rights is replaced by that of weighing or evaluating the interests. He considers law to be the "conscious" creation of man and hence opposes the extreme historical view of law as being mainly tradition embodied in custom.

1878. **TOLSTOY** (1828-1910), Russian :

My Confession, What shall we do then ?

(1885) *Kingdom of God is within you or Christianity not a mystical doctrine but a new life-conception* (1893): "Our supreme

law is love: do not resist evil by force" Law is "upheld by violence" and hence is to be rejected by the "more highly developed peoples of our time" who "acknowledge the commandments of philanthropy, of sympathy with one's neighbour and ask only the possibility of friendship" "For the more highly developed nations of our time," the legal institution of the state is unnecessary. The state is the "rule of the bad raised to the highest pitch." The rule in the state is based in physical force. Property is an "anachronism" "for the more highly developed nations." Property means the dominion of possessors over non-possessors. This dominion is based on physical force. Those men who are convinced of these truths are to convince others as to the "necessity" of the change "for love's sake." Finally, the law, state and property are to be abolished "with the help of the refusal of obedience."

1880-98. Catholic Movement in Italy.

Congresses of the Church are held. They take interest in the interests and aspirations of the middle and working classes. Rural savings banks, working men's societies, university groups, young men's societies, diocesan and parochial committees etc., are established under church auspices. Professor **TOMASSO** is an exponent of this Christian Socialism (Pisa). Under the pontificates of **LEO XIII** and **BENEDICT XV** (c1914) the Church breaks away from its alliance with the parties of absolutism with which since 1789 it had made common cause against the Revolution and recognises representative institutions as the legal and legitimate form of government.

1889. **WAGNER**. *Finanzwissenschaft* (Science of Finance) :

the public finance of the ancient states

was governed by "fiscal" considerations,—i.e. the objective of enough revenue for public purposes. Modern states, on the other hand, are functioning in what may be called the "socio-political" epoch of public finance. Revenue is not the sole consideration to-day. The modern states seek to bring about a more equitable distribution of wealth by interfering with the rights of private property. Proportional taxation is the system of the "fiscal" period, whereas in the modern socio-political epoch progressive taxation is the rule, because it is an effective instrument in the readjustment of relations between the different classes.

1882. **RENAN** (1823-1895): "*Qu'est-ce qu'une nation?*" ("What is a nation?"): lecture at the *Collège de France*: "Nationality is dependent on (1) the positive will of the people, and on (2) the possession of common memory. His exposition leads to the repudiation of the "physical", objective elements viz. race, language, territory (cf. Mancini, 1851).

1882. British occupation of Egypt: **Muhammad ABDO**, the Grand Mufti of Egypt, is banished on account of his participation in the nationalist struggle

"*Le Lien Indissoluble*" (1884), a weekly paper in Arabic (French title), is conducted from Paris by **Saiyad JAMALUDDIN** of Persia and his disciple **Muhammad ABDO** of Egypt.

1882. The Bank of Japan is founded on the German model (cf. 1875.)

1882. **JELLINEK**: *Staaten-verbindingen*: (Unions of States) Obligation exclusively through its own will is the juristic mark of the sovereign state. The sovereign power can be limited,—but only by itself. This is self-limitation through legal self-determination. States may continue to be states although they are no longer sovereign. Sovereignty is not a characteristic mark of the state. He propounds the doctrine of non-sovereign states in a federal union.

1884-85. The Third Reform Bill in England institutes universal suffrage in politics. A working class democracy is thus initiated.

1885. **KROPOTKIN**. (1842-1921), Russian; *Paroles d'un révolte* (Words of a rebel), *Anarchist Communism* (1891), *La Conquête du pain* (The Conquest of Bread), 1892, *Fields, Factories and Workshops* (1901): In general philosophy he is practically identical with **Bakunin**. The "next phase of evolution," the "higher form of social organization" will

"inevitably" be not only anarchism but "anarchistic communism." He preaches the abolition of capital and private property. His social system is based on mutual aid and co-operation. The state is negated, of course.

1885-7. Indian National Congress: First three sessions—Bombay, Calcutta and Madras. First Presidents:—W. C. BANERJEE, NAORAJ, Badruddin TYABJI. Resolutions: (1) Adequate representation of the people. (2) Encouragement of Indian manufactures in order to combat the poverty of the people. (3) Admission of Indians to higher ranks of the military service. (4) Protection of the interests of the Indian settlers in South Africa (Poona Session, 1895, President Surendra Nath BANERJEE).

• N. B. Indian Councils Act, 1902.

The Indian National Congress activities of the period mark the beginnings of "constitutional agitation," and "association with and opposition to the Government" on the part of the people's leaders.

1896-9. The Japanese Constitution is established. Prince Ito takes the prominent part.

PARTIES IN JAPAN

1860 Jiyu-to: Liberal: founded by
ITAGAKI

1832 Kaishin-to: Reform 1896

OKUMA

Shimpo-to: Progressive

1893 Teisei-to: Imperialist-Conservative

FUKUCHI

1893, Kensei-to: Liberal-Progressive Combination.

1900 Seiyun-kai: Constitutional Government—Ito.

1899. PREUSS: *Gemeinde, Staat, Reich als Gesamtpersonschaften*. (Community or Locality i. e. Parish, Town or District, State i. e. Province, and Empire as territorial corporations): He attempts to interpret the constitution of the German Empire according to the theory of *Genossenschaften* (corporations): cf. Gierke. The theory of sovereignty is eliminated by him from the categories of political science. Sovereignty as "absolute and perpetual power of a state" (Bodin, Hobbes, Austin, Hegel) is inconsistent with international law which by nature deprives the states of their independence (through contracts and agreements.) It is incompatible with the idea of "federation" in which it is difficult to precisely locate

the highest authority. It is inconsistent with constitutional law which by nature imposes restraints on the authority of the state (cf. Duguit: *L'Etat*). It is incompatible with the existence of other associations and corporations in the body politic. It was consistent with the absolute state of the past but can have no place in "modern" states which consist in a series of mutual rights and obligations.

1890. LEROY BEAULIEU (1843-1916): *L'Etat moderne et ses fonctions* (The Modern State and its functions) He presents a hostile criticism of state socialism and expatiates on the heavy financial burdens of the "new state" He is pro-Eantian and anti-Hegelian in his advocacy of *laissez faire* and liberty. His thought is marked by Spencerian individualism but with no touch of anarchism. He admires Cnevalier and Mill for their moderate socialism, and condemns Lorenz von Stein, Schachtle, Wagner and Bluntschli for their adoration of the State. The "organismic" idea of the state is stoutly opposed by him. He believes in the existence of an infinite number of free intermediate associations between the state and the individual. The state is entirely devoid of inventive genius, says he. It is not the highest form of personality. The state does not create right. The theory of Bossuet and Fenelon is less false than that of Bentham. The legislator comes last to sanction and specify. Leroy-Beaulieu preaches the necessity of bringing the legislator into a more modest frame of mind. His *Traité des Finances*, (Treatise on Finance), teaches that the state should not attempt inflicting more or less equal sacrifice on the individuals. It ought rather to recover from them the just price of the services rendered to each and the just share of each in the interest and liquidation of the national debt. He is thus an exponent of the more or less traditional French theory of taxation, namely, the theory of benefit. Progressive taxation is condemned. His ideal is proportional taxation.

1890-91. SAYYAD JAMALUDDIN'S (1838-97) activities in Persia. He is expelled on account of anti-foreign agitation (1891): "The sword of unrighteousness has not suffered me to see the awakening of the peoples of the East, and the hand of 'ignorance' has not granted me the opportunity to hear the call of freedom from the throats of the nations of the Orient."

POLITICAL BACKGROUND

1 Foreign concessions in Persia (1888-89) (i) the Karum River Concession Nov 1883 is granted to England (ii) the mines to Baron Julius de Reuter January 1889 (iii) the Rivers of Labriz etc to Russia Feb 1889 (iv) Tobacco Concession, March 1890

2 Anti foreign agitation in Persia (1883-89) culminating in the *Futwa* of December 1891, against the use of tobacco. The *Futwa* is issued by Haji Mirza HASAN of Shiraz—under the inspiration of Jamaluddin

3 Maladministration in Persia is marked by the tyranny and exactions of the governing classes, corruption of all branches of administration e.g. sale of government offices, prevalence of torture, unpaid and undisciplined soldiers, robbery and plunder by soldiers. The country is depopulated. Emigration to Turkey and Russia is a consequence

NEW ASIA c 1886

Evolutionally speaking, in terms of modernism in constitution, economic life, political experience and general outlook Asia (1880-1890)—*Lux America* (1776-1832) is the modern East is about half a century behind the modern West. New Asia is born through (1) contact with and example of modern Western progress, (2) industrialization, however slow and halting and (3) hatred of foreign domination, intervention or concession

The inspiration derived from the political and cultural achievements of ancient and medieval Asia is another formative force in the New Orient. This romantic appreciation of the past is, however intimately associated with modern historical archaeological and anthropological scholarship. Nationalism, in so far as it is an aspect of romanticism, is ultimately to be traced, therefore in the main to Western education such as began to bear fruit among the pioneers of new life and thought in Asia between 1850 and 1896 and has been more or less democratized filtering down to the masses since then

The process of Asia's rebirth may be said to have begun c 1850 and taken about one generation or so—thus

- 1 Western Asia (Turkey, Egypt and Persia) 1857 (Crimean War) to 1876 1857, 1876
- 2 Southern Asia (India) 1857 (Mutiny) to 1858
- 3 Japan 1853 (Commodore Perry) to 1870 1853
- 4 China 1842 (Nanking Treaty) to 1846

1892 BURGESS, American *Political Science and Comparative Constitutional Law*. A federal government may be created but a federal state is impossible. Sovereignty is single and indivisible. The Union is a single state. The old states possess to day only the 'residuary powers of government', which do not constitute sovereignty

1892 Gold Exchange Standard, is introduced in Austria Hungary and Russia as well as India (1893-98) and the Philippines (1903). We have here a series of victories for gold (cf Holland 1877) as against bimetalism

1893 *Scienza delle Finanze* (Science of Finances) Italian

The sentiment of constitutional liberty, that generates the need for discussing the questions of public finance is not yet sufficiently diffused among the Italian people, says he. Representative government itself is in Italy the 'product rather of brain than of conscience and of the organic evolution of the constitutional idea'. Equality of all members of the political society before law is the characteristic feature of modern states. The ancient state was the veritable organization of one class, the nobility, and it was in the exclusive interest of this class that the state exercised its power. The modern state on the contrary, is the organization of all the social classes, that directly or through special associations minister to the satisfaction of the collective needs. From this doctrine of equality, proclaimed as it was by the French revolution are derived in public finance the doctrines of *generality* (universality) and *uniformity* of contribution. The observance of these two doctrines constitutes financial justice and the basis of modern financial legislation

According to the principle of universality every member of the society is compelled to contribute to the public exchequer and privileged and exempted classes are inconceivable. This principle is, however, violated to a certain extent in the exemption of the 'minimum of subsistence' from taxation. But it need be observed, says Ilora, that this exemption is more apparent than real, because indirect taxes on consumption are paid by even the poorest classes who are, as a rule, exempt from the direct tax. According to the principle of uniformity every citizen, no matter what be the amount of his wealth or income experiences an 'equal sacrifice' on account of the contribution paid by him to

the state. This ideal of equality of taxation involves the problem of assessment according to the proportional or progressive system.

From the fiscal standpoint the problem is important solely as a means of "attaining equality in the distribution of taxation" between the different members of the community. But from the social standpoint the question has bearing on the possibility of militating against inequality in distribution, which is the result of free competition, or on that of gradually converting private capital into collective and thus accelerating the solution of the social question.

1894. Progressive taxation on inheritance is introduced in England (the "death duties") also in different states of Germany and finally in the German Empire (1899 1906).

1896. LEcky: *Democracy and Liberty* presents an aristocratic criticism of popular institutions (cf. MAINE: *Popular Government*, 1884; LE BON: *Crowd*, 1896; FAUGET: *Cult of Incompetence* etc.)

1896-1901. KANG YU-WEI's propaganda promotes constitutional and educational reforms. The period is marked by the Boxer Revolt against foreign aggressions. A characteristic document is the EXPRESS DOWAGER's Edict. It says in part: "The various powers cast upon us looks of tiger-like voracity, hustling each other in their endeavours to be first to seize upon our innermost territories. They think that China, having neither money nor troops, would never venture to go to war with them. They fail to understand, however, that there are certain things which this Empire can never consent to, and that if hard pressed, we have no alternative but to rely upon the justice of our cause, the knowledge of which in our breasts strengthens our resolves and steels us to present a united front against our aggressors."

ENGLAND IN CHINA

1842. Nanking Treaty opens Amoy, Canton, Fuchow, Ningpo and Shanghai and transfers Hongkong to Great Britain.

1858. Tientsin Treaty establishes extra-territoriality, and opens up the Yangtze, as well as other parts of China.

1863. The Maritime Customs Department is organized by England to help China against the Taiping Rebels.

1886-97. Great Britain counteracts the French treaty of Tientsin (1885) by counter-concessions in 1886, 1890, 1893, 1894, 1897.

1886. Burma becomes British.

1890. Sikkim becomes British.

1893. England is assured of the non-alienation of Yunnan and Kwangtung by China.

1898. The Yangtszekiang becomes a British sphere: 2,800 miles railway concession.

1893. Spheres (Russian and German) are delimited.

1900. Boxer Rising.

1902. Anglo-Jap alliance against Russia.

1902. Anglo-Chinese (Mackay) Treaty.

RUSSIA IN CHINA

1854. The Amur River is seized by Russia because of the blockade of the Black Sea during the Crimean War.

1860. The so-called Maritime Provinces are ceded to Russia by China, BEGINNINGS OF VLADIVOSTOK.

1891. The Siberian Railway is completed by Russia except the Pacific Branch.

1894. Korean War between Japan and China makes Russia friendly to China.

1895. Russia deprives Japan of the fruits of her victory in Manchuria.

1895. Carsin, the Russian diplomat, enters into a Convention with China through Li Hung-chang at Petrograd.

1896. The Chinese Eastern Railway is a concession to Russia through Li because of help against Japanese Treaty.

1898. Port Arthur is leased to Russia as against German Kiaochiao.

1901. Harbin to Port Arthur Railway opened: Russia dominates the North by the whole Manchurian Railway.

1902. Russian "Chinese Eastern Railway" hastens the Anglo-Japanese Alliance.

1905. The Treaty of Portsmouth which concludes the Russo-Japanese War deprives Russia of the South Manchurian Railway.

FRANCE IN CHINA

1858-62. Annexation of Cochin China by France.

1863. Protectorate over Cambodia is established.

1874. Cession by Annam to France of territories to the South. France compels China at the same time to acknowledge the independence of Annam.

1885. Protectorate over the southern frontiers of Tongking is established by France who likewise becomes responsible for the maintenance of order in Annam.

1895. Convention re mines and railways between France and China; occupation of Tongking by France.

1898. As against German Kiaochiao, Kuang-chau-wan is seized by France. The non-alienation of the provinces bordering on Tongking is at the same time promised by China.

EASTERN ASIA IN 1898

On the mainland, the battle for spheres in China. The Pacific: Hawaii, Guam, Samoa and the Philippines come to the United States from Spain.

1900. KOHLER (1849) *Lehrbuch der Rechtsphilosophie* (Text-book of the Philosophy of Law): Civilization has been advancing both in extent and in content from stage to stage. It is the function of law to promote this advance by creating new ideals and values. Law is in perpetual progression.

Social history is not to set the standard for law but is to be exploited in the interest of remaking law.

1900. MAITLAND'S *Introduction to the translation of GILKES'S Political Theories of the Middle Ages* popularizes in England the idea of groups as "real persons", and gives a fillip to pluralism or federalism in political theory, already popular in German political philosophy (cf. Prensé).

1902-5. HOBSON J. A. (1858) *Imperialism*: The sliding scale of diplomatic language, hinterland, sphere of interest, sphere of influence, paramountcy, suzerainty, protectorate, veiled or open, leading up to acts of forcible seizure or annexation which sometimes continue to be hidden under "lease", "rectification of frontier", "concession" and the like is the invention and expression of this cynical spirit of imperialism, says he. According to him the antagonism with democracy drives to the very roots of imperialism as a political principle. "The Foreign, Colonial and Indian Secretaries in Parliament, the permanent officials of the departments, the governors and staff who represent the Imperial Government in our dependencies are not and cannot be controlled directly or effectively by the will of the people. This subordination of the legislative to the executive and the concentration of executive power in an autocracy are necessary consequences of the predominance of foreign over domestic politics."

1902 KAUSKY (1854-) *Soziale Revolution*:

The proletarian state would "abolish all rights of inheritance." Graduated income-

tax would be a feature of reforms in taxation. He prefers "compensating" the capitalists and landowners to "confiscating" their properties.

1904. President ROOSEVELT'S *Message to Congress*. "The Filipinos do not need independence at all, but do need good laws, good public servants, and the industrial development that can come only if the investment of American and foreign capital in the islands is favoured in all legitimate ways."

1904 RABINDRANATH TAGORE (1862-). *Swadeshi Samaj* (Indigenous Indian Society), a lecture in Bengali at Calcutta: He poses the society against the state. In his attitude of indifference to the state, almost in the manner of Leroy-Beaulieu, he is an exponent of Spencerian individualism verging, as it does, on anarchism. An anti-state attitude in India is tantamount, however, to anti-Britishism. His philosophy thus becomes a feeder of extremist or radical tendencies in the political thinking of Young India as contrasted with the traditional, "moderate", Indian National Congress view of relations with the British government.

1904-5. Russo-Japanese War: It compels the first mentionable set-back to the logic of the "white-man's burden" and ushers in the birth of Young Asia. Along with it one notices the beginnings of sanity in Eur-American philosophy. The significance of Japanese victory and the "ideas of 1905" in social science is discussed in the present author's *Futurism of Young Asia*, Leipzig, 1922.

THE SOUTH AFRICAN INDIAN OUTLOOK

By C. F. ANDREWS

ON account of the confusion that exists in the public mind in India about the South African Indian situation, it has been thought well by many whose minds are still in doubt that I should issue a statement that should be, as far as possible, explanatory, authoritative and impartial concerning the Settlement, the Indian Community and the Congress.

Let me make clear at once, that the South African Indian Congress (often called the S.A.I.C.) represents, in all the provinces, by far the larger proportion of the Indian community. It also contains the ablest members. In reality it is Mahatma Gandhi's own creation; and it has had his continuous support since his departure. Mrs. Sarojini Naidu always worked through the Congress when in South

Africa, and she is now its President. In the last few years, the Congress has obtained an overwhelmingly strong position. It has dealt directly and officially with the Union Government on all supreme occasions, as representing the whole Indian Community. Therefore, it would be difficult to exaggerate its commanding importance in South Africa and also the great ability with which its conferences and executive meetings have been conducted. The Indians in South Rhodesia have just amalgamated with the S.A.I.C. and made it stronger still.

There is only one possibility for such a body of men as the South African Indian community isolated as it were in the midst of so many millions. The community must be united, or it will perish. Fortunately, as a successor to Mr. A. I. Kaje, the Congress has now, in Mr. A. Christopher, who has just returned from England, a born leader and a man of great powers of self-sacrifice in the national cause. We had missed him very much during the last very critical years; but now we have him back again with renewed vigour; and along with him we have a disciplined executive body, who have stood the test of very difficult days. Indeed, the Congress has now been more united, active and powerful. The Dutch Government has a sincere respect for it, as I have related.

The S.A.I.C. has been consistently devoted to the All-India National Congress. Each year, it appoints delegates to the Congress. Each year, it follows closely every part of the annual proceedings. The chief Congress leaders, both past and present, have their portraits in the Parsee Rustomjee Library, at Durban, which is the centre of all political and social activities.

Let me now describe, who the South African Indians are. The great bulk come from Tamil Nadu. These went out to South Africa originally under the old unsatisfactory conditions of indentured labour; they were more like slaves, at that time, than free men. But liberty has become all the dearer to them on that account; and their descendants are a people, who win one's heart by their wonderful industry and happy domestic life. In the country districts, they have made Natal a garden. The market gardening and banana trades are almost entirely in their hands; they have made many swamps into fertile regions. Four out of five of the Indians in Natal are probably from South

India. The remaining Indians are chiefly Gujaratis—Muhammadan merchants from the West coast of India and a small number from the Punjab and U.P. Some of these Gujarati merchants are very wealthy. It is this wealthy Muhammadan element, that has provided the bulk of the £20,000, which Mr. Shastri has obtained for higher Indian education.

There is absolutely no Hindu-Muslim problem in South Africa. The simple fact, that the greater part of the higher Indian education will go to the Tamil Hindus, is itself a sufficient proof of this. For, as I have said, Muslims have been the biggest subscribers.

It is true, that there are divisions; but these are rather on political lines, and of a party of personal character. Yet it must be emphasised that the Congress stands high over all other sections and forms the one rallying centre.

Nobody ever dreams of considering whether a man is a Hindu or Muslim or Christian, when elections to the highest posts in the Congress take place. It is sufficient that he is a man of character. We have, for instance, a saintly old Musalman, Amood Byatt, appointed year after year as President in Natal, being elected chiefly by Tamil Hindu votes. Of all things in South Africa this is of the happiest augury; and as long as the Congress is strongly supported from India, as the substantive body, this favourable state of things will continue.

But the question has arisen in India, whether the Congress itself has not compromised the Indian position by a too ready acceptance of the Cape Agreement. I wish every one, who has any such uneasy feeling, could have had my own experience, from 1925 onward. The attitude of the Congress Executive, at every stage, has been one of uncompromising independence. In the end, although the Capetown Agreement was signed by the Indian Delegation without first being shown to the Congress, nevertheless every point had been thrashed out; and it was on the advice of the Congress Executive, that the Indian Delegation settled all the most important issues. On the whole, the settlement when it came to be published was far more in our favour than we had expected.

Let me make clear the main points:—

(i) The Asiatic Bill, which was intended, "to reduce the numbers of Indian in South Africa to the irreducible minimum" has been

withdrawn. The whole policy underlying this Bill has been reversed.

(ii) The Indian Community is no longer to be regarded as an alien community, but is accepted as a "permanent section of the South African population."

(iii) Though monetary inducements are still offered by the Union Government to Indians to enable them to return to India, every trace of compulsion, or pressure, or recruitment under false pretences, has been abandoned. Anyone who goes away, goes entirely at his own free will; he also is free to return within 3 years.

(iv) The pledge is given that the Union Government will do its utmost to foster the progress of the Indian Community to 'the full extent of its capacity and opportunities.' This pledge is already being made good in the sphere of education, by far the most important sphere of all. General Hertzog's recent speech shows that he is determined to honour the agreement.

(v) An Agent General, who shall look after Indian affairs on the spot,—has been welcomed and accepted by the Union Government. He has been given a rank higher than that of the Ambassador of any other country.

All this is to the good. With regard to the repatriation figures, under (iii), that has been nothing so far that is alarming. It is true that nearly one thousand more Indians have returned in 1927 than in 1926. But all those who took the bonus, since the Agreement, have the option of returning within 3 years. Many are likely to do so. Farther more, it has to be remembered, that the bonus money was doubled in 1927. This raising of the bonus has augmented, for the time being, the number of those who have accepted the return passage. The same thing happened in 1921, when the bonus was raised before. Then, too, there was an immediate increase in the number of those who took the return passage. Afterwards, there was a falling off. So it may happen again. For a year or two, there is likely to be an increase in the number of those who return. But this number after all is very limited. For, conditions in South Africa are improving all round so rapidly, owing to the shortage of labours, that in a little time it is unlikely

that many will accept the bonus, at all, even though its value is again raised.

But while I have sought to show as clearly as possible that there has been a change for the better in the whole situation, and that the pitch-dark night of 1925-26 is not likely to return, yet it must be always remembered that the Agreement in no way removes the *fundamental* disabilities. These are three in number:—(i) The prohibition of all Indian immigration. (ii) The blank refusal of the franchise. (iii) The colour bar in social life. All these three remain. Probably, the only way to break down this triple barrier is to aim steadily at improving our own educational and domestic status, till the colour bar becomes an anomaly. In a hundred directions, the South African Malay Community, at the Cape, has already accomplished this. There is no reason why Indians also in Natal should fail to accomplish it in their turn. But the surest victory will be won in this direction by the steadiest methods, namely, by better education and by gradually raising the standard of living already, the presence as Ambassador of an Indian has dealt the greatest blow to white race exclusiveness that has ever been struck in South Africa. A second blow is already about to be struck owing to the impending change in the whole character of Indian education in Natal. Given twenty years of educational advance, with such splendid material as the present Tamil, Gujarati and Hindustani communities to work upon, and the result can hardly be doubtful. Personally, I have no question, that in twenty years time, if steady progress continues, not merely will the colour bar be broken down, but also the franchise will be won.

In conclusion, it must be remembered that the Dutch are now in power for good. They are sturdy, independent Nationalists, who have fought for their own freedom and have won it. We must not quarrel with them, but must show them that we love our national freedom just as much as they do. That, in the long run, is the argument which will prevail in Dutch South Africa. There could be no happier omen for the future than General Hertzog's speech on the Anniversary of the Agreement and Tielman Roos's withdrawal of clause 101 from the Liquor Bill.

Comment & Criticism

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

Leprosy Problem in Bankura

Professor Jogesh Chandra Ray has written a very interesting and useful article in your March number on Leprosy in the Bankura District. May I take the liberty of correcting his statement about the Bankura Leper Home, which I think may give a wrong impression?

The Bankura Leper Home was built by the Mission to Lepers in 1901 and now has 180 inmates. It also cares for, educates and makes self-supporting over 20 healthy untainted children of leper inmates. Prof. Ray is not quite accurate in his facts about the Leper Home. Our inmates are by no means all of the pauper class. Many of them are ryots from the Bankura District and a number come from Midnapur and some even from Assam. Some are weavers and all inmates who so desire can attend school in the Leper Home and also receive practical instruction in weaving from a teacher engaged specially for the purpose. Inmates come to the Leper Home of their own free will and for some time recently we have had to tell them there is no room. They are allowed to leave the Leper Home if they wish and are not kept there against their will. Provided their conduct has been good and it does not interfere with their treatment and they are not infectious cases, inmates are given leave for a few days when they desire it. Inmates are examined periodically to note the progress of the disease and they are discharged when symptom-free or when the disease has been fully arrested. If they have no obvious means of support and no relatives to look after them they usually stay in the Leper Home to the end of their lives. Their days are certainly spent with far more peace than they would be outside.

Patients too are admitted independent of caste and there is no compulsion about their becoming Christians. Inmates are given every liberty about attending the religious services. We naturally invite them and long for them to learn something about Jesus Christ. It is through Him they have been helped and in His name they receive the latest medical treatment and food and clothing by the help of free will contributions from Christians in many parts of the world.

Prof. Ray refers to the benevolence of Babu Gananand Jatia who contributed the sum of Rs. 30,000 in memory of his father Babu Kishorilal Jatia for the building of six semi-detached cottages with separate cook houses, and doctor's

quarters. These Jatia buildings are set apart specially for the treatment of better class Indians, but few are coming forward to avail themselves, of the opportunity thus provided. The resident doctor of the Leper Home, appointed by the Mission to Lepers, has had special training at the Calcutta School of 'Tropical Medicine in Leprosy' under Dr. E. Muir and resides at these buildings.

The new buildings, known as the Svasthyaniketan, are separated from the main Leper Home by nearly a mile and are in a very healthy position. Since the opening of the buildings last year by the Governor of Bengal, we have had one or two inmates, and discharged one inmate after six months treatment. We should like to see these buildings full and the prejudice in the mind of the educated Indian against taking treatment removed. Why should not the higher caste Indian who would not come to the ordinary Leper Home look his disease honestly in the face and decide to take proper treatment at once whilst the disease is in its early stages? A few months of treatment under proper conditions at this period would prevent their becoming cripples for life and if they are in the early stages there is every hope that they will soon become symptom-free. What differences can there be in going to some special institution for the treatment of tuberculosis or some such disease and in taking treatment under recognised authority and supervision in Leprosy?

Patients are admitted irrespective of caste, they have separate cook houses and free medical treatment. Further particulars will be gladly given by the undersigned. In addition to the attention of a resident qualified medical practitioner every patient has individual attention and supervision from Dr. R. G. Cochrane, M.D., M.C.R., D.T. & H., Medical Adviser to 'The Mission to Lepers in India.' Dr. Cochrane has a world-wide experience of leprosy, for he has visited the Mission leper homes in China, Japan, Korea, the Straits Settlements and some 50 of the Mission leper homes in India.

Prof. Ray has rightly drawn attention to the predisposing causes which so seriously affect leprosy. Under proper medical supervision these predisposing causes are treated as well as the disease itself.

J. T. Jackson.
Hony. Supdt., Bankura Leper Home

Mrs. Naidu and the All-India Women's Conference

In your note on the All-India Women's Conference, you have unconsciously shown an inclination to split straws on the question of Mrs. Naidu's presence at that Conference. I observe that you hold that as a leading non-co-operator Mrs. Naidu should have had nothing to do with it for the reason that Lady Irwin opened it. But I feel that Mrs. Naidu's politics deserve to be looked at from a more charitable point of view. Though her political conscience is in the keeping of the non-co-operators there are times when she is obliged to part company with her brothers-in-arms when she finds herself at cross-purposes with them on matters relating to women's rights. Besides, technically speaking, the All-India Women's Conference was a purely non-political conference from which controversial politics and men were rigidly excluded so as not only to give room for the wives of government officials to participate in it but also to divide the two sexes on specific issues. Non-co-operators, men and women, in spite of the political Manuism, insisted upon by their leader or leaders, are bound to meet government servants and their wives (who by the way are, only indirect sinners) on some neutral ground without prejudice to their respective political

professions. For the same reason no non-co-operator, however hidebound, will condemn Mrs. Naidu if she allows the mother-instinct in her to assert itself so as to fondle the Viceroy's children.

Being a stranger to the fact that the ticket "non-co-operator" covers a multitude of sins so far as we in the Madras Presidency are concerned you are shocked to see Mrs. Naidu meet Lady Irwin on the platform of the All-India Women's Educational Conference. In our midst we witness the staggering incongruity of the Non-co-operators being actively associated with communal organisations, pledged to uphold the caste system and all the abuses pertaining to it, such as untouchability, etc. Some of them perhaps do overcome the temptation to meet government officials and in their enthusiasm go a step further than Mrs. Naidu in demanding something more than absolute independence but in their own spheres of activity they make democracy in religion and in society impossible. Lately Gandhiji has showered his blessings on the Varnashrama Dharma for which they stand tooth and nail, and has in a way helped them to strain their absurd psychology to the length of opposing progressive movements in society and healthy social legislation.

Please decide for yourself which type of non-co-operator is more reprehensible.

K. VENUGOPAL RAO

EDUCATION—THE MAKING OF THE SWISS NATION

By MRS. SUDHINDRA BOSE, M.A.

AS early as the middle of the nineteenth century the Swiss Republic, commonly known as Helvetia or Switzerland realized that the education of the children was a prime necessity which it could not afford to neglect. Accordingly, it established a public primary school where children of all classes of people were to be instructed not by the clergy, as it was done in France or Italy, but by laymen. In 1871 primary education was made free and compulsory in Switzerland. From that time to the present, every Swiss child is required by law to attend a public school from his sixth year until he has completed his fourteenth year.

The compulsory educational law is rigidly enforced. Three months before the beginning of the school year, authorities notify the parents or guardians of the eligible child. In this way there is little excuse for forgetting to send a child to school. Still in some remote parts of the mountain regions one does find, here and there, a child who has escaped the vigilant eye of the law; but as general rule, parents are keen to

give their children at least elementary education.

Primary education is free in all cantons. There are absolutely no direct expenses for the parents except for paper, pencils and pens. The maintenance of the public school system falls partly on the canton and partly on the commune. This explains the fact that some primary schools are better equipped than others, and that some school teachers are better paid and better housed. The popular enthusiasm for education is so great among the various communes that there is a constant, but friendly rivalry for improving the school facilities.

The compulsory primary education lasts eight years. At the end of that period, the child may go to work if the parents cannot afford to send him to school any longer; but an employer who should engage a child under fourteen is liable to a heavy fine or even imprisonment.

One of the outstanding characteristics of the Swiss elementary education is the manual training for boys, and domestic science for girls. This instruction begins in the very

lower classes. The idea is to find out the likes and dislikes of the child, as well as to teach him how to use his little fingers. He is given a saw and a hammer, and set to making such things as bird-houses, wooden bowls, bread boards, and eventually simple furniture. He is also taught to use paints and varnish in decorating his work.

Girls, on the other hand, learn how to knit and sew and mend. They also learn how to make pretty laces and embroideries, in white or in colour. At the end of the school year, there is an exhibition of the works of the pupils and prizes awarded to the best ones.

In the upper classes, the girls receive instruction in housekeeping which consists of cooking, caring for the house, and waiting on the sick. A Swiss girl, with such a practical training, has a fair chance of making a good housewife. In many cities, the high school boys go through a military training course. They wear uniforms, and are fully equipped with arms. The little army is composed of all the different divisions to be found in the regular army of the Republic, except the cavalry. Each year they stage a sham-battle, and it is interesting to see how well-instructed these youngsters are in the science and art of warfare.

Gymnastics play a very important part not only in the life of the school children, but also of the people as a whole. They are naturally fond of outdoor exercises. Schools provide for all kinds of sports: running, jumping, discus-throwing, swimming, tennis. Throughout the country there are gymnastic clubs. Any healthy man may belong to them by paying a small sum, which goes toward the maintenance of the organizations.

I am glad to be able to say that girls also take active part in gymnastics. Years ago it used to be considered very unlady-like for a girl to move her arms and legs; but now she does not suffer from any such superstition. Girls to-day take their physical exercises alongside with the boys without any loss of femininity.

Personal hygiene, too, is a branch of public instruction. It should be stated that instruction in hygiene is provided neither by the federal nor by the cantonal government, but by the commune. In the large and prosperous city of Bale, for instance, schools are provided with baths which are under the supervision of some responsible person. Every child is

scheduled to take a bath at least once a week. Towels and soap must be brought to school by the child on each bathing day. Failure to do so gives the pupil a bad grade, just as does tardiness or the failure to recite his lessons. This splendid institution does more than keep the child clean; it prevents careless mothers from actually sewing their children, during the cold months, into the winter-woolens.

Winter Sports of Swiss School Children

Swiss schools take great care to teach their students to be thrifty. Almost every school has a school-bank. Each child on entering the school is given a bank-book with his own name on it. Any one may deposit money for the child, but the child only can withdraw it. Banking hours are fixed usually for every Saturday morning at the first hour of the session. The teacher acts as the teller. The students stand in line, and cheerfully wait their turn to deposit their savings which may not be less than twenty centimes (two annas).

The children are very proud of their bank account, and there is a general rivalry to deposit more than the prerequisite amount. The small savings count up, and a child often ends the school year with a nice little sum to his credit. In order to make this saving attractive, the school-bank pays interest on deposits just as any regular bank does, three percent. The school banking system develops the habit of saving, keeps the pupil from spending cash unnecessarily, and teaches him the value of money. Besides, the children enjoy it all. I recall how wistfully I would stand in line with my weekly saving, even if they amounted to only twenty

INDIAN Womanhood

The All-India Women's Conference which held its second session at Delhi under the Presidency of H. H. the Begum-Mother of Bhopal may be considered as a forerunner of a mighty awakening. We have received various reports about this session. Referring to the proceedings of the Conference Mrs. MARGARET E. COUSINS writes :

Every one in Delhi agreed that the Women's Conference was a brilliant success and that it created an effect and an atmosphere of earnestness, capacity, unity and determination to accomplish its ends that have been most impressive.

SRIMATI BANALATA DEBI (Mrs. S. R. Das) welcomed the delegates as chairman of the Reception Committee which made elaborate arrangements for the entertainment of delegates. We learn from an illuminating news-letter from Mrs. KAMALADEVI CHATTOPADHYAYA, Hon. Organising Secretary of the Conference—

Srimati Banalata Debi :
(Mrs. S. R. Das)
Chairman, Reception Committee, All-India
Women's Conference

Miss Janak Kumari Zutshi

A Group of Prominent Lady Delegates at the A. I. Women's Conference

The Conference was a remarkable success from every point of view. The same keen enthusiasm and interest was sustained throughout. The women proved more than ever their matchless gift for public speaking, that given the necessary opportunity they can distinguish themselves in any sphere of work. They showed remarkable skill in handling the various subjects under discussion and rare breadth of vision in dealing with problems in a comprehensive way. Their power of organisation was exemplary. The elaborate arrangements and the sumptuous hospitality for the delegates and visitors as well, showed the housewife and the mother in woman at her highest and best with the narrow walls crumbled before that larger self within her that extends the home to the whole humanity and pours forth her love to embrace the whole universe. Nor were the social and cultural sides of the Conference lost sight of. Delightful excursions had been arranged for the delegates and visitors. Visits to the ancient monuments and other places of interest found very ready acceptance on the programme. Then there was a round of At Homes and dinners including a tea party at the Viceregal Lodge by Lady Irwin. One felt that Delhi had been truly Imperial in her hospitality.

She concludes with the following observations:

One special feature of the Conference that needs

mention is the large share of success contributed to it by the Muslim women. They not only attended in large numbers but took an active part in the organising and running of the conference. It is a noteworthy fact that the two biggest national gatherings of India, the Indian National Congress and the *All-India Women's Conference*, should both have been presided over by Muslims this time. The perfect spirit of understanding and unity with which the two sections of the Indian community worked in the women's Conference has given the lie to the much talked of communal bitterness. The serene figure of H. H. the Begum of Bhopal seemed to form a link between the two communities, each with its own culture and tradition, creating a beautiful union with the synthetic points of affinity and the enriching points of diversity between the two, to hand down to posterity a harmonious oriental culture.

MISS JANAK KUMARI ZUTSHI, daughter of Mr. L. P. Zutshi, Bar-at-law, Allahabad, and of Mrs. LADORANI ZUTSHI, an ardent social and educational worker of the Panjab, topped the list of M.A. candidates in English in 1928. No other lady has achieved such a unique distinction in the history of the Panjab University.

It would take too long to describe the whole educational system from primary schools and secondary schools up to universities. I wish to say, however, that among the famous institutions are the universities of Zurich, Geneva, Bern, Basel, Fribourg, Lausanne and Neuchatel, and the Federal Polytechnic at Zurich, which attracts students from all parts of Europe. There is no use stringing out details; but it should be noted that Switzerland provides ample opportunities for the training of those who do not care to go in for higher education. For special training there are various commercial, technical, agricultural, and other schools. The Swiss people set their hopes for the future and build their ideals around educational institutions.

Here in America many young men and women go to college merely to get a social label, it appears to me. Some of my own

Skiing Sports of Swiss Students

college students in this country look upon their college as a large, pleasant social club, as a prestige-conferring institution. It is different in Switzerland. There no one enters a college solely for social purposes. In the Swiss scheme of life, education is prized not only for its resultant economic advantages but also for its spiritual and cultural values, its higher civic usefulness.

Switzerland is a small country with a population of less than four millions. Its physical area comprises nearly 16,000 square miles, and almost equals that of the State of Jorpur in India. Even a small country is not without significance, as the history of the Netherlands, Greece, or Palestine illus-

trates.* Mere bulk does not necessarily mean proportionate greatness, as Africa demonstrates. The Swiss are, however, a heterogeneous people who lack unity of race, language, and religion. They do not have a national language. Territorially, Switzerland is divided into twenty-two cantons, of which sixteen speak German, a little over four speak French, about one and a half speak Italian, and in a very small section of the country they still speak another language called Romansch. It is a corruption of the ancient Latin. In addition to these languages, there are numerous dialects, and sometimes they are so different that some people find difficulty in understanding one another in the same locality. For general convenience, the Swiss have made two official languages: French and German. These two languages must be spoken fluently by the members of the Federal Court. Most of the railroad officials are required to have a fair speaking knowledge of three languages, and those engaged in business can often converse in four.

A Swiss is a Jack of all languages, so to speak. Like most people of Switzerland, I learned French and German not to mention a number of local dialects in my early teens. Later while attending colleges and universities in Italy, Spain and the United States, I acquired Italian, Spanish and English. I maintain that though I feel quite at home in five languages, I love the land of my birth as passionately as one born in a country where he is doomed to speak but one tongue. I do not wish to declaim about it, but neither am I ashamed to say that patriotism with me is an enduring reality, a species of religion. As the word nation is used in the bright lexicon of some of the imperialistic European politicians, Switzerland cannot be a nation. Plain nonsense. If these men ever get their mental sight cleared, they will see they are mistaken. Switzerland, in spite of its diversities in geography, race, religion and language, is most emphatically a nation. The national consciousness and solidarity of the Swiss people is an immutable fact.

Switzerland, the home of many tongues and many races, has been practically an independent country almost as long as the Alps have gazed upon the Swiss. Their independence was not, however, a free gift

* "In little Palestine in Joshua's time, people had to sleep with their knees pulled up because they couldn't stretch out without a passport."—Mark Twain in "A Connecticut Yankee in King Arthur's Court."

Srimati V. K. Parukutti Nethyaramma, Maharanee of Cochin

Srimati V. K. PARUKUTTI NETHYARAMMA, the Maharanee of Cochin is an enlightened Indian lady. She received early education at home and began her English studies after her marriage under the personal supervision of her husband—His Highness the Ruler of Cochin. She takes

active interest in the amelioration of the condition of women in her State and is assiduous in her efforts to better the lot of her sisters. She owns a school of her own and sympathises with all organisations aiming at women's welfare in India.

Another Group of Lady Delegates at the A. I. Women's Conference. Mrs. Hamid Ali (*extreme left*), Mrs. Cousins and Mrs. Naidu (*centre*)

Mrs. AHMED SHAR has been nominated to the U. P. Legislative Council as a representative of the Indian Christians. The U. P. is the second province in British India to

enjoy this distinction. Mrs. ANASUYA KALE of Nagpur has also been nominated to the C. P. Council last month.

THE GATE OF CLOUDS

By JESSIE STANFORD

The gate of clouds swings slowly to and fro:
The magic keys the sentinel seasons hold;
Behold! beyond Olympus' crown of snow
The land of dreams in majesty unrolled.

Brighter than gems, softer than virgin gold,
The nacreous splendor's palpitating glow;
To lands so fair pace pilgrims, young and old;
The gate of clouds swings slowly to and fro.

See! Through the gate comes Dian with her bow,
Hiding 'mong mountain pines from lovers bold;
There broods my muse mid flowers' perpetual blow;
The magic keys the sentinel seasons hold.

There Beauty breathes superb in faultless mold,
And Muses harp their charmed music's flow!
And Graces teach, all statuesquely stoled,
Behold! beyond Olympus' crown of snow.

Lands of the Orient, in clouds arow—
Visions of earth in heavenly mirage scrolled—
From scenes so fair, oh, Fate, why hold me so
The land of dreams in majesty unrolled?

Fain would I see its beauties manifold:
Ere Eden's matchless glories I shall know,
And bathe my soul in essence—bliss untold—
Prepare me here, sweet Muse, and open throw
The gate of clouds!

We, who are borne on one dark grain of dust
Around one indistinguishable spark
Of star-mist, lost in one lost feather of light,
Can by the strength of our own thought ascend
Through universe after universe, trace their growth
Through boundless time, their glory, their decay:
And, on the invisible road of law, more firm
Than granite, range through all their length and breadth,
Their height, and depth past, present and to come.

ALFRED NOYES

When we see beauty in Nature we are discovering that Nature is not only a body, but has or is a soul. And the joy we feel is produced by the satisfaction our soul feels in coming into touch and harmony with the soul of Nature. Our soul is recognizing sameness between what is in it and what is in the soul of Nature, and feels joy in the recognition.

SIR FRANCIS YOUNGHESEAND

Marriage and the Age of Marriage

The National Christian Council Review writes :

There appears to be good hope that the Bill of Sir Hari Singh Gour, which aims at raising the age of consent within the marriage relationship, is to receive friendly consideration in the Assembly. It is sometimes alleged that the appearance of this Bill, as well as of what is known as the Sarda Bill and of other Bills in the Provincial Councils of a similar tenor, is to be placed to the credit of Miss Mayo. Everyone who is acquainted with the facts knows this to be wholly untrue. This 'push' on the subject of the age of marriage and of consent was proceeding actively long before Miss Mayo's book was published. This book has aroused emotions, such as those of humiliation and resentment, that are more likely to retard than to promote reform. Far more powerful than these sinister and doubtful influences has been the steadily increasing influence of enlightened and able Indian women and of the conferences that they have held, culminating in that which met in Delhi last month. When the 'Mother-Begum' of Bhopal, bowed under the burden of her great age, yet takes her place in the front line of advance, surely few—whether from among the Government forces or the orthodox—will be too timid to follow. It is fully time that the Christians of India were taking up again the question of obtaining a new Marriage Act. The old Act has many defects and ambiguities, and lawyers are agreed that it needs revision. Further, it prescribes thirteen as the minimum age of marriage for girls, and with the likelihood of this age being soon advanced, in the case of Hindus, at least to fourteen, Christians ought to be impatient lest they should even appear to be left in the rear. It is true that the actually operative age for marriage is seldom if ever as low as the law permits, and it is true that it has not usually been necessary among Christians in other lands to prescribe a legal limit. But in India the position is different, and Christian and Hindu may well enter into a worthy rivalry in this matter, ensuring that evil tradition is abandoned and that it shall not be possible to bring railing accusations against India as 'a jungle of sex, in which her body and soul are wasting away.'

Islamic Conception of Godhood

The following extract from an article in the *National Christian Council Review*, by Murray T. Titus, is, perhaps, not a fair evaluation of

the Musalman's Concept of God. It however should stimulate Musalman's to make their position clear.

The hard, deistic notion of God held so commonly by Muslims is at best a non-moral being, whose chief attributes are Force and Will. Regardless of Muslim practice and sentiment, at any rate, Muslim theology has no place for the great moral ideas of Holiness and Love. On the contrary, if Christ is in any sense the revelation of God, it is because He gave expression to the essentially moral character of Divinity. The God whom Christ revealed is above all a God of infinite Holiness and infinite Love. The great Christian task is to free the Muslim from the dread of Allah as an inscrutable Despot, and to teach him to pray to 'Our Father.' 'Islam, by the shallowness of its ethical conceptions, drives us to emphasise afresh these two burning attributes of God the Father: His Holiness and His Love.' In his ethical blindness the Muslim cannot see how the Cross can become the sign of victory over sin, and the problem of evil. None can who have not a living experience of sins forgiven. 'The Muslims must be led to enthrone God morally at all costs. God is indeed one; God is indeed Almighty. But He who is not Holiness and Love is not God!'

Untouchables among Animals and Plants

It is interesting to note how the Hindu idea of untouchability does not restrict itself to men only; but also applies to animals and plants. *Man in India* publishes an account of this by Rai Bahadur Hira Lal, which we reproduce below :

One disposed to hold friendly intercourse with others is called social. The others with whom he associates are generally of his own kind, belonging usually to his country, his own district, his own town or village, to his own house or to his own family. With this social intercourse, a society is built and the society's doings when given a scientific turn become what is known as sociology. Thus Sociology deals with the "associated life of humanity." But Hindu sociology appears to be wider, embracing as it does animals and plants. The Hindu social rules divide humanity into various grades, the primary divisions being touchable and untouchable. The touchables are again divided into 4 classes, the well-known Brahman, Kshatriya, Vaishya and Sudra, but the untouchables have no such divisions. In fact, they are relegated to the last class, the Sudras, who thus get

divided into two sections, the touchable Sudras and the untouchable Sudras. If the touchables happen to touch the untouchables, they get polluted and have to purify themselves generally by taking a bath. This sociological rule has been extended to the lower animals and plants. There are also Brahmans, Kshatriyas, Vaishyas and Sudras amongst them and also touchables and untouchables. A bullock is a Brahman, a lion, a tiger or a horse is a Kshatriya, a fox is a Bania, an ass, a pig, a lizard, and a vulture are Sudras. In fact, the Sudras just named are untouchables. Their touch does not pollute their own kind, but it pollutes the Hindus. If they happen to touch them they must purify themselves by taking a bath. Similarly in the vegetable kingdom, Pipal and Bar are Brahmans. They are invested with the sacred thread. People of all classes would prostrate themselves before them. They dare not uproot them or cut their branches. They are extremely afraid of their displeasure. They propitiate them with offerings as they would do in the case of a live Brahman. Then there are the low-caste trees just like Hwar (Reongha) which is considered to be a Mahar and Mehadi (Hina) which is a Chamarni. Nobody would use sticks of these plants as tooth-brush, as being of low caste they would pollute the mouth. They would not use faggots of these plants in the kitchen, as food cooked with their aid would get polluted.

The examples I have quoted above refer to prejudices met with in the Central Provinces. It would be an interesting thing to collect information from other provinces to show this curious evolution of high and low on the Indian soil. It would be still more interesting to collect examples of such a development amongst other people outside India, and to ascertain whether they are still prevalent or have become obsolete.

—

Travellers' Adventure in the Heart of Asia

The following thrilling account which we reproduce from *Buddhist India*, was originally contributed by Lt. Col. P. T. Etherton to the *Weekly Despatch*. Wrote the Colonel :—

The heart of Asia still holds first place in the realm of mystery and romance, especially that unexplored corner of the Kuen Lun mountains in South-Eastern Turkistan, where the Chinese hold shadowy dominion over the highest inhabited portion of the globe, a mountain maze that is still a sealed book to the rest of the world.

There I found a strange Buddhist sect who have as near neighbours more than a score of peaks exceeding a height of twenty three thousand feet, and glaciers covering hundreds of square miles.

This curious sect numbering not more than six hundred, are doing penance for the rest of the world, for the sins of you and me and all mankind, and in their monastery hewn out of the solid rock they are completely isolated from the world beyond, unmindful of great wars and upheavals and the rise and fall of empires.

They are following what they conceive to be the original precepts of their ancient religion as expounded by the Buddha six hundred years before the birth of Christ.

I will pass over the journey thither and come direct to the discovery of the monastery. I and my small party had reached it after infinite toil and pain amidst the rapids and ravines of the world's highest range.

For days we had run the gauntlet of snow-slides and avalanches, and at dusk reached the summit of a pass—at an altitude of 18,000 feet—beyond which lay the monastery I was in search of.

Slowly we worked our way to the foot of the pass, over glaciers and along the edge of yawning crevasses, by walls of snow and ice, and across torrents that swept through the canyon like a millrace, where one false step when jumping from rock to rock meant an icy grave.

At dusk we reached a point where the canyon widened to some two hundred yards with a patch of barley, the only cereal growing at this altitude, whence a rocky path led off into a side ravine to the monastery.

Finally, we reached a clearing at a sudden turn in the path and saw before us a rough stone structure built into and alongside the edge of the ravine. Remembering its reputation, its inaccessibility, and the weird stories connected with the sect, I could not help wondering what would happen once inside the monastery.

I had intended camping without, but the abbot, who greeted me dressed in a dirty yellow robe and with a shaven pate, insisted on my staying, within the great building, so accepting his hospitality, I followed him through the gateway.

Here other monks joined us, dressed in long coarse robes similar to the monks of Europe, and together we passed up a flight of stone steps into a corridor that seemed to be hollowed out of the mountain. We went along this passage for perhaps seventy yards. Then branched off into a smaller one that twisted and turned until I lost all sense of direction.

At last we reached a small doorway on which the abbot knocked. It was swung back and we filed through. All this time not a sound had been uttered, the whole place was wrapt in semi-darkness, and the air of mystery and general uncanny procedure of my ghostly attendants was far from cheering.

We next ascended a spiral stairway which led to a small landing lighted by a long slit in the wall, from which I gathered that we must be at the side of the monastery overlooking the ravine, but the crevice in the wall being ten feet above me I was uncertain of my bearings.

From the landing we entered a room like a cell, about ten feet by six feet, and at least twenty feet in height. In one corner was a narrow ledge of rock that served as a bed, a rough chair of wood and goatskin and a large earthen pitcher. This was all it contained, and as the other rooms leading off from it and the landing were bare of any furniture, I had perforce to consider myself domiciled in luxury. The etiquette of the monastery apparently required that all conversation should be in so low a tone as to be practically whispered.

The abbot then served tea flavoured with rancid butter, and some coarse brown cakes resembling oat cakes, but nothing like so palatable as the Highland variety. I was both hungry and thirsty, so the frugal repast was as corn in Egypt.

Having started me on the meal, the abbot departed with his attendant monks, adding that so long as I was within the monastic walls he considered me as his guest, and all my wants would be ministered to by himself or his immediate entourage.

Now, although I have a fair bump of locality, I realized how difficult it would be to find my way out into the open should necessity arise, but dismissing such possibilities from my mind I sat down on the ledge, and awaited developments.

Night closed over the lonely monastery and after another scanty meal I wrapped myself in my blankets and lay down on my rocky couch. The wind moaned and shrieked through the crvice and up the stairway, the light from an oil lamp on the floor throwing weird shadows across the room, while anon, dark figures silent and ghostly passed in front of the door. Once or twice during the night I awoke from a fitful sleep, and found a cloaked and spectral figure making a tour of my room.

At last, some time before dawn, I heard the low chant of voices in unison, a wailing note as of souls in torment. I jumped up and went to the doorway; not a sign of anyone, only the distant sound of that depressing dirge.

Perhaps it was midnight service? As I stood there listening a shadow appeared upon the wall and a huge bat flashed past within an inch of my face. It galvanized me into activity, and, donning coat and boots, I set off down the passage in the direction of the music.

Threading many passages, twisting and turning this way and that, I came to an open doorway with a verandah beyond it, then a courtyard leading to a building opposite. I crossed the courtyard and peered in through the half-closed doorway.

Before me was a chamber about one hundred and twenty feet long and sixty or seventy broad. It was but dimly lighted, with oil and wicks in clay bowls, emitting volumes of black soot and smoke. Kneeling on the stone floor were the members of this extraordinary sect, droning the song of remorse, bewailing the sins of those countless millions who had gone before, of those millions scattered throughout the earth's wide surface who were still a living force, and of those millions yet unborn whom it might be possible to turn into the right path.

Picture, if you can, courtyard set in an amphitheatre of mountains, the loftiest peaks in the world, the pale light of the moon, the ghostly oil lamps, and the hundreds of kneeling figures intoning that supreme chant to an omnipotent power. It would have stirred the feelings of a Nero.

As I retraced my steps across the courtyard I heard faint sounds of voices from the side flush with the mountain. Curiosity, but perhaps irresistible fascination, drew me there. I saw openings some eighteen inches square in the rock, and a similar chant as from the great hall issued from them.

Was it an echo or merely an hallucination? I

struck a match and peered through one of the openings. Gradually the form of a human being with emaciated figure and glassy eyes became outlined against the light. It seemed to be looking at me from another world. Then it lowered its eyes and continued the chant.

I hurried from the courtyard, from those living tombs, regained my room, and lay down, but not to sleep. Dawn came and with it my departure from the monastery towards that great world of sin and sorrow with its wars and upheavals and all the consequences that come in their wake.

The Education of Women in India

R. Krishna Bai, B. A., L. T., writes in the *Non Brahmin Youth* on the ideals of women's education in India. She begins by quoting Lord Avebury :

Well has Lord Avebury put : 'Reading, writing, arithmetic and grammar do not constitute education any more than a knife, a spoon and a fork constitute a dinner.' Education is then a preparation for life and, if applied in the true sense, it "helps us to live."

Then she states our ideals of the really educated woman in the following way :

What is really wanted is to bring back the lost culture, art and religion, and keep up the individuality of Indian womanhood. The function of pedagogy, hence, is to organise the mind with knowledge and give it the impetus to perfect itself by self-immersion which is the same as self-realisation. Though centuries of neglect on the part of our countrymen have visibly dimmed the glory of Indian womanhood, though whirlwind after whirlwind of foreign invasions thrust various changes over the head of Aryavarta, the key stone of the arch of Indian womanhood stands unshaken, unimpaired still. It is because our women did not try to imitate man and compete with him in his lines of work. It would be a sad mistake indeed if woman, dazzled by the present ideas of freedom and equal rights, should forget that in her hands lies the future happiness and progress of the country. I do not certainly mean that women should have no activities beyond the family. The whole world is her realm and whatever may be her chosen sphere of activity, let her not lose her individuality and mechanise life. Let us not imitate another nation. We are children of an ancient civilisation, we inherited a glorious past and we are proud of her past and ardently wish to be proud of our future. The glory of our future depends on the homes of the present. To woman then belongs the greatest privilege—the careful tending and educating the future citizens of 'Bharata Mata.' Her mission is greater than that of the politician. But as Rabindranath Tagore, our honoured poet, says : "It is not that every woman should be made to learn the culinary art or that she should have no higher ambition than to be a home-manager." We want politicians like Mrs. Sarojini Naidu and Dr. Muthulakshmi Reddi to fight for our long neglected rights ; at the same time, let us not neglect our

homes for the Law Courts and Legislative Councils entirely. I am not opposed to women entering politics, we need them absolutely to make "men in power" realise their long-forgotten duty to women, but I am certainly opposed to larger numbers entering public life leaving their much-needed social work at home and in society. As Mrs. Sarojini Naidu aptly warned in the recent Notional Social Conference, let not "new ideals of liberty affect the cherished notions of Indian womanhood." We want our Savitris, Sitas and Damayantis to once more glorify the annals of History. There has been no break in the glorious history of women till the time when English education gave a new culture to man in which she had no share till now and which carried him away into a new world, while she remained ignorant at home. We have illustrious names like Padmini of Chittore, Meera Bai the Poetess, Tara Bai the skilled Warrior. Do not these names shine out as brilliant stars in the sky of our Nation's history? Now that the gap is being filled up gradually by enthusiastic champions of woman's cause, and that women have given ample proof that they are not in any way inferior in intellectual capacity to men, it is high time we looked into the kind of education that women should get, in order to enable her to perform the duties of a woman successfully.

Finally, she goes a little into the details of curricula. She says:

A girl who stops after passing the elementary stage should be able to possess an elementary knowledge of subjects that are useful in every day life, e.g. hygiene, first aid, domestic science, general principles of nursing the sick, care of children, in addition to the instruction she gets. Besides, the present system of education is sadly neglecting the development of the finer faculties in man; the aesthetic sense. It is deplorable to hear our girls complain of "monotony in drawing lessons and dislike in the singing classes." It is no real education which does not develop all the higher imaginative faculties. Music "the universal language of mankind" and art "the science of the beautiful" should find a place in schools and colleges. To respect art and music is a national as well as individual duty as their influence tends to develop the best moral virtues, teach reverence, beget unselfishness, elevate the mind, and create a dislike for all that is mean, and ignoble. We, a nation whose aesthetic understanding has been deadened by generations of foreign notions of culture and teaching, have now to stimulate instead of suppress in our young, the lively inborn artistic sense of our people. Set out Art and Music free to follow the natural channel, remove the impediments that are placed in their course and without doubt they can minister to the intellectual needs of Mother India. Let us get rid of that false culture which blinds the eyes and stops the ears of our girls, to all that the sublime nature art and melodies of our own country have to teach them. Let education give the impetus to the powers of observation to appreciate beauty of form, and line to understand beauty, to enjoy and feel it; for it is towards realising the divine beauty on which the universe rests that all the hopes of humanity are centred. If the aesthetic spirit which is more natural in women, and which is the

motive force to develop all the higher intellectual faculties, is kept out of the newly formed Indian Universities they will only establish, rather perpetuate, all the evils of the old. They must make way for Art and Music. Then and only then will there be any hope for the revival of our past culture. The Andhra University has recently included Music and Art as one of the faculties and has also instituted a Degree. Let those who have the faculties and opportunities to take up University courses specialise according to their special aptitudes, but let those who want education to prepare them to take up the noble mission of women train themselves in that groove. India needs mothers at present, "good mothers" to lead the home, to instil into the future sons the noble ideals of life and citizenship. "This done" as Rabindranath Tagore says, "the country will be a heaven of man and woman—a world of love, service and sacrifice."

Higher Politics in Feudatory States

The following items are reproduced from the *Feudatory and Zemindary India*.

The Council of Administration of the State of Bhavnagar is pleased to prohibit the bringing into the State by sea or land any copy of the pamphlet "India" published by G. S. Dara, London.

A recent order in Rajpipla State, lays down that all meetings proposed to be held either in a private or public place, are prohibited unless the organizers nearly ten days before the meeting is convened obtain the permission of the District Magistrate after explaining fully the objects and the agenda to be placed for discussion. The order states that the restriction is necessitated on account of possibility of feelings running high on either political or communal questions: Any meeting held in defiance of the order would be considered as an unlawful assembly.

Theory and Practice of Mughal Kingship

R. P. Khosla, M. A., I. E. S. writes in the *Journal of the Bihar and Orissa Research Society* on how the Mughal kings side-stepped the quranic Law in order to enjoy absolutely autocratic powers over their subjects. We read:

In theory the Mughal king was under the holy law, but the latter was a region of speculation and vagueness when applied to the practical powers of the king. Law and political theory are considered in the Muslim world to be as much derived from divine revelation as is religious dogma. Islam did not recognise the institution of kingship to start with. It believed in the democracy of the people. Hence the absence of any particular rules in the holy Quran for the guidance of kings who are subject to the same laws as others. There is no distinction between the canon law and the law of the state. Law being of divine origin demands as much the obedience of the king as of the peasant. The king may be

mujtahid—an authority on law, but his legal decisions are limited to an interpretation of the law in its application to such particular problems as may from time to time arise. He is in no sense a creator of new legislation. It is the duty of a king to uphold the authority of the Islamic law and to keep himself within the four walls of it. The dignified rank of sultanate comes after the great theoretic character of the holy law is liable to prevent it from serving as an effective check on the sovereign authority.

In practice the Mughal kings exercised greater authority than that claimed by any kings in the west who based their claims to sovereignty on divine right. Though the Mughal kings were not above the holy law they enjoyed complete sovereignty in the state. The subjects were expected to submit to every ordinance issued by the monarch. The royal authority was not limited by any coronation oath which could, by a stretch of imagination, be interpreted as a compact between the ruler and the ruled. No forms of constitutional checks existed anywhere and the cry of popular rights was never heard. The power of the reigning authority was all-embracing and there was no distinction made between *de facto* and *de jure* sovereign. The royalty was wrapped up in a golden haze of sanctity and the king was veritably regarded as the shadow of God. Monarchy being the divinely ordained institution, obedience to the king was a religious as well as a political dogma. When Ashkari Mirza rebelled against Humayun he is said to have exclaimed, "Am not I a king, God's engaged in drinking wine." Every Mughal king representative on earth was the vicegerent of God. His power was unconditioned by any constitutional restraints and he was the sole interpreter of his will. The doctrines of the right of resistance, popular sovereignty, and the merely official character of kingship were meaningless terms.

The position of the monarch was further strengthened by the secular nature of the Mughal state. Though the holy law was theoretically supreme, the ulama, who were the only authoritative exponents of the holy law, were never allowed to become supreme in the state. The dangerous character of their power was easily recognised by the Mughal kings who kept them under strict control and thus prevented the creation of a state within a state. Though theoretically the Quranic law was the only law recognised and all civil law was subordinate to it, the king's wish was the real law in practice. Though the king was expected to make the precepts of the sacred law effective in every department of administration, in actual practice the wheels of the state machinery moved according to the royal will and royal will alone. The secular power claimed and enjoyed complete supremacy. The Mughal kings always considered it dangerous for the state to give the spiritual power a free hand in political matters, as that would have fettered the action of the state in a thousand ways and clogged the wheels of the governmental machinery. It was unsafe to make the ulama the ultimate arbiters of political action. The Mughals like their predecessors the Pathans were ever jealous of clericalism. The ecclesiastical organisation was never allowed to be strong enough to put forward an effective claim to control and

direct the action of the king. It might be used as a convenient instrument by the king as the court of ecclesiastical commission was used by the Tudors and the Stuarts in England, but it could never act as a check upon the royal authority. The ulama were held in great esteem, but they were never allowed any hand in determining the policy of the state. There was never any danger of an *imperium in imperio*. No synod of divines or doctors of law was powerful enough to act as a check on the king's will.

As practical instances of secular domination of the clergy we find the following in Mr. Khosla's paper :

The submission of the clergy to the Mughal king was as complete as it was in the case of Henry VIII of England. There are not many fatwas issued by the ulama against the Mughal kings. It is true that the heretical doctrines of Akbar did provoke an adverse criticism, and Mulla Muhammad Yazdi, the kaziul-kuzat of Jaunpur, issued a fatwa insisting on the duty of taking the field and rebelling against the emperor on this account, the net result was nil. The lay power succeeded in establishing its supremacy, even to the point of persecuting the teachers of all doctrines which it regarded as harmful. When the Mulla Muhammad Yazdi excited a rebellion against Akbar and was joined by Muhammad Maqum Kabuli, Muhammad Maqum Khan Faran-khudi, Mir Muizz-ul-Mulk, Nayabat Khan, Arab Bahadar and others, the whole thing ended in a failure. In vain did the imam condemn the emperor for having made serious encroachments on the grant-lands belonging to the church and to God. The mulla was decoyed and put in a boat. When the boat got in deep waters, as we learn from Badaoni, "the sailors were ordered to swamp the boat of the mulla's life." The mullas of Lahore were banished and all the mullas who were suspected of disaffection by Akbar were sent to "the closet of annihilation."

Not all this secular autocracy was due to mere love of power. Much of it was engendered by demands of statesmanship ; for we read,

In this secularisation of the state the Mughal kings showed themselves to be good statesmen. In a country where the bulk of the population consisted of non-Muslims the views of the orthodox ulama would not have proved very helpful in matters of statecraft, and any successful insistence on the observance of the ulama's views would have been followed by disastrous results for the stability of the State. Thus the state never became the mere handmaid of an ecclesiastical corporation, and the supreme direction of politics was never placed in the hands of the rulers of the church. The policy of the government during the greater part of the Mughal period was not regulated in the interests of a theological system. The Mughal kings never bowed their heads before the clerical power. Any departure from this policy would have placed the action of the state under the control of a body of persons who were not experts in statesmanship and whose acquaintance with the

intricacies of the governmental machinery was not very intimate. The supremacy of the temporal power was on the whole good for the state and ensured its stability.

So that by religious toleration the Mughal tyrants did not understand toleration of religious fanaticism. They tolerated religious views and activities only so far as they helped good government and social progress. Toleration of anti-social religious fanaticism was a political ideal of post-Mughal origin.

Was Lanka in Africa ?

The following extract relating to the above question is taken from the *Vedic Magazine*.

Ruins of ancient granite buildings discovered in South Africa, have led to a number of surmises as to the people that lived in those parts. One supposition is that the site perhaps is of the ancient Lanka of Ramayana. The plenty of gold found in that locality agrees well with the description of Lanka as a country of gold.

The ruins lie in the heart of the continent several hundred miles away from the coast at Zimbabwe, which is about 17 miles from Port Victoria in a straight line with the old East African port of Sofala. A branch line to Port Victoria shoots from Gwelo which is half-way on the Bulamoyo-Salisbury railway of the Rhodesian system. There in the wild heart of Mashonaland, buried by a foliage amid secluded hills and valleys where probably no modern white man had previously trodden, granite ruins of vanished civilisation were discovered in 1865 by a wandering hunter.

The ruins consist of several granite edifices of which the largest is a rough oval. There are no roofs and between these two major ruins are traces of several minor structures. The walls of the oval are in places thirty-five feet high and sixteen feet thick at their base. They are wholly constructed of small well chiselled granite blocks cleverly fitted together without mortar. There are no inscriptions, and the structures themselves do not show signs of great age. The granite shows very little discoloration or mouldering, and the chief marks on the granite are in many places undimmed. The ruins are of far greater dimensions and more solid build than anything else seen in Rhodesia.

DATE AND ORIGIN OF RUINS

Two theories have been advanced in connection with the date and origin of the ruins. On the ground of mediæval objects having been found in such position as to be necessarily contemporaneous with the foundations of the building a set of thinkers conclude that the structures do not date back to more than 600 years. They also point to the similarity of design of various later Rhodesian structures and advance that the builders were local natives. This theory would

imply that the natives of Central and South Africa had only 600 years ago "knowledge, skill, initiative, and a mode of life comparing not in favourably with that of mediæval Europe."

But there is another theory, placing the Zimbabwe ruins "somewhere in remote antiquity. According to it, "when what are now Britain and France were still barbaric countries, a foreign civilisation flourished in Zimbabwe." The scholars who have made this theory their own point to the finding of soda-water bottles in the ruins by subsequent excavators and state in connection with the absence of inscriptions that there are numerous ruins without inscriptions along the Persian Gulf in Mesopotamia and Southern Arabia. At the same time it is not improbable that the native builders of Rhodesia subsequently initiated the design and form of Zimbabwe buildings.

The Bantus, natives of Rhodesia, have never been builders of stone structures elsewhere and are even to-day entirely in a rudimentary stage. The builders must have been foreigners who colonised this spot.

Rhodesia and Transvaal are even at this date *minerally the richest countries of the world*. They must have been so even in remote ages and the antiquity school allege that some foreign people, now wiped off and forgotten, may have had a colony at Zimbabwe for exploiting the mineral wealth of this territory. The ruins represent this ancient colony.

Hundreds of old workings have been discovered both in Rhodesia and Transvaal, making it abundantly clear that gold was once mined on a large scale in these regions. Modern metallurgists have examined them and agree that "the vanished miners knew a good deal of metallurgy and throughout the country successfully handled hundreds of thousands of tons of rather intractable ore." The gold extracted by these ancient miners is valued in present-day terms at not less than 75,000,000 pounds.

WHO EXTRACTED THIS GOLD ?

Who extracted this gold ? If the Bantus did it, they must have been a very different people from what they are now. If foreigners did it, who were they ? We must go to the history of ancient peoples. The Phœnicians, a sea-faring people, had, it is known, inexhaustible resources of wealth. The mines of King Solomon are known and the Ramayana of Valmiki describes Lanka, the city of Gold. Do all these things refer to a common gold-mining colony in the South ?

Kavaca, the King of Lanka, lived across the seas, many miles distant from the Indian shore, much more distant than Ceylon which we generally identify with Lanka. He was the devotee of Siva who is worshipped in a phallic form. He belonged to the Raksas race and the characteristic features of life and form in Lanka, as described in the Ramayana, are intense ascetic activity, material wealth and universally gigantic proportions. Though there are no inscriptions, symbols of the sun and the hawk have been found on the Zimbabwe ruins and the interior of one of the ruined temple at Zimbabwe has "similarities also to the two very large phalli about thirty cubits high described by Lucian as standing in the temple of Hieropolis in Meso-

potamia." May these not be traces of Ravana's phallic worship?

In fact, a study of the ruins reveals considerable organization, military, mining and colonial. The structures at Timbar are not ornamental, they are not even strictly symmetrical, but they impress one with their proportion and skill. Zimbabwe may have been not only a metropolis but a centre of great colonial activity on the part of some foreign people. As such, it is well worth a visit by Indian students, scholars as well as sightseers.

A New Port for Western India

The *Mysore Economic Journal* gives the following account of Okha, a new port that is being developed in Western India.

In Western India, besides the well-known Ports of Bombay and Karachi, there are no other Ports approachable all the year round by large vessels and where the vessels can remain at anchor, sheltered from the storms on the open sea, specially during the south-west monsoon and discharge their cargo directly on a pier. The Peninsula of Kathiawar has over 300 miles of coast line but notwithstanding this extent, there are no really good harbours except at Okha near Beyt at the north-west corner of Kathiawar. Okha is on the extreme west point of Kathiawar near latitude 22° 35' N. and longitude 69° 15'. It is at the mouth of the Gulf of Cutch and lies midway between Bombay and Karachi. At this place, the Government of His Highness the Maharaja of Baroda have recently opened to traffic the Port of Okha. The new Port is most favourably situated for traffic, particularly as it is a safe-all-weather Port designed and constructed for steamers of about 2½ feet draft and connected with the Railways of Kathiawar, Northern Gujarat and Rajputana.

India in Empire Economics

In the same journal J. E. Woolacott pleads for India that she may not be forgotten by Empire economists as a fruitful source of profit to British manufactures. The author says:

A description of the greatest of the irrigation works now under construction in India, the Lloyd (Sukkur) Barrage and Canals Project, contains the arresting statement that while the whole area of Egypt comprises 8,160,000 acres, with an actual cultivation of 5,400,000 acres, the Indian project will provide for an annual irrigation of 5,900,000 acres in a total commanded area of 8,132,000 acres. It is, indeed, impossible for any one who has not actually visited India to visualize its enormous extent and its almost unlimited economic possibilities. And it is to be feared that in the visions of some ardent believers in the future of the British

Empire, India finds no place. Yet India to-day is the greatest market in the world for the manufactures of Great Britain. A country which in a single year absorbs British goods to the value of £90,000,000 is a factor of the greatest importance in the Empire's well-being. But in the many discussions that have arisen regarding the prospects of British commerce and the imperative need for developing markets for British manufactures, how seldom it is that the importance of India finds the recognition it deserves. Nor is it adequately appreciated that to-day the purchases of British merchandise by the Indian peoples comprise more than half their total purchases from abroad.

We are afraid there are no very great fears of the Empire economists forgetting India's claims as the most important field for exploitation by the white section of that Empire.

Hindu University Convocation Address

His Highness the Maharaja of Bikanir delivered his address as *Pro-chancellor*, to the Convocation of the Benares Hindu University on the 9th December 1927. The address has been printed in the *Benares Hindu University Magazine*. His Highness laid very great emphasis on the need of universal physical culture and regular Military Training for students and stated what he thought to be the ideal of student life very clearly. He said,

The value of a Residential University can best be demonstrated in the facilities it can afford for the building up of good character. Let your goal be the culture of "Self-reverence, Self-knowledge, Self-control; which three alone lead to Sovereign power." One cannot fail to be struck with the mistaken notions about liberty that often prevail in the minds of some young men. True liberty consists in freedom to do what one ought, not freedom to do what one wills, which only deteriorates into licence and wanton depravity. Learn to control yourself; for, moral self-government alone can prepare you for any higher form of political self-government. Cultivate the habit of self-reverence. We have indeed every reason to be proud of our ancestors, our ancient culture and our glorious civilisation; but do not let any undue bias for antiquity deter you from your duty to posterity. Reverence for the ancient Aryans can never be incompatible with an eager solicitude for the elevation and re-generation of Mother India. But with this end in view, "Act, act in the living present"; and "above all in the words of Shakespeare, to thing oneself be true; so that thou canst not then be false to any man." Service and Sacrifice ought to be the twin-rows of your modern Brahmacharya. Our land has been well-known for the spirit of Chivalry. If that Age has gone from the present day Western World of

Sophisters and Economists, let not that same cancer eat up the vitals of our ancient culture. Never fail to set a high value on a habit of deference and reverence to your elders and of proud submission to rank and sex which is the true test of an abiding civilisation.

Russian Peasantry

K. Kocaroveky Zemgor supplies the following information to the *Vista-Bharati Quarterly*.

1. The village population of Russia equals 85 per cent of the whole population of Russia, and a considerable part of its industry is to be found in the villages being by its nature non-capitalistic home industry.

2. Already before the revolution the rural economy was rapidly passing into the hands of the peasants: if more than a third of the land was in the hands of rich landlords, they possessed only 10 per cent of seedings, and only 6 per cent of the cattle. With each decennary the peasant economy progressed fast and faster, the showing of grass and farming with crop-rotation of more than three fields was spread over a considerable part of Russia. After having been crushed by bolshevism it is now anew returning to its restoration.

3. The most part of Russian peasantry is a homogeneous working mass. The statistics of bolshevists, who wait for its capitalistic "stratification into layers," show among them only $\frac{1}{10}$ per cent. of small capitalists and even this percentage does not increase.

4. About three-fourths of the peasants possess land in common, as members of community; this form of communal land-owning had developed during the last centuries and has considerably improved after the abolition of servitude: the repartition of parcels became more and more equal, the community adapted itself more and more to the progress of the rural economy. During the regime of Stolypine from 1907 to 1917 about $\frac{1}{4}$ of community peasants were artificially eliminated out of communities, but during the revolution the most part of them have returned into communities whereas independent farms are to be found almost exclusively in the narrow western strip of Russia. "The white land revolution was based on the community, which is at present stronger and more progressive than ever and just on it is based the state exploitation of land by working masses, which existed already before the revolution."

5. After the first revolution of 1905 co-operation developed with an extraordinary speed—in banking, consuming, buying and selling and in barter of every sort. In 1917 at least 2-3 of the Russian peasantry were already unified by these co-operative associations, which were working solidly and successfully. The bolshevists had entirely destroyed this organisation, but during the last years it is restoring anew.

6. Russian peasantry is energetically striving for instruction and culture and has already much done in this respect. Russian peasants established schools, helped the schools of zemstvos, had done more for the enlightenment than those of the nobility.

After 1905 the peasants began to organize in villages middle schools, libraries, lectures, folk-houses, choruses, theatres etc. All this was stopped by the bolshevists, but during the last years the independent activity of the peasantry is restoring. Just before the revolution the Russian village was on the point of reaching, after a lapse of only 7 years, the general instruction and in this regard the village was always going ahead of the towns.

What is a Good Diet

The *Federation Gazette* says:

The accustomed diet of the people of this country, be it based upon rice or *atta*, or upon meat, is in almost all cases, defective and excessive. The food is first deprived of its best and most nutritious parts when the rice is husked and polished and the *atta* is ground fine and white, or the potatoes are peeled, and then it is spoiled by cooking which slowly destroys the vital properties, i. e. the "vitamins," which are essential to good health.

Man is the only animal that cooks its food. The less the food is cooked the better it is. The longer it is cooked the more it loses its vital properties or vitamins. The combination of cooking with the removal of the valuable and nutritious skins and inner husks of vegetables, fruits and grain, leads to a deficiency in diet of the vital elements which create and maintain life, and further leads to excess in eating in the effort to make up for these deficiencies.

Further the accustomed diets of most races, be they based upon rice, upon *atta* or upon meat are all one-sided. The habit is to eat too often of one thing, such as rice and to eat too much of it and so to clog the body with a quantity of starch which it cannot digest. A balanced diet must contain fresh fruits and vegetables in ample quantity, and should, if possible, include good clean milk, and these things should not be cooked or boiled for more than a few minutes and would be better not cooked at all.

The quantity of any one article of diet of a staple nature such as rice, *atta* or meat should be kept small, and balanced by the addition of fresh fruits, green vegetables and milk, so that the total diet will contain a balanced combination of the essential products, carbohydrates, fats and mineral salts together with an ample supply of the essential vital elements.

Work for the Blind in Germany

We learn from *Light to the Blind* the following about work done by Postwar Germany for her blind nationals.

Miss Marian Feuchtwanger of New Haven, Connecticut, spent the summer of 1926 studying methods of work for the sightless in Europe. In an interview published in the New Haven Register she tells of the efforts of the German Government in behalf of war and civilian blind.

When loss of sight came to Miss Feuchtwanger fourteen years ago she was a school-teacher in New Haven. She is now giving the greater part of her time to furthering the cause of blind people in her own city and state, declaring that her chief aim is the procuring of suitable and congenial as well as remunerative occupations for those without sight. Of her study abroad she says:

"All of the European nations are doing splendid work for the blind. They were forced to it at the end of the World War by the sad realization that countless thousands of their returning soldiers were sightless and these men came back to civil life helpless, desolate and despirited, their means of livelihood gone and their hearts filled with bitterness and despair.

"Germany, with more of these blind soldiers than all the other countries, sought almost desperately for ways of helping them. She put into the task every ounce of resourcefulness and talent which she could muster and called to her assistance the ablest minds in the country. Work for the blind became of paramount importance and as a consequence it went ahead with leaps and bounds. Germany to-day is among the countries of the world that lead in their efforts for making better the condition of the needy blind, as well as of those who want to take their places once more in the community of which they were once active citizens.

"The first task was to restore, so far as possible, the confidence and fighting spirit of the stricken men, and it was no light undertaking.

"Only one who has lost his sight can realize the utter desolation which temporarily paralyzes even the bravest and best fortified when first engulfed in that blackness in which all sense of time, space and direction are lost.

"To lift this mantle of blackness, then to give to the sightless soldiers some measure of their former independence, to help them regain a sense of time and direction, this was the task to which all Germany turned with a will. Many things were tried. Some availed and some did not.

"Then the world-renowned police dogs were called in to help. From the first they were successful. Trained in the finest kennels of Germany by the thousands, they form one of the most touching and astonishing sights in that country to-day, as they lead their blind masters about the streets. They escort their blind charges through the crowds, halt at crossings until they receive the signal to go, steer them into cars and buses, take them to empty seats and guide them into buildings and elevators in a way that is very nearly human.

"It was soon found that the soldier who could go about with his dog was a soldier partly adjusted. The blackness began to lift a little when he could come and go as in former days.

"Then the watch for the sightless was made and presented to him and his sense of time returned and with that his fighting spirit awoke and his cure was assured.

"While this much was in process of accomplishment, plans for helping the blind soldier to earn his living were being formulated.

"A great movement was launched to encourage him wherever possible, to do his pre-war work. This was a staggering task for him but such was the spirit of the entire German nation and such a wealth of help and co-operation was given that to-day blind men are doing excellent work in almost every conceivable trade profession and industry. Mechanics have gone back to their machines, tradesmen to their crafts, scholars to their desks, and scientists to their laboratories. Even in such trades as tailoring and cobbling blind men are working side by side with the sighted.

"For the cultured classes, the blind intelligentsia as they are called in Germany, it has undoubtedly been the hardest, but they have set wonderful examples to the others by their unflinching courage and cheerfulness.

"Early in the work here was a call for books for the blind and suddenly it seemed as if every one who could see was making books for those who could not.

"They were turned out in such numbers that many of them were distributed and lost, an unheard of thing, for books for the blind are scarce and precious. Each one is a treasure and such a thing as losing track of even one, in normal times, is almost unforgivable.

"Now, when the German people began to make books for their blind soldiers they found that it was slow work since they could make but one copy at a time. Inventors began to work on a machine which would more nearly do the work of an ordinary typewriter, and when I left Germany the model for this new machine was very nearly ready to market."

Doctor Picht of Leipzig, has invented a machine known as the Picht Braille writer, which corresponds to our Hall writer, but differs in that when four Picht writers are placed in a certain position, four copies may be ticked off at once.

Dr. Strehl, an Academician, himself sightless, is at work at present on a remarkable Braille machine to be known as the Strehl Braille writer. By the completion of this invention, four copies can be taken off the machine by one stroke of the hand. Dr. Strehl is a native of Maguria, a small town outside Berlin. This machine is not yet ready for the market, but when it is ready, it will be of inestimable value to all workers of handcopy books.

Miss Lucille Goldthwaite, of the New York Library, is eagerly watching the advent of this machine.

The Leipzig Library for the blind is the largest Library of the kind in Germany, and the circulating centre for books not only for the German Blind, but for the sightless of Sweden and Holland as well. It contains more than 6,000 Braille books.

Lord Sinha

more than outweigh any advantages it may have in other directions. As Sir Humphrey Rolleston, President of the Royal College of Physicians, said: "Its action is more likely to be harmful than beneficial."

The old idea that alcohol was a stimulant to heart and brain and vital activities has been "abandoned by rational medicine," although it still lingers in popular belief. Alcohol is essentially a narcotic, and as such is now recognized in all textbooks, although the word "stimulant," by force of habit and common usage, still creeps into popular language. As a narcotic, alcohol tends from first to last to numb, disorder, and paralyze the higher levels and centres of the brain—those levels which are the first to be developed, and through which the mind is able to express its power of intelligent judgment and self-critical discrimination and control.

Public health officials are unanimous that alcoholic indulgence in the national life, as a whole, is one of the most potent co-operating factors in the production of all sorts of damaged and deficient life. The more extreme forms of disease caused by long-continued abuse are obvious; but there is an increasing recognition that, far short of anything like so-called excess, alcoholic indulgence may be a powerful factor in precipitating serious disease. Thus the late Sir F. W. Mott said: "The amount of alcohol consumed by the pillars of society is sufficient to turn certain potential epileptics and feeble-minded persons into criminal and certifiable lunatics." That is to say, if there is a latent inborn tendency or possibility, then alcoholic indulgence, far short of so-called excess, can bring out, accelerate and intensify that possibility. In his recent lecture on cancer, Sir Berkeley Moynihan (*British Medical Journal*, January 29, 1927), speaking of the way cancer attacks diseased organs, says: "The majority of people, it may be said, commit suicide. If we consider the effect of alcohol, syphilis, tubercle; of the conditions which, are set going by the rush for wealth...the statement, though shocking, appears to be true." Here, you see, this great expert places alcohol in the very foreground of his picture of the causes which predispose towards the 50,000 deaths from cancer every year.

persons gainfully employed, which has risen from \$1,637 in 1921 to \$2,210 in 1926. "This great increase in income is not the result of an increase in the price level," the bureau said, "for the actual price of consumed goods was slightly less in 1926 than 1921."

Mother Europe and Aunt America

Such should have been the title of an article in the *World To-morrow* showing up the ghastly nature of the "White Slave Traffic" from the findings of the League of Nations investigation into that evil. We give extracts from it below:

Though the United States remains outside the fabric of the League, America is taking an ever-increasing interest in its work. American representatives made notable contributions to the success of the World Economic Conference last May which Russia, too, attended. An American citizen has just given two million dollars to the library of the League, America has long made generous grants to the Health Bureau. It is due to the initiative of an American woman that the investigations of the League into the traffic in women were begun. The sum of 175,000 voted by the American Bureau of Social Hygiene made possible their extensive inquiries.

The report of this inquiry, adopted by the Assembly last fall, proves beyond doubt that the abominable traffic in women, known 30 years ago as the "white slave traffic," is still operating in all its old vigor. Submerged by the war, the "souteneur" has reappeared. He has not changed in the years between. Only his methods have been adapted to meet new conditions.

There are regular "trade routes" along which this muddy stream of traffic passes. The chief "market" is, without doubt, South America, a new country of vast undeveloped possibilities, rich already, and containing a surplus of men who have flocked in as pioneers and adventurers to make their fortunes. The chief hunting ground of the "souteneur" is in Central Europe, impoverished and scarred by war. Hungary and Poland especially have paid a terrible toll in womanhood since 1919. There is a beaten track of human misery and degradation from the heart of Europe to South America.

Some of his victims are already versed in vice, and are not unwilling to accompany him to more lucrative employment. Often they are defrauded by him or by the "madame" to whom he hands them over. Others are merely foolish girls who are "stage-struck" or want to dance in cabarets. They are engaged to dance in foreign cities where they quickly learn what else is expected of them. How many are forced by circumstances into complaisance is proved by the ordinance of the authorities at Salonika, which draws no distinction whatever between cabaret dancers and common prostitutes. Both are submitted to the same regulations.

Even more unfortunate, for their awakening is more cruel, are the girls the "souteneur" has lured from home with a promise of marriage.

Sometimes indeed, there is a marriage, for the "souteneur" does not hesitate to add bigamy to his other crimes if it simplifies matters for him. Occasionally it does, for the legislation of some countries to control this traffic does not extend to the married woman. Travel and immigration are thus facilitated. When he has reached his "market" he hands over his captive for a good price which may range from \$3000 to \$3,600.

Henceforth the woman is in the toils. She is encouraged to run into debt and she is paid so little that debt is difficult to avoid. Then the control of the "madame" can be tightened, and she can be compelled, to put it brutally, to work longer hours. She can be more easily led to practise unnatural vices because they yield higher profits.

Not the least terrible feature of this trade in immorality is the youthful age of the majority of its victims. Youth is at a premium. Young girls are wanted because they have longer to live.

Incontrovertible evidence proves that in one country, at least, mothers have sold their own children into this slavery.

How Should We Teach History

Should truth be sacrificed in history books for the sake of propaganda or patriotism (?) is a question now agitating the American mind. We have a direct interest in the question as we are probably the most maligned nation in our own history books—maligned by interested imperialist propaganda. Some in this country think that lies should be answered by greater lies, i.e., if British historians have painted us black we should answer by painting ourselves in the colours of the aurora and dab the British with the murkiest shades. For such opinion-holders the following extract from an article by Lyon G. Tyler Ph.D., editor, Tyler's Quarterly Historical Magazine, contributed to the *Current History* will provide interesting reading.

Truth is the fundamental test of history and there is no such thing as American truth, British truth, French truth or German truth—there is only one eternal almighty truth for all. Two things only are to be considered by a just historian—statement of real facts, no matter what side they may favor, and impartial deductions from those facts according to their relative importance. An American history necessarily, of course, turns upon matters relating strictly to America. To luxuriate in the history of other countries, except in an explanatory way, is a departure from the true philosophy of the work. The facts given should always afford a perspective and be full enough to justify the conclusion. In a real history indiscriminate eulogy, prejudicial statements and unwarranted conclusions have no place. While there is plenty of evidence that our forefathers were not as faultless as the old historians

were in the habit of representing them, I hold that there is enough real heroism in American history and in American biography to afford all the inspiration necessary to patriotic citizens without the necessity of ascribing godlike attributes to the heroes or obscuring the real case by misrepresenting facts in favor of the Americans or using abusive language of the enemy or opposition.

Women Bolsheviks of England

What is the attitude of the average English women towards Bolshevism? Who are the women Bolsheviks in England? Why are they Bolsheviks? Such questions are answered by Edith Sellers in the *Nineteenth Century and After*. We are told:

In England very few women are born Bolsheviks. What women Bolsheviks we have among us have, for the most part, been manufactured. By nature, indeed, the great majority of working-class Englishwomen are staunchly anti-Bolshevist—at any rate, when once their young days are past. Of that proof may be had, even in Hyde Park, any Sunday evening by watching the faces of the women who stand around the platform on which some Red orator holds forth, and listening to the comments they make. It is, as a rule, only the young among them who show any very keen interest in what is being said; while as for the older women, some seem indignant, others amused, others again—and they are the majority—bored or worried, especially if their husbands are with them and take to applauding. Bolshevik orators preach Communism, we must not forget, and the average working-class Englishwoman has no sympathy at all with anything that even smacks of Communism. So long as she has a roof over her head, a bed to sleep in, a few kettle and pans, even a hint that she might be called upon to share her possessions with her thrifless, possessionless neighbors would at once set her ablaze with wrathful indignation. If she is one of the lucky few and has a cottage of her own, or a few pounds in the War Loan or some savings bank, she would fight to the death rather than let what she has be thrown into any common stock, in which she would have no share and share alike with all comers.

Moreover, if she has a husband and children, she is fairly sure to be dead, not only against Communism, but also against the whole Bolshevik system; of its moral, or immoral, code she has a perfect horror. If she is of a religious frame of mind indeed, she dubs it 'devilish.' For, let the Soviet's agents argue as they will, she is firmly convinced that under Bolshevik rule, were it in force here, the State would be able to take possession of her children and do with them what it would: while as for her husband, he would be free to turn her adrift any day, and install in her place some slip of a girl. Why, even to think of such a state of things is enough, she declares, to drive any decent woman 'stark mad.' And she, the average working-class woman, whether she has a husband and children or not, is an e.

decent woman it must be remembered kindly and law abiding by instinct, sound to the core. There is not much danger therefore that she will ever become either a Communist or a Bolshevik unless indeed something should happen that fair upsets her makes her feel that she or those near to her are being unjustly treated degraded deprived of what is due to them.

But those that are Bolsheviks are so for queer reasons. For says the author

Among the women Bolsheviks whom I have known two emulated the Ishmaelite creed because in spite of all their efforts to escape they were compelled to pay supertax a third a small farmer because during the war some government official prevented her from doing what she wished to do with her own bit of land and a fourth a sturdy young female because a conscientious panel did or refused to certify her as a consumptive!

Those are of course exceptional cases. Still the great majority of Englishwomen who are Bolsheviks are Bolsheviks for no reason that has anything to do either with principles or theories but simply because they have been fair upset: they have suffered what they regard as wrong or have seen their children suffer wrong. So it is at any rate with the older women. Some of them have been robbed of their savings and forced to betake themselves to the House or have had to wander about without shelter because children are looked on as lance by landlords or worst of all perhaps because while facing the grim wolf at close quarters they have come across a dog being overfed. Even the young who join the Reds join as a rule because they have been upset. They have had to scrub floors perhaps when they would fain have been dancing to wear cotton gowns when they longed to wear silk for the latter day young have a great love of pleasure of finery too and it cuts them to the quick to see others going off to balls in smart clothes. Little wonder therefore that the Bolshevik creed attracts them or that they listen eagerly to those who tell them that when Bolshevism is the order of the day here it is 'they who will wear smart clothes and go to balls while those who wear them now will be in cottons and scrub floors

Trotsky Exiled to Turkestan

The *Literary Digest* tells us

Trotsky who with the late Lenin founded Bolshevism and was for years one of the stalwarts of the Soviet has been exiled to the snowy steppes of Russian Turkestan described in some journals as one of the loneliest and dreariest spots in the world. As seen at a glance by the *London Daily Mail* he was deported because he dared to form an opposition to the Bolshevik Government now controlled by Stalin. At the same time other Bolshevik former Commissars, who joined him in the Opposition—among them Zinoviev Radek Rakovskiy Kamenev Smilga and Smirnov—were also sent to separate and equally inaccessible and desolate stations. In a *Lancia* dispatch to the *London Daily Express* from J. J. Greenwall its correspondent in the French capital we read

The disappearance from the Russian stage of Leon Trotsky Karl Radek and their minor colleagues is the most astounding event that has occurred in Russia since the day the revolutionists stormed a cross the Neva bridges and bombarded the Winter Palace but the real meaning of Trotsky's passing has not yet been realized. It is nothing less than a turning point in Russia's policy. It means the definite abandonment of world revolution as the main plank in Soviet policy.

Who were the leaders of the Russian revolution? Lenin and Trotsky. Lenin lies buried in a curious underground tomb in the Red Square Moscow. He died at the right moment for although the peasants venerated Lenin as a saint yet had he been alive today he would have shared Trotsky's exile. Of that there is no doubt whatever. About twenty yards behind Lenin's tomb is the wall of the Kremlin that city within a city where the Soviet leaders live. Trotsky lived in the Kremlin and until last year was the head of the extremely important concessions commission.

Every foreign concession had to pass through Trotsky's hands. That was his power. Then came the split within the Communist party and Trotsky had to leave the Kremlin and seek a private residence. Stalin the new dictator of Russia, is a fair man. He gave the active revolutionists the right to reply to the allegations which were made against them that their policy had failed and instead of building up a new Russia it was dragging the country down and down. With the failure of the Soviet attempts to make China Red came the final and utter collapse of the old regime. Then it was only a matter of weeks before it was decided to send the world revolutionaries into exile.

The dismissal of Karl Radek is only second in importance to the passing of Trotsky. Radek whom I first saw in a Berlin prison cell in January 1919 was the head of the world wide Soviet revolutionary propaganda. Radek was the head of the remarkable Chinese University in Moscow. This university as recently as last August was filled with young male and female Chinese who were being trained as revolutionaries to be sent back to China and other places in the East to prepare their countrymen for a revolution.

What of the man who now rules Russia? Joseph Stalin has had a long standing grudge against Leon Trotsky. It dates back to the time when Trotsky was in the field against the White Russian General Denikin. Stalin went to call on Trotsky but the sentry outside Trotsky's quarters refused to allow Stalin to pass. Stalin—who believes in direct action—rushed the sentry and lurst in on Trotsky when he was in conference. Trotsky reluked Stalin had the sentry arrested the troops paraded and the sentry sentenced to death. Trotsky then pardoned the sentry publicly and gave the reasons which led to his arrest.

Stalin never forgave Trotsky for what he considered an insult, and his policy gradually evolved until it became quite definitely anti revolutionary. Stalin however is not pro British. Rather the reverse and like the majority of the men with whom he has surrounded himself he is 100 per cent Russian.

I am convinced that the world revolutionary

movement has been dropt. Instead of Great Britain and the Continental countries being riddled with Soviet agitators trying to cause strikes, we shall find many Soviet spies, just as we found many German spies before the Great War. I believe, too, that the next great Russian sensation will be the break between the Red International and the Soviet Government. This, of course, is a matter of time, but I do not think it is a possibility which should be ruled out when dealing with Russian affairs. After all, six months ago who would have believed that Leon Trotsky, Kark Radek, and the others would be sent into exile by Joseph Stalin, a man whom nobody outside Russia even knew?"

Japan Weekly Chronicle on Simon Commission

The *Japan Weekly Chronicle* comments at length on the Indian situation as complicated by the Simon Commission. We quote from that paper below without comment:

The Simon commission has been by way of an anticipation of the original programme, and should in theory, be received with acclamation and tears of gratitude. But that has not been its fate. Offence was given in the first place by making it British instead of a mixture of Englishmen and Indians; but quite apart from that the whole idea seems to be unwelcome. It is not impossible to suppose that some of the most active agitators were the least certain that the evidence would show that the reforms had not been very admirably used, but that they were genuinely concerned about their faults of omission is not to be supposed for a moment. It is certain that a commission of this sort will see what it is predisposed to see. The political dictum has been laid down that no nation is good enough to govern another nation. But if one went looking for shortcomings it would soon be established beyond any doubt that no nation is capable of governing even itself decently. It is easy enough to point out to Indians that their rule will be neither just nor competent, but they would retort by pointing out that Britain's government of her own people is so imperfect that not very long ago the whole country was paralysed by a strike which members of the Government described as revolutionary and treated as a military problem. How, then, they would say, can Britain pretend to govern India when that is the best she can do with her own country.

The *Japan Weekly Chronicle* assumes that the boycott of the Commission was carried out with a view to convince the Simon Seven by violence; because reason is a bad convincer. We are told:

Perhaps it is not very flattering to Sir John Simon to suppose that he will be more impressed by assaults, boycotts, rioting, and the closing of shops than by reason, but as they would point out, even so eloquent and distinguished a lawyer as Lord Birkenhead fell back on all kinds of

violence when argument failed, so why should not they? The question whether in the abstract, the claim of the objectors to the Commission is justified, is hardly pertinent. Whether they would make a good show at government is doubtful. That they would try and give justice to the depressed classes and a fair share of everything to the Musalmans, is worse than doubtful, but the fact seems to be that, however little they may represent India as a whole, that great entity is not sufficiently interested in the dispute to sweep away their pretences on a wave of popular indignation, but so far as it comes into play at all, supports them. It is also true that as with Ireland, the longer claims are withheld and more grudgingly they are granted, the further they advance and the greater they become. The Commission has made such a bad start that it would be best to abandon it. If the opinions of the Government's own officials cannot be acted upon, then the case for serious defects in the administration is established. On the part of the British official hierarchy in India the principal factor in making them profoundly reluctant to put unlimited power into the hands of the group demanding it is a genuine fear that it would result in extensive injustice to large numbers of people but in the end that evil will have to be left for the people themselves to set right. It may cause something like chaos, but there seems to be no belief even in the most conservative that to hold on to the present system and suppress hostile action will ever result in a permanent condition of happiness, progress, and content.

—

Suppose Germany Ruled England

Rev. J. T. Sunderland quotes in *Unity* from H. W. Nevins on in order to bring home to his readers the absurdity of the foreign domination of India. We read:

Some years ago, Mr. H. W. Nevins on contributed an article to the *North American Review* entitled "Under the Yoke," in which he imagines England to have been conquered by Germany (as India by England) and then draws a picture of Germany ruling England (exactly as England rules India). He does not mention India but everyone who knows India can see what he has in mind. Here is Mr. Nevins on's picture:—

England would be divided into four sections under German governor-generals and there would be German governor-generals in Scotland, Wales and Ireland. Germans would be appointed as district commissioners to collect revenue, try cases and control the police. A Council of Germans, with a proportion of nominated British lords and squires, would legislate for each province.

A German viceroy, surrounded by a council in which the majority was always German and the chief offices of Chancellor of the Exchequer, Commander-in-Chief of the army, and so forth, were always filled by Germans, would hold a Court at Windsor and Buckingham Palace. The English would have to undertake the support of Lutheran churches for the spiritual consolation of their rulers. London and the other cities would be

given German Lord Mayors. German would be the official language of the country, though interpreters might be allowed in the law courts. Public examinations would be conducted in German, and all candidates for the highest civilian posts would have to go to Germany to be educated.

The leading newspapers would be published in German and a strict censorship established over the *Times* and other rebellious organs. Criticism of the German Government would be prosecuted as sedition. English papers would be confiscated, English editors heavily fined or imprisoned, English speakers deported to the Orkneys without trial or cause shown. Writers on liberty, such as Milton, Wordsworth, Shelley, Burke, Mill and Lord Morley, would be forbidden. The works of even German authors like Schiller, Heine and Karl Marx would be prohibited.

On the railways English gentlemen and ladies would be expected to travel second or third class, or if they traveled first they would be exposed to German insolence and would probably be turned out by some German official. Public buildings would be erected in the German style. English manufactures and all industries would be hampered by an elaborate system of excise which would flood the English markets with German goods. Such art as England possesses would disappear.

Arms would be prohibited. The common people, especially in Scotland and northwest provinces, would be encouraged to recruit in the native army under the command of German officers; no British officer would be allowed to rise above the rank of lieutenant—all commissions being reserved for Germans. The Boy Scouts would be declared seditious associations. If a party of German officers went fox-shooting in Leicestershire and the villagers resisted the slaughter of the sacred animal, some of the leading villagers would be hanged and others flogged during the execution. The national anthem would begin: "God save our German king! Long live our foreign king!" The singing of "Rule Britannia," would be regarded as a seditious act.

The Germans would abolish Eton, Harrow and other public schools, together with the college buildings of Oxford and Cambridge, converting them into barracks, while the students would find their own lodgings in the towns and all stand on far greater equality in regard to wealth.

German is not a very beautiful language, but it has a literature, and the English people would have the advantage of being compelled to speak and write German in all their dealings with the Government, and they would learn something of German literature and history. They would also learn to eat black bread, which is more wholesome than white. All the English would, of course, be compelled to contribute heavily to the defense of the German Empire, and would pay the expenses of the large German garrisons quartered in their midst and of the German cruisers that patrolled their shores.

Will White Australia Last?

We read in *The Young East*:

In a speech recently delivered at Perth, Western Australia, before a large and representative assembly of legislators and businessmen, Mr. C. S. Nathan, of the Commonwealth Development and Migration Commission, is quoted to have asked two pertinent questions. These were:

"Can we say we shall be satisfied if Australia in 23 years' time has a population of 10,000,000? Could we hold Australia in such circumstances in face of the requirements of neighbouring nations?"

Australia is now inhabited by just over 6,400,000 people. According to a simple process of arithmetic, based on the present rate of increase, it will take until 1950 before the population of Australia reaches a paltry 10,000,000. We are told that in Western Australia alone there are yet at least 12,000,000 idle acres within the 10-inch rainfall, a good deal of it enjoying 11 and 12 inches annually, all capable of being settled and producing wheat.

In face of these facts, we are tempted to ask: "How long will Australia continue to adhere to its white Australia policy?" There is no denying that Australia's slow development in spite of its vast area and rich natural resources is primarily due to this policy, which closes its doors rigidly against all but white immigrants. That this policy is desirable from the Australian point of view is not disputed, for it has kept the country racially pure and maintained the standard of living high. But will it be able to keep it up for long? While Australia is slowly plodding its way towards economic prosperity, all because it lacks manpower to develop its resources, all the nations surrounding it are advancing by leaps and bounds on the high road of industry. Especially noteworthy is the economic progress which is being made in recent years by South American nations. Free from racial prejudice, they receive with open arms immigrants from all quarters of the globe and thanks to the labour and capital they bring with them they are rapidly surging forward as great industrial countries. It does not require much power of foresight to predict that in the course of a quarter of a century, such countries as Brazil, Argentine, Chile and Peru will closely follow the United States of North America in wealth and prosperity. Meanwhile India, China and Japan will also grow up as equals of industrial nations of the West. Supposing Australia refuses to part with its white Australia policy, what will be the position it will find itself in then? The answer is obvious. Hopelessly beaten in the economic struggle, its position will be that of a minor nation. It appears to us that if only to keep pace with the progress of its neighbours, Australia will be compelled sooner or later to abandon its white Australia policy.

By BENARSIDAS CHATURVEDI

The Poet on Colour Prejudice among Colonial Indians

The following letter, that has been sent to the Press by the Poet Rabindranath Tagore, will be read with considerable interest by our readers. The Poet has given a timely warning to our *Chhota* Imperialists, who consider themselves superior to the Natives and think it below their dignity to associate with them.

"I have read the letter of Mr. Habib Motan dated November 19, 1927, addressed to the Agent-General, protesting against any Indian being invited to attend Fort Hare Native College, for University Education. In this published letter, he states, that "it is humiliating to the Indian sentiment, and to the Indian National Honour and Civilisation, to think that our Agent-General is trying to bring us down to such a low level." Such colour prejudice, from an Indian, who has himself suffered from the racial prejudice of the European, is to me revolting in the extreme. It is neither in accord with Indian sentiment, or with Indian National Honour and Civilisation. Our only right to be in South Africa at all is that the native Africans, to whom the soil belongs, wish us to be there. To insult them publicly as Mr. Habib Motan has done, in this open letter,—both by the words I have quoted, and by others equally contemptuous,—is an act which needs immediate repudiation from all right-minded men."

RABINDRANATH TAGORE

'Hindu' or 'Indian'?

We congratulate Hon'ble Mr. S. Veerasamy of Kuala Lumpur F. M. S. on his appoint-

ment as a member of the Federal Council. There is, however, one thing in this connection, which we have not been able to appreciate at all His Excellency the Governor of F. M. S. made the following speech in the Council on this subject —

His Excellency—"Honourable Members, before proceeding with the ordinary work I should like to take this opportunity of congratulating Mr. Veerasamy on the distinction, which is his, of becoming the first representative of the Indian community on the Federal Council. There is just one word which I should like to say on the subject of this appointment. We have on this Council various representatives of the different communities in Malaya—communities which are entirely Mohammedan, communities which are mainly Christian and so on, and as regards Indians in Malaya you might say that the preponderant majority of these are Hindus. There are, of course, many Christians and some Mohammedans no doubt as members of that community. When the question of appointing a member especially to represent the Indian community arose, and when I was in correspondence with the Secretary of State for the Colonies on the subject recently, I pointed out to him that we had in 1921 in the Federated Malay States 305,219 Indians and 9821 Ceylonese and according to the latest estimates there are 410,000 Indians and 12,300 Ceylonese. In view of that it is recognised by Government that the 12,300 Ceylonese are also preponderantly Hindus and are of Indian origin, and I wish to state that Government reserves to itself the right at any future time when a vacancy occurs, which we hope will not occur for some years, to select any member of the Hindu community whether born in the F. M. S. or not to represent the community, the majority of which subscribes to the Hindu faith. Though the community which is represented now by Mr. Veerasamy is called the Indian community, we regard it as including Ceylonese, and him as especially representing Hindu interests on this Council."

Now why should the Government of Federated Malaya States make a distinction between Hindus and Mohammedans or

Christians? *The Tamil Neean*, an Indian paper of Malaya, writes:—

"The reference to the Indian member as one representing generally Hindu interests is, to say the least, very unfortunate. The Indians all these years have acted as one solid body and we are convinced will continue to function as such, now and for ever. Whatever may be the state of things at home in India the members of the Indian Community shall ever zealously adhere to this noble ideal."

Communal representation has already done considerable mischief in India and its introduction among our compatriots in the colonies is fraught with great danger to the unity that exists among them. Will the Indian Government protest against this invidious distinction?

Tanganyika Indians and East African Federation

Messrs. S. N. Ghosh and M. P. Chitale voiced the feelings of the Indians against East African Federation in their admirable speeches in the Tanganyika Legislative Council. Hon'ble Mr. Ghosh said:—

If Federation is such a good thing, why do not the other three countries want to come in? Rhodesia with its White predominance does not want to come in. Nyasaland does not see eye to eye with us. And who in Tanganyika wants Federation? Only the Europeans. The total number of Europeans here is 4,580, and the majority of these are Government officials. There are not more than 1500 non-official European subjects. The Natives are an inarticulate mass now. Who is going to represent them? The Kenya Memorandum talks of three Europeans to represent them. The Indians in Tanganyika have increased since 1921 from 9,000 to 18,000, and no one can deny that they are playing a useful part in this country. (Hear hear). They are doing work which Europeans will never be able to do. These 18,000 with one voice do not want Federation. The Indians do not think that it will in any way be of any use to them at this stage.

The position in Kenya is different from that here. Kenya wants a European Unofficial Majority before Federation is established. But they will bring their policy to Tanganyika, for they will be on the Federal Council. There is a policy of racial differentiation in Kenya. How could one keep such a policy separate and inviolate? If there was a majority of people in the Federal Council whose angle of vision was different, how could one obviate their policy becoming a policy of the Federated States? Kenya would be bound to come down into Tanganyika, on account of the latter's greater prosperity, and that is why the Indian community will fight Federation tooth and nail, even if it becomes an accomplished fact. Everything is liable to change."

Here are two extracts from Hon'ble Mr. Chitale's speech:—

"Are we certain that we shall have our safeguards? Who will listen to our conditions? One might submit any number of conditions, but our friends across the border have a stronger pull at home, have a greater influence there and their argument would be listened to more eagerly than our prayer, for safeguarding our own right."

"He and his colleague, being communally and racially different from the rest of the members, felt the greater danger which would come over them from Federation, and they wanted to protect themselves from any infringement of their rights, and the rights of the Indian community, under which, under the present Government, they have equal treatment, and they did not require that their position should be in any way endangered by Tanganyika being linked up with the Kenya Colony."

Will Messrs Ghosh and Chitale prepare a short pamphlet on Tanganyika giving detailed information about prospects for Indian trade and settlement there?

The Danger in South Africa

I interviewed Mr. C. F. Andrews about the alarming news from South Africa that 'the Colour Bar Act is likely to be applied to Natal.' This is what he said:—

"I had always feared most of all the blunder made at the time of signing the Capetown Agreement by not obtaining in the settlement itself a clear assurance about the Colour Bar Act and its application to Natal. This was really culpable negligence and it may have disastrous effects. The Colour Bar Act makes it impossible for those not specified under the Act to handle machinery whenever that machinery has been notified under the Act. Up to the present the Colour Bar Act has not affected Indians as skilled workmen because it was only applied to the mines and there were no skilled Indian workmen in that mechanical occupation but the whole sugar refining industry in Natal is carried on by means of skilled Indian workmen. If the Colour Bar Act is applied to the sugar refining machinery all of those Indians will be thrown out of work. At the time of the Round Table Conference I pressed with all my might for a definite protest to be made instead of leaving the matter unnoticed. I feel that we still have a strong position under the Agreement to protest against its extension because the first clause under the head of 'Upliftment' declares that it is the duty of the Union Government to foster each permanent section of the population "to the utmost of its capacity and opportunity." It may rightly be argued that restriction from such an occupation as the sugar industry means the very opposite of fostering Indian capacity. This is the line which I have advised Indians in South Africa to take. But our position would have been far stronger if we had definitely referred to it in the Agreement itself and had protested against it."

Indians in Southern Rhodesia

The following facts and figures are taken from the Report of the Director of Census,

Southern Rhodesia, regarding the Census taken on 4th May, 1926.

The numbers of Indians in Southern Rhodesia at the censuses taken since 1901 :—

| | |
|------|-----|
| 1901 | 703 |
| 1907 | 807 |
| 1911 | 701 |
| 1921 | 854 |
| 1926 | 929 |

The Indians shown for the years 1921 and 1926 were those born in India. If we add those of Indian parentage born in the Union of South Africa and Southern Rhodesia, the figures are increased to 1151 in 1921 and 1311 in 1926.

The total number of Asiatics including these Indians is only 1451, thus the Indians make up more than 92 percent of the Asiatic population. In the Asiatic population there were 117 males born in five years from 1921 to 1925 and 22 of these died before attaining one year which means a male infantile death-rate of 188 per thousand. This is excessively high when compared with the mean for European infants, which was only 75.31 for the same period. But the female infantile death-rate was only 2.81 per thousand per annum. On this point the Director makes the following significant observation :—

"Influences which must have considerable effect in producing the very low female death-rate are the common practice amongst the Indian men of sending their wives home to India at frequent intervals and the fact that it is only of recent years that they have brought their women-folk to this colony in any numbers, being content for the most part formerly to visit India themselves periodically."

It is to be noted that the females represent only 235 per cent of the whole and there are 3.25 males to each of the opposite sex.

For colonisation, in the real sense of the word, it is necessary for our countrymen abroad to take their families with them. They ought to settle in the colonies instead of living there as occasional visitors.

An Aryasamajist Preacher to Fiji Islands :—

Shriyut Mehta Jaimini, B.A., LL.B., sailed for Fiji by S. S. the Sutlej on March 17th. Mehta Jaimini has already visited Mauritius, Anam, Siam, Singapore, F. M. S., Sumatra and Java and his lectures produced a great impression upon our countrymen in those places.

Mehta Jaimini was born in Montgomery District of the Punjab. He passed the vernacular middle examination from his village school. As his means could not permit him to study English he had to become a teacher in a village school on Rs. 15 p m

Mehta Jaimini

By studying privately he passed the matriculation and intermediate examinations and got his degree in 1896. He passed the LL.B. examination in 1899. He is thus a self-made man. For more than twenty years he practised as a lawyer and gave up his practice in 1921 and since that time he has assumed the role of a Vedic preacher.

May we hope that he will exert his influence to bring about unity among our people in Fiji ?

Indian Vernaculars in South Africa

Swami Bhawan Dayal Sanyasi deserves our hearty congratulations for putting up a good fight for Indian Vernaculars at the Kimberley Congress in South Africa. He has kindly sent me an account of this discussion, telling me how Mr. Sastri made the mistake of ~~mis~~representing the interests

Indians at the Kimberley Congress

Right Honourable V. S. Srinivas Sastri with his official secretary Mr. Tyson and private secretary Mr. Kodand Rao

Indian Vernaculars, how the Congress first accepted the views of Mr. Sastri and how after a strong protest from Bhawani Dayalji it ultimately passed a resolution in favour of the introduction of Vernaculars. As I have unfortunately missed that speech of Mr. Sastri, I do not know on what grounds he opposed the inclusion of the Vernaculars.

Bhawani Dayalji writes in his letter :—

"Vernacular education can be included in the curriculum of the Government and Government Aided Indian schools of Natal and also with great

Swami Bhawani Dayal

NOTES

How India's Indigenous Sugar Industry was Ruined

In *The Commercial Products of India* Sir George Watt writes :—

"An import duty on Indian sugar, which was practically prohibitive, was imposed by Great Britain. It came to 8s. a cwt. more than was taken on Colonial sugar." (p. 958.)

The italics are Sir George Watt's.

He concludes the section devoted to "Exports to Foreign Countries" with the following paragraph, which has the side heading "Severe Blow":—

"Thus there can be no doubt that a severe blow has been dealt to the Indian sugar industry, which, but for its own immense resources and recuperative power, might have been calamitous. Had England continued to purchase Indian raw sugar, there is little doubt an immense expansion of the area of production, and an enhancement of the yield, would have been the natural consequence. All this is now changed, and sugar represents 533 per cent. of the total value of the articles of food and drink imported, and is the second largest single article of importation, the first being cotton piece goods. Thus, the two chief items of India's early export trade have become her greatest modern imports."

Sir George Watt's work, from which the above extracts are taken, was published in 1908 "under the authority of His Majesty's Secretary of State for India in Council," and is, therefore, not a seditious book written by a pestilential agitator.

How India's Indigenous Paper Industry was Ruined

In the same work Sir George Watt gives a brief history of the manufacture and use of paper in different countries of Asia, including India. Coming to the days of the rule of the East India Company, he writes :

"One of the earliest detailed accounts of the Native methods of paper-making in India is perhaps that given by Buchanan-Hamilton (*Stat.*

Acc. Dinaj. 272-3), the material used being jute. Prior to 1840 India obtained a large share of its paper supplies from China. About that date interest was aroused in the subject, and both Hindu and Muhammadan factories for hand-made papers were established all over the country. During Sir Charles Wood's tenure of the office of Secretary of State for India, an order was issued for the purchase of all the supplies required by the Government of India in Great Britain, and this threw back very seriously the growing Indian production." (P. 866.)

The italics are ours.

Sir Charles Wood was the grandfather of Lord Irwin, the present Governor-General of India, and is generally known for his Education Despatch. But he should be remembered also for the order which contributed largely towards the decay of the indigenous paper industry of India.

The Indigenous Iron Industries of India

In Sir George Watt's *Commercial Products of India*, page 692, it is stated :

There would seem to be "no doubt that the existing manufacture of wrought iron by a direct process was widespread in the country before the date of the most ancient historic records, while the manufacture of the ancient *woot*; anticipated by many centuries the cementation process, developed in Europe, for the manufacture of the finest qualities of steel." "The Native iron-smelting industry has been practically stamped out by cheap imported iron and steel within range of the railways, but it still persists in the more remote parts of the Peninsula and in some parts of the Central Provinces has shown signs of slight improvement." (*Imp. Gaz.*, 1907, iii., 145) According to Mr. Syed Ali Belgrami, the Nizam's Dominions furnished the material from which the famous Damascus blades of the Middle Ages were made. To this day Hyderabad is noted for its swords and daggers.

It does not appear that the British Government in India ever did anything to prevent "the Native iron-smelting industry" from being "practically stamped out." But some

glimpses of how the process of stamping out was accelerated are to be found in Valentine Ball's *Jungle Life in India*, pp. 224-5, where he writes :—

November 16th [1860]. Deocha—

In this village there are some native iron furnaces, the sole surviving remains of an industry now well-nigh extinct in this part of the country owing to the restrictions placed upon it by the Birbham Company, which bought up the sole right to manufacture, and owing also to the royalty subsequently inflicted by the native landlords.

The Birbham Company, referred to above, was a British Company. The British Government ought not to have sold the sole right to manufacture iron and steel to this company, nor allowed "the native landlords" to inflict a prohibitive royalty. Who, if any interested persons, instigated them to do so, is not stated.

Valentine Ball adds :—

To the best of my belief these furnaces are, for their size and the magnitude of their results, by far the largest and most important in the whole of India. Each furnace could make about 15 cwt of iron per week; and the total estimated output in 1852 from 70 of these furnaces was put down at 1700 tons by Dr. Oldham. The *lohas* or iron-makers here were Hindoos, but farther to the north, in the vicinity of the Ramguri Hills, there is another race of iron-makers, who use the ordinary small furnaces, and are called *Cois*. It is probable that they are identical with the *Agurians* of Hazaribagh and Palamow, whom I shall describe on a future page.

—

Feasibility of Industrial Revival

Though most of the principal indigenous industries of India have decayed or been destroyed during the British period of Indian history, it would do no good to any body merely to dwell mournfully on their total or partial disappearance. That there were such industries at one time shows that the raw materials necessary for them exist in India and that Indians had the knowledge and the capacity to manufacture them into finished products. It behoves us, therefore, to revive our industries according to the most up-to-date methods and with the help of the latest machinery. That it is possible to do so is proved by the cotton industry of India. In spite of handicaps, our countrymen of Bombay have shown great enterprise in this branch of industry. Similar other industries should be started in other parts of the country. Where, as in Bengal, a local modern

industry, like jute, has been almost monopolised by foreigners, Indians should make strenuous efforts to capture it. Already there are some jute mills in Bengal owned by Indians.

—

The Tomb of Rajah Ram Mohun Roy

We have received the following appeal from the Reverend Dr. W. Tudor Jones in connection with the tomb of Rajah Ram Mohun Roy at Bristol —

14, Clifton Park,
Bristol.
Jan. 23rd, 1928.

Dear Indian Friends,

I wish to make an appeal to you for help in connection with the Tomb of Rajah Ram Mohun Roy, who died in Bristol in 1833 and was buried here. A sum of money invested in the names of the Trustees of the Unitarian Church at Lewin's Mead, Bristol, would provide for the up-keep of the Tomb for the future. And, also, Lewin's Mead Chapel, where the Rajah worshipped, has been restored at a heavy cost of nearly £1,000. The Congregation has no wealthy members, and we appeal to you to help us to clear a debt of £500. This Place of Worship was very dear to the Rajah. It was through the instrumentality of the then Minister—Dr. Lant Carpenter—and of his great daughter, Miss Mary Carpenter, that the Rajah came to England. It is our intention to place a Tablet in this Place of Worship for the Rajah. Mr. Keslhub Chunder Sen was also greatly attached to the Place and we should like to place a Tablet to his memory as well.

On the 27th of September of each year a service is held at the Rajah's Tomb, and Indian friends and pilgrims visit the Church.

Any contributions sent to me, as Minister of the Church, will be gratefully received, acknowledged, and used for the purposes which I have mentioned in the

etter. It is our strong wish to preserve for all times the Tomb and the Religious Building.

With thanks,

I remain,

Dear Friends,

Yours sincerely,

(Sgd.) (Reverend Dr.) W. Tudor Jones.

The appeal speaks for itself. Indians of all provinces, races, creeds and castes should contribute their mite to enable Dr. Tudor Jones to keep the tomb of the Rajah in good repairs. The people of Bristol have done much hitherto to preserve it. It is time now for us to do our duty.

The editor of *The Modern Review* will be happy to receive, acknowledge, and remit all contributions to Dr. Tudor Jones.

—

Defeating Government in Legislative Bodies

As in previous years so in this, the Central and Provincial Governments have been defeated in the Legislative Assembly and the Provincial Councils a good many times, and yet the Central and Provincial Governments go on merrily, without even any change in their personnel brought about by such defeats. For this reason these official defeats and non-official victories may appear useless and meaningless, and the time and energy of the non-official members spent for inflicting the defeats may seem wasteful expenditure of those valuable things. But these victories are not futile. For one thing, they prove that our case is strong and our representatives are patriotic and capable men. In legislative bodies which are not entirely elective and in which the official influence is so strong, it is not an easy thing to inflict defeats on the Government.

India is not a new country. It is not like a clean state on which one can write anything that one wants. Some work of destruction has sometimes to be done in order that constructive work may commence. One would fain not do such work. But sometimes it has got to be done. As it is not and does not appear to be practicable to remove the British bureaucracy from the sphere of Indian administration and politics by some revolutionary change, what has to be done is to destroy the false belief in their superior

and special altruism, beneficence, capacity, efficiency and *bona fides*. It is not urged that this should be done by any means, fair or foul—by recourse to falsehood and unrighteousness, if need be. This can be done and should be done by strict adherence to truth and righteousness. Debates in the council chambers, resulting in inflicting defeats on the Government, serve the useful purpose pointed out above. It is not meant that all such defeats are brought about by the superiority of the case put forward by the non-official majority. Sometimes the officials have the worst of it in intriguing, it being then a case of 'diamond cut diamond.' The non-official victories which deserve praise are those which are due to superior principles, arguments, and debating capacity.

For constructive work the essential requirements are knowledge, practical idealism, character, devotion and unremitting toil.

—

Empire Parliamentary Association Delegates to Canada

At the annual meeting of the Empire Parliamentary Association, British India branch, four delegates were elected to attend the next meeting of the Association in Canada, the expenses of the delegates being borne by the Canadian Government. The following members have been elected delegates: Dewan Chaman Lal, Pandit Motilal Nehru, Mr. T. C. Goswami, and Sir Darcy Lindsay. As the first three are Swarajist Congresswalas, who have accepted absolute independence as India's political goal, they have been subjected to banter and serious criticism for accepting positions in an Association which takes for granted India's place within the British Empire and for agreeing to travel at the expense of a member of the "British Commonwealth of Nations."

The Empire Parliamentary Association is not the only body in which India has a place without being fully entitled to it. All the members of the League of Nations, except India, are self-governing states; other states which are not self-ruling cannot become members. India, a subject country without self-rule, was given a place there by a fluke. The British Government wanted more votes than one, and that was one of the reasons why the signatories to the Peace Treaty at Versailles

were made original members of the League and an English official was made to sign it on behalf of India. Similarly only those countries of the British Empire which have real parliaments ought to be entitled to become members of the Empire Parliamentary Association. India's Central Legislature is a glorified debating club, a sort of camouflage to mislead the unwary into the belief that India has self-rule;—it is not a real parliament in any sense. Therefore, India's legislators are not in reality entitled to have anything to do with the Association. But there is no harm in availing ourselves of opportunities that come without our seeking them, which may enable us to establish contacts with foreign countries and serve India in various ways and acquire experience.

The acceptance of absolute independence as India's political goal does not mean that India has already become independent. If Swarajist Congressmen are to be criticised for accepting positions in an Empire Association, they might also be criticised for remaining members of British Indian legislatures, for paying taxes to the British Government, and so on. We do not think they should be criticised for those reasons. If by becoming and remaining members of legislatures they sincerely feel they can indirectly promote the cause of independence, they are justified in doing so. As for accepting payment of their expenses from the Canadian Government, there can be no objection to it on any reasonable ground. They do not accept money on any conditions, nor do they thereby part with any of their rights or principles. All those of our legislators who are independentists are paid their travelling expenses to and from the seats of Government by the Central and Provincial Governments. If the acceptance of such payment is not wrong, it is also right to accept Canadian money.

Canada has not yet got the semblance of independence but it has got its substance. When it has advanced a little further, it would be able, if it liked, to fully assert its independence. If our delegates can interest the Canadian people in India's claim to a political status similar to that of Canada, it would not be a worthless performance. Let it not be supposed that in writing this, we are advocating a Dominion status for India as the goal of her political aspiration and thereby indirectly opposing her just and natural right and claim to absolute indepen-

dence. We are doing nothing of the kind. The exact means and methods to be used for attaining independence are not yet clear to us. But it may be said in general terms that independence may be won either by means of a revolution or *via* the Dominion status. It is not clear to us how a revolution may be brought about—particularly how it may be brought about without damaging some of India's vital interests and impairing her ultimate prospects of freedom. It may be admitted that it is possible, but what is possible may not be practicable under certain circumstances. As regards the way to independence *via* the Dominion status, though it may not be as dramatic and heroic as the revolutionary method, there is nothing dishonorable or disgraceful about it. Dominions like South Africa and Canada have not declared for independence in the abstract; but it is clear from their actions and the speeches of their statesmen that they will not brook any interference on the part of Great Britain and that they will secede the moment Britain stands in the way of their doing what they think fit in their own interests. What the comparatively small populations of these countries are doing may surely be aimed at by more than one-sixth of the population of the earth dwelling in India.

We are aware that there is at present as little disposition on the part of the British people to agree to India's having Dominion status as to her having independence. But when the same goal may be reached in different ways, there need not be any hesitation to use whatever honourable means may be found handy.

There is one point in the criticism levelled at the Swarajist delegates to the Empire Parliamentary Association which is worthy of attention. It is said that if they go to Canada they will not be able to attend the Simla Session of the Legislative Assembly. That will certainly be a disadvantage to the non-official groups, as they will have three votes the less. Moreover, the opposition will be deprived of the leadership of Pandit Motilal Nehru.

Students and Politics

If young men of and above a certain age who are not students are thought fit to take part in politics, students of and above the same age may also be intellectually fit to do so. This general statement

history of Bengal in regard to religion, art and architecture is unique and unrivalled", said Mr. Dikshit, in the course of his lecture. Illustrated by lantern slides, on the recent excavations and finds at Paharpur. The excavations at Paharpur, which were undertaken by the Eastern Circle of the Archaeological Survey, have yielded a rich harvest of finds during the last three years including amongst others the discovery of a colossal temple of the Gupta period about 350 feet in length and 320 feet in breadth and 70 feet in height, embellished with sculptural and terra-cotta decorations on a scale not hitherto found in Eastern India. The outstanding characteristics of the most flourishing period of the Paharpur temple appear to be catholicity and tolerance. All the known religious sects, such as the Vaishnavas and the Saivas, the Buddhists and the Jainas, were represented.

"The Paharpur mound," the lecturer explained, "was first brought to the notice of Dr. Buchanan Hamilton over 120 years ago as the highest existing ruin of antiquity in Eastern or probably in the whole of India. Subsequently it was seen and described by Westmacott and Cunningham about 50 years ago, the latter making an unsuccessful attempt to excavate it. After the formation of the Eastern Circle about 8 years ago, the site was one of the first to be acquired. In 1923 a part of the surrounding rampart walls was cleared under the direction of Prof. Blandarkar of the Calcutta University. But excavations were first begun in the central mound, which proved to be the main temple, in 1925 by Mr. R. D. Banerji, then Superintendent of the Eastern Circle. Mr. Banerji succeeded in clearing the northern portion of the gigantic temple including the staircase and a gate-house in the northern rampart wall. Since 1926 the work has been conducted under the superintendence of Mr. Dikshit and the entire temple with its terraced verandahs and pillared halls, bands of terra-cotta plaques, recessed niches with sculptures in the lower part of the basement were brought to light.

"The Paharpur temple," the lecturer observed, "supplied an architectural missing link between the earlier monuments of India and the later exuberance of Indo-colonial art as exemplified in Java, Cambodia and Burma. The art of Paharpur supplies the first indications of a prosperous school of sculpture in the golden age of the Guptas. Besides exhibiting the well-known characteristics of broad intellectualism common with the other contemporary schools, the Bengal masters show their individuality in their peculiar refinement and emotionalism. The terra-cotta plaques, of which no fewer than three thousand specimens have so far come to light, represent probably the most well-defined provincial folk art in which Bengal continues to show her prominence to the present day. Almost the entire animal and vegetable world seemed to have been laid under contribution by the artists of Paharpur, who have succeeded in imparting to their handicraft the impressions of the world throbbing with the action and life in which they were living. The wealth of material thus made available to the student of the early plastic art of Bengal is of incalculable value.

The stone images discovered *in situ* at Paharpur form probably the most valuable part of the discoveries. They prove for the first time the

existence in Bengal of a strong Vaishnava and Saiva tradition, and a flourishing school of sculpture in the Gupta period. Some of the earliest and most artistic representations of the exploits of the divine Krishna in his boyhood are to be found here, including the earliest known representation of Shri Krishna and Radha, incidentally proving that the popular Radha-Krishna cult of Bengal can be traced back in Bengal to over fourteen centuries. The images of other Hindu deities, such as Balarama, Indra, Yamuna, Siva, Yama, Agni, etc., are marvellously well executed and exhibit many features of interest to the student of art and iconography. A few stories from the Indian epics, Ramayana and Mahabharata, as also popular folk-tales current among the people, have been rendered in stone and terra-cotta with characteristic force.

"The most important among the finds of the current year's excavation is a copper plate dated in the year 159 of the Gupta year (equivalent to 479 A. D.) recording the purchase and donation of land by a Brahmin and his wife for the maintenance of worship at the Vihara or religious establishment presided over by Nigrantha or Jaina abbots, which, there are reasons to assume, was no other than the Paharpur monument in its earlier and possibly less complex form. There must have been wholesale additions and reconstructions in the next few centuries and from the ninth century A. D. the Vihara seems to have been dedicated to Buddhism, and known after the well-known king Dharmapala of the Pala dynasty, who were devoted adherents of the Buddhist faith. The history of this wonderful monument, along with that of many similar places in Northern India, ceased with the Muhammadan conquest."

"Indianization" of the Indian Army

That the Indian army has remained so long de-Indianized is a sufficient condemnation of British rule in India. The attempt to Indianize it, if made in all sincerity, would only have removed some of the disgrace attaching to British rule on account of the long de-Indianization of the army; it could not have entitled the Government to positive praise. But the Government is determined not even to wipe away any stigma attaching to it. Even the partial Indianization of the army, recommended by the Skeen Committee unanimously, is not to be given effect to. And what was that committee like? It was, in the words of the Liberal weekly *The Week*, edited by Dr. H. C. E. Zacharias, a body of eminent Englishmen and Indians, presided over by the British Chief of Staff of the Indian Army.

"If such a Committee could formulate a unanimous report, proof is not needed that its terms would neither be precipitate nor of a nature to impair the efficiency of the Army. No General of the eminence of Sir Andrew Skeen would have

set his seal to it, we may be quite sure, unless the plan proposed was technically, i. e. militarily, sound. But such a report has now been treated as a mere scrap of paper, floated and tossed into the Imperial waste-paper-basket. And why? Because the report honestly tried to lay the foundation to a really "Indian Army." Instead of which we now find that all the British will do is to open the Artillery, Engineers and Air-Corps to Indians; and that they will give them 20 vacancies *per annum* instead of the 10 promised at present. But already one is told that "suitable" candidates are not forthcoming even sufficient for the ten nominal vacancies, how then is the raising of their number to 20 going to help us? The main recommendation of the Sken Committee of course was for the creation of an Indian Sandhurst, to make India self-supporting in the provision of officers; and that recommendation has been ruthlessly thrown out. There is to be no Indian Sandhurst and there is—particularly—to be no time-table, tying down the Government to a definite programme of progressive Indianization. At every step there is to be a "review of effects," a "watch and see", a *perhaps*, an *if*.

Worst of all, the policy of the "Eight Black Units" is to be revived, so as to make the rest of the army—the *Indian Army*—quite snuz for British Officers and preserving them from the calamity of having an Indian as superior officer. As Indian officers get promoted, they will be drafted into the Black Units—but even there, Sir W. Birdwood with unconscious irony adds, "it would be years before the last British officer was eliminated."

The Eight Units scheme was devised to see that no British officer had ever to serve under an Indian officer, and therefore, it is sacrosanct! Before the Sepoy War, it was not unusual for British soldiers to be led by Indian commandants. But partly on account of the racial arrogance fostered by British Imperialism and partly owing to distrust of Indians, there has been retrogression in the army in this respect.

Mr. Jinnah is reported to have said—and as he was a member of the sub-Committee of the Sken Committee he ought to know—that the announcement made by the Commander-in-Chief in the Assembly with regard to the decisions of Government on the Sken Committee's report is substantially the scheme placed before the Committee by the British War Office. So all the time and labour devoted by the Committee to taking evidence, deliberating, and drafting a report—not to speak of the large sums of money spent, were simply a huge waste and a fraud. The powers that be knew what they would do even before the Committee had set to work! What hypocrisy and camouflage!

Further,

Mr. Jinnah asked the Commander-in-Chief why the report of the Sub-Committee of the Sken

Committee was still suppressed. If it was not to be published, was the appreciation of the Sub-Committee's labour genuine or only formal. "May I know the object of suppressing the report and the proceedings of the Sub-Committee." He thought Pandit Motilal was wise in leaving the Committee (Cheers). He (the Pandit) realized it was not worth while wasting time, energy, and brain. The speaker did not follow that line but continued in order to produce a fair and reasonable scheme for the purpose of accelerating Indianization. They spent 13 to 14 months and their report was unanimous. Continuing Mr. Jinnah said: "The Government has fundamentally turned down that Report and I must emphatically protest against to-day's announcement. It is a travesty of the unanimous recommendations of the Sandhurst Committee" (Hear, hear).

Mr. Jinnah observed that Indians wanted a National Army

The Commander-in-Chief has told us that the 8 Unit Scheme must remain in operation. Every British Officer and Indian Officer who gave evidence was opposed to the scheme and yet it is not given effect to. Why? I tell the House the only reason is, and the Commander-in-Chief has put it in a diplomatic language, that it will be taking a risk—the risk that the British recruitment may fail. Why? Because it is only by means of the 8 unit scheme that an Indian will never be a superior officer to the British Officer. (Hear, hear, Shame).

Mr. Jinnah added "You say, we will increase your number to 25 at Sandhurst and 6 each at Woolwich and Cranwell. That is not what we are aiming at. The Commander-in-Chief knows perfectly well that we wanted to lay the foundation of a Military College in India that will establish our own traditions and a system of our own and the sooner that is done the better, and you want the later it is done the better. That is the real issue. Sir Victor Sassoon says the military expenditure is an insurance premium for safety. Have I got the choice to change the insurance office or say I can get as much safety by paying less premium" (Applause).

That India can get as much safety by paying less premium, that is, that India can be as well defended at a less cost by Indianization of the army is clear from some calculations of Dr. Moonje, which are, that in the cavalry 15,000 Indians cost Rs. 8 lakhs and 4,000 British Rs. 15 lakhs, whilst in the infantry the figures are respectively 90,000 Indians costing Rs. 6 lakhs, and 45,000 British Rs. 16 lakhs."

In conclusion Mr. Jinnah said:—

Here is a machine the whole basis of which is this garrison in the country. (Hear, hear) I do not want the garrison of His Majesty's forces to ensure me. I want a national army (Applause). The whole principle is bad from start to finish. So long as you maintain this vicious principle, so long as this machine continues with the present organisation, you cannot reduce very much of its expenditure. What is the good of the Com-

carries with it the implication that schoolboys are not fit to take part in politics. For, nobody contends that a boy of, say, even 16 or 17 who is not a student is fit to take active part in politics. Of course, like other boys, even schoolboys may be spectators of political demonstrations and listeners to political speeches—though we would prefer their not hearing the harangues of demagogues.

What should be the attitude of college and university students to politics? Nobody says that young traders, merchants, mechanics, artisans, handicraftsmen, physicians, engineers, lawyers, labourers, etc., are unfit to have anything to do with politics merely because of their youth. A young man of 21 of any of the above classes may even be a legislator. So students of similar ages may not be intellectually unfit to take part in politics. The real objection to their dabbling in politics is of a different description. A young man of any of the above-named classes would not succeed in his profession if he were to devote more of his time and energy to politics than to the work which he professes to do. There may be many among them who have sufficient wealth to fall back upon even if they fail in their profession; so they can afford to neglect it. But the real point is that by such neglect they cease to be efficient and useful members of the class to which they nominally belong. It will be understood that we are not referring to elderly persons who have practically retired or can afford to retire from active pursuit of their callings.

As regards college and university students, if they devote more time to politics than to their studies, they must fail to achieve such success as they could otherwise have done. The very fact of a man being called and calling himself a student means that his main concern is study. If he feels called upon to devote himself entirely or mainly to politics, he is bound in honesty to cease to be a student and to call himself a student. The students owe something to their parents or other guardians also. The matter becomes comparatively simple if these guardians agree to their wards devoting most of their time and energy to politics while retaining the name and status of students. The question then would remain to be decided by the heads of educational institutions whether they would have students backward in their studies owing to excessive devotion to politics.

the guardians of any students want

that they should make study their main concern, but if the same students want to make politics their chief occupation, the honourable course for such students to adopt would be to tell their guardians unreservedly how they spend and want to spend their time. If need be, these young men should also be self-supporting. The allowances given them by their guardians are meant to enable them to live and work as students. If without the consent of their guardians or contrary to their wishes, they want to be in the main politicians or agents of politicians, they should in honesty forego these allowances, and either maintain themselves by their own independent earnings or be maintained by the politicians whose behests they carry out.

We are aware of and have all along condemned the hypocrisy underlying the use of the words "atmosphere of pure study." In the modern world at any rate there cannot be any such atmosphere. Loyalty is also politics of a sort, and some text-books and celebrations are marked by such politics. Students, like other young men, will have to do with politics in their future careers, and therefore they ought to know politics. But their contact with politics should be mainly as students, as observers and learners, not mainly as active workers and participants. We cannot dogmatically say that students should leave all participation in political meetings and movements severely alone. Nor can we provide all sorts of students with a cut and dried time-table, definitely laying down how much time is to be devoted to studies, how much to recreations, how much to politics, how much to social and religious movements and social service, etc. As self-regulating beings, the students should be able to discipline themselves and to draw up their own time-tables, always remembering that so long as they retain the names and status of students, their main work is study.

Ought not they to fight freedom's battle? Of course, they should, when and if the call comes for their services. But they are to fight as young fighters for freedom, not as students. We are for thoroughgoing honesty, inner and outward. If you are above all fighters for freedom, be so by all means. But please do not pretend to be students par excellence at the same time. There should not be any make-believe of any sort.

We are aware of the truism that neither man's nature nor man's sphere of outward

activity is divided into water-tight or air-tight compartments and that one can play several roles. But the number of versatile super-men has been very small in the world's history. And so the general rule for the vast majority of mankind is that there should be one main occupation for each individual. For students that occupation is study. They can no more figure as successful politicians and successful students at the same time than many of the leaders of a political party in Bengal have successfully filled the roles of "National" educators and political agitators at the same time.

Rowdysm of Young Men

It gives us great pain to call attention to the rowdy conduct of some of our young men in connection with public functions and towards their teachers. If elderly persons do anything wrong, that also should certainly be condemned and remedied. But it is doing no good either to the young men concerned or to the nation at large to systematically omit all reference to their rowdysm, describe them as fighters for freedom, and give highly coloured accounts of the real or imaginary faults of their teachers and dwell exclusively on them.

Worst of all has been the exulting and laudatory description of the exploits of the young hopefuls in insulting and assaulting some Bengal M. L. C.s at the Calcutta Town Hall at the instigation of some fellow-councillors after the failure of the no-confidence motion against the Bengal Ministers. It is quite easy to behave as *Indian* gentlemen even towards political opponents.

Whatever else in occidental manners is worthy of imitation, Western political rowdysm is not. Cowards hire goondas or hooligans to insult and assault their opponents. Are our young men to degrade themselves to such a role? If any politician wants any opponent of his to be assaulted, he should have the courage to do the act of violence himself.

Annual Reunion of Greater India Society

The Greater India Society held its Annual Reunion (29th March, 1928) in the Lecture Hall of the Asutosh Building, Calcutta University. Mr. Jadunath Sarkar, M.A., C.B.E., presided on the occasion. Sir Brojendra

Lall Mitter, the Advocate-General of Bengal, Dr. Subodh Chandra Mookerjee, Government Examiner of Accounts, Dr. B. L. Chaudhury, Mr. O. C. Ganguly, editor "Rupam," Mr. P. Chowdhury and several other men of light and leading in sympathy with the Society were present. The Vice-Chancellor, who is also the President of the Society, welcomed the guests and traced the progress of the work of the Society, which from an infant institution has gradually become an All-India movement, throwing new light on Indian history and popularising historical research by means of lantern lectures all over the country; Mr. Sarkar pointed out how Dr. Kalidas Nag, D. Litt (Paris), the Honorary Secretary of the Society, was invited by four of our universities—those of Madras and Mysore, Andhra and Dacca, to deliver lectures on the "art and archaeology of Greater India," and he hoped that the history of Hindu cultural colonisation and of the undying contribution of India to world culture would form part of the syllabus of every University of India. He further remarked that the lectures delivered by brilliant scholars like Dr. Sunita Kumar Chatterjee D. Litt (London), Dr. P. C. Bagchi D. Litt (Paris), Dr. B. R. Chatterjee, M.D. (London), Dr. N. P. Chakravarty, M.D. (Calcutta), and others were creating a new historical outlook and were bringing the results of recondite research to the general public, not forgetting even the unlettered mass of men and women, who are everywhere hailing with great enthusiasm the illustrated lantern lectures of the Society. It is not only the learned societies of the city like the University, the Science Congress, the Sahitya Parishad, etc., that had welcomed the lectures, but from the remote mufassal also has come warm response, and the lecturers had to visit Howrah, Hooghly, Bogra, Pabna, Rajshahi, Rungpur, Dacca, Mymensing, Manickganj, Barisal, and other places. "The permanent contribution of India to human history", continued the historian Vice-Chancellor, "was in the department of culture and art, of philosophy and peaceful progress; and here our society has drawn inspiration from its *Purodha*, the poet-sage Rabindranath Tagore."

On this occasion Mr. K. N. Dikshit, Superintendent of the Archaeological Survey of India, Eastern Circle, delivered a very interesting lecture on the Paharpur excavations.

"The contribution of Paharpur to the cu

mander-in-Chief telling us yarns that one heard from grandmother. Oh! Army is a better nation-building department than any other. See what we do in the education of our soldiers who are better fed and clothed than in their villages. We run factories. We are pioneers of every national movement in this country. (Laughter). Sir, I can tell his Excellency these yarns won't do (Renewed laughter). I do not deny the Commander-in-Chief is doing his best. If you were to put me there I would say the same thing because I have got to run that machine. Why tell us these little yarns as if these are the issue. Our fundamental position is this. We want to turn this garrison into a national army. You can help us or hinder. I am convinced that the British Government does not wish to help us. I had my faith in serving on the Sandhurst Committee and let me tell the Commander-in-Chief that by turning down this report and by his announcement he has completely shattered my faith in the bona fides of the Government. (Loud and prolonged applause).

Pandit Motilal Nehru also was as outspoken in his condemnation of the Commander-in-chief's announcement as Mr. Jinnah.

Pandit Motilal Nehru declared that the Commander-in-Chief's speech had left him cold. It was to his mind in perfect keeping with the policy to which they owed the Statutory Commission. The Commander-in-Chief's announcement was a further step in the direction of the working of that policy; for, the real thing they wanted, namely, an Indian Sandhurst, was not to be established. He had found no reason to enthuse over the recommendations of the Sken Committee of which he had at one time been a member. Indeed, when the recommendations were published he felt a sense of relief that he was not a party to them.

Mr. Jinnah: How do you feel now?

Pandit Motilal Nehru: I feel the same now; for even if as recommended by the Committee an Indian Sandhurst was established, it would have taken several years before there would have been a sufficient number of trained Indians for the army. But the insatiable greed of Britain which was responsible for keeping India in its grip would not contemplate even that contingency of one day India standing on her own feet. I hate the word Indianisation from the bottom of my heart. We are in India and there is no question about Indianisation. What India wants first is to get rid of Europeanisation of the Army. But there was to be no Indian Sandhurst and even the ten cadets required for the real Sandhurst were not, in the Government's opinion, available in India, and it must take a long time before an Indian Sandhurst could be established. It was a calamity on the manhood of India to say that there was a dearth of cadets. Even in the short time he was a member of the Sken Committee, he found there were thousands of candidates available but there was no inclination on the part of the Government to get at them and that Government founded qualification not on ability but in parentage.

INDIAN CADETS TURNED OUT

But one of the grounds on which several cadets were turned out of Sandhurst

was that they could not follow the lectures given in English. There were thousands of students in India capable of following English lectures who were anxious to enter the Army but the Government would not select them because they were not great grandsons of some villagers who some years ago were connected with the Army. However sugarcoated the announcement of the Commander-in-Chief might be, however tempting the offers of admission to Woolwich and Cranwell and Sandhurst might be, the fact remained that no substantive advances had been given towards a national army in the sense that it was to be officered by Indians. It was sheer hypocrisy to say that it was not possible to establish a Military College without increasing the military budget.

Afghanistan, Persia, Turkey, Japan—all with far smaller populations than India—can officer their armies with their own men; but India is falsely assumed to be incapable of supplying men fit to be officers. If the Government were sincere, it could have got the requisite number of graduate cadets even from the races, tribes, sects and castes admitted by it to be warlike, namely, the Jats, Sikhs, Pathans, Gurkhas, etc., not to speak of the entire Indian population.

Imperial Penny Post

The Statesman supports the revived proposal for an Imperial penny postage, even though it would involve an annual loss of six million pounds sterling, on the ground that it would benefit large numbers of citizens. It writes:

With reference to the proposed return to an Imperial penny post, the Secretary to the Post Office pulls a long face at the estimated cost, which he puts at six millions sterling, even after allowing for an increase in traffic. If that is the only argument against the reform, all that can be said is that officialdom strains at gnats and swallows camels. For an expenditure of six millions an untold boon would be conferred upon many millions of British citizens. The wide flung Empire would be brought closer together and poor people to whom every penny is a consideration would be encouraged to keep in closer touch with their friends and relatives. It does not hurt an administration which has added nearly 40 millions to the Budget in the last four years to raise pious hands at the proposal to spend another six millions for a purpose which appeals to everybody.

All these arguments apply to reduction of postage in India, *mutatis mutandis*. According to the present ratio of exchange, a penny is worth less than an anna, which is what the Indian Post Office charges here for carrying a letter of minimum weight. The Imperial Penny Postage scheme means that a letter with a penny stamp attached to

it, posted at the farthest extremity of the British Isles, would reach a man living in the remotest corner of Ladakh, the Shan States, Australia, the Fiji Islands, etc. But a letter carried from anywhere in India to anywhere else in India, *i.e.*, over a much shorter distance than the British letter, must cost for its carrying one anna, which is more than a penny. If for the advantage of numerous British citizens, whose average income is much greater than that of Indians, a loss of several million pounds is worth incurring, why should not a smaller loss be worth incurring by the Government of India for the advantage of a larger number of persons?

The Indian Posts and Telegraphs Department combined worked at a profit of Rs. 21,62,542 during the year 1926-27, in spite of the fact that the Telegraph Department, taken by itself, caused a net loss of Rs. 12,72,332. So it is quite probable that, if postage were reduced, the resulting increase in the number of post cards and letters used would prevent serious loss to the Postal Department alone. In the mass the Telegraphs serve the more well-to-do section of the people using the combined Posts and Telegraphs Department. The higher postage rates at present charged ought not to be kept up mainly in the interests of this richer telegraph-using section.

Postage rates are cheaper in Japan and the United States than in India. The postal department ought here to be treated as a development department as in many other countries.

It is to be regretted that this year, too, motions for the reduction of postage were lost in the Assembly. It is said that they could have been carried if all the members who helped to pass the no confidence in the Simon Commission motion had been in their places and voted aye when the postal resolutions were moved. If so, the absent members were guilty of neglect of duty.

Mr. Sarda's Child Marriage Bill

The Select Committee's report on Mr. Har Bilas Sarda's Bill against child marriage has been signed subject to minutes of dissent by five members.

The Committee has decided that the Bill should effect its purpose of restraining child marriages not

by declaring such marriages to be invalid but by imposing punishments upon those who participate in them. It has also been proposed that the amended Bill should be general in its scope and apply to all classes and communities in British India. The minimum marriageable age for boys has been settled at eighteen years and for girls at fourteen. These decisions are embodied in sub-clause 2 of the amended Bill.

The next important principle determined is the interpretation of the phrase 'participants in a child marriage.' It has been decided that the following classes should come within the penal provisions of the Bill namely: (A) male adults who marry young girls, (B) persons, who perform any essential ceremony of a child marriage, and (C) parents and guardians, who promote or permit a child marriage. The committee has decided that where a boy between the ages of eighteen and twenty-one marries a child he shall be liable to fine and that where a man above twenty-one marries a child he shall incur the full penalty prescribed for offences under the Act. In clause 3 it has provided for a fine of Rs. 1,000 for offenders above the age of eighteen years and under twenty-one and in clause 7 it has been provided that imprisonment shall not be imposed on these offenders under any circumstances. Clause 4 relates to offenders above the age of twenty-one years.

The next point decided was the extent of punishment to be provided generally for offences under the Act and this has been fixed at simple imprisonment up to one month a fine up to one thousand rupees or both these. The punishments appear in clauses 4, 5 and 6 of the amended Bill.

Certain provisions have been made to avoid the risk of frivolous prosecution and harassment. It has been provided in clause 8 that only Courts of Presidency Magistrates and district Magistrates shall have jurisdiction in cases concerning child marriages. In clause 9 it has been provided that cognisance can be taken only upon complaint made within one year of the solemnisation of the marriage. In clause 10 it has been laid down that the Court, unless it dismisses the complaint, shall in all cases make a preliminary inquiry under Section 292 of the Code of Criminal Procedure, 1908. In clause 11 a provision has been added requiring the complainant to give security for payment of any compensation that may be awarded against him under Section 250 of the same Code. It has been also provided that the Act shall not come into force until the 1st day of April, 1930, by which it is expected the provisions of the Bill will be widely known among all classes and communities. The Government has been asked to take exceptional measures in publishing the Act as finally passed.

We are on the whole in favour of the Bill as re-cast by the Select Committee. If passed into law, it will not materially affect the marriageable age prevalent among the educated classes. But as the illiterate and uneducated masses form the vast majority of the people of India, strenuous and ceaseless educative work must be carried on among them.

The physical, moral and intellectual edu-

cation of girls must also be undertaken on a vastly wider scale both by the people and the Government.

So far as Bengal is concerned, those who are or are called political leaders and their followers must pay greater attention than they do at present to the prevention of outrages on girls and women. For, higher marriageable age for girls would mean the keeping unmarried of large numbers of girls of a maturer age than at present. The risk to Hindu girls would be greater than Muslim girls, because purdah is stricter among Muslims and because statistics show that Hindu girls are victimised in larger numbers by Muslim and Hindu ruffians than Muslim girls are by Hindu and Muslim ruffians. In writing this we do not indirectly suggest that purdah should be made stricter among Hindus. What we suggest is that Hindus, young and old, should be more courageous, willing and able to protect girls and women than they are, and girls and women should also be taught the arts of self-defence.

In the course of his statement to the Press Mr. Sarda says:

"The Muslim opinion is dead against lowering the minimum marriageable age of girls below 14, and there is hardly any reason why the Hindus, whose interest in the well-being of their own community is as strong as that of the Muslims in theirs, should want the age to be fixed below 14."

"It is apprehended that those who are opposed to all social reforms or to legislation in any form in the matter of social reforms will start an agitation against the Bill, and it is therefore necessary that all Indians who have the good of India at heart should begin work in right earnest in this matter of the most vital importance and to the well-being of the nation, to educate public opinion and to focus it on the provisions of the Bill."

"I particularly appeal to the women of India to be up and working and to leave no stone unturned to see that the Bill becomes a measure of adequate marriage reform and to show that, as it primarily affects their well-being and their future happiness, they are fully conscious of their responsibilities in the matter and their power to shape their future destinies."

Madras Council Against Child Marriage

An Associated Press message, dated Madras, March 27, states:—

Strong condemnation of child marriage found expression in the Madras Council this afternoon when Dr. Muthulakshmi Ammal moved a resolution emphasising the necessity for legislation in connection with raising of marriageable age of boys and girls to twenty-one and sixteen respectively. Speakers deplored the practice of early marriage

and urged British India to follow the lead of Indian states.

The motion was carried without division.

Satyendra Prasanna Sinha

I saw Satyendra Prasanna Sinha for the first time when he returned to India after being called to the Bar. His cousin, the late Hemendranath Sinha, was then residing in Calcutta as a college student in an old house in Mir Jafar's Lane (now College Row), Calcutta, with a few friends, myself being one of them. On landing in Calcutta, he spent a day or two with us in that house.

I always respected him, because he was a gentleman and a man of character. Our views in social and religious matters were similar; in politics we somewhat differed. But I never had any doubts regarding his sincere love of the Motherland and his desire that she should be free in the fullest sense of the word. *The People of Lahore* is quite right in stating that he was not of the breed of flatterers: his advancement in life was due to his merits, and also, of course, to the rising tide of national self-assertion in the country. He never mistook rudeness for spirit of independence; nor did he ever suffer from a swelled head.

The Indian Social Reformer writes:—

In his own quiet way, he worked to advance the national cause in every direction. He took a keen interest in the progress of the social movement in particular and regretted that it could not proceed faster. In a letter written just two months ago, Lord Sinha expressed his pleasure at the success of the last National Social Conference, adding: "I wish the pace could be greatly accelerated; but take comfort when I remember the wise dictum of Lord Bacon that 'if the force of custom, simple and separate, be great, the force of custom, copulate and conjoined and collegiate is far greater'; and only those who are actual workers in the social field can realise the enormous difficulties in their way. Patience must be our watchword." The difficulties are not so great as they seemed to Lord Sinha, and they have steadily diminished. The prospect of social reform was never brighter than it is to-day. To a considerable extent, this is the direct consequence of the awakened political conscience of the country, which enables it to see the details of social life in their proper perspective, and Lord Sinha's part in the great awakening is second to that of none.

His innate modesty and gentlemanliness prevented him from practising the art of self-advertisement. These traits are found

exemplified in the following extract from *The Indian Social Reformer* :

Lord Sinha's Chivalry: We reprint elsewhere a letter written by Mr. N. N. Sircar in which he points out, in repudiation of Miss Katherine Mayo's calumny, the social benefactions of Lord Sinha to his native village of Raipur. We had not noticed this in our reading of Miss Mayo's book, until Lord Sinha himself called attention to it. Friends in England have been pressing for an English edition of thereprint of our articles in reply to Miss Mayo's book, and one of them suggested that Lord Sinha should be requested to write an introduction. In asking to be excused, Lord Sinha wrote: "I doubt if it would be of much use for me to write a foreword for the proposed English edition of your articles in reply to Miss Mayo's 'Mother India'. Personal recour may be attributed to me, as she devoted half a chapter to vilifying me—anonymously but sufficiently clearly to indicate whom she meant. I trust you will excuse me if I keep clear of the controversy, which is also getting stale now." Mr. Sircar says that Lord Sinha refused to have his benefactions advertised in order to rebut Miss Mayo's calumny.

That notorious woman's calumny is to be found in the following passage of her book *Mother India*, pp. 195-196, British edition:—

It was one of the most eminent of living Indians who gave me this elucidation of the attitude of a respected Hindu nobleman toward his own 'home town.'

"Disease, dirt and ignorance are the characteristics of my country," he said in his perfect English, sitting in his city-house library where his long rows of law-books stand marshalled along the walls. "Take my own village, where for centuries the head of my family has been chief. When I who am now head, left it seventeen years ago, it contained some 1600 inhabitants. When I revisited it,—I found that the population had dwindled to fewer than 600 persons. I was horrified..."

"We question, therefore, is plain. *What have the British been doing in the last hundred years that my village should be like this?* The British say, 'We had to establish peace and order before we could take other matters up'; also, 'this is a vast country, we have to build bridges and roads and irrigation canals.' But surely, surely, they could have done more, and faster. And they let my people starve!"

After quoting these words of Lord Sinha's without mentioning his name, the authoress says that "he, the one great man of his village, had left that village without help, advice, leadership", etc. Lord Sinha did help his village. He spent money for its educational, sanitary and agricultural improvement, and has left endowments for the continuance of such work.

Sir Ramanbhai Nilkanth

Gujarat in particular and all India have lost a great citizen in Sir Ramanbhai Nilkanth. Of him the *Subodha Patrika* writes:—

His death removes from our midst one of the most distinguished lawyers of the Ahmedabad bar, one of the warmest advocates of social reform and the leader of the Prarthana Samaj movement in Gujarat. We cannot, in this short article, speak of the innumerable services that Sir Ramanbhai rendered as the President of the Ahmedabad Municipality and a Member of the first Bombay Legislative Council: we are more concerned with what he did to further the cause of religious and social reform in Gujarat. Having inherited from his wellknown father Rao Saheb Mahapatram Rupram his passion for bringing about a total change in the religious and social outlook of the people of Gujarat, Sir Ramanbhai decided to devote himself heart and soul to the cause of the Prarthana Samaj movement.

Sir Ramanbhai was a man of great abilities and remarkable gifts and it was not surprising that he should have been engaged in so many public activities and connected with so many organisations, but we doubt if there was ever any work which was dearer to his heart than the work of the Prarthana Samaj. Without intending in the least to condone the unfortunate mistakes that he may or may not have committed, let it be said in fairness to this man who has not always been understood and appreciated in the way he deserved, that the reforms that he actually brought about in practice were so immense for his time and circumstances that we would not hesitate to class him, for that and that alone among the greatest reformers that Gujarat has produced.

Strictly from a point of view of social reform he went far ahead of his contemporaries. His wife, Lady Vidya Gouri, is the first Gujarati lady graduate, three of his daughters are also graduates and the remaining two will graduate in a year or so. His is one of the most cultured families in Gujarat. If Sir Ramanbhai had done no other work, his own family would sufficiently indicate the largeness of the spirit of the man who has now gone to take his well earned rest.

K. Ranga Rao

The late Mr. K. Ranga Rao of Mangalore was a great friend of "the depressed classes" and worked for the amelioration of their condition for years till the day of his death. We intend to publish an article on his life and work in a future issue.

Mr. Natarajan on City College Affairs

The paragraph on "The City College and Hindu Festivals" published in *The Indian*.

Social Reformer does not do justice to Mr. K. Natarajan's reputation as a journalist and a thinker. Probably he has not had time to obtain full and accurate knowledge of all the facts. So many falsehoods relating to the subject have been and are still being circulated that it is not practicable to overtake and expose them in a monthly magazine.

The principal, Mr. Heramba Chandra Maitra, has been characterised as "a rather strait-faced Brahmo Samajist." It is unnecessary for us to defend him against this gratuitous personal attack, made in such perfect good taste. What has to be pointed out, in order to show that it is gratuitous, is that whatever Mr. Maitra has done has not been done in his individual capacity. Like other colleges in Bengal, City College has a governing body or council, consisting of Brahmo and Hindu members, which arrives at decisions, and the Principal gives effect to them. Perhaps, of course, it is the governing body or council which is "strait-faced," not Mr. Maitra, or not Mr. Maitra alone.

Mr. Natarajan writes :—

The idea of taking advantage of the necessity of Hindu students to join the City College for secular education, to force on them the creed of the Brahmo Samaj, is not fair either to the students or the Samaj. We are sure that Raja Ram Mohun Roy would not have approved of it. From prohibiting the puja in the Hostel, it is but one step to prohibiting it in the homes of the boys.

There never was, nor is there now, the faintest idea of taking advantage of the necessity of Hindu students to join the City College. Calcutta, not to speak of many mofussil towns of Bengal, contains many Colleges, as cheap as City College, which can accommodate all the students of that college in addition to their own. Therefore, there is strictly speaking no necessity for any Hindu student to join City College. Those who join it and its Ram Mohun Roy Hostel do so knowing full well what the rules are. There has never been any attempt to force the creed of the Brahmo Samaj on any student or anybody else. The boarders of the Ram Mohun Roy hostel have all along been allowed perfect liberty of individual worship there according to their beliefs. Moreover, they have all along been allowed to celebrate the Sarasvati Puja festival outside the hostel, and they have done so this year, too. Under the circumstances, if any group of Brahmos do not allow any religious

festival of which image-worship is a part to be celebrated in any house and grounds under their charge and control, such action, in our opinion, does not deserve to be characterized in the way Mr. Natarajan has done. The Ram Mohun Roy Hostel is not a church, it is true; but it is not a Hindu temple either. It is a hostel meant for students of all religions not merely for Hindu students. Hindu students certainly have the right of freedom of worship. But, we presume, the Brahmo Samajists also have the right to determine what shall or shall not be done in houses and grounds under their charge and control.

We understand that at present almost all the boarders of the Ram Mohun Roy Hostel are Hindus. But it is not an exclusively Hindu hostel. Students of City College of any other denomination are entitled to reside in it, if they want to and if there be room. The college authorities cannot shut them out. Under the circumstances, the authorities, we think, have been well-advised in laying down the rule that if students of any particular sect want to celebrate a festival, they should do it outside the hostel precincts. At the same time, orthodox students of any particular denomination, provided they are sufficient in number, may have a separate "mess" for themselves in a separate house and celebrate their religious festivals there. There is no objection to that. If a hostel, like the City College hostel in question, were open to students of all religions, and if they all wanted to celebrate their particular religious festivals there, it might thereby be certainly converted into a Religious Liberty Hall of Festivals of All Religions, but it is certain that that would not promote intercommunal peace and goodwill and "nation-building," as in such a Hall sacrifices of certain kinds of quadrupeds might lead to unintended human sacrifices also.

Mr. Natarajan is sure that Raja Ram Mohun Roy would not have approved of the rule relating to festivals laid down for the hostel named after him. But our perusal of the Raja's life and Bengali as well as English works has not made us so cocksure as the editor of "the Indian Social Reformer." We think he would have approved of it.

"From prohibiting the Puja in the Hostel, it is but one step to prohibiting it in the homes of the boys." Hypothetically it may be so. But the fact is and has been otherwise. Far from making such an absurd

attempt as prohibiting the Puja in the homes of their students, the City College authorities have all along allowed the boarders to celebrate the Puja anywhere outside the Hostel, and they have done so.

We do not wish to write more on the subject. The authorities of the City College and the leaders of the Sadbaran Brahmo Samaj, with neither of which the present writer has any connection, ought to have furnished the editors of the principal Indian newspapers with a full account of the facts, in the absence of which the lies and half-truths published in the newspapers are being accepted as the undiluted truth, and students guilty of gross breach of discipline, rowdysm and of such highly refined acts as insulting and molesting their principal, hustling and abusing one of their professors, switching off the lights in his quarters, trying to force open the door of the apartments where he was residing with his family, pouring curds on the head of a fellow-student and garlanding another with old shoes for their offence of attending college, etc.,—are being eulogised as martyrs to religious freedom by some demagogues and some professors of rival colleges.

A Noble Gift

Sir Annamalai Chetty has offered the sum of twenty lakhs of rupees along with properties attached to the Sri Muvakshi College at Chidambaram for the formation of a University there. It is a great gift, which will immortalise the donor's name and benefit countless generations of young people.

"Whose is the Associated Press"

The People asks in its issue of the 22nd March last, "Whose is the Associated Press?" and publishes some test facts. It shows that the A. P. I. version of the Lahore demonstration on the arrival of the Simon Commission is the same as that which appeared in the Anglo-Indian daily the "Civil and Military Gazette." It goes on to ask Mr. K. C. Roy some very inconvenient questions in this connection.

The Simon Commission in the Panjab

It is clear from the pages of *The Tribune*, *The People* and *The Hindu Herald*, that the people of the Panjab gave the same sort of welcome to the Simon Commission which it generally received elsewhere. "The welcomes were all got-up tomfoolery." In many places, the boycotters were interfered with and roughly handled by the local police and officials.

The Servants of the People Society

The Servants of the People Society of Lahore has just celebrated its 7th anniversary. Its report for the year 1927-28 shows that it has done good work for the people in various directions, social, political, economic and educational, in the Panjab, U. P., Orissa and Kathiawar. During the anniversary celebrations Pandit Madan Mohan Malaviya laid the foundation stone of the Hall which the Society requires in Lahore, naming it very appropriately after Lala Lajpat Rai, the founder and director of the Society. Lalaji announced the establishment of a trust of the initial value of Rs. 1,10,000 for erecting a consumptives' hospital for women. It is needless to praise him for his charities.

The Holkar-Miller Marriage

So much fuss has been made over the "conversion" of Miss Nancy Miller and her marriage with the legally and illegally polygamous Sir Tukoji Rao Holkar, because of the rank and wealth of the latter. For, bigamous and polygamous "marriages" of Indian Hindu princes and plebeians with women of European extraction have taken place before; what are better and morally unobjectionable, viz., monogamous marriages of Indian Hindus with women of European extraction, have also taken place ere this. Such women have also previously undergone *shuddhi* to contract monogamous marriage with Indian Hindus. There was, therefore, nothing new in the Holkar-Miller affair except the rank and wealth and unbridled animality of the man concerned. Hinduism allows the taking of a new wife during the life time of previous wives if

they have not borne a son. The Holkar cannot plead even this excuse.

His Holiness the Sankaracharya of Karavirpath has made a grandiloquent speech, in effect characterising the *shuddhi* of Miss Miller as a sort of epoch-making affair. Epoch-making it is in a sense of which neither His Holiness nor his Hindu supporters ought to be proud. It is not epoch-making in the matter of acceptance of Hinduism by non-Hindu European gentlemen and ladies. For such acceptance had already become a thing of past history before ever Sir Tukeji Rao saw Miss Miller. The acceptance of Hinduism by occidental ladies from entirely non-worldly motives is also well-known. Take the case of Sister Nivedita of hallowed memory. If the word epoch-making is to be used in connection with the acceptance of Hinduism by occidental ladies, it should be reserved for cases like hers.

We have all along been in favour of every religious community having and exercising the right to convert persons of a different faith by all legitimate means. But we are against glorifying "conversions" whose plain object is worldly; and when that object is polygamy, it deserves condemnation. It is true, Sir Tukeji Rao is not the only polygamous prince. But a vicious practice cannot become a commendable virtue because of its commonness among princes, nor can it be commended because one offender is a man of rank and wealth and the other offender is a woman with a pale pink skin. The following Free Press message appears in *The Leader* :—

LONDON, March 19.

The news of Miss Miller's conversion has created a great sensation in England. Numerous letters reached the office of the *Indian*, inquiring whether such conversion could be made outside India and whether the Hindu Mission could find it possible to go to Europe for the purpose of accepting recruits to the Hindu faith.

One of the letters appeals to the new Maharani Sharmistha Bai Holkar to initiate a new movement to start a Hindu mission in Europe and America for spreading Hinduism.

There is nothing to show that British men and women have suddenly awakened to the high spiritual teachings of the *Upanishads*. There are hundreds of thousands of surplus unmarried women in England, many of whom would not dislike marrying Indian princes and other wealthy Indian men a career. Should they choose such a career

and the candidates be a little too many, Hindu girls in India, whose marriage is none too easy an affair, may find it a still more difficult thing! For they cannot flirt and woo, which Western women can.

A correspondent of *The Leader*, writing from Indore on the 19th March, says:

"His Highness is reported to have expressed his keen desire to devote his future life to the cause of educational and social uplift of the country."

May the God Kandarpa save India from such uplifters! Of course, Sir Tukeji Rao Holkar may not be the worst among his brethren. But neither is he among the best, or even among the merely passable ones.

An Associated Press message, dated Barwaha, March 19, states:—

Their Highnesses Maharaja Sir Tukeji Rao and Maharani Sharmistha Devi have been the recipients of numerous congratulatory messages from brother Princes, including the Maharaja of Kapurthala and friends from England, America and Paris. Several leaders of religious thought such as Mahamohopadhyayas from Calcutta, Benares and other centres of learning, have sent messages offering their benedictions to their Highnesses.

Probably these "brother Princes" sent congratulatory messages to the older Maharanis of Holkar also on their acquisition of a new co-wife. At least the "sister Princesses" must have done so. These congratulatory messages also deserve to be published. And the benedictions showered on the occasion on the older Maharanis by the "several leaders of religious thought" should be preserved in a museum and exhibited as proofs of their deep and high religiosity.

The whole thing is nauseating to a degree.

Colour Bar Act Applied to Natal

Bombay, March 23.

News has been received by the Imperial Indian Citizenship Association that the Colour Bar Act has been made applicable to Natal enabling the Government to declare what skilled occupations are to be reserved for white and coloured persons only, to the exclusion of the African natives and the Indian population. This, it is said, creates a very serious situation, since the bulk of the Indian population is confined to Natal and many of them being Colonial born Indians, are dependent on skilled and semi-skilled employment. The Natal Indian Congress has, therefore, entered its vigorous protest and it is believed they have also telegraphed to the Government of India.

This creates a very serious situation.

The Government of India should take prompt and vigorous action in the matter.

Firing at Railway Strikers at Bamungachi

We read the *Statesman* to discover why the Railway strikers were shot at at Bamungachi, killing some of them. We could not find out how and why the crowd which was peaceful throughout came to be considered a murderous mob requiring shooting when they wanted to cross the Bamungachi Bridge. We are not satisfied that the shooting was necessary and justified.

It is a well-known fact that shooting is resorted to more often and on less serious occasions than in England. Our lives are cheap here.

Paid Vice-Chancellor for Calcutta

The Bengal Legislative Council has done well to reject the demand for a salary for the Vice-Chancellor of the Calcutta University. None of our previous Vice-Chancellors, nor the present one ever asked to be paid for their labours. Had the salary been voted, it would have been *used, though unjustly*, to vilify Professor Jadunath Sarkar.

Simon Commission Committee for Bengal

The Bengal Government has used its discretion aright in not moving for the appointment of a Committee of the Bengal Council to co-operate in a subordinate capacity with the Simon Commission. It will, no doubt, go on manoeuvring to secure a majority in order to bring forward the motion at the proper time.

Egyptian Independence

In British dictionaries independence still connotes to mean independence;—there are no different grades or varieties of independence. But if British Imperialists succeed in having their own way, at no distant date British lexicographers would have to define the varieties of independence known as Egyptian, Iraqi, etc. But the Egyptians

themselves want the thing called independence without any qualifying adjective. Their new Prime Minister, Nahas Pasha, wants to safeguard his country's rights in the Sudan. He will not agree to any condition conflicting with its complete independence. At the same time, like every other civilised independent country, Egypt, he says, is willing and ready to safeguard the interests of foreigners residing there.

Dominion Status and Independence

So far as the British Empire is concerned the line of demarcation between dominionhood and independence is bound to become gradually fainter and fainter. Canada has independently appointed some ambassadors abroad and concluded treaties also independently. Ireland has followed suit. The Irish Free State has got its treaty with Great Britain registered at the office of the League of Nations. Some of the Dominions have got their mandated territories. As a result of the last Imperial Conference it was understood that if Britain entered upon any war without the previous consent of any Dominion that Dominion had the right not to help the "mother" country but to remain neutral. In a recent pronouncement General Hertzog has made a declaration in favour of such a right. The exercise of such a right will make for peace to some extent. There is another right of independent states, namely, the right to declare war. No Dominion has yet claimed this right even in theory.

Aligarh University Enquiry

The report of the Aligarh University Committee of Enquiry is said to have revealed a very sad picture of the affairs at that institution. It is said that in consequence Dr. Ziauddin Ahmed, its pro-vice-chancellor, has been asked to take leave preparatory to retirement. It is also said that the heads of all its departments are henceforth to be Europeans. That would mean that there were no cultured, able and honest Musalmans to be had even for the high salaries to be paid to the Europeans. Such Europeanization would be a sad and damaging commentary on the claim of the Muslim community to share all powers and privileges with the

Hindus. For, in none of the other officially recognised universities, where the talent of all Indian communities has scope, has there been any debacle like that at Aligarh.

We dare not, of course, seriously suggest that if Muslim talent, ability and integrity be not available, Indian non-Muslim talent may be given a chance. For most Indian Muslims there are only two alternatives—Muslim management or European management. The tacit admission of European superiority would be bearable; but the implied admission of non-Muslim Indian superiority must be unthinkable.

Long ago, as an example of Aligarh methods, we stated, without any subsequent contradiction on anybody's part, that though at a certain examination all the candidates had failed in mathematics, when the results were published they were all found to have passed in mathematics as well as in other subjects! One can befool the public for a time, but one cannot befool Nemesis for all time.

healthy corrective against the 'sex-obsession' than intellectual comradeship and participation in the innocent delights of common pursuits and social pleasures and for this no other agency could be devised than co-education in higher stages."

The correspondent adds:—

In the last Howrah District Teachers' Conference also a resolution was moved by Babu Mohit Kumar Banerjee, Head Master, Bally Banga Sishu Vidyalaya, recommending that 'co-education be introduced in M. E. and H. E. Schools where local conditions will permit,' and it was passed by an overwhelming majority. This if given effect to by the Education Deptt. will no doubt be an advance movement in the field of education. I know of two schools where co-education prevails satisfactorily and successfully too, but the Education Deptt. (I mean the Inspectors of Schools) have been constantly discrediting them and bitterly opposing the system. When the countrymen want such a thing, will the Director of Public Instruction, Bengal, issue a circular so that co-education may be permitted to be introduced in schools or colleges that demand it?

Co-education should certainly be permitted where the people want it, if for no other reason than this, that the number of girls' schools—particularly high schools—is very small in Bengal, and the Bengal Government has been so ruthlessly and deliberately robbed of its resources by the wicked Weston Award that there is no likelihood of the Bengal Education Department opening or aiding girls' schools in sufficient numbers in the immediate future.

India's Payment for the British Army

A Reuter's telegram, dated March 27, states that India's capitation payment for "Home" effective service is £1,400,000 and contribution for non-effective services £1,110,000—total £2,510,000.

Co-education in Bengal Schools

A correspondent of the *Amrita Bazar Patrika* draws attention to the fact that in his presidential address delivered at the conference of college teachers recently held at Barisal Principal G. C. Bose spoke of co-education in the following terms:—

"I know there is a good deal of prejudice against co-education in the country, but I am confident with the growth of modern ideas all such prejudice will be overcome. There is no more

The Boycott of British Cloth

British and other foreign cloth should certainly be boycotted. But the boycott can be effective, only if the manufacturers and suppliers of khaddar and Indian mill yarns and cloth will increase their out-turn, be honest, and restrain their desire for gain within due limits.

During the anti-Partition agitation in Bengal, some Bombay mill-owners not only charged unconscionable prices for their goods but passed off Japanese cloth as made in India.

WHOLE NO.
257

HOW RULING INDIA INJURES ENGLAND

By DR. J. T. SUNDERLAND

PART FIRST

It is believed by the present writer that England, in robbing India of her freedom and forcing upon her a foreign rule, not only inflicts upon her the greatest injury any nation can suffer, but also that, in thus wronging India, she seriously injures herself, and in many ways. It is the object of this article to point out some of the ways in which England is hurt by forcing a foreign rule upon the Indian people.

The injury which England receives from her domination of India is of two kinds, namely, *moral* (moral and social), or that which comes to individuals, and *political*, or that which comes to the nation. Let us look first at the moral (and social) harm—the dulling of the finer sentiments, manners and ideals of life, and lowering of the moral character, which comes—not to all persons who return from service in India, but to very large numbers, it is believed to a large majority.

In the very nature of things, any man who wrongs another man, or any nation that wrongs another nation, suffers, must suffer, a lowering of its or his moral standards, a greater or less degree of moral degeneration. This is a law of the moral universe which can no more be escaped than can the law of gravitation.

The moral hardening, the moral degeneration, which Englishmen suffer from the despotic rule which they practise in India, of course, manifests itself first in India itself. But it does not stop there. These Englishmen return home to England as soon as their terms of Indian service expire, and of necessity bring with them the lowered moral standards and the autocratic, imperialistic spirit which have been bred in them.

This is a moral poison of a very serious nature, which is being introduced constantly into England with the return both of the civil service men and of the military service men. And there is no possibility of England getting rid of it so long as she holds India in forced subjection.

Many Englishmen themselves recognize and deplore this moral injury which their country not only suffers now, but has suffered ever since its domination of India began.

Macaulay, in his Essay on Lord Clive, gives us a graphic picture which makes clear the early part of the story. He tells us that the life lived by Englishmen in India and the enormous wealth which they acquired there, mainly by extortion and robbery, filled England with hundreds of "nabobs," men who returned from a few years in India, rich and proud, to strut,

and parade their ill-gotten riches, to exhibit toward their fellows the same domineering spirit which they had shown to their subjects and virtual slaves in the East, and to corrupt and deprave the English society in which they moved. "Many of them," says Macaulay, "had sprung from obscurity; they had acquired great wealth in India, and returning home they exhibited it insolently and spent it extravagantly; they had crowds of menials, gold and silver plate, Dresden china, venison and Burgundy wine; but they were still low men."

The "nabobs" who come back from India now (if we may still call them by that significant name) are of a somewhat different kind. They are not generally so rich; some of them are not of so humble origin, though not a few are of an origin quite as humble. But no one who is acquainted with the social England of to-day can deny that many, even if not all, bring back from their years of "looking down" on everybody possessed of a "dark skin," and of "domineering" over the "natives," essentially the same autocratic, undemocratic, sometimes brutal and always dangerous spirit which characterized the earlier nabobs, although it is generally shown in less obtrusive and vulgar ways now than in the earlier days.

Let me cite some testimonies from Englishmen themselves regarding this matter.

Dr. V. H. Rutherford, M. P. after a tour of investigation in India in 1926, embodied the results of his observations and experiences in a book in which he says:

"Our forefathers took India for the purpose of exploiting its resources, and we hold it to-day for the same immoral purpose. Our Indian Empire has poisoned us with the virus of Imperialism, has lowered our standard of moral values at home and abroad, and fostered in us the spirit of arrogance, intolerance, greed and dishonesty, degrading our national life."

Another testimony. In his book, "Gordon at Khartoum," Mr. Wilfred Scaven Blunt says:

"It is impossible to exercise tyrannical authority abroad and retain a proper regard for liberty at home."

In another connection he adds:

"The two things are not compatible. My reading of history has taught and practical experience has confirmed to me, the fact that the

task undertaken by a nation of ruling other nations against their will, is the most certain step upon the road to national ruin. The virus of autocratic rule in foreign lands infects the body politic at home by a gradual process of contempt for human brotherhood and equal rights, which are the basis of all just law and the only guarantee of freedom in free nations."

Still another testimony from an eminent Englishman. Mr. J. B. Hobson writes:

"Our despotically ruled dependencies have ever served to damage the character of our English people by feeding the habits of sabbish subservience, the admiration of wealth and rank, the corrupt survivals of the inequalities of feudalism. Cobden, writing in 1869 of our Indian Empire, put this pithy question: 'Is it not just possible that we may become corrupted at home by the reaction of arbitrary political servitude in the East upon our domestic politics just as Greece and Rome were demoralized by their contact with Asia?' Not merely is the reaction possible, it is inevitable. As the despotic portion of our Empire has grown in area, a larger number, trained in the temper and methods of autocracy as soldiers and civil officials in our Crown Colonies, Protectorates and Indian Empire, reinforced by numbers of merchants, planters, engineers and overseers, whose lives have been those of a superior caste living an artificial life removed from all the healthy restraints of ordinary European society, have returned to this country, bringing back the characters, sentiments and ideas imposed by this foreign environment."

Nor are the evil social effects of the aristocratic and irresponsible domination of India by Great Britain confined to English men. The poison extends also to English women, and often in a magnified form. This fact should not be overlooked. Indeed, the change for the worse which I myself have seen in English women in India—a change which I knew had taken place as the result of their life there—is one of the things which first opened my eyes to the necessarily coarsening effect of British rule upon British themselves. English writers have often called attention to the same.

* If any one would understand fully how imperialism, not only that of Britain in India, but the domination of one people by another everywhere, in all lands and in the very nature of things, injures and degrades both rulers and ruled, and the rulers quite as much as the ruled, let him read M. Gaston Boissier's two books, "The Opposition Under the Caesars" and "Cicero and His Friends," and there see how Rome's rule of her Provinces (comparatively enlightened as that rule was) gradually destroyed the higher and finer nature of the Roman people themselves, undermined their moral character and brutalized them, while at the same time it operated everywhere to destroy the self-respect, the manliness, the power of initiative, the intellectual and moral worth of the various peoples held in subjection.

Among others, Miss Margaret Nollé (Sister Nivedita), an eminent English woman who lived many years in India and wrote some of the best books on Indian life that we possess, frequently mentioned and deplored this deterioration of English women as the result of the dominance of their race over a subject people. She pointed out that however kind, courteous and lady-like they are when they leave England, and however, perfectly they manifest these high characteristics to their European associates in India, with far too few exceptions they soon come to treat their servants, and indeed all Indians, with a disdain, harshness and often real cruelty that would have shocked them if they had seen anything of the kind in England. Living more secluded lives than their husbands and coming less in contact in large ways with the Indian people, their prejudices against them are often even stronger than those of their husbands, and their treatment of them more unreasonable and heartless.*

Has Great Britain reason to be proud of a system of foreign rule the influence of which is thus to harden so many of its women? And when these English women in India at the end of their "banishment"

* This coarsening influence of British rule applies not only to English women, but to others—to all indeed who arrogate to themselves the "superiority" of being "white." A striking illustration which comes to my mind is that of an American woman, the wife of an English banker in one of the large Indian cities, in whose elegant home I was a guest for some days. We had been acquainted in America, and I had held her in the highest esteem as one of the most cultured and refined ladies within my acquaintance. Her husband was the son of an English clergyman and was generally looked upon as a gentleman of the finest type. But as I witnessed the treatment extended by both of them to their servants of whom they had some fifteen or twenty, I was amazed; it was quite as unsympathetic, harsh and abusive as was ever seen among the Georgia and Louisiana planters in the old days of American slavery. And some of these servants were persons of intelligence and real refinement. I could hardly believe it possible that the woman whom I found treating her Indian servants in such a manner (and her treatment of other Indians, not her servants, was not much different) was the same lady who was entertaining me with such courtesy and whose life in America had always been marked by such refinement and such kindness to everybody.

There is something of this race prejudice and consequent unjust treatment of the Indian people seen among the missionaries; but not much. I noticed it clearly in only a few cases.

return to live once more in England, they bring with them of necessity the virus that has gotten into their blood. They can never again be quite what they were before. They are always thereafter more domineering in their nature, less kindly, less sympathetic with any class except the aristocracy, less interested in the welfare of the people, than they would have been if they had not for years breathed the poison air of autocratic and irresponsible rule in India.

So much for the *moral* and *social* injuries which ruling India against her will brings to the English people as *individuals*. Let us now consider the *political* injuries which come to the British *nation*, and see whether these are any less serious.

The recruitment in England of large numbers of men for civil and military service in India, with the high salaries and large pensions connected with the same, results in filling England with thousands of men who after the short period of twenty-four years in India return "home" to spend the last half of their lives in comfort and ease, often in wealth and luxury, supported by the poverty-stricken Indian people. What do these men, thus living in England upon the money which they have saved from their high salaries in India,—and upon their fat pensions paid by India, what do these men do during these years of freedom and leisure at home, practically one-third or one-half of their lives? Do they devote their time, strength and money to advancing the interests of the Indian people from whom they are getting their living, and to whom they owe so much? That is, are they giving their influence in every way possible to create a public sentiment in England in favour of reforms in India, in favour of giving to India more and better education, better sanitation, better medical service, lighter taxes, more freedom, such treatment as will advance her toward the place she ought to occupy among the great nations of the world?

A few of them are; a few come home from India to spend their years as real friends of the Indian people and to do for them all they can. But the number of such is sadly small. The very large majority, poisoned and morally hardened by the imperialistic spirit, the autocratic and domineering spirit, the race and class pride and arrogance which ruling a people without their consent inevitably breeds, settle down

in England to manifest essentially the same spirit still, and therefore to be political enemies of India, and at the same time (what is very serious for England) to be political opponents of progress and reforms in England.†

Historians of the period of Clive and Warren Hastings and the generation immediately following, tell us that when the British conquerors, rulers and adventurers of that time returned from India with their enormous wealth, obtained by every kind of oppression and injustice, one of their favorite ways of spending their ill-gotten riches was that of buying up "rotten boroughs," and thus securing seats in Parliament. This was a stream of poison which began pouring itself into the legislation of England; for it was very soon discovered that these "nabobs," corrupted and morally hardened by their years of tyranny and extortion in India, could be counted on almost to a man to exert their influence in Parliament on the side of extreme conservatism and reaction, and against all measures looking toward enlightenment, reform and progress.

During the last more than one hundred years, practically every reform and every progressive political, industrial or educational measure introduced into Parliament has had to calculate on the almost solid opposition

of the men returned from service in India. No matter how broad-minded, liberal, progressive or freedom-loving they were when they went out, they came back, with very few exceptions, conservative, backward-looking, narrowed and hardened, imperialistic and militaristic in spirit, in sympathy with the privileged classes, in sympathy with the conquest abroad and autocracy at home, giving their influence for an ever bigger army and navy, and, throughout their lives, active opponents not only of all legislation favorable to the progress and freedom of India, but equally opponents of all movements to advance the interests, whether political, social, educational or industrial, of the people of England. *

To be specific. The various immensely important legislative movements which have arisen in England, particularly since the early thirties of last century,—to extend the franchise, first to men and later to women; to do away with political corruption, in many long-existing forms; to reform the barbarous criminal laws; to create juster taxation; to improve agriculture; to protect women and children in factories and elsewhere; to protect minors; to advance popular education; to create better conditions for labor, and so on,—these progressive movements, as has been said, have had to face the pretty nearly solid opposition of the India pensioners—the men who in India became autocrats; and who came home bringing with them of course, their autocratic ideas, impulses and habits. This poisoning influence of India on British legislation has continued right on down to the present time. Thus to-day, the Liberal party in England, and the Labor party, and every party, under whatever name, that aims to promote progress and improve the condition of the masses of the people as distinguished from the privileged classes, has to fight the poison influence of India.

And what else can any reasonable man expect? "Can the leopard change his

† The baneful influence, which British rule in India exerts upon the political life of England is clearly recognized and often commented upon in India. Says *The Mahatma*, of Poona (January 16, 1910): "The autocratic and irresponsible system of British rule is not only largely responsible for the backward condition and the discontent here (in India), but it also makes its evil effects felt seriously in the home life and politics of England. The high officials who reign as veritable autocrats in India, seek to perpetuate their despotism also in England. The evil effects of this have often attracted the attention of British statesmen, who have more than once declared that the English Constitution is constantly threatened by these 'proconsuls' trained in the school of alien despotism. It was the nabobs, the men who had made money in India by means chiefly foul, who returned to England, bought up pocket boroughs, and were the ready tools of George III in his campaign against representative government in the American Colonies. The 'prancing pro-consuls' returning from their autocratic rule in India to-day are the twentieth century representatives of the eighteenth century nabobs. They are more respectable, but they are all the more insidious. They have inoculated the whole British Tory party with their principles. Indeed these pro-consuls from India are the leaders of a plutocratic oligarchy in England."

* England's experience with India is simply one more demonstration in the world's long history of the truth of Lincoln's declaration; "This is a world of compensations; and he who would be no slave must have no slave. Those who deny freedom to others deserve it not themselves, and under a just God cannot long retain it."

Said the great Frenchman, Lamennais, in his work, *Le Livre de l'Homme*: "A people allowing itself to oppress another, digs the grave in which shall be buried its own liberty."

spots, or the Ethiopian his skin?" If a man with a slave-driver psychology comes from India to England, does the change of place change his psychology? Men whose business in India has been oppression, why should they favor liberty in England? Men who have opposed giving education to the people of India, why should they not oppose giving any more than the very minimum of education to English "common people?" Men who, with all power in their hands, have done practically nothing to elevate labor in India, why should they be expected to be interested in movements to elevate labor in England? Men who have spent all their years in India trampling on the rights of the people there, why should they be expected to care much for the rights of the people at home?

It was the autocratic and imperialistic Englishmen who were living in England on fat pensions paid by the poverty-stricken people of India, who were largely the leaders in keeping Ireland so long in bondage.

What was it that overthrew the Ramsay MacDonald Labor Party in England in 1924, and at the same time struck such a blow to the Liberal Party? Primarily it was India. All the erstwhile Indian officials living as nabobs in England, all the militarists and imperialists whose main reason for existence was to hold on to India, and all India bondholders, Lancashire cotton-manufacturers and men who had financial interests in India, all these were afraid that the Labor Party, or even the Liberal Party, might give the Indian people too much freedom, and thus hurt some British pocket-books. So they turned MacDonald and his following out, gave the Liberal Party a stinging blow, and set up an ultra conservative Bourbon Government which would be sure to keep a firm grip on India (together with Egypt, Mesopotamia, and the rest of the dependencies and mandates), and which at the same time would hold down at home all the too liberty-loving men and women, whether in the Labor Party or elsewhere.

It is noticeable that in the long struggle of the women of England to obtain the franchise, three of the men most prominent in opposing the movement, were Corson, Cromer and Milner; all of them were schooled in the ruling of foreign peoples without their consent. As a matter of course men accustomed to tyrannizing over the people of India and Egypt would not be

likely to see any good reason why English women should not always continue to be tyrannized over by British law and custom.

As is well-known, India is the greatest of all the bulwarks of the British House of Lords. Except for India that anachronism, that survival from an undemocratic and tyrannical past, that expensive remnant of Feudalism, that perpetual foe to British freedom and progress, would long ago have been swept away. But so long as Great Britain holds India, the House of Lords will remain, and remain essentially unaltered. The reasons are two. First, because it is a tradition which seemingly cannot be broken, that all men who win distinction in India must be raised to the peerage (if they do not already possess that distinction), and second, because the inevitable effect of ruling a people without their consent is to create an aristocratic, imperialistic spirit, the necessary result of which is a ruling body based not upon the choice of the people, but upon privilege, upon birth, upon wealth, upon considerations wholly autocratic and feudal.

But not only is India a chief bulwark of the House of Lords, it is also the strongest bulwark of British aristocracy, of the whole semi-feudalistic system which divides the nation into two classes—one, the people, unprivileged, who pay their own way in the world, living by their own exertions, often unemployed, and too many of them in poverty; and the other, an aristocracy, privileged, living in luxury, and often in idleness, possessing titles which they did not earn, and many of them holding as their private preserves large and valuable areas of land inherited from feudal or semi-feudal times, which of right belong to the nation, and which ought in some way or other to be in the possession of the people, to give them employment and better home, and to help feed the nation.

The framers of the Constitution of the United States expressly decreed that this country shall never have a hereditary and privileged aristocracy. No provision of that Constitution has more thoroughly proved its wisdom.

No other country is burdened with so extensive and expensive an aristocratic class, privileged class, or "caste," largely hereditary, made up of "sirs" ("knights"), "barons," "earls," "marquises," "lords," "dukes," "princes" and the rest, as is England. Will she ever get rid of it? Never, until she

ceases sending thousands and thousands of her sons to India, to spend half their lives as an aristocratic, privileged, all-powerful foreign caste, to dominate over a fifth of the human race, and thus fill their whole nature with the very worst spirit of privilege, of aristocracy, of autocracy, of caste, and of course to bring back the same to England when they return.

Lloyd George, in an address delivered at Shrewsbury on January 30, 1926, pointed out the terrible evils which England has long been suffering, from the fact that the land of the country is so largely in the possession of the aristocracy who use it primarily for selfish ends,—for private parks, hunting preserves and the like, and only in a very limited extent to produce food for the nation or in any way to benefit the people. He declared that this condition of things is actually growing worse; that there are fewer owners of land and more tenant farmers now than there were half a century ago; that there is no hope for real prosperity in England until a very much larger proportion of the soil is owned by the agricultural laborers and is used to produce food for the people. He asserted that with a proper distribution and employment of the land, the home production of food in Great Britain might easily be increased to the enormous extent and value of £250,000,000 (\$750,000,000) each year.

Of course, British rule in India is not wholly to blame for this situation. But it is a prime factor in creating it because as already said, it is the most powerful single, bulwark of the whole British aristocratic system, a system which in its very nature keeps the land so largely in the hands of the few, and therefore cripples agriculture, drives to the cities millions of men who ought to be tilling the soil, and forces on the nation the expense and peril of bringing the larger part of its food from over-seas; when the nation might and should produce at home each year this seven hundred fifty million dollars worth, and thus add an important sum to the public revenue, save the cost of the navy required to guard the food that comes from abroad, give prosperity to British agriculture, and, what is sorely needed, furnish permanent employment to several millions of the British people.

Another way in which India has been bitterly injuring Great Britain for more than a century and a half is by robbing her of

so many of her young men, who were sorely needed at home. No other so great and irreparable loss ever comes to any country as that of its manhood, especially its young manhood. This is why war is so terrible, to victors as well as to vanquished.

From the first, Britain has sent to India a never-ceasing stream of her sons, of two classes, one, as soldiers, to conquer the land and forcibly hold it in subjection, the other, as civilians, to administer its government. Let us first consider the *soldiers*.

For nearly all of Britain's first hundred years in India there were, wars, wars, wars, of conquest, most of them bloody, some of them very bloody. Then came the sanguinary "Sepoy War," or "Mutiny," which India likes best to call "The War for Indian Independence." After that there were no more wars in India, but many on her borders, generally to extend her area, and many in distant countries, of Asia, Africa and even Europe, fought against nations that were supposed to covet India, or to keep Britain's passage clear and safe to India, or on account of international complications growing out of Britain's possession of India. Englishmen to-day little realize how numerous and serious these wars have been, and therefore, what a vast amount of blood was shed and what an enormous number of British young lives were sacrificed.

Mr. James Macdonald, editor of the *Toronto Globe*, in an address in Carnegie Hall, New York, April 21, 1912, drew the following picture:

"Every part of the United Kingdom tells the same story. From every parish the choicest sons, generation after generation, went out to wars in large proportion of them fought in India or on account of India. Sons of the palace and sons of the manse, sons of the castle and sons of the cottage; out they went, the best the nation bred, and only the shattered remnants came back. Every village has its monument. In every great cathedral and in every parish church you may read in marble and brass the tell-tale lists of officers and men. Worse it was than the Egyptian sacrifice of the first-born, for war is no respecter of persons. What wonder that Britain's city slums are filled with human dregs, and that throughout her villages disease brought from the barracks and camp life of India leaves behind it the white-faced, the hopeless, the unfit.

The toll taken from Ireland, Wales, and Scotland has not been less wasting than from England. Every valley, every moor, every hamlet, every mountain glen they all have sent their best, and their best have never come back. The tragedy of the Celts is in the sentence: 'Forever they went out to battle, and forever they fell.' The Grants stained the marble palaces of India vermillion

with their blood; few of their clan are left in 'their ain dear glen.'

The cost (of our Indian Empire) has been not alone the death of so many brave men who fell, but that those heroes in their youth and *prime* have left no breed behind. The heroic sires died with heroic sons unbred in their lives. It is the countless heroes that *ought* to have been, but are *not*—that never-ending phantom host who had no chance at life,—had they taken the places left empty by the fall of their sires, the loss had not been so fearful, so far beyond repair."

Such is a part, only a part, of the terrible price Britain has paid, and is paying still with no surcease,—for what? For her crime (yes, *crime*) of conquering a great civilized people that had done her no wrong, robbing them of their freedom and nationhood and ruling and exploiting them. Think of it! Actually hundreds of thousands of lives of British young men lost! Actually hundreds of thousands of graves over every one of which the line of Gray's "Elegy" might well have been placed

"Some mute inglorious Milton here may lie"

Yes, or some mute inglorious Watt, or Stephenson, or Harvey, or Lister, or Ruskin, or Arnold, or Joshua Reynolds, or Wesley, or Wilberforce, or Robert Burns, or Newton or Darwin, or even Shakespeare! who knows!

Has Britain received from her "slave India" any adequate return for the loss of all these young lives?*

But we have not done yet with the young men whom she sends to India as soldiers. There is more to be said. A part of the heavy price which England pays for her Indian Empire,—a part which the world knows little or nothing about, and which England herself only very imperfectly

understands (else a shock of surprise and horror would run through the land, and millions of Englishmen and especially women would cry out as they have never done against the whole evil India business), is the introduction into England and the wide dissemination among the people, of venereal diseases, caused by the return from India of infected British soldiers.

The fact that India is a subject country held by the power of the sword, makes it necessary to keep a large army there. The young men composing that army, living an unnatural life, in a foreign land, far removed from the moral restraints of home, are subject to severe temptations to which it is easy to yield, with the result that large numbers become seriously infected with sexual diseases, which, of course, they bring back with them when they return home to England, and there spread them abroad. As already said, only a very few Englishmen understand how serious this condition of things is; and, of those who do, fewer still have the courage to let it be known, and to protest against a foreign policy of the government which requires such a sacrifice of the country's young men and of the nation's health.

Mr. John M. Robertson is one who knows and dares to tell the facts. He writes:

'India as we govern it, is not only poisoning the higher Englishman, and through him poisoning England but it is also poisoning the lower Englishman, 'Tommy,' the soldier and through poisoning England no less. The British soldiers who serve in India are recruited from our best English yeomanry. But no Englishman can contemplate the life which large numbers of them live in India, without being deeply pained. Naturally they are good, jolly fellows who if they had remained at home as husbands and parents would have been able to retain the fine qualities which heaven had bestowed upon them. But in India they are confined in barracks like so many bulldogs, and fed and nourished upon meat and rum which brutalizes all their higher sentiments. Ponder for a moment the depraved condition of those wretched men. Not a few of them would brutally murder innocent Indians, were they to fail to supply them with wine and women. Many of them, on returning home, are poisoning the lower classes in England by the loathsome diseases which they have contracted, diseases whereby not only do they ruin themselves physically and morally, but also their own innocent countrymen and country women at home. Englishmen in England, as a rule, know nothing of the way in which tens of thousands of their fellow-countrymen,—fine specimens of humanity,—are enlisted as soldiers, deported to India, converted into something like brutes,—later to return to England

* Eminent writers have shown that it was Britain's possession of India that really sowed the seed of the Great War of 1914-18. That is to say, it was Britain's Indian Empire that aroused Germany's jealousy and inflamed her with an ambition to obtain for herself an equal "place in the sun." Out of this grew her determination to build her Berlin to Bagdad railway, her creation of a great navy and great army, and finally, as an inevitable result—the collision, the great conflict. Thus to the price which Britain has really paid for her possession of India must be added the 807,451 men of the British Empire killed in the Great War, the 61,907 missing and never found, the 2,059,131 wounded; besides all the war widows and orphans, and the enormous national debt and crushing taxation from which she cannot recover in a generation, if ever.

to bring and spread their brutalism and their diseases here."*

How grave a matter this poisoning of England by these diseased soldiers is, may be seen from a few figures. The Report of the Medical Department of the British Army for 1896 (Parliamentary Blue Book) states that of the admissions to hospitals in India, in 1895, 444 out of every 1,000 were for venereal diseases; and, in 1896, 522 out of every 1,000 were for venereal diseases; From two Parliamentary Reports—"East India (Contagious Diseases)" No. 1 and No. 3, 1897,† we learn that

"Of 70,642 British soldiers serving in India on the 15th of July, 1894, 19,892 or 28 per cent. had been admitted to hospital for syphilis since arrival in India. . . . About 13,000 soldiers return to England from India every year, and of these, over 60 per cent had suffered from some form of venereal disease."

* It must not be understood that venereal diseases are more prevalent among the Indian people themselves than among the people of other lands. As a fact, syphilis the worst of these diseases, does not seem to be really Indian at all, but foreign, brought into the land by foreigners. Says Frederick Tice, M. P., in his "Practice of Medicine," (Vol. III, p. 442): "The researches of Okemura and Sasaki for Japan and China and Jolly and others for India, showed that syphilis did not exist in any of these countries until it was introduced from Europe." Indeed, in the Indian system of medicine this disease is called *Pheranga Roga*, Feringhee disease, which means European disease.

Soldiers are in danger of contracting venereal diseases in all lands. This is one of the evils universally connected with armies and wars. If the evil is particularly grave in connection with the British army in India, it is not at all because Indian women are of lower character than other women! It is because the British army there is large, it stays a long time, and, the fact that the country is not free, but is a subject land, causes the British soldiers to look down on the Indian people and take liberties with their women which they would not do with the women of a free nation.

That British soldiers in India contract venereal diseases is not primarily the fault of India, but of the soldiers themselves (or of the British government that sends them there) is shown by the fact that the Indian people deplore the presence of these soldiers among them. In my own travels in India I found that all communities in or near which soldiers were stationed, particularly foreign (British) soldiers, regarded their presence as a danger to their women, and always felt greatly relieved when the soldiers were ordered away.

† No. 1, Report of Departmental Committee, presented to Parliament. No. 3, Report of Committee of the Royal College of Physicians.

Such was the shocking situation in 1894, 1895 and 1896: and so far as can be learned there has been no essential change since. Thus we see that the army which Great Britain finds it necessary to maintain in India to hold the country in subjection is one of the greatest of perils to the people of England. In the language of one of the Parliamentary Reports, that army "with its enormous prevalence of venereal disease, yearly sending home thousands of men infected, is a great and growing danger to the whole home population."

No Englishman or Englishwoman should for a moment forget that this too is a part of the terrible price which Britain pays for India; a part of the deep and irreparable injury—injury of many kinds and in many forms—which comes to her as the inevitable result of her crime of robbing a great nation of its freedom and holding in forced subjection.

PART SECOND

Let us turn now from soldiers to civilians.

The men whom Britain sends to India to carry on the civil government there, of course, are generally educated, and for the most part of a higher class than the soldiers who are sent to hold the country in subjection. As has been said, these civilians are expected to remain there twenty-four years, minus four years allowed for furloughs. Thus they spend away from home, in a foreign land where they should not be, the best half, and generally a little more than half, of their adult lives. This means that Britain herself (Britain at home, the real Britain), is robbed of their lives and their service to that extent. This privation; this loss; this injury, which she suffers, is very serious; the British nation has no more pressing need than to get its eyes open to a realization of how very serious it is. It has meant in the past, and it means to-day, nothing less than the drawing away of a steady stream of the nation's intellect, intelligence, energy, efficiency, spiritual life-blood, during all these years, and with no adequate return.

Notice how England has suffered educationally, by the draining away to India of the men needed at home to build up her schools primary, secondary, and high, her colleges and universities, her scientific and technical institutions, her schools to teach every kind of practical knowledge necessary

to keep her abreast of the scientific and industrial progress of the age. For thirty or forty years it has been recognized by intelligent foreigners, and known and deplored by all enlightened Englishmen, that as compared with some of her neighbour nations on the Continent, and also as compared with the United States, England has been backward in nearly every kind of education. These other nations mentioned did not throw away their men of education and brains, but kept them at home doing constructive and vital work for the advancement of their people. Therefore, these nations forged ahead.

In the *New York Times* of June 16, 1915, Mr. H. G. Wells said:

"We in Great Britain are intensely jealous of Germany, because in the last hundred years while we have fed on vanities the Germans have had the energy to develop a splendid system of national education, to toil at science and art and literature, to develop social organization, to master and better our British methods of business and industry, and to clamber above us in the scale of civilization. Unfortunately, this has humiliated and irritated rather than chastened us."

In the same issue of *The Times*, Mr. Arnold Bennett confirmed the testimony of Mr. Wells, saying:

"There can be no doubt that Germany has surpassed us in education, the organization of knowledge, social organization and at least two arts. There can be no doubt that she has been more industrious and more serious than we."

It is easy to see how and why the sending away of so many of England's young men to India, as soldiers, to be killed or physically wrecked, and, in addition to this, the even more disastrous banishing of so many of her educated men and so much of her brain power, have necessarily resulted not only in impending her educational progress, but also in causing a decline of her industrial efficiency as compared with several other nations, in a general lowering of the English physique, and in a wide-spread impoverishment of the masses of the English people.

In a lecture delivered by Dean Inge before the British Science Guild, London, November 21, 1927, that eminent churchman is reported as declaring that "with the exception of the upper class Englishman who is a fine animal, the whole British nation is physically inferior to the French and the Germans, and the miserable physique of England's town population is without parallel in Europe."

The scientific investigators of the physique of the British people during the war of

1914-1918 were appalled by what they discovered. Men undersized, their muscles undeveloped and flabby, their hearts weak, their lungs showing signs of tuberculosis, with "rotten flesh and bones of chalk" is the phrase of one investigator. In Manchester of eleven hundred young men examined for the army, nearly nine hundred were found unfit, and it must not be forgotten that these unfit men were the ones who were left behind to become the fathers of the next generation, while the best, who were too precious to be lost, were sent away to the battlefields to be killed.

Said a bishop of the Church of England in a recent public address in London:

"The inequality in the distribution of wealth in England is shocking, and it grows worse. Poverty, want, destitution abound, and increase.

Four-fifths of the soil is in the hands of the favored class. At one end of London wealth literally festers, and the other end ill-clad, hopeless women work fifteen hours a day to keep soul and body together. And for the worker there is always fear of unemployment, which when it comes means suffering and often actual starvation, and for children conditions too terrible for description."

Mr G. K. Chesterton has written a poem entitled "The Lords of England," which contains the following terrible lines:

"Lo! My Lords we gave you England—and
you gave us back a waste,
Hamlets breaking, homesteads drifting,
peasants tramping, towns erased.
Yea, a desert labeled England, where you
know (and well you know)
That the village Hampdens wither and the
village idiots grow."

Turn to British agriculture. We have already quoted from Lloyd George, showing its deplorable condition, largely because so much of the soil of Britain is in the hands of the aristocracy, and is used by them for their own selfish pleasure instead of being employed to feed the nation. But more should be said on this subject.

Says a writer in the *New York Times* of August 8, 1926:

"England, naturally a rich agricultural country, is cursed by the herding of people in the industrial centres. In the space of thirty years (from 1891 to 1921) the number of souls in Britain (England, Scotland and Wales) rose from 33,000,000 to 42,750,000, an increase of 9,750,000 inhabitants. While this enormous increase in the number of human beings to be fed was going on (can it be believed?), the number of persons engaged in agriculture actually and seriously declined.

There was a time when native-grown grain fed 24,000,000 of the population; now it provides for less than 8,000,000. Britain's food import bill has

risen about \$50,000,000 in the last two years, with an annual outlay of something like \$600,000,000. It is one of the ironies of the situation that in a country of fertile soil and plentiful labor, where grain-growing was once the premier industry, to-day people are the most vulnerable to starvation of any considerable people in the world."

Turn to British manufactures. Says a writer in the *New York Times* of August 8, 1926 :

"Men now living can easily remember when Great Britain was the premier steel-producing country in the world. Now America, France and Germany are well on the lead, with the output in the United States five or six times that of Britain.

When it comes to competition, the British are falling farther and farther behind America in applying to manufacturing the principles of scientific mass production. The British have been slow to adopt labor-saving appliances in the mining of coal and in the weaving of cloth. Not less than two-thirds of American looms are automatic, as compared with 10 per cent. in the British Isles."

What does all this mean? Why is it that in so many ways Great Britain has thus fallen behind other nations, when she ought to be at the front?

Her soil is rich; her climate is good; she has abundance of coal and iron, which are the most important natural elements in modern industry; her situation is one of the best in the world for commerce and trade; her people are descendants of a hardy ancestry, and ought to-day to possess vigor and energy second to none.

One other element of distinct advantage should be noticed. For two centuries after the Reformation, the population of England as a whole was recruited and greatly invigorated by the immigration of Protestant refugees from Continental European countries where religious persecution had made life unbearable. Large numbers of French Huguenots, Germans and others, generation after generation, found refuge in England, and brought with them an enormous accession of intelligence, economic power and industrial efficiency. Among these independent thinkers were the most skilled artisans of the Continent, who introduced into England trades and arts previously unknown there. It may even be said that they laid the foundation of the country's at least temporary industrial greatness. For a considerable time she was distinctly the industrial leader of Europe. Why her decline? Why is she not leading Europe to-day, not only in industries but in education, in science, in freedom, in every kind of progress?

Doubtless the explanation is not simple. There are more elements than one entering into it.

But can any intelligent and unprejudiced Englishman doubt, and especially can any intelligent student of the situation looking on from the outside doubt for a moment, that it is essentially and centrally what has been intimated and urged above? It is Britain's wars and conquests; it is her aristocracy; above all, it is India.

It is widely believed by Englishmen that the possession of India has greatly increased England's wealth. Even if this were true, would it compensate for the moral loss which England has suffered in so many ways from that possession?

But has it increased her wealth? And if so, has it to anything like the extent supposed? And has such wealth as has come into the hands of a few, reached the real people of England? Has it been a benefit to anybody in England, except the very small minority the money-lords who have used it to increase their own riches and power; the great manufacturers, who have used it to build great factories, in so many of which men, women and children have toiled cruelly long hours on cruelly low wages; the aristocratic class who have employed it to enlarge their parks and hunting preserves, to build fine mansions and to increase their personal luxury; the militarists and imperialists who have used it in propaganda to get larger armies and especially bigger and ever bigger navies, which the people have had to pay for, and which have led the country into ever more and more wars? How much of it has gone for education or for anything calculated to lift up or in any way benefit the masses of the English people?

Said Richard Cobden in the House of Commons:

"I do not think, for the interest of the English people, any more than for the interest of the Indian people, that we should continue to govern India. I see no benefit which can arise to the mass of the people of England from connection with India, except that which may arise from honest trade."

This statement of Cobden's is as true now as when it was uttered, seventy years ago; and British rule in India is maintained now, as it was then, not because it profits the English people as a whole, but because it profits those British classes and interest which ever seek to dominate and use the English people.

It is the unqualified verdict of history that the vast treasures which Spain obtained from her conquest and plunder of Mexico and Peru, brought no permanent benefit either to the Spanish people, or to the nation as a nation. On the contrary, it corrupted her whole national life and hastened her decay. Moreover, the wealth itself was soon gone because it had not been used for the enlightenment, elevation and betterment of the people.

The iniquitous slave trade which was carried on so long under the British flag, did not benefit the British people, but only certain British ship-owners and capitalists. Slavery, which so long disgraced the Southern States of the American Union, did not benefit the people as a whole, or those States as states. It enriched only a small class. The country and the people generally were injured. The Northern States, where there was no slavery, far surpassed the South in education and in everything pertaining to the general welfare, and it is only of late years, since the curse of slavery has been removed, that the Southern States are beginning really to prosper.

During the fifty years preceding the Great War, Germany without any India and without colonies worth mentioning, increased in trade, commerce, and wealth much more than did Great Britain. The same was true of several of the smaller nations of Europe that had no colonies and no India. These facts show that colonies and dependencies are not necessary in order to secure trade—trade of the most profitable kinds, trade to the fullest degree.

One reason why the industrial prosperity of a nation does not require the owning of colonies and dependencies, is the fact that the armies and navies and police and vast imperialist machinery which such ownership involves, more than consume the profits. It has been proved a hundred times over that the motto, "Trade follows the flag" is not necessarily true at all. What trade follows is friendship, intelligence, enterprise, absolutely honest and fair dealing. A large part of the best trade of every nation is with peoples not under its flag. This is true of America. It is true of every nation of Continental Europe, it is true of Great Britain herself. The United States did not require to "possess" the Philippines in order to reap most profit from their trade. Since she conquered them they have been an

actual expense to her. What she needed, to promote her trade, was the friendship of the Filipino people. Great Britain covets the rich trade of China. What she must have in order to secure it is the friendship and thorough confidence of the Chinese people,—these, and not British gun-boats on their rivers, British battleships in their harbors, British police in their cities, tyrannical exterritoriality, unjust customs exactions, and concession obtained by force. Friendship, enterprise, absolutely fair and just dealing will bring to Britain and every other commercial nation far more and better trade with every part of the world than all their armies and navies can possibly extort.

This is the lesson that Great Britain needs to learn concerning China, and still more concerning India.

Many Englishmen claim that Britain by her possession of India has gained protection and safety, because she has been able to draw upon the Indian people for recruits for her armies.

Nothing could be farther from the truth than this claim. From the very first day of Britain's possession of India, India has been Britain's danger point, her weakness, her peril,—the part of her empire most liable to flame into revolution; the part most coveted by other nations and therefore which has had to be most constantly protected against other nations; the part of her empire to guard which she has had to maintain an army much larger and more expensive than otherwise she would have needed, and a navy several times as great and several times as costly as otherwise she would have required. This shows how very great a danger and how very great an expense the possession of India has been, and all the while is, to Great Britain.

Many Englishmen justify their domination of India on the ground that it gives their nation prestige. Yes! unquestionably it does, of the kind that comes from conquering nations and ruling them without their consent; prestige based upon brute military power—"Devil prestige"! Does Britain want such? If so, her religious teachers, if she has any who really believe in justice and moral law and God, may well sound in her ears the solemn lines of her Kipling:

"Far-called, our navies melt away;
On dune and headland sinks the fire;
Lo, all our pomp of yesterday
Is one with Nineveh and Tyre!"

And also the following lines, not less applicable to her case:

"The ruins of dynasties passed away
In eloquent silence lie;
And the despot's fate is the same to-day
That it was in the days gone by.
Against all wrong and injustice done
A rigid account is set,
For the God who reigned in Babylon
Is the God who is reigning yet."

One further very important thought, in conclusion.

If Great Britain can spare her best young men from the great task of building up her important interests at home, and can afford to send them away to a foreign land, why does she send them to India, a full land, a crowded land, where they are not wanted, where they have no right to be, where their task is that of perpetuating human bondage? Instead, why does she not send them to her own dominions, Canada, Australia, and the rest, where they have a right to be, where they are wanted,—her own splendid lands of vast, unpopulated spaces, rich in every kind of material wealth,—lands which have long been calling them, calling them, to come, and build up new homes, new communities, new cities, new states, new civilizations, for the enlargement of the bounds of human freedom, for the strengthening and glory of Britain, and for the benefit of the world?

Canada and Australia are vast areas, almost continental in extent, possessing unlimited material resources, one containing only about nine millions of inhabitants and the other less than six millions, yet each capable of sustaining in comfort and prosperity a population of fifty, or seventy-five, or a hundred millions. Both countries have begged incessantly for population, and none would have been so welcome or so valuable as immigrants from the home land. Both have sorely needed capital, and have been full of opportunities for its investment where it would not only have brought ample returns but also would have served the immensely important purpose of developing free countries and building up strong nations.

Here, in creating in these lands great and rich civilizations—other and greater Englands—was a career for Great Britain worthy of her best sons, worthy of her most ardent and sustained energies and of her highest ambitions. Why has she turned aside from, neglected, rejected, such glorious and unprece-

dent opportunities to serve both herself and the world, and instead, has thrust herself, forced herself, into a land, fully populated, where her sons have had to spend their years in the un-British task of ruling men against their will and gaining wealth and power by injustice and tyranny?

Looking at the matter from any side, considering the case on any ground even the lowest, has India been an advantage to Great Britain? Has Britain been wise in pursuing her career of conquest, oppression, exploitation and robbery (in the later years legal robbery) in India, and at the same time neglecting her dominions, her free colonies?

General Gordon, who had an intimate knowledge of both England and India, wrote in his Journal (1st Ed., p. 133):

"India to me is not an advantage. It accustoms our men to a style of life not fit for England. It deteriorates our women. If our energy expended there were expended elsewhere, it would produce ten-fold. India sways our policy not to our advantage but to our detriment."

Many other British men express in private conversation, and not unfrequently make bold to say in print, the same word as that of General Gordon. In the *Glasgow Herald*, I find a letter written by a Glasgow gentleman, saying:

"Let us suppose, for the sake of argument, that British rule in India has proved to be a benefit to the Indian people—which to say the least is very questionable, does it follow that Britain should continue to rule India? Assuredly not, since there is strong reason to believe that the British talent, energy and capital which have been absorbed in that far away land where we can stay only by forcing ourselves upon an unwilling people, would have been very much more productive of solid benefit to ourselves and to the world if this talent, energy and capital had been used to develop the resources of the British Islands, and of those parts of the world where we are wanted, where we have a right to be, and where people of British birth and descent can settle as permanent colonists and build up great new British dominions."

The present writer has lived some years in different cities of Canada, and he knows how many Canadian people feel that the "mother country" has been anything but wise or just in devoting so much of her thought, attention and capital, and sending out so many of her best men, to India, to the neglect of her own important dominions—Canada, Australia, and the rest. Many Canadians believe that several millions of emigrants, intelligent, vigorous, enterprising people, who have come from the British Islands within

the last half or three-quarters of a century to the United States, and who are exactly the kind of men and women that the British dominions needed to develop their new civilization, would have come to these British lands instead of to the United States if the mother country had shown half the interest in helping and developing these lands that she has shown in ruling and exploiting a country that did not belong to her, and that brought her no strength and no real good.

To cite a sample Canadian utterance. In the London *Times* of Sunday, June 6, 1926, appears a quotation from a prominent Toronto editor, addressed to Great Britain, declaring that British neglect is being taken advantage of by the United States to draw Canada more and more under her influence. He says:

"We Canadians do not want to be tied up with these people south of us; but what are we to do? You British care nothing about Canada. Two per cent. of the capital invested in the Dominion is British; more than seventy per cent. is United States capital. Even when your big people—prominent authors and the like come across the water, they choose the States, and seldom come to the border even to shake hands. Who are we? God's lost sheep."

The people of Australia even more than the people of Canada feel the unwisdom and folly of Great Britain, and her injustice to her own children, in paying so little attention to them, and especially in devoting such an enormous amount of her capital and her manpower and brain-power to the altogether questionable enterprise of maintaining her "Indian Empire," when all this capital, manpower and brain-power are urgently needed in the great Australian Continent to develop there a rich and powerful daughter nation of infinitely more value to Britain than any slave empire held in allegiance by bayonets can ever be.

Says an American Quaker, who has lived both in Canada and in India:

"Why does not England send her sons to Canada, instead of to India? Under Canadian conditions the best that is in them would be brought out. Pioneer life, the conquest of natural forces, the building up of free institutions in a free land make manly, strong, honorable and noble men. But under such conditions as exist in India the worst that in men is developed. The domination of a subject people destroys manhood, and degrades the character of all who have part in it. In Canada I have always been proud of Britain. In India I have always been ashamed of her. Why does she not have the wisdom to give up her slave empire, washing the stain of it from her hands, and put all her energies into building up her splendid free Commonwealths, Canada, Australia and the others?"

In the story of Jesus we read

"And the devil taketh him unto an exceeding high mountain and sheweth him all the kingdoms of the world and the glory of them; and he said unto him, All these will I give thee if thou wilt fall down and worship me. Then said Jesus unto him, Get thee hence, Satan."

When Great Britain was taken up into a high mountain and shown the kingdoms of the world and the glory of them; and when the devil said unto her, All these will I give you if you will fall down and worship me, what answer did she make? Was it that of Jesus? Or was it the opposite—Give me the kingdoms, above all, give me India; and I will fall down and worship thee?

As surely as day follows night, a future age, wiser than ours, will come, which will see and declare that Britain in conquering and maintaining her "Indian Empire," like Jacob of old "sold her birthright" (and a splendid birthright it was) "for a mess of pottage"—nay, for a cup of poison for herself and for half the world.

[This article, specially contributed to *The Modern Review*, will form a chapter of the author's forthcoming work, "India's Case for Freedom"]

RAMKRISHNA PARAMHANSĀ

By NAGENDRANATH GUPTA

I

OF men that are called great the greatest are the givers of radiance, the shedders of light, those who guide the groping hands and the hesitant and straying feet of

men, who lift up the drooping hearts of men with strong words of faith. There is no accounting for them, there is no explanation of their gift beyond the bare statement that

it seems to be conferred by a higher Power which chooses them as instruments for the diffusion of light. This is the highest heroic element in man and forms his highest distinction. The highest gift vouchsafed unto man is the gift of faith, and the strength to inspire others with faith. The fabled messenger of the gods had wings on his heels, but the messengers that are seen on earth release winged words which fly on tireless pinions through the wide and endless expanses of Time. Men assign without hesitation the highest place to the teachers of humanity, the men who show the path that lead Godward. Among these is the assured place of Ramkrishna Paramhansa.

The great bulk of humanity is usually content with the ways of the world. The impermanence of all things mundane does not seriously disturb the thoughts of men. The bonds of the world paralyse their spirit, the wrappings of life form an impenetrable veil for their vision. In varying degree different peoples in different lands have hazy notions of a hereafter, of things beyond this life and beyond this earth, of a vitalising and energising Force behind manifest phenomena. Transcending these early thoughts comes the conception of a Creator and Sustainer to whom homage is due. At the most, this is a fleeting and passing thought, and does not materially influence the course of life. While all waking thoughts are given to the affairs of this life men, even when they are inclined to be religious, snatch only a few moments to think of their God, or the mystery of being. The world absorbs them as a piece of sponge absorbs water.

At times the dreary desolation of the Dead Sea of a stagnant humanity is quickened and galvanised into consciousness by the urgent voice of some great Teacher moved by compassion. He picks up the Dead Sea apple, the fruit of worldly life, beautiful and tempting to the eye, breaks it and shows the rottenness within. And his words, words of hope and good cheer, a call not merely to repentance but also to righteousness, a promise that man may come into his inheritance if he prove worthy. Such a Master may be born in a king's palace, or cradled in a stable manger; he may be born in a desert country or in a poor man's home. He is not a creature of circumstances, he is not affected by his surroundings. The signs that may distinguish him from other

men come to be recognised either at birth or later on; the latent power in him may develop early or may mature at a later stage of life, but his message is always delivered and his part is always fulfilled before he lays down his life.

Born in a good but poor Brahmin family in a village in west Bengal, the boy Gadadhar, who was afterwards known as Ramkrishna Paramhansa, began by both justifying and upsetting Carlyle's theory that the greatest men were born before any books were written. This is true to the extent that some of the greatest and most ancient books were composed by word of mouth but were not reduced to writing till several centuries later. There were great men when no books had been written, but men may become great even now without the help of books. Ramkrishna took an early aversion to books and he did not acquire even the little learning that the village school could bestow. He barely learned to read his own language, but never acquired any other. If, however, he had a distaste for books he was avid about everything pertaining to religion, and eagerly read such Bengali books as the Ramayana and the Mahabharata, and anything else that came his way. But in all he read very little and could not be called an educated man. In conversation also he used the language of an ignorant villager, mixing up the respectful and the familiar forms of the pronoun 'you' in Bengali, and using swear-words freely. And yet in this crude form of speech he expressed thoughts which amazed and delighted his hearers, including several highly cultured persons in Bengal. Many of his sayings have become familiar as household words.

While yet a boy in his 'teens Ramkrishna came to Calcutta with his brother, much older than himself, and afterwards moved to the temple at Dakshineswar on the bank of the Ganges, a few miles to the north of Calcutta. This temple had just been built and endowed by Rani Rasmani, a devout and wealthy woman belonging to an humble caste. The chief idol in the temple was an image of the goddess Kali in stone, but there were several temples with other images in them. Ramkrishna's brother was installed as priest and after some time he asked the young lad to officiate in the daily worship. Ramkrishna was a good singer and he sang hymns and sacred songs with great feeling and emotion. His intense devotion, utter

simplicity and truthfulness soon attracted the attention of Rani Rasmani and her son-in-law, Mathuranath Biswas, and they treated him with the highest consideration as long as they lived. With the exception of a few occasional visits to his village home and a pilgrimage in the company of Mathuranath the whole life of Ramkrishna, until nearly the very end, was spent at Dakshineswar.

Here in this temple and in the grounds surrounding it, in the little wooded arbour known as *Panchavati* was begun and finished the spiritual evolution of Ramkrishna Paramahansa. This worshipper of idols, this young man who had deliberately turned his back upon instruction and the knowledge derived from books, was filled with an overpowering longing to visualise Kali the Mother, whose carved image stood in the temple. He wept and waited and cried out, 'Mother! mother! mother!' until the people around him thought he was bereft of his senses. And he never rested until his agonised calls, the yearning of his soul, were answered and the vision of God as Mother was granted to him.

So marked was Ramkrishna's dislike to all worldly affairs that his people were agreeably surprised when as a young man he agreed to marry a little girl several years his junior. It was not a marriage as the world understands the word, for there were no marital relations between them. During his protracted meditations and austere observances the sex instinct had been completely subdued by Ramkrishna. All women, even the fallen among them, were in his eyes manifestations of the divine Mother. When his wife grew up to be a young woman he worshipped her in due form, and subsequently explained to her that the Mother of the worlds was visible in her personality as well as in the image of the goddess in the temple. She was in fact his first disciple and was held in the greatest reverence by all the followers of Ramkrishna Paramahansa.

At the temple at Dakshineswar food cooked and uncooked, was freely supplied to Sadhus and Sannyasins who tarried there for a short space while on a pilgrimage to the various sacred places and shrines in India. Ramkrishna came in frequent contact with these people and learned from them many Hindi hymns and holy sayings. For a considerable time he was under the influence of a Bhairavi, a Bengali Brahmin woman, who initiated him into the forms of Tautric worship. Next he met Tota Puri, a

stalwart Adwaitavadi from the Punjab, from whom he received *sannyasa*, and who probably conferred upon him the name of Ramkrishna. Tota Puri went about naked like the gymnosophists whom Alexander saw when he crossed the Indus and with whom he held converse. Ramkrishna used to speak of this man in later life as the Naked one. From another person he learned the doctrine of Vaishnavism. He displayed keen interest in the tenets of Islam and for some time called upon the name of Allah and would not enter the temple of Kali. The name and teachings of Jesus Christ attracted him and he went and stood at the entrance of a church in reverent spirit. He went to the Adi Brahmo Samaj on the Chitpore Road in Calcutta and was much impressed by the genuine and deep devotion of Darendranath Tagore and Keshub Chunder Sen. In fact, he practised with full faith and conviction every form of worship that came to his knowledge or of which he heard, and he accepted every religion as a path to salvation. While under the instruction of Tota Puri he entered into *Nirvikalpa Samadhi*, which is said to be the final stage of communion during which the soul is unified with the Absolute Godhead and all consciousness of the outer objective world is lost. From this time onward Ramkrishna used to pass frequently into a state of *samadhi* and while in this state he was unconscious of his surroundings, but his countenance was lit up with an ineffable rapture and beatitude. For some time these trances were attributed to physical or physiological causes, but this theory was abandoned when it was found that the inducement to *samadhi* was, in every instance, some intense religious thought or feeling.

The best description of the states of *samadhi* is to be found in the *Masnavi* of Jalaluddin Rumi. —

"Ecstasy and words beyond all ecstatic words :—
Immersion in the glory of the Lord of glory!
Immersion wherefrom was no extrication—
As it were identification with the very Ocean."

Upto this time Ramkrishna Paramahansa was mainly concerned with India of the past, the India of the ancient creeds and the ancient forms of worship, the worshippers of Siva and Vishnu, Kali and Krishna. He had also given thought to religions that had originated out of India. The intensity of his devotion and faith had brought on strange visional experiences. And now he came into

direct touch with India of the present, leavened by western education and western thought. He went himself to see Keshub Chunder Sen, the great, gifted and deeply devout leader of the Brahmo Samaj of India, and very soon there sprang up between these two kindred spirits a deep intimacy based upon their earnest religious feelings. Both were well-advanced in their convictions, both were full of real humility. When Ramkrishna once asked Keshub to deliver a speech the latter replied, "Am I to vend needless in a blacksmith's shop? I would rather listen to your words." I may recall another unreported instance of Keshub's humility. When father Luke Rivington, an eloquent priest of the Roman Catholic Church, delivered some addresses in Calcutta some people in Keshub's hearing remarked that Father Rivington could not be compared to Keshub as an orator. Keshub deprecated this remark and said, Father Rivington was a big drum while he was like a child's toy-drum (*दकेर कद्वे ब्यानेमि !*) Ramkrishna Paramhansa invariably spoke of himself with the utmost humility. He used to say he was an atom of an atom, the servant of another man's servant. At Dakshineswar he usually avoided using the first person singular. He would say 'here' or 'of this place', meaning himself. When 'one came and said unto Jesus, Good Master, what good thing shall I do, that I may inherit eternal life? And he (Jesus) said unto him, Why callest thou me good? There is none good but one, that is, God.* It has been a characteristic of great religious teachers, holy men and saints to avoid the egoism implied in the pronoun 'I.' The Buddha spoke of himself as the Pathagata, Jesus Christ called himself the Son of Man, Muhammed in the Koran uses either his name, or designates himself either the unlettered Prophet or simply the prophet. Chaitanya and the leading Vaishnavas called themselves servants of other men, the well-known Pavhari Baba of Ghazipur spoke of himself in the third person singular as the servant of the man he happened to be addressing. The Buddha said, "Such things as a *Me* and *Mine* are really and truly nowhere to be found." † In the case of such men

"Love (the love of God) took up the harp of Life and smote on all the chords with might :

* St. Matthew.

† The discourses of the Buddha. The Parable of the Snake.

Smote the chord of Self, that trembling, pass'd
in music out of sight."

There has been some speculation and theorising about the influence exercised by Ramkrishna Paramhansa and Keshub Chunder Sen upon each other. The followers and admirers of both these Teachers have claimed the larger share of influence for their own Master. A speculation of this kind is neither profitable nor edifying. Both of these great men had remarkable personalities, both were mutually attracted towards each other, both had high respect for each other, both must have derived some advantage from their loving and intimate intercourse. The Buddha met Nigantha § Nathaputta (Nirgrantha § Nirgrantha the unfettered.

Nathaputra), who was none other than Mahavira, the twenty-fourth and last Tirthankara of the Jains, and had discussions with him. Who shall say how far these two Teachers influenced each other? Is it for any one to speculate to what extent Jesus of Nazareth was influenced by John the Baptist, or the Buddhist preachers who carried the gospel of the Buddha to Asia Minor? Does any one believe that the Jew and the two Christians with whom the prophet Muhammed associated for some time inspired the Koran? Advaita was older than Chaitanya and a very staunch Vaishnava. Does that justify the inference that the whirlwind of Chaitanya's divine love was influenced by the older man? Guru Nanak associated with Hindu and Mussalman holy men. Is there any need for making up an account of his indebtedness to others?

Following the distinguished lead of Keshub Chunder Sen other men of note began visiting Ramkrishna Paramhansa. The papers controlled by Keshub published some of his sayings and drew attention to the saintliness of his character. Max Müller heard of him and wrote an account of him and quoted his sayings. Protap Chandra Mazumdar of the Brahmo Samaj, a man of high intellectual attainments, wrote several articles remarkable for their eloquence and expressive of warm admiration. Among other sentiments of praise he wrote:—"So long as he is spared to us, gladly shall we sit at his feet to learn from him the sublime precepts of purity, unworldliness, spirituality and inebriation in the love of God." Elsewhere he wrote:—"He has no other thought, no other occupation, no other relation, no other

* Tennyson

primer to an intelligent child. His precursors, those that gave him oral instruction, were left behind. Even this immense treasure did not satisfy the craving of his spirit. Unlike a Hindu, who is usually satisfied with the religion of his fathers, he inquired about other religions and discovered the Truth in all. He was a living illustration of his own parable of the woodcutter who was advised to go forward and who discovered richer treasures the farther he went. Ramkrishna Paramhansa turned with disgust from worldly wealth, but he never tired of acquiring the wealth of the spirit-world and never rested till his treasure-house was full to overflowing.

The points of resemblance between the great Teachers of humanity fill the mind with wonder. The teaching in the Bhagavadgita, which has permeated the whole of India and has reached other parts of the world, was originally addressed by Sri Krishna to Arjuna alone. The first teacher who charged his disciples to carry his doctrine abroad and to offer it to all alike without distinction for acceptance was the Buddha. He had all the learning of his time but he used only the simple Pali idiom then understood by the common people and his discourses were addressed either to the monks or inquirers. He made use of parables and stories to expound his doctrines. The dignity, serenity and eloquence of his discourses are as elevating as they are impressive. Jesus Christ spoke in language of astonishing beauty and simplicity, making use of striking images and parables. But he also spoke to small audiences and not to large crowds. The Sermon on the Mount was delivered only to his disciples, for it is stated that seeing the multitudes and evidently to avoid them Jesus went up into a mountain and his disciples came unto him. Muhammed was unlettered and the Koran was uttered, Sura by Sura, in the hearing of the few faithful who were his early converts. The Koran sometimes shows the passion of the Hebrew prophets and again there are passages of great grandeur and sublimity. Ramkrishna Paramhansa, when not citing the scriptures about which he had heard, used the simplest similes and illustrations derived from the observation of the things and incidents of everyday life. There was a slight halt in his speech, but his words flowed on, unhesitating and unceasing, and the few people around him drank in the words with bated

breath and undivided attention. The Teacher is different from the orator who addresses and sways multitudes. The words of the Teacher are charged with power and weighted with authority, and he drops them as pearls to be picked up and strung together by the privileged but few listeners. The Guru teaches, the Chela preaches, Jesus Christ put it exceedingly well to his disciples:—"What I tell you in darkness, that speak ye in light; and what ye hear in the ear, that preach ye upon the housetops.* Yea, upon the housetops and in the market-place, in the forum and across the seas let the preacher with a mandate carry the word of the Teachers and Lights of the world to freshen and sweeten the springs and waters of life.

The persuasiveness and power of the great Masters did not always move the hearts of all their hearers. Devadatta was a cousin of the Buddha and a member of the order of the monks following the master's teachings. He claimed to possess the power of *iddhi* (working miracles and mystery wonders) and insisted upon the importance of austerities and penances. He persistently endeavoured to undermine the influence and power of the Buddha, and on one occasion when there was a schism between the monks asked the Master to resign the leadership of the Order in his favour. In the Jataka tales it is related that Devadatta was invariably an opponent of the Buddha in previous births and even made an attempt on his life. After the death of the Buddha Subhadra, a monk who had joined the Order of the Bhikkhus in his old age, said they were well rid of the great Samana (the Buddha) because he used to annoy them by telling them what was becoming and what was unbecoming in their conduct. Judas Iscariot was one of the twelve apostles chosen by the Christ and beloved of him, and to whom he had promised, "Ye shall sit upon twelve thrones, judging the twelve tribes of Israel." And Judas sold his Master for thirty pieces of silver and betrayed him not by open denunciation or public accusation, but by the treacherous kiss of seeming love. Abu Lahab, uncle of the Prophet Muhammed, rejected his nephew's claim to the prophetic office at the instigation of his wife, Umme Djemil, who is said to have strewn the path of Muhammad on one occa-

* St. Matthew

sion with thorns.' For this they have been cursed in the Koran: "Let the hands of Abu Lahab perish, and let himself perish! Burned shall he be at the fiery flame, and his wife laden with fire-wood on her neck a rope of palm fibre."[†]

Hriday Mukerji was a nephew of Ramkrishna Paramhansa and his constant companion. He tended his uncle in illness and served him in many ways, but he never realised the greatness of the Paramhansa. He scoffed at him and used to tell him to speak out all that he had to say, once for all, and not to harp on his ideas constantly. He became so rude and insolent that on one occasion the Paramhansa thought of drowning himself in the Ganges to escape the tyranny of Hriday. This man was at length expelled from the temple by the proprietors. A current of electricity, usually so powerful and irresistible, is baffled and set at naught by a non-conducting medium. Similarly, there are men to whom the words of the best teachers make no appeal.

Humble as was the life of Ramkrishna he never made any distinction between one man and another, between a wealthy and titled person and a poor and obscure indi-

vidual. He designated every one, Raja or Maharaja, eminent writer or famous man, by name and was always outspoken in his expressions of opinion. Bankim Chandra Chatterji, the famous writer and composer of the *Bande Mataram* song, was reproved for his ill-timed and indecorous levity while conversing with Ramkrishna. So were Maharaja Jotindra Mohan Tagore and Kristo Das Pal for their assumption of superiority. Householders were always advised to devote some time to the contemplation of the deity. Of what use was all the learning in the world, Ramkrishna was in the habit of saying, if it afforded no glimpse of God? That was the touchstone on which the metal of every man's nature was tested. Dr. Mahendra Lal Sircar, a learned scientist and the leading homeopathic physician of Calcutta in his time, who made a fetish of scientific scepticism, was strongly attracted by Ramkrishna Paramhansa whom he treated in his last illness, and used to spend hours listening to the marvellous conversation of his patient. The rugged exterior of Dr. Sircar concealed a deep love for the truth and he was fascinated by the inexhaustible flow of the truth from the lips of Ramkrishna.

[†]The Koran. Sura CXI.

THE SECOND AFGHAN WAR

By MAJOR B. D. BASU, I. M. S. (Retired)

THE QUEST OF THE SCIENTIFIC

FRONTIER OF INDIA

IN the political and military transactions which gained for England the so-called 'Scientific Frontier' of India, two men played very important parts. They were Major General (afterwards Lord) Roberts and Major (afterwards Sir Louis) Cavagnari. Before the war broke out they were not considered to be 'shining' lights in the service of the Government of India. But for the Afghan War, these two men would have, in all probability, died "unhonored, unwept and unsung". In his 'Forty-one Years in India' Lord Roberts has given an account of the war. It is not to be expected that he would

give a correct description of all the circumstances and events which brought on war. He has suppressed as well as misrepresented facts. Lord Lytton was his patron and consequently he has extolled him to the skies. It is a great pity that his book, teeming with misrepresentations has found a large circulation amongst the people of England, who have formed erroneous judgment regarding the late Ameer Sher Ali and his doings, for Lord Roberts has painted Sher Ali in the blackest color possible. Lord Lytton would appear to be the greatest statesman whom England has yet produced if Roberts' account of him were to be trusted. This is not to be wondered at, for his career was made by the doings of the writer of pretty and sensuous verse. Referring to his meet-

with Lord Lytton on his arrival at Bombay Lord Roberts writes:—

"Little did I imagine when making Lord Lytton's acquaintance how much he would have to say to my future career."

Cavagnari was a native of Ireland, as was also Roberts. These two Irishmen were the confidential advisers of Lord Lytton. It was not to be expected that Irishmen in power would sympathize with the Afghans in their love of independence. The Irish people have been the bondsmen of England for several centuries. Therefore such of them as get into power do not hesitate to destroy the independence of others. From Colonel Maun's book we learn that Roberts and Cavagnari were the chief conspirators for the destruction of Afghan independence on whom Lord Lytton leaned for support.

There were three columns formed for invasion of Afghanistan when the war was declared against Sher Ali. One column under Sir Samuel Browne marched from Peshwar and captured Jellalabad. The Candahar column under Sir Donald Stewart marched from Quetta and captured Candahar. The Kurram field force, destined for Kabul, was under Major General Roberts. But the force did not reach Kabul. Amir Sher Ali was not prepared for the fight. He was taken by surprise when the British let loose the horrors of war in his dominion. What with the grief consequent on the death of his favorite son and with the bullying of his British neighbours, his position was a very pitiable one. That spirit of self-reliance and fertility of resources for which Sher Ali was noted, did not desert him in this hour of trial and need. He saw his safety in flight since discretion is the better part of valor. So he left his capital. But before doing so he released his son Gakul Khan from prison (for this prince had been incarcerated for rebellion against his father), and placed him on the throne of Cabul. At the same time he wrote a letter to the officers of the British Government, which should be quoted in full because it is of great historical importance. He wrote:—

"Be it known to the officers of the British Government that this suppliant before God never supposed, nor wished, that the matters (in dispute) between you and myself should come to this issue (literally 'should come out from the curtain,') or that the veil of friendship and unity, which has for many years been upheld between

two neighbours and adjoining states, should, without any cause, be thus drawn aside.

"And since you have begun the quarrel and hostilities, and have advanced on Afghan territory, this suppliant before God, with the unanimous consent and advice of all the nobles, grandees, and of the army in Afghanistan having abandoned his troops, his realm, and all the possessions of his crown, has departed with expedition, accompanied by a few attendants, to St. Petersburg, the capital of the Czar of Russia where, before a Congress the whole history of the transactions between myself and yourselves will be submitted to all the Powers (of Europe).

"If you have anything in dispute with me regarding state affairs in Afghanistan, you should institute and establish your case at St. Petersburg, and state and explain what you desire, so that the questions in dispute between us may be made known and clear to all the Powers. And surely the side of right will not be overlooked. If your intentions are otherwise, and you entertain hostile and vindictive feelings towards the people of Afghanistan, God alone is their protector and real Preserver. Upon the course of action here above stated this suppliant before God has resolved and decided."

Under the circumstances, we think, this was the best course for him to adopt. This was an act of a far-seeing statesman and, may be interpreted as one of a sincere patriots. It saved Afghanistan at least for sometime from the Britishers' fire and sword. Sher Ali also thought that by his procedure the British would be compelled to show their hands as regards the future of Afghanistan. In his proclamation before the commencement of war, Lord Lytton said that he had no quarrel with the people of Afghanistan; that he wished to respect their independence and that the object of the war was to punish Sher Ali. So if the man to be punished eluded their grasp and placed himself beyond their reach, would the Britishers, true to their word, leave the people of Afghanistan unmolested, and in the enjoyment of their ancient rights and privileges?

The placing of Yakoub Khan on the throne of Cabul was also meant by him to pacify the wrath of the Indian Government. Again and again, the Government of India had requested the Amir Sher Ali to set Yakoub Khan at liberty but their request was resented by Sher Ali. The Amir said that the British Government had no right to interfere in the administration of Cabul's 'home affairs.' This often expressed request was considered by Sher Ali as one of his grievances against the British Government. So he thought Yakoub Khan was a *persona grata* with the rulers of India.

These considerations must have decided

him in the step he took in his flight from Cabul. As to his laying his grievances before the European Powers, that was only tall talk and meant as bluff. He knew perfectly well that the nations of Europe were all very selfish and would not raise their little finger in saving a non-Christian and Asiatic power. He had before his eyes the treatment meted out to Turkey. He saw how the European powers were harassing the defender of the Islamic Faith and leaving no stone unturned to make the life of the Sultan of Turkey a burden to him. It is absurd therefore to think that Sher Ali could have ever seriously entertained the hope of any assistance at the hands of the European Powers. However, he might have thought that he would be able to give to the world a true account of the affairs of Afghanistan and thus succeed in enlisting the sympathy of all right thinking men on his side.

But he died a few days after leaving Cabul. It is suspected by many that he committed suicide. However, he was spared the humiliation which he would have otherwise been subjected to, had he stayed in Cabul.

The flight of Sher Ali and thus the success of the authors of the Aggressive Policy filled the heart of Lord Lytton with joy. He wrote to the Secretary of State for India:—

"Within two days after the declaration of hostilities, the affront received by Sir Neville Chamberlain's Mission at Ali Musjid was appropriately avenged on the spot where it had been offered. Within two weeks after the same date, the passes of the Khyber and the Kurram were completely in our hands and the Amir's troops swept clean beyond the range of our operations. Not long afterwards, Jellalabad and Candahar were occupied without resistance; and before the end of January (that is to say, in less than three months from the commencement of the campaign) the greater part of Southern Afghanistan, from the Helmand to Kbelati Ghilza, had passed into the possession of the British Government. The rapid success of our military operations completely confirmed the calculations on which they had been based. The Amir's standing army was defeated and dispersed beyond all possibility of recovery; yet his Sirdars had not risen to the rescue of his power. His towns opened their gates without remonstrance to our summons; their authorities readily responded to our requirements; and their inhabitants evinced no disposition to forfeit the pecuniary advantages they derived from the presence of our troops."

Major Cavagnari was the political officer with Sir Samuel Browne's force. On the 19th December 1878, he telegraphed to the

Viceroy, announcing the flight of Ameer Sher Ali from Cabul. On the receipt of this intelligence, Lord Lytton instructed the Commander of the Khyber column, Sir Samuel Browne, to hold a Durbar at Jellalabad, with the object of explaining to the inhabitants of Afghanistan, the intentions of the British Government regarding the future of their country. The Durbar was held on the 1st. January 1879, and was attended by about 36 Chiefs of Afghan blood. As the political officer of the force, Major Cavagnari was allowed by Sir Samuel Browne to address the assembly. He commenced his address by vilifying and abusing the Ameer Sher Ali; then he bragged a good deal of the valor of the European officers and the men under their command. He said —

"Regarding the collapse of the Amir's army at Ali Musjid and the Peiwar, you have heard full particulars, and have doubtless perceived that it is utterly hopeless for such troops to stand against the British forces, and by his flight from Cabul the Amir has shown his recognition of this fact. * * * * you have heard the assurances of the Viceroy of India that the quarrel of the British Government is entirely with Sher Ali Khan and not with the people of Afghanistan. "It has been necessary in some few instances to inflict punishment upon evildoers but the Government is satisfied that the acts were committed by only a small portion of the tribes we have come into contact with, and were repudiated by the majority who desire to live in peace with the British Government."

"I further draw your attention to the concluding portion of the Viceroy's proclamation in which it stated that interference by other Powers in the affairs of Afghanistan will not be tolerated by the British Government, and I have already informed most of you that the Russian Government has recently repeated its former assurances that it has no desire to interfere in Afghanistan nor will it assist the Amir either with troops or money during his hostility with the British Government."

"It has been my pleasing task to report to the Viceroy of India the hearty manner in which the leading Sirdars and Chiefs of this district came forward to tender services to the British Government, and it is hoped that others will speedily follow the good example you have set them."

There was not a single word said regarding the future Government of Afghanistan. Hence from this address of Major Cavagnari many presumed that the Government of India meditated the annexation of Afghanistan. It is not improbable that the question of the annexation was at that time engaging the attention of the authorities in England as well as in India. Had it not been so, Lord Lytton would have certainly assured the Pathan Chiefs that the British Govern-

ment had no designs on their national independence.

Another curious feature was the announcement regarding Russia's intention towards Afghanistan. If Russia had no intention of interfering in Afghan affairs, why should Ameer Sher Ali be punished for receiving the Russian Mission. Amongst the European Christians, marriage is not performed in that haphazard manner as it is done amongst Orientals. A Christian European has to win the love of a girl, before he can aspire to be her husband. If it so happens that a girl is being paid attention to and wooed, by two men or lovers, the matter is often settled in some European countries by a duel between the two rivals. That lover must be a great coward indeed who, fearing the physical strength of his antagonist and thus avoiding a duel with him, puts an end to the life of the girl out of jealousy of his rival, feeling the only satisfaction that by such a dastardly deed, the girl whose love he could not win, would not become the wife of his rival.

The position of Afghanistan was that of a girl whose love two strong powers tried to win. It is not unnatural in Christian European countries that a girl having two or more suitors to her hand, flirts with, and tries to excite the jealousy of, each of her lovers, for, in this manner she often succeeds in getting better terms than she could have otherwise expected. The ruler of Afghanistan did nothing more than flirt with Russia and thus tried at the most to excite the jealousy of England. The fact should not be lost sight of that when Russia was alleged to have been suing for the hand of Afghanistan, England had altogether withdrawn from the scene. England, moreover, had the assurance of Russia, that that power would never dally with Afghanistan. If Russia was guilty of bad faith, England should have gone to war against Russia. Taking all these circumstances into consideration, it appears to us that the invasion of Afghanistan by England was utterly unjust.

On assuming the reins of Government, Yakub Khan made overtures for peace with the British Government. To the political officer, Major Cavagnari in the beginning of February 1879, he offered his good offices for adjusting the differences which had arisen between his father and the British Government. A few days later, Cavagnari

received another letter from Yakub Khan in which he communicated the news of his father's death. Sher Ali had died in Afghanistan on the 21st February, 1879.

Lord Lytton was not as yet inclined for peace. But he had to yield to the pressure brought on him and his war party by the public opinion of the natives of England who were now against the continuance of the war. Accordingly this Viceroy wrote to Cavagnari to suggest to the new Amir Yakub Khan to invite him (Cavagnari) to Cabul for the opening of negotiations. The Viceroy wrote :—

"So many and such mischievous misrepresentations of our Afghan policy, more especially in reference to the territorial questions, had been propagated after the rupture of our relations with Sher Ali, that the Amir's reluctance to entertain any territorial basis of negotiations appeared to us very probably attributable to be exaggerated and erroneous apprehensions as to the real character of the arrangements we deemed essential to the future security of our Frontier. We felt, however, that their moderation must be admitted, if they were compared with the conditions of a similar character hitherto dictated, at the close of victorious wars by conquering or conquered Powers and he believed that if the object and scope of them were thoroughly understood by the Amir, the last obstacle would be removed from the conclusion of a mutually honorable and advantageous treaty of peace between His Highness and the British Government. For this it was necessary that there should be between us a frank interchange of views and wishes on the subject of our relative positions. Such interchange of views could not be satisfactorily carried on by formal correspondence, or without personal intercourse; but long and varied experience had convinced us that the policy of a European Government cannot be adequately interpreted, or represented by Asiatic Agents, however loyal and intelligent they may be.

"* Warned by this knowledge, we felt that to entrust the detailed explanation and discussion of our views to any Native agent, would insure misconception and resistance on the part of the Amir. On the other hand, we reposed complete confidence in the discretion and ability of Major Cavagnari; and for all these reasons, we were anxious to bring about if possible early and unreserved personal intercourse between him and the Amir of Cabul.

"* We, therefore, authorised Major Cavagnari to address to the Amir proposals for a personal conference at Cabul on the subject of our territorial conditions. These proposals having been accepted the Native bearer of them was instructed to arrange with Yakub Khan for the proper reception of Major Cavagnari at the Court of His Highness."

The Agent chosen for carrying the letter to the Amir was a Muhamadan gentleman by name Buktia Khan. On his arrival at Cabul he saw those nobles who had lately returned from Turkestan after the death of Sher Ali.

These nobles were, it is alleged, against an alliance with the British. Baktiar Khan was alarmed at their hostile attitude. Accordingly he suggested to Yakub Khan to visit the British camp which had moved from Jellalabad to Gundamak about 30 miles from Cabul. It is said that Sir Samuel Browne moved from Jellalabad "owing to the increased heat of the weather, and the defective sanitary conditions of Jellalabad." But it appears to us that the motive for the move was to threaten the Amir with a march on Cabul if he did not consent to the terms of the proposed Treaty.

Yakub Khan arrived at Gundamak on the 5th May 1879. When the articles of the proposed Treaty were communicated to him he protested against the cession of the most important provinces of his kingdom to the British Government. But all his protests were of no avail. Rightly he pointed out that the origin of the quarrel with his father did not consist in any question regarding territorial concessions and that as his father was now dead the relations between the two Governments should rest on the same understanding as before the unhappy rupture with his father. But all his pleadings were in vain. The Jewish Prime-Minister tore Afghanistan not only of one pound of flesh, but of as much flesh as his knife allowed without becoming blunt. *Nolens volens* Yakub Khan was obliged to sign the Treaty. On the 26th May 1879, he signed away a large portion of his patrimony, as well as the independence of Afghanistan. This Treaty is known as the Gundamak Treaty. Major Cavagnari signed it on behalf of the Government of India. A few months before the Treaty was signed, public were acquainted with the real object for which the war was forced on the Ameer. The Jewish Prime-Minister had thrown off the disguise. At the opening of Parliament on February 13, 1879, Lord Beaconsfield said:—

Her Majesty's government have the satisfaction of feeling that the object of their interference in that country (Afghanistan) has been completely accomplished. We are now in possession of the three highways which connect Afghanistan with India, and I hope that this country will remain in possession of those three great highways. We have secured the object for which the expedition was undertaken. We have secured that frontier which will, I hope, render our Indian Empire invulnerable.

In all the diplomatic proceedings with the Ameer, in all the despatches either of

the Secretary of State for India, or of the government of India, no hint was ever given as to the real motive for interference in the Afghan affairs. The cause of the war was assigned to the refusal of the Ameer to receive a British mission while the Russian Embassy was welcomed by him.*

The Jewish Prime-Minister frankly declared afterwards that it was undertaken with the object of securing the 'scientific frontier' of India.

What was this 'scientific frontier'? Lord Beaconsfield was good enough to define it at the banquet on the Lord Mayor's day of 1878. His Lordship said—

"My Lord Mayor—The attention of Viceroy and Governments in India and in England has for a long time been attracted to that question of the North-Western Frontier of our Indian Empire. So far as the invasion of India in that quarter is concerned it is the opinion of Her Majesty's Government that it is hardly practicable. The base of operations of any possible foe is so remote, the communications are so difficult, the aspect of the country so forbidding that we have long arrived at an opinion that an invasion of our Empire by passing the mountains which form our North-Western Frontier is one which we need not dread. But it is a fact that that frontier is a haphazard, and not a scientific frontier, and it is possible that it is in the power of any foe so to embarrass and disturb our dominion that we should, under the circumstances, be obliged to maintain a great military force in that quarter, and consequently entail upon this country and upon India a greatly increased expenditure. These are evils not to be despised and as I venture to observe, they have for some time, under various Viceroys and under different administrations occupied the attention of our statesmen. But my Lord Mayor, while our attention was naturally drawn also to the subject some peculiar circumstances occurred in that part of the world which rendered it absolutely necessary that we should give our immediate and earnest attention to the subject and see whether it was not possible to terminate that absolute inconvenience and possible injury which must or would accrue if the present state of affairs were not touched and considered by the Government of the Queen."

In the House of Lords, on the 10th December, 1878, Lord Beaconsfield further explained what he meant by the scientific frontier of India. He said:—

"It has been said that on a recent occasion—not in this House—I stated that the object of the war with Afghanistan was a rectification of boundaries, and that we were to have a scientific instead of a haphazard frontier. I never said

* From the official records the objects of the war appear to have been, first obtaining an apology by the Ameer; secondly, an agreement by him to receive a permanent British Mission within his territories and, thirdly, some temporary arrangements respecting certain border tribes.

that that was the object of the war. I treated it as what might be a consequence of the war—a very different thing."

Then he said that—

"A scientific frontier" is a frontier which "can be defended by a garrison of 5,000 men, while a haphazard one will require for its defence an army of 10,000 men, and even then will not be safe against attack."

It was to attain this 'scientific frontier' that the British dictated by Disraeli committed those atrocities and barbarities in Afghanistan which the Afghans still remember.

"But what had the Ameer (Sher Ali) done," that British armies should slaughter his subjects, burn his villages, capture his cities, and drive him from his capital? Lord Beaconsfield was profuse in assuring the Lords that Russia had done nothing amiss. Her conduct was 'perfectly allowable.' Her Majesty's Government made representation to the Court of St. Petersburg, and it was impossible that anything could be more frank and satisfactory than the manner in which they were met. Russia says: We have ordered our troops to retire beyond the Oxus; our Embassy is merely a temporary one, upon a Mission of Courtesy, and as soon as possible it will disappear.

But if the Russian Mission was so innocent why punish the Ameer with fire and sword for receiving it, especially when it was well known that he did all he could to stop it? Lord Beaconsfield praises the 'frankness' of Russia. Why not imitate it, and confess boldly that he is making war upon the Afghans because he wishes to turn, at their expense, 'a haphazard' into 'a Scientific frontier'?"

This so-called scientific frontier was meant to provide against imaginary danger by taking an innocent neighbour's land and liberty and life and wasting the resources of the famine-stricken natives of India, for, at the time when money was being poured like water in 'slaughtering the Ameer's subjects,' the Indian subjects of the Queen who had then recently assumed the title of the Empress of India, were dying by millions, for want of food. Yet it was the famine-stricken and starving people of India who had to provide the sinews of War.

By the Gundamak treaty a portion of Afghanistan was arrested from Yakub Khan.

"To which England had no more right than France has to Belgium or Prussia to Holland. It was an act of high handed aggression, aggravated by duplicity and a gross violation of the faith of treaties."

The amputated portion of Afghanistan was designated by Lord Beaconsfield as

* The causes of the Second Afghan War.
† Causes of the Afghan War.

forming the "scientific frontier" of India. Whether India has gained a scientific frontier by the addition of a portion of Afghanistan remains yet to be seen. But events have shown that this scientific frontier has involved her in ruinous expenses, and brought her to the brinks of bankruptcy and poverty. It has been obtained by deliberately violating the solemn proclamation of the Queen.

By the other articles of this Gundamak Treaty, Yakub Khan had to grant all those concessions the refusal of which cost his father his life. British officers were stationed in his dominion as Agents of the British Government.

The Gundamak Treaty was the dropping of the curtain over the first Act of the Tragedy. But the drama was not yet played out to the end.

The two important articles of this treaty are the 4th and 9th. The former article runs as follows:—

"With a view to the maintenance of the direct and intimate relations now established between the British Government and His Highness the Amir of Afghanistan, and for the better protection of the frontiers of His Highness's dominions, it is agreed that a British representative shall reside at Cabul, with a suitable escort, in a place of residence appropriate to his rank and dignity. It is also agreed that the British Government shall have the right to depute British Agents with suitable escorts to the Afghan frontiers, whenever this may be considered necessary by the British Government in the interests of both states on the occurrence of any important external fact. His Highness the Amir of Afghanistan may on his part, depute an Agent to reside at the Court of His Excellency the Viceroy and Governor-General of India, etc."

By the 9th article, the Amir's dominion was amputated of certain territories for the formation of the scientific frontier of India:—

"In consideration of the renewal of a friendly alliance between the two states, which has been attested and secured by the foregoing Articles, the British Government restores to His Highness the Amir of Afghanistan, and its dependencies, the towns of Candahar and Jellalabad, with all the territory now in possession of the British armies, excepting the districts of Kurrum, Pishin, and Sibi. His Highness the Amir of Afghanistan and its dependencies, agrees on his part that the districts of Kurrum and Pishin and Sibi according to the limits defined in the schedule annexed, shall remain under the protection and administrative control of the British Government. * * *

The British Government will retain in its own hands the control of the Khyber and Michni Passes, which lie between the Peshwar and Jellalabad districts, and of all relations with the independent tribes of the territory directly connected with these Passes."

VIDYASAGAR AND VERNACULAR EDUCATION

Based on unpublished State Records

By BRAJENDRANATH BANERJI

DAWN OF RESPONSIBILITY

THE Government of India of that time did not recognize it as its duty to impart education to the people it ruled, and only small sums were spent in encouraging the study of Sanskrit and Arabic. In March 1835, Lord William Bentinck published a minute holding that "the great object of the British Government ought to be the promotion of European literature and science among the natives of India; and that all funds available for the purpose of education would be best employed on English education alone." Since this momentous decision—education through the medium of English had been encouraged by Government. But Bentinck's measure marked too sudden a change of policy, and it provoked a general complaint that vernacular education was being entirely neglected. It should be clearly understood that the policy pursued by the Government only provided for the educational wants of the upper and middle classes of the community, and therefore, the claims of the masses now began to be loudly urged. But neither English, nor Sanskrit was the language by means of which the people at large could be educated; in fact, useful knowledge could be spread amongst them only through the medium of their own mother-tongue. To Sir Henry Hardinge belongs the credit of having made the first attempt in this direction, in October, 1844. In the face of great pecuniary difficulties, he set up 101 village schools in Bengal, Bihar and Orissa (at a monthly cost of Rs 1865), for imparting elementary instruction in the vernacular.* "Vidyasagar was not wholly unconnected with them. He took great pains for their advancement. The charge of selection of teachers for these

schools by examination, and their appointment was entrusted to Mr Marshall (Secretary to the College of Fort William) and Vidyasagar."

But the project did not meet with the desired measure of success, as the Government were not then in a position to supply the necessary books, teachers and supervisors; and, before four years had passed, the Board of Revenue—under whose control the schools had been placed—reported that "the fate of the vernacular schools was sealed, and success was hopeless." Since then little had been done by the Government towards mass education. It was left for the Governor of another Province to show that education for the masses was not a Utopian scheme.

Early in 1853 the report on the eminent success which had attended the system of vernacular education, established by Lient Governor Thomason in some selected districts of the North-Western Provinces, came into the hands of the Governor-General†. This led the Governor-General to impress on the Court of Directors how desirable it was to introduce the same system into the Provinces of Bengal and Bihar and, pending the orders of the Court, the Government of Bengal were requested to report their views on the subject at their earliest convenience§. Upon this the Council of Education was directed to furnish a plan, based on Mr. Adam's reports on vernacular education and on the Thomasonian system, "best calculated to provide the most efficacious means of founding and maintaining a sound system of vernacular instruction"*** On 9th September,

* S. C. Mitra's *Isar Chandra Vidyasagar*, p. 50.

† Minute by Lord Dalhousie, dated 25th October, 1853.

§ Letter from G. Plowden, Offg. Secy. to the Government of India to C. Beadon, Secretary to the Government of Bengal, dated 4th Nov., 1853.

** Letter from the Secy. to the Government of Bengal to the Secy. to the Council of Education, dated 19 Nov., 1853.

* For the history of education in India under the East India Company, see *Selections from Educational Records*, Part I (1781-1839) by H. Sharp, and Part II (1840-1855) by J. A. Richey, as well as the authorities cited therein.

1854 the Council forwarded a batch of minutes on the subject.

Bengal was placed under a Lieutenant-Governor on 1st May, 1854 and the first incumbent was Fred. J. Halliday. Shortly before his appointment Halliday had, as a member of the Council of Education, stated his views on vernacular education in a minute (21 March, 1854). The Lieutenant-Governor after studying the proceedings submitted by the Council, came to the conclusion that the plan he had already proposed was the best for the purpose and so he now recommended it to the Governor-General for adoption.* The educational policy which appeared best to the Bengal Government is clearly set forth in the following extracts from his minute:—

2. In the province of Bengal we have a vast number of indigenous schools. I have carefully inquired about them from several well-informed persons, Native and European, and I am assured that these schools are universally in a very low and unsatisfactory condition, the office of school-master having, in almost all cases devolved upon persons very unfit for the business.

3. Our object should be, if possible, and as far as possible, to improve these schools, and we cannot do better than follow the excellent example of the late Lieutenant-Governor of the North-Western Provinces, and establish a system of Model schools as an example to the indigenous schools and a regular plan of visitation by which the indigenous school-masters may gradually be stimulated to improve up to the models set before them.....

5. I append a memorandum on the subject, drawn up by the energetic and able Principal of the Sanskrit College who, as is well-known, has long been zealous in the cause of vernacular education, and has done much to promote it, both by his improved system in the Sanskrit College and by elementary works which he has published for the use of schools.

6. I approve generally of the plan which is contained in the Principal's memorandum, and would wish to see it carried into effect.

7. According to this plan, the monthly expense of say 20 schools, distributed over four zilas, and allowing for rewards and a rather more liberal allowance to the Head Superintendent than the Principal has proposed for himself, would be about Rs. 21,000 per annum, or Rs. 5,250 for each zila. Mr. Thomason's first plan allowed Rs. 4,500 to each zila annually; but in Mr. Thomason's plan a large extra expense was incurred for European superintendence, with which, in Bengal, I should for the present be willing to dispense. I am aware that Native superintendence is not often to be depended upon without European overlooking but Pandit Ishwarchandra Sharma is an uncommon man, who has shown great energy and zeal in this

matter, and I should be well pleased to let him try an experiment, in the result of which he is greatly interested, and which I really think will succeed in his hands. My estimate accordingly provides for an allowance to him for this duty of Rs. 200 a month, including travelling charges. This, in addition to the Rs. 300 he draws as Principal, will be a fair remuneration. He has asked for none.

13. It is the opinion of the Principal of the Sanskrit College, and of others whom I have consulted on the subject, that although admission to the Government Model Vernacular Schools ought at first, and for some time, to be gratuitous, they are certain, at no distant time, to be self-supporting, as all the indigenous schools now are.

23. I have said nothing about Normal Schools for the education of school-masters. At present very good school-masters are being trained for us in the Sanskrit College, which is becoming, in the hands of the Principal, a sort of Normal School for Bengal.*

VIDYASAGAR'S NOTES ON VERNACULAR EDUCATION

From this it is quite clear that great credit was due to Vidyasagar whose able note on vernacular education formed the basis of Halliday's minute. This note is of great interest, as its provisions were mostly adopted in the subsequent development of primary education in Bengal. We therefore, give it in full:—

1. Vernacular Education on an extensive scale, and on an efficient footing, is highly desirable, for it is by this means alone that the condition of the mass of the people can be ameliorated.

2. Mere reading and writing, and a little of Arithmetic, should not comprise the whole of this Education: Geography, History, Biography, Arithmetic, Geometry, Natural Philosophy, Moral Philosophy, Political Economy, and Physiology should be taught to render it complete.

3. The elementary works already published, and fit for adoption as class-books, are the following:—

1st. *Shishushiksha*, in 5 parts. The first three parts teach Alphabet, Spelling, and Reading; the fourth is a little treatise on the Rudiments of Knowledge; the fifth, a free translation of the Moral Class Book of "Chambers's Educational Course."

2nd. *Pashwabati*, or Natural History of Animals.

3rd. *History of Bengal*, free translation of Marshman's work.

4th. *Charupath*, or Lessons on useful and entertaining subjects.

5th. *Jibancharita*, a free translation of the Lives of Copernicus, Galileo, Newton, Sir William Herschel, Grotius, Linnæus, Duval, Sir William

* Letter from the Under-Secy. to the Govt. of Bengal, to the Under-Secy. to the Govt. of India, Home Dept., dated 16 Nov., 1854.

* For the full text of the minute, see *Selections from the Records of the Bengal Government*, No. XXII—Correspondence relating to Vernacular Education (Cal. 1855).

Jones, and Thomas Jenkins, in "Chambers's Exemplary Biography."

4. Treatises on Arithmetic, Geometry, Natural Philosophy are in the course of preparation. Treatises on Geography, Political Economy, and Physiology, and the Historical Works and a series of Biographies will have to be compiled. For the present, the Histories of India, Greece, Rome and England will suffice.

5. One Teacher for each school will not be sufficient. Two each at least will be required. Every school will very likely contain from three to five classes, which for one teacher to manage efficiently is impracticable.

6. The salary of Pandits should be at least Rupees 30, 25, 20 per month, qualification and other circumstances being taken into consideration. When all the books enumerated above shall be ready for adoption, every school should have a Head Pandit at Rupees 50 a month.

7. Arrangement should be made for the teachers receiving their salaries regularly every month, in their own Stations, without being required to quit their posts.

8. Four zilas for the present should be selected for operation, namely, Hughli, Nadia, Bardwan and Midnapur. There should be 25 schools for the present, to be distributed as expediency suggests. These should be established in towns and Villages not in the vicinity of English colleges and schools. In the neighbourhood of English Colleges and schools, vernacular education is not properly appreciated.

9. The success of vernacular education greatly depends on an active and efficient supervision, as well as the amount of encouragement given to the successful pupils. With Natives in general, the acquisition of knowledge, for the sake of knowledge itself, has not as yet become a motive. It is therefore necessary, that Lord Hardinge's Resolution, which has so long been in abeyance, should be strictly enforced.

10. The following plan of superintendence appears to be much less expensive and far more efficient than any other could possibly be.

11. Two Native Superintendents, each on a salary of Rs. 150 a month, including their travelling charges, to be employed, one for Midnapur and Hughli, the other for Nadia and Bardwan. They are frequently to visit the schools, examine the classes, and rectify the mode of teaching.

12. The Principal of the Sanskrit College to be nominated, the Ex-officio Head Superintendent with no other additional allowance than his travelling charges, which at the most will not exceed Rs. 300 per annum. He is to visit the schools once a year, and to report to the authorities, with whom will rest the management of Vernacular Schools.

13. The preparation and adoption of class-books, and the selection of teachers to be entrusted to the Head superintendent.

14. The Sanskrit College, besides being a seat of general education, to be also considered as the Normal School, for the training of vernacular teachers.

15. Thus the training of teachers, preparation and adoption of class-books, selection of teachers and general superintendence will be united in one office. This circumstance will remove many inconveniences.

16. An Assistant Head Superintendent to be appointed with Rs. 100 a month. His duty will be to assist the Principal of the Sanskrit College in training up the teachers and preparation of class-books, and to officiate for him while visiting the vernacular schools.

17. The Patshalas, or indigenous schools under Gurumotashoys, such as they are now, are very worthless institutions. Being in the hands of teachers, generally incompetent for the task they undertake, these schools require much improvement. It will be the duty of the Superintendents to inspect these schools and give the teachers as much instruction as they can as to the mode of teaching. It will also form part of the duty of the Superintendents to watch opportunities to introduce, as far as practicable, the class books above-mentioned. In fact, the Superintendents will take every care to make these schools, as far as possible useful institutions.

18. These schools founded by Natives, or Missionaries, which are in the hands of competent teachers of course deserve attention and encouragement. The Superintendents will be required to visit such schools and to report on their respective claims to encouragement.

19. The Superintendents will also be required to consider it as part of their duty to persuade the inhabitants of towns and villages, within their respective beats, to establish schools upon the model of Government Schools.

The 7th February 1854.

Halliday rightly considered Vidyasagar to be an uncommon man, in no way inferior to a European he had, therefore, suggested in his minute that the entire superintendence of the proposed experiment should be left with the Pandit. This view, however, was strongly opposed by the other members of the Council of Education as may be seen from the following passages of the minutes:—

Ramgopal Ghose.—"Although I have a very high opinion of the zeal and ability of the Principal of the Sanskrit College, I am scarcely prepared to place the control of vernacular education in his hands, so long as he has other responsible duties to attend to. Were he untrammelled with these, I might, perhaps, have acquiesced in the proposition of the Hon'ble Mr Halliday, to allow him to try the experiment. But as he cannot be spared from the Sanskrit College, his visits to the vernacular schools must necessarily be rare, and he could but afford a small portion of his time and attention for this additional and onerous duty. We ought to secure the undivided energies of one man for so important a situation.—Although I have with some hesitation, voted against the appointment of Pandit Ishwarchandra, as Superintendent of Vernacular Education, I think it still desirable that he should be, in some way or other, connected with this great movement. His advice in the selection of books and teachers, in the choice of sites, mode of teaching, and in other matters of detail, will be found exceedingly valuable. He has been preparing a number of Bengali books well adapted for introduction into the Government and indigenous schools. The re-modelled Sanskrit

College under him will provide the best class of vernacular teachers. For these reasons, and for the deep interest he takes in the subject, I should be glad to see him permanently connected with this great undertaking. I am not prepared exactly to say what form this connection should take: he would probably be best employed in superintending the preparation of books. Perhaps his services might also be available in the examination of teachers" (11 July 1854).

Sir J. W. Colville:—"Upon the system of supervision proposed, more is to be said. A priori I should conceive that Pandit Ishwarchandra is more likely than any Civilian of whom I can think as likely to be employed in this way, to set the new system going, and to keep it going right. His knowledge of the language of his own countrymen, and of the feelings and habits of moral communities, must be far greater than that possessed by an European Officer. His acquirements both in the old learning of the country, and in modern and European learning, are considerable and it has been his special object to train up young men with some tincture of both kinds of learning with the view of furnishing vernacular teachers of a higher order.—I think there is much force in the objection made to the partial severance of the Principal from the Sanskrit College. I agree fully, however, with Babu Ramgopal Ghose, in thinking that to the Pandit, Ishwarchandra, should be assigned a prominent part in determining the school-books to be read, and the course of instruction. And I am of opinion that for those duties he should be adequately remunerated." (20 August 1854).

VIDYASAGAR SELECTS SITES FOR GOVERNMENT MODEL SCHOOLS

From Halliday's esteem for Vidyasagar a friendly intimacy sprang up between the two and they frequently met together to discuss matters. Immediately after his appointment as Lieut. Governor of Bengal, Halliday took in hand the selection of suitable sites for the proposed Model Vernacular schools, and he charged Vidyasagar with this important work. In the following letter, dated 3rd July 1854, the Pandit reported the result of his tour:—

"Agreeable to the instructions of the Hon'ble the Lt. Governor of Bengal verbally communicated to me by his Honour, I visited, from the 21st of May to 11th June last, several places in the District of Hughli for the purpose of selecting suitable villages and towns for establishing the contemplated vernacular schools, and beg leave to request the favour of your submitting to His Honour the following report.

2. On the 21st May last I visited Shikhalah, 21 miles distant from Calcutta and situated on the Saltia Road. This place is the abode of about a thousand families and has in its close vicinity several villages. When the object of my visiting the place was known, the principal inhabitants of this place, as well as of the surrounding villages, assembled and waited upon me to express their eager desire to have a Government Vernacular School at Shikhalah. I asked them if they were

prepared, in case Government established a vernacular school there, to give over to Government a piece of land suitable for erecting a school house upon it, and erect a school-house at a cost of about Rs 300. Several Brahmans showed me their Lakhiraj lands and told me that any of these lands and as much as may be required for the purpose they will most willingly make over to Government. But as they are generally poor, their circumstances would not enable them to erect a school-house at a cost of Rs. 300 which is, in fact an enormous amount to them. From all that I observed, I have not the least doubt that vernacular education would be highly appreciated at Shikhalah and the villages around.

3. On the day following I visited Riddhanagar and Krishnagar, villages about 40 miles west of Calcutta. These two villages, in close contact of each other, contain about a thousand families and are surrounded by many villages. From conversation with several principal inhabitants it appeared to me to be very clear that vernacular education will be highly appreciated here. A piece of land suitable for erecting a school-house the inhabitants are ready to make over to Government. But as they are generally poor, they are unable to erect a suitable school-house at their own expenses.

4. On the 24th May last Khirpai, a town containing above three thousand families and about 60 miles west of Calcutta, was visited by me. The principal inhabitants, with whom I conversed on the subject of the contemplated vernacular schools, appeared to me to be very eager to have one in their town. Khirpai, I am of opinion, fully deserves to be the seat of a new vernacular school. If a school be established here, the inhabitants are willing to make over a piece of land to Government for erecting the school-house, but being generally poor they are unable to meet the expenses of raising a suitable school-house.

5. Next I intended to visit Chandrakona, a very populous town and already the seat of a Government Vernacular school and 8 miles distant from Khirpai. But I was informed that the school was at the time closed for a month or so, the teachers being absent on leave. Instead of visiting the place I made enquiries regarding the state of the school etc. and the following information I picked up from creditable quarters.

Chandrakona is in the Zemindari of Babu Jaikishan Mukherji who is generally said to be the founder of the school and the Seminary is known as Jaikishan's School. The school contains no more than 50 pupils. The teacher Babu Lakhan Pal is an ex-student of the Barasat Government School, and is but an imperfect Bengali scholar. Of 50 pupils 35 regularly read English and nominally a little of Bengali. These pupils pay to the master fees varying from four to eight annas. They attend the school only for the purpose of reading English. The remaining 15 only may be properly said to be the pupils of this vernacular school. They pay the usual fee of one anna as fixed by Government.

The inhabitants of this town care very little for educating their children.

Of the 35 pupils that resort to this school many come from distant villages.

6. From these facts Chandrakona does not appear to me at all to be fit for establishing an experimental vernacular school,

HEIGHT AND WEIGHT OF BENGALI SCHOOL CHILDREN

By DR. NAVAJIVAN BANERJI

INTRODUCTION

IT is for more than five years that I have been trying to find out the standard weight of children and adults in relation to their age and height. I find that no worker has yet attempted this in our country and our knowledge with regard to it is very meagre and crude. Whenever we are in need of finding out the standard weight of men and women in wasting diseases we have to make proportionate reductions from European standards. These reductions are arbitrarily fixed by the physician in question to meet his needs.

The present paper deals with standard weights for Bengal, with average weights for different institutions. My subjects are mainly drawn from the upper and lower middle classes. Within the scope of my observation aristocratic people and the proletariat are fewer than people of the lower middle classes. The children, boys and girls, are mainly drawn from schools where no distinction of class has been made. In finding out the *standard* I have selected the healthiest subjects as regards their heights and weights in proportion to their age. I have taken the average arithmetical mean. No attempt has been made to take the difference of mean for the following reasons: There is an indication among the girls in understating their age, with the exception of the few; and among the guardians of understating the age of their boys. I, therefore, mention the defects which my standard is bound to contain and over which I had absolutely no control. I hope, when a systematic examination would be taken up by a large number of workers and on a much larger scale, a more perfect standard would be placed before the public.

My observations along this line have stimulated me to work up a definite scheme for the physical development of our school children at present. While formulating this scheme I have taken into consideration the fact that we are in an adverse economic

condition, a condition as serious as that which prevailed during the time of the world war in European countries. It may be that the moneyed men are not conscious of it. I appeal to our upper middle classes and the rich to economise as much as possible and to spend the money thus saved in improving the health factor of our race. It is possible to make our children bonny boys and girls and infuse into them the power of initiative if we work up the scheme and help its fruition by all the resources at our command.

 AVERAGE WEIGHT OF GIRLS IN BRAHMO
GIRLS' SCHOOL

| Age | Height in inches | Weight in lbs. |
|-----|------------------|----------------|
| 3 | 35 | 29 |
| 4 | — | — |
| 5 | 38 | 31 |

Our observations show that the average heights of both boys and girls are very near standard European heights but the graph shows a big fall in weight, markedly more noticeable in boys than girls. It is more marked in the adolescent period than in earlier years. The average weight of girls up to the 11th year shows that they are very near standard European weights. This, I think, is due to the fact that girls who come to school belong to better strata of society as compared with boys of the same age. Beyond the age of 12 years there is a very rapid fall in the weight of the girls. This is probably in part due to the defect in education and routine of work of the girls at this age. The physiological changes brought about in the body at this age should be seriously taken into consideration in judging the effect of work, routine and food on the physico-psychical state of the developing girls.

 SCHEME FOR CENTRAL BOARD OF HEALTH FOR
SCHOOLS IN BENGAL.*

The Board consists of official and non-official members.

1st stage—1st year.

All schools coming under the scheme should buy a weighing machine and send a quarterly report of age, weight and height of the boys and girls of the schools to the Central Board. The Health report should contain also number of absentees with the cause of absence. Every school should keep a chart of weight and height. It shall also inform the board as to how many boys

* A similar scheme was communicated to the Director of Public Instruction and to the Director of Public Health, Bengal early in September 1927.

and girls take tiffin in the school. The cases of all under-weights should be communicated to their respective guardians by the head-master or head-mistress as indicating the failing health of their children. A method should be devised for the supply of tiffin to all the girls and boys, so that those who cannot afford to pay for it may not feel any loss of self-respect. The tiffin should contain all the ingredients recommended by the board.

2nd stage—2nd year.

The school committee shall arrange to get the services of a medical officer who will examine thoroughly all boys and girls who get themselves admitted into the school or leave the school. He shall also undertake one annual health examination. External examiners may be appointed if possible. The guardians should be requested to be present when the examination is conducted. The routine method should be adopted of sending a copy of the report of such an examination to the guardians in question and another copy should be sent to the central board of health.

3rd stage—3rd year.

Each school should form a local board of health consisting of the head-master or head-mistress, the physical instructor or drill teacher and two assistant teachers, two guardians with the medical officer as the president of the board. The teaching of personal and social hygiene should be undertaken by the medical officer in question. An honorarium of Rs 300 to 400 per annum may be fixed for him at present. He will devote at least 2 hours every day to 3 classes. He should especially teach matriculation hygiene. All the members of this board, in rotation, should help the doctor during the time of examination and should take up the after-care of the student patients in question. The members should attend to the needs of the children who require medical help and treatment. And if the guardians fail to supply treatment to the children, the members should help them to get the treatment from the local hospital until they are cured. Voluntary services of eye, ear and dental surgeons should be arranged for those who cannot afford to pay in Calcutta.

4th stage—i.e., in the fourth year.

If by this time sufficient health con-

sciousness has been aroused, combined local boards with hospital for the treatment of school boys and girls may be attempted. It will consist of one medical officer and 3 members for each school, two teachers and one guardian. The seniormost medical officer will be superintendent and other medical officers will act as officers of the hospital. A fee of Rs. 3 may be charged from each student seeking treatment for each new admission for the maintenance of the hospital. A public fund may also be started for its help. Special departments for eye, ear, nose, throat, etc., may be started.

POINTS TO BE SETTLED,

- (1) *Memorandum of the Board.*
- (2) Rules of the Board—(Articles of Association).
- (3) Membership
- (4) Finance
 - (a) Government grant.
 - (b) Subscriptions and donations.
- (5) Relationship of the Central Board with the local associations.

The Central Board of Health should arrange for efficient inspection preferably by the members of the board, failing that, by engaging medical inspectors.

DETAILS OF WORKING

1st year :—

| | | |
|-----------------------|--------|-----|
| One weighing machine. | Rs. 35 | As. |
| One tape. | | 4 |
| One eye testing chart | | 8 |
| Porterage etc. | | 9 4 |

Total Rs. 45-0

To be met from games fund.

Quarterly health reports to be sent to the Central Board of Health.

Details of working :—

2nd year :—

One medical man should be taken into the managing committee, who will examine all new admissions and transfers. All transfers should accompany a health certificate. All schools which have hostels attached to them will utilise the services of the hostel doctor in conducting the health examination. He may be taken in the managing committee. The annual health examination shall be conducted by the external doctors just to keep a check on the usual examination. If the

Standard height and weight of boys

hostel doctor refuses to do this additional work, some other medical man of the town may be appointed in his place.

3rd year :—

Hygiene should be taught in the school as an important subject and the medical officer should take it up on an additional pay of Rs. 25 a month. This amount may be met from the money now spent in hygiene work, or, if it is not possible, by raising a fee of two annas per head, or by obtaining an additional government grant of Rs. 25. Cases requiring medical treatment should be followed up by the physical instructor or committee members and headmaster.

4th Year :—

69-5

If sufficient public opinion be created by this line of work, special hospitals may be started for school children.

At present only Zila and Aided and a few selected private schools must be taken in hand.

FINANCIAL ASPECT OF THE SCHEME

For Central Office in Calcutta

| | |
|------------------------------------|-------|
| Rent at Rs 100 per month | 1,200 |
| Clerk (steno-typist) at Rs 75 | 900 |
| Literature <i>durban</i> at Rs. 25 | 300 |
| Paper, Printing and postage | 700 |
| Contingent | 500 |
| | 3,600 |

Touring expenses for organising and inspecting 5,000

Total 8,000

Of this sum it is expected to raise by public subscriptions and donations in the 1st year 1200, 2nd year 2400, 3rd year 4000.

Standard height and weight of girls

COMPULSORY TIFFIN

For about 3 months we have been trying our best to see how tiffin can be made compulsory in each and every school. In one of the schools (Keshab Academy) in Calcutta we have asked each and every individual

Weight in lbs

Standard weight (upper line), and average weight of boys of the Keshab Academy (lower line).

student to bring tiffin from home, but in vain. We have appointed vendors for supplying tiffin to the students and have found 10 per cent. of the students would take tiffin. Believing that it is the economic condition which is interfering with any scheme which is being put forward for the health of the school children we started preparing *chapati* and *dal* in the school premises by one of the *durwans* and supplying them to children on

a minimum of one piece for one good sized *chapati* and two tablespoonfuls of *boot dal*. The students at once responded by voluntarily taking tiffin in very larger numbers. Taking of tiffin has been made compulsory in the above school from February, 1928. A special apparatus has been devised to keep the tiffin in a uninfected condition.

SCHEME OF MEDICAL EXAMINATION OF SCHOOL CHILDREN

I To be filled in by class teachers :-

(a) Questionnaire : whether a boy has suffered from—

(1) Measles, Whooping cough, Diphtheria, Dysentery, Malaria, Small Pox, Rheumatic Fever.

(2) Any eye complaint.

(3) Otorrhoea

(4) Rhinitis.

(b) Examinations.

(1) Vision normal or not—by eye chart.

(2) Colour vision.

(3) Squint.

(4) Hearing normal or not.

(5) Speech normal or not.

(6) Mental activity.

(7) Any deformity.

(8) Height.

(9) Weight.

(10) Chest measurement, inspiration and expiration.

II. To be filled in by the school medical officer :

(a) 1. Mouth.

2. Adenoids.

3. Teeth.

(b) In children, 10 p. c. above standard weight, standard weight and 5 p. c. below standard weight.

Direct your examination from the report of the school teachers.

Heart to be examined if the children had measles, diphtheria and dysentery or rheumatic fever.

Lungs to be examined if the children had measles or whooping cough or if the chest expansion is less than 1 inch.

(i) In children 10 p. c. below standard weight.

Lungs—

Heart—

Organs of metabolism.

(ii) In children 15 p. c. to 20 p. c. below standard weight. Examination of each and every organ with a special stress on lungs and all glandular systems.

Urine examination—

Organs of metabolism with special reference to diet.

Quality, vitamins, fat, carbohydrates and proteins, etc. and

Quantity by weight.

Rest or over work.

Medical officer is requested to find out any possible cause of underweight or bad physical development and regulate students' routine of work and diet, etc. accordingly.

Standard weight (bolder line), and average weight of girls of Brahma Girls School (thinner line).

THE HOUSE OF LABORERS Ltd., COMILLA

Before attempting any description of the House of Laborers in my own words I make no apology for quoting in extenso from an address which was presented by the staff and members of the institution to Sriji Ramananda Chatterjee at the time of his visit to the works. It brings out in a few well-chosen words the ideas and ideals of the House of Laborers in an admirable manner. The address reads:

"The House of Laborers (not an incorporate body at that time) began its career in a small and wretched-looking hut in an obscure corner of the town of Comilla on the 2nd of February, 1922. The initial capital was Rs. 210. But there was a greater asset—the human asset. Here was a band of young-men willing to work and willing to suffer—ready to struggle against odds which appeared to be overwhelming. We took our first leap

The Directors of the House of Laborers Ltd., in front of the Administration Building.

absolutely in the dark. We did not know what exactly we were going to do, but we knew this that we were out for something productive. We knew we must be of some service to the community—service through business—for this must be the fundamental motive of all true business. We failed and faltered. We lost in money but did not lose heart. Many a dark and stormy day we had to pass through till at last we came face to face with light. Work is dynamic. It is self-propelling. It finds its own course.

"Coming to the present position, our audited Balance Sheet for the year 1927 shows a gross turnover of Rs. 1,03,000. The nett profit is about Rs. 11,000, the whole of which amount has been transferred to the Reserve Fund. We never divide our profits, but re-invest them in the business itself. Our assets on the 31st of December, 1927, were valued at about Rs. 97,000, against which we had a Bank Liability of Rs. 49,000. The average number of workers is about 75, all of whom have been trained at our own works. The band includes university graduates in science, holding the degree of M.Sc. or B.Sc. The value of orders now on hand amounts to about three lacs of rupees.

"We have but one Ideal—the ideal of service. We have but one gospel—the gospel of work. Work and yet more work is our

slogan. Money follows as a necessity. It is no use repeating the outworn shibboleth that a Hindu despises the world of matter and must be despised and exploited by others, for all time. We must bring ourselves abreast of the other nations of the world if we want to live. We must lead the vanguard of progress in every department of life. We must develop our land. We must drive poverty and squalor out of our shores. We must sink all petty squabbles regarding caste and creed. The world is wide enough for all of us if only we know how to be mutually helpful. In God's ample granary there is food enough for everybody if only we knew how to get it. All work is honourable, if conceived in a spirit of service.

"We have as yet achieved but little. Very much more remains ahead. But what little we have done fortifies us in the hope that we have not been pursuing a chimera—that our ideas can be translated into work. We know we have many shortcomings to overcome. But in spite of this we have already been favoured beyond measure by our friends and sympathisers. It is through their help and co-operation that this institution has been made possible. It is our constant endeavour to be worthy of the confidence that is being reposed in us."

The above gives a brief but bold outline.

A 150' x 100', two-storeyed Tea House in course of Erection by House of Laborers at Vernerpur Tea Estate, Cachar

The Directors of the House of Laborers Ltd., inspecting the 50 K. V. A. Power Plant

of the activities of the House of Laborers, Ltd. I am giving such other particulars as are not contained in the above statement. It is hoped that in these days of chronic unemployment amongst the middle class youths of Bengal the story of the House of Laborers will be of some interest to the reading public. Amidst the prevailing gloom of depression and failure, it is like a small but luminous speck to cheer and hearten the lonely toiler in the field of the industrial regeneration of the country. The House of Laborers has undoubtedly its tale of early rebuffs and failures to tell. But in the end it has come out with flying colours.

Want of capital is sometimes trotted out by do-nothing people as an excuse for failure in business. But this is not true. The history of the HOUSE OF LABORERS gives the lie direct to this statement. It is the argument of the weak and the vanquished. Human energy is the real capital. Where there is a strong enough will there is always a way. Here in the HOUSE OF LABORERS

we see an organisation which has been built up practically without capital.

It was in the momentous days of the Non-co-operation Movement that the House of Laborers had its inception. The original founders of the House of Laborers were a band of youngmen—some of them political ex-detenuis, some of them non-co-operators, but all fired with the same burning desire to do some productive work for the country—of giving some good service, while making an honest living for themselves. The starting capital, as has been said, was only Rs. 210 eked out by petty contributions from friends. With this capital the young men fitted out a small workshop in a small hut in the town of Comilla. The situation was discouraging on all sides. The organisers had no training either in business or the technique of Engineering. They had hardly any capital. They had no precise ideas. Wise men predicted a sure and dismal failure. Even their friends could not muster enough courage to believe that an Engineering busi-

ness of this nature was possible in a place like Comilla. But many seeming impossibilities can be rendered possible if there is strength of faith and steadfastness of purpose. It is faith more than anything else that has made such a thing as the House of Laborers possible.

Step by step the workshop grew. After about a year financial help came from unexpected quarters. Babu Mahesh Chandra Bhattacharji, the well-known merchant prince of Comilla, proffered his help. He had all along been watching and taking a kindly interest in the work of these young men.

repaid the whole of the loan of Babu Mahesh Chandra Bhattacharji. They have also paid, of their free accord, interest for the period that they used this money, although this was not demanded.

There is one other incident in the early history of the House of Laborers which deserves mention. Mr. A. T. Weston, then Officiating Director of Industries, Bengal, paid a visit to the workshop just a few months after its inception. It was at that time absolutely negligible. There was nothing that could interest a person of Mr. Weston's standing, who was accustomed to lead very

The workers of the House of Laborers Ltd, (Sri Ramananda Chatterjee in the centre, second row)

He was convinced of the honesty of their purpose. Then out of his abundant munificence he gave them a loan of about Rs. 22000, without document, without security, without interest, on mere good faith, with this understanding that this money was to be returned whenever the conditions of the business permitted. Such things are not common in these days, and Babu Mahesh Chandra Bhattacharji has placed the House of Laborers under a deep and permanent debt of gratitude by this act of generosity. The House of Laborers, however, has proved fully worthy of the trust. They have now

much more gigantic organisation. But he understood and appreciated the spirit behind the youngmen. He shook their oil-begrimed hands with a genial smile. He gave them words of hope and encouragement when it was darkness on all sides. Mr. Weston has been one of their best friends ever since and has consistently helped them by information and advice. Mr. Weston visited the workshop last time only a few weeks ago, when the following significant words, among others, passed between him and the Secretary of the House of Laborers.

"Are you all still together—the original

discipline by steadily applying himself to this very process which will appear the most congenial to him than by counting over the rules of declension and inflection. Every boy or girl ought to be allowed to follow his or her own bent and develop along that line. The field of choice is vast from which it is not at all difficult to pick out a few subjects which one should like to study.

So much as regards school life. The out-of-school hours are spent even more happily. One is no longer expected to pass his or her time in poring over dry text-books. Every encouragement is given to take an intelligent interest in the outside world and nature. Sufficient opportunities are given to pick up one's health and regain the lost tone. Holiday parties are got up and excursions are arranged to health resorts and places of historical or antiquarian interest or great scenic beauty. This has come to be looked upon as a part of education. Amidst these beautiful surroundings one can really live a joyous life. No longer tied to the dull routine of humdrum existence every one can enjoy to the full his or her particular hobby and develop at the same time self-help and the spirit of helpfulness. Life in the camp is one long holiday. The boys rise at dawn fresh and gay pass the whole day in play or communion with nature and lie down at night tired but cheerful, sometimes under the star-lit sky and fall asleep talking of the various experiences of the day. Can life be more enjoyable than this? The happy, free, unconventional camp-life is symbolical of the new existence which has now been opened up to our boys and girls.

The moral development of boys and girls too is receiving more and more attention at our hands but in a novel way altogether. We are no longer satisfied with placing before them dry moral precepts and examples for their imitation and edification but we require them to translate them into action in their own lives. We require them to be not merely spectators but actors. They are given every scope to develop manliness and feminine qualities respectively and to become better citizens and better mothers, sisters and wives. Obedience to parents, teachers and superiors, loyalty to chiefs, consideration for the susceptibilities and comforts of others, brotherly and sisterly love eagerness to serve and self-help are inculcated in them in a practical way. The Boy Scouts, the Girl Guides and the Camp-Fire

Girls' Movements are some of the beneficent forces working in this direction. There is nothing so essential to rouse the dormant qualities in boys and girls than voluntary work and service. It is to be hoped that these movements will take firmer roots in our country and spread far and wide.

That our conscience has been thoroughly roused to the injustice that has been done to them and that we are determined to right it is also evident from the separate children's hospitals or children's wards in hospitals for adult population and reformatories and penitentiaries which are coming into existence. We realise that they require delicate and sympathetic handling whether as patients or juvenile offenders and under no circumstances should be lumped together with ordinary hospital and jail population. In the children's hospitals and wards every attempt is made to make the atmosphere of the place congenial to the child. There are toys and other play-things and affectionate matrons are placed in charge of these departments. In the jails it has been found by experience that juvenile offenders are converted into hardened criminals by being herded together. The Borstal system has been invented to wean away the young men by slow degree from their vicious lives and to make them worthy citizens by removing from their minds all taint of evil. The laws by which they are judged and the judges who administer them are not the same as in the case of grown-up offenders. Ladies are very often appointed to act as judges as more conversant with the child psychology and likely to take a more lenient view than blundering unsympathetic men. How we wish that this system were given a more extended trial in our own country.

But no amount of solicitude on our part and liberty enjoyed by children will be of any effect unless they are healthy and free from diseases. Infant mortality particularly in our country is appallingly high and a large percentage of those who survive drag on a miserable, joyless existence throughout their lives. Many are permanently incapacitated and cannot earn an independent living. Much of this misery and unhappiness and suffering is due to our own ignorance of the laws of health and hygiene and our propensity for the enjoyment of carnal pleasures. To counteract these evils, to shield the child yet unborn from these harmful consequences and to rescue the suffering maternity hospitals

and children's clinics have been established at various centres where free advice is given, diseases are treated and the poor babies are supplied with pure milk and fresh linen. Afterwards, when they grow up and admitted to schools we do not cease to take care of them. Primary education is often free and compulsory. Some up-to-date schools go farther and supply the scholars with tiffin. In the big libraries of the west there is very often a section for children supplied with such books, periodicals etc., as will be after the child's heart. Story-telling too has been reduced to an art to catch his attention and the most up-to-date method of broadcasting is being impressed for the purpose. The same affectionate solicitude for their welfare is noticeable in all departments of life.

But what a pity it is that these ideas are spreading very slowly in our country and that our proverbial poverty is standing in the way of their translation into action. Free and compulsory primary education has not yet been introduced in our country except in a few selected areas as a tentative

measure. So is the case with the establishment of the child-welfare centres and health clinics. Camping out in the case of our boys and girls is a dream of the future. Children's hospitals are almost unknown. The Borstal system for juvenile offenders has not yet been given a trial. But surely, though slowly, these ideas are filtering in our midst and will produce the inevitable result. Even in this changeless East we note with pleasure how higher education for girls has come to stay and has rescued them from their age-long bondage to marriage and childbearing. It has opened up before them a new prospect and has brought the message of joy. The Boy Scout Movement too is advancing with rapid strides. But we shall not be able to approach within a measurable distance of our goal until all our boys and girls will be completely emancipated and we shall be able to place within the reach of everyone the amplest scope for development unhampered either by poverty, diseases, lack of opportunities or our antiquated ideas.

THE AMIR ABROAD

(Adapted from the French of Dr. Tenebre)

by Dr. M. Ahmed, M.A., LL.M., Ph.D., Bar-at-law

HIS Majesty Amir Amanulla Khan, the king of Afghanistan left his capital Kabul at the beginning of December last to undertake a long tour over the world. He passed through India and visited Egypt and at the present moment he is in England. In a few days he will be the guest of Poland before visiting Russia and other great capitals of Europe. It is stated that he will include Persia and Turkey in his extensive tour. This tour is an event of considerable importance in oriental history. In India the Amir won golden opinions from the Hindus and aroused extraordinary enthusiasm among the Mohammedans. In Egypt the Afghan sovereign received an enthusiastic welcome. The twelve days that he passed in the valley of the Nile from the 26th December to the 5th of January, 1928, furnished the occasion for unprecedented manifestations of sympathy. It was indeed the first occasion on which Egypt feted a really independent Mohammedan monarch. King Fuad of Egypt received his guest with truly oriental splendour, in a palace specially prepared for him, at Ghizeh. While doing so, King Fuad doubtless remembered

his recent pleasant trip to Europe and he must have felt an intimate community of sentiments and ideas between himself and Amanulla Khan. In Italy the King of Afghanistan received the most delicate attention as the part of the royal family and S. Mussolini. This was the Amir's first contact with a great European nation. Italy received him with its magnificent vestiges of ancient traditions and the equipment of a country in the full swing of a renaissance. But surely it is France which the Amir was most anxious to visit. For French is the only western language, which he understands perfectly and which he speaks sufficiently to make himself understood. Even in Italy apart from the speeches that he has delivered in Persian—the official language of Afghanistan—it was in French that he conversed with his interviewers. The French culture has profoundly affected him. While he has summoned to his kingdom the engineers and technicians from almost all European countries—Germans, Russians and Poles, the French have always taken the lion's share. It was a Frenchman the architect, A. Godard from

founders of the institution?" enquired Mr. Weston.

"Yes, Sir, we are all together."

"And you have had no trouble amongst yourselves?"

"None of it. We have always so much work to do that there is very little time to be lost in quarrels."

"That's news to me," added Mr. Weston. "Half a dozen educated young men working together for six years is a new thing in this country."

However sad a commentary on the business habits of Bengal the above may be, it is perhaps nevertheless true in many cases.

The present lines of business of the House of Laborers are, Steel Structural work, mainly for Tea Gardens, manufacture of Tea garden implements such as Pruning Knives, and repair and erection of Prime Movers and Tea Machinery of every description. They have done work for such well-known Tea Companies in the Surma Vally Districts as the Cachar Native Joint Stock Coy. Ltd., Bharat Samiti Ltd., The All-India Tea and Trading Co. Ltd. etc. They are also working in the gardens of such European firms as Messrs. Jardine Skinner & Co., Messrs. Begg Dunlop & Co., Messrs. Duncan Brothers, etc. They own a well-equipped workshop near the Ry Station, Comilla. A new 50 K. V. A. Power Plant driven by a 72 B. H. P. Polar Diesel Engine is in course of erection. Their present assets, including Buildings and Machinery, are worth well over a lac of rupees. Their business in the year 1928 is expected to come up to about five lacs of rupees.

The House of Laborers certainly makes profit. But that profit is not large. Last year it came to about 10 p. c. of the gross revenue. This is because their rates are cut extremely low for the benefit of the customers.

Low profits and large turnover is their ideal of business. Because the true justification of a business lies in its being able to give better and cheaper service. By an article of Association of the Coy., (it is now incorporated as a private limited Coy.) the profits are not divisible amongst the shareholders. All the profits go back to the business itself.

About a dozen apprentices are being trained up at these works every year. The House of Laborers does not train workers for others but for its own organisation only. In about three months the young apprentice is able to earn his living. His progress thereafter depends entirely upon the merit of his work. No difference is made in the class of work. All work is equally good. Every member of this organisation must be prepared to do anything that he is called upon to do. In fact, these *Bhadralok* youths are successfully doing such diverse works as digging of earth, laying of bricks, making a concrete block or erection and roofing of a Steel Building. There was an impression abroad that the *Bhadralok* is not well-adapted for manual work. This has been thoroughly disproved by the House Of Laborers. They have proved that, given the necessary training and opportunity, the *Bhadralok* youngman is quite as good as any ordinary artisan—or ten times better on account of his superior intelligence. The prevailing notion on this side has changed already, as is evidenced by the large number of applications for admission that the House of Laborers is receiving.

At Comilla the House Of Laborers is an institution worth seeing. Amongst its honoured visitors it counts such personalities as Mahatma Gandhi, Rabindra Nath Tagore, Dr. P. C. Ray, Swami Abhedananda, Mrs. Sarojini Naidu, Ramananda Chatterjee etc.

X

THE EMANCIPATION OF CHILDREN

By Prof. HARI CHARAN MUKHERJI

IT is the fashion to talk of the emancipation of women and the need of helping them to attain it in every possible way. But we never talk of the emancipation of children from the bondage to routine

and convention, to foolish laws, and regulations, to unhappiness and misery. Their dependence upon us was more complete than that of women. But happily a complete change has come or is coming in our relations

with them. It is nothing short of a revolution but it has not been attended with any trouble or any break through the past. It has been coming on slowly for a long time and it will take a longer time still for its consummation. They had not to agitate or appeal to our chivalrous motives as in the case of women. This change has been initiated by man's innate sense of justice and his kind solicitude for the welfare of children. As the result of this they have come into their own and have entered upon an extended sphere of activities and a nobler and happier life than was possible before. The future citizens of the world will be nobler and better men and women than their present-day prototypes. It is true that this blessed time has not come yet but we are trying our best to hasten its arrival when the children will be entirely free and happy without any reservation whatsoever.

When we look at the modern boy or girl and consider his or her mode of life the truth of the foregoing remark becomes evident. Instead of becoming degenerate they are becoming more virile and active and are living more fully than before. Their lives are no longer hedged in with a thousand and one restrictions as to what to do and what not to do. The era of grand-motherly legislation for boys and girls is gone for ever. Every opportunity is given them to develop their latent qualities. No attempt is made to reduce them to the same unvaried monotonous type. We now realise that all men and women, boys and girls do not possess the same aptitude and cannot be expected to develop the same qualities. It is a pity that this important truth was not discovered earlier in which case much needless suffering and despair and disappointment would have been saved.

We need only look around us at nature to realise that diversity and not dull uniformity is her rule. One boy is born with a natural aptitude for mathematics, another with a love of literature. To require the former to take an intelligent interest in literature will be as foolish as to compel the latter to develop a love for mathematics. Incalculable is the loss that we have suffered in times past from our foolish obstinacy not to allow the young people to follow their own bent of mind. It seems to be nothing short of a wonder that in spite of these rusty rules so many of us developed their original bent and conferred great blessings

on mankind. This only proves the fact that natural tendency is stronger than artificial rules and can break through all restraints imposed on them. But this is true only of a few in whom the natural inclination is very strong and who possess the courage to revolt against conventions. But we shudder to think of the huge waste that we have suffered on account of this dogged persistence on our part viz., to subject all boys and girls to the same grinding process. We shudder to think of the unhealthy conditions physical as well as moral, under which they lived. The picture of the school-room, cold and dreary and the irascible school-master with his rod naturally rises before our mind. There was no freedom of thought or action. Personal initiative was unknown. Woe to the boy who out of a roving nature or excess of animal spirits ventured to play truant or had the hardihood to laugh behind the back of the teacher at all his queer ways. But all this has fortunately changed or is changing slowly but surely. "Spare the rod and spoil the child" is now a discredited maxim. The boy or girl is no longer confined for long hours in an unhealthy room and amidst uncongenial surroundings. Now classes are held in commodious, well-lighted and ventilated rooms where the child's health is not at all likely to suffer. He or she is always encouraged by the teacher to pass as much time as possible in the open air and amidst beautiful natural surroundings. Every attempt is made to make them take an interest in flowers and trees and creepers. There is nothing like this out-door life to instil health into us and compose our agitated minds and overstrung nerves which is the bane of modern civilisation.

Secondly, the girl or the boy is no longer subjected to any unnecessary hardship. The mode of teaching has changed. Text-books are being written in improved style so as to reduce to a minimum the strain on the child. Even attempts are being made to make the process of learning interesting and enjoyable. The study of grammar is now not so much emphasised. It was the fashion in times past to defend the dry method of getting by heart the rules of grammar for the sake of mental discipline that it imposed upon us. But we have now discovered how this advantage can be derived without the attendant trouble. A boy who has got a natural aptitude for observation of nature will acquire greater mental

whom he accepted the plans of his grand new capital, Dar-ul-Aman that will shortly supplant Kabul. To a correspondent of the Daily Mail who interviewed him at Rome the Amir stated: "I have come to Europe for two reasons—to take back to my country, the best things that I discover in European civilization and to show to Europe that Afghanistan has her place on the map of the world." The Amir had already remarked during his journey through India, "I have so far tried to raise my country to the level of the western civilization according to what I have hitherto learnt through books. The time has now come for me to complete my studies by personal observation and experience." These are the words of a great king conscious of his duties and of the gigantic task that he has undertaken. The history of Afghanistan has been a lively one during the nineteenth century.

M. Zya Humayun. H. M. the Amir. Mahmud Tarzi
Private Secretary. Foreign Minister
and father-in-law
of the Amir

Two stubborn wars, the first from 1831 to 1834 and the second in 1878-1879 had imposed British protectorate on Afghanistan. On the 20th February, 1919, Amir Habibullah who had all along been faithful to England was assassinated. His third son Amanullah Khan who was then only 27 years of age did not hesitate to proclaim the independence of his country in opposition to his two elder brothers who shrank from such an audacious step. On his assumption of the title of King of Afghanistan, a short but bloody war

ensued. It ended on the 30th August, 1919, when England renounced her title to hold Afghanistan in tutelage. The Anglo-Afghan treaty of 1921 followed, which definitely re-established peace between the two countries.

Assured of his future, reconciled with his brothers who are now his best co-adjutors as the Amir has now set himself a task as important as that of Mustafa Kamal Pasha in Turkey or of King Riza Khan Pahlavi in Persia, with this difference that Afghanistan has been far behind either Turkey or Persia. Every thing had to be created there. Within a few years a kingdom belonging as it were, to the middle ages has been transformed into a modern state. It has been furnished with a proper army, with roads, and schools and within the last year it has adopted the metric system. If it still has no railways, it has a Motor Car Service, which is replacing more and more the ancient bullock carts, as well as the transport elephants. Like Mustafa Kamal Pasha, the Amir had to break down the resistance of the religious fanatics. This has caused revolts, but they have been put down with rigour, which though cruel was undoubtedly necessary in the interest of public peace and progress.

It would surprise no one to learn that the Amir is a great worker: At 7-30 every morning he is ready for a walk or a ride on horse-back lasting an hour. He is one of the best riders in his country. Thereafter, he applies himself to his work. He is both King and Minister, and as such he carries two votes in the Council of Ministers. But he leaves a good deal of initiative to his co-adjutors accepting their advice when his own view does not command a majority. It is true that in Afghanistan where the parliamentary system of Government does not exist it is the King who nominates his seven ministers. These are ministers of war, of foreign affairs, of the interior, of Finance, of Justice (which portfolio is held by his second elder brother Agatulla Khan) and of public instruction and commerce, with an under-secretariat for hygiene, occupied at present by another and a junior brother. Every day of the week is set apart for one minister, who arrives at the palace exactly at nine o'clock with all the files relating to subjects which he has been studying the past week. The minister communicates the contents of each file together with his recommendations and the result of his consultations to the Amir, who wants to acquaint himself with the minutest details of internal administration. The Amir does not leave his office desk sometimes till night fall, until all questions have been disposed of. He does not leave his work before that, under any circumstances, so much so that if necessary he calls for light refreshments which are served while he is dealing with current affairs. But generally these interviews with his ministers terminate at 5 p. m. The Amir then goes out for a promenade with the queen in his motor car. This is an innovation which scandalises the old fashioned mohamadans according to whom women should remain concealed behind the four walls of the zenana. Without going as far as Mustafa Kamal Pasha, the Amir has done his best for the emancipation of the Afghan woman. He is personally monogamous and if he has not imposed upon his people a practice which is not prohibited in the Quran, he never fails to inculcate among his

subjects in the course of his discourses in the mosque every Friday, the importance of having only a single wife.

His queen Surayya who is as young as she is beautiful renders him valuable assistance in his royal duties. Nobly descended she has passed the whole of her infancy and adolescence in Syria, where she has been highly educated. She was compelled to pass her girlhood in Syria on account of the revolutions that have been a marked feature of the recent history of Afghanistan. She is the daughter of His Excellency Mahamud Tarzi, the permanent minister of foreign affairs in Afghanistan who was the Afghan ambassador in Paris from 1921 to 1924. For reasons of health Mahamud Tarzi has not returned to Afghanistan for some years past. Recently he has been sojourning in Switzerland, whence he came the other day to Cairo to receive the Amir there, and to accompany him throughout his European tour.

The queen Surayya is invariably dressed in the European fashion which her example has tended to introduce in other families of Afghan nobility. When she appears in public, she wears only a veil instead of the Mohamadan Burka. She is specially interested in female education and manages along with her mother, the girls' school at Kabul which now has about 800 pupils on its rolls. This institution has met with a lot of opposition among the old fashioned Afghans and in order to maintain it the Amir has been often obliged to have recourse to exemplary firmness. The Amir devotes his leisure to (1) private study and (2) sports. His Private Secretary and interpreter M. Zya Humayun is a distinguished Persian gentleman who was educated in Paris at the Ecole des Beaux-arts and rendered most important services in connection with French propaganda during the great war. He is entrusted with the duty of keeping the Amir au-courant of all intellectual scientific movements in the Western World. He has also taught French to the Amir who is a regular reader of the French Pictorial Weekly l'illustration. The Amir either reads it in original or has its articles translated for him every week, because he says he finds in it the most complete image of life and progress in the world. The Amir's patronage has contributed to its circulation in his Kingdom so that the illustration is the only European Journal in the world which counts no less than 237 subscribers in Afghanistan.

The Amir devotes the rest of his leisure hours to sports. He goes out for duck shooting in autumn and winter in the immediate vicinity of Kabul, and for buck-shooting 3 or 4 times during the year in the high mountains. He is an excellent tennis player. Another favourite pastime of his is billiards in which he is an expert.

During the winter the Amir resides at Kabul and spends short holidays at Jalalabad. In summer his court is removed to a distance of some 30 miles from Kabul at Paghman which was formerly a small village obscurely situated in a valley surrounded by mountains. The Amir, who was born there, has converted it into a magnificent station and a model city. He has built there hospitals, cinemas, restaurants, a theatre, a sanatorium and a hotel provided with all the comforts of international palaces. He has also had the little valley replanted with trees. So that

Paghman will soon become a well wooded and most modern country-place. The Amir has come to Europe with a sufficiently large suite. He is accompanied by his queen, his sister and one of his sisters-in-law together with 15 other persons exclusive of servants. He has chosen this retinue not haphazardly but according to their personal competence to assist him during his journey. Among them are his father-in-law Mahamud Tarzi, Field-marshal Mahammad Nadir-Khan who was formerly Minister for war and recently ambassador at Paris (from 1925 to 1926). The assistant minister for foreign affairs Ghulam Saliq the younger brother of the present Afghan minister at Paris Ghulam Nabî Khan, and the Court minister Mahammad Yaqub Khan a young, Afghan of unusual intelligence and courtsey.

Her Majesty the Queen of Afghanistan

In Paris on the 24 January 1928, the Amir was received on his arrival at the Bois-de-Boulogne railway station by M. Daumeryne the President of the French Republic, M. Doumer, president of the Senate and M. Bouisson, the president of the French Chamber of Deputies. The Royal guests were accommodated in the Palais d'Orsay where they remained as the official guests of France for three days and where they had the rare honour of sleeping in the bed once occupied by Napoleon

the great. The queen's Boudoir there contained some furniture used by the great queen Marie Antoinette.

On the 27th January 1928 the royal guests vacated this official residence at the Quai d'Orsay and removed to hotel Crillon which became their private residence for the rest of their sojourn at Paris.

From here the king went about incognito, visiting the famous sights and other numerous places of interest in Paris. The Amir expressed himself delighted with them. He is a monarch with a modern outlook and his avowed object is to bring Afghanistan in line with European civilization. Before leaving his country in December last, he had never known what a railway journey was, for there are still no railways in Afghanistan. One can easily imagine what an eye-opener, this extended tour in Europe must have been to such a King, and have this long-looked-for first contact with the great European nations must have provided a long and continuous course of instruction for him. He received the welcome of the citizens of Paris at the hotel-de-Ville and was entertained at a gala dinner at the Palais-d' Elysee.

He then visited the tomb of the unknown soldier where M. Painleve—the war minister explained to him the high symbolism of the flame which burns perpetually under the Arc-de-Triomphe. The royal guests also visited Versailles where they were received by another minister M. Herriot who conducted them through the magnificent picture-galleries and gardens, not omitting Erianon. What historic souvenirs and grand images of the past, as well as the present, must have passed before their astonished eyes.

Two great paintings in the Versailles gallery are said to have particularly attracted the Amir's attention. They represent—(1) Napoleon distributing the eagles to his regiments and (2) the French Generals. The Amir also stayed long looking at the table, at which the famous treaty of Versailles was signed after the great war. He then visited the hotel-des-Invalides where the sight of Napoleon's tomb seemed to impress him profoundly. He also inspected the Pantheon and the Musée du Louvre. The same evening he received the President and other notabilities of the French republic at the Afghan Legation in Paris. The Amir and his queen also went to Vances to see the Ircze Mechelet where their eldest son prince Hidayat Ullah Khan was first admitted in France. He is now studying at another school. A younger brother of the Amir and one of his brothers-in-law are also studying at the special military school at Saint-Eyr.

The Amir renewed at Paris his acquaintance with some of the Frenchmen whom he had already known and held in high esteem viz. M. Alfred

Foucher, formerly chief of the French Archaeological Mission which conducted highly interesting excavations in Afghanistan, M. Hockin, superintendent of the Guimet Museum and a member of the above mission, and Dr. Tenchre principal of the French College at Kabul and of the urgent proposals which engaged the Amir's attention at Paris was the installation of wireless telegraphy that will connect Kabul with the rest of the world. The French firm of Kasmir has already secured the order for its erection, and one of the French engineers M. Baulveret, an old pupil of the Polytechnique has been lent by the French Government to reorganize in Afghanistan the department of Posts, Telegraphs and Telephones. The prolonged sojourn of the Amir in France constitutes the best augury for the future relations, economic and intellectual, between Rome and Afghanistan, a new country with a great future which was until only a few years ago completely closed to Europeans.

From France the Amir and his suite crossed over in the beginning of March 1928 to England, where they were warmly received by the Prince of Wales at Dover and by their Majesties. The King Emperor and Queen Empress, accompanied by the whole of the cabinet, at the Victoria Railway Station in London. The reception was as grand as that accorded to the President of the French republic a year ago. They remained their majesties personal guests at the Buckingham Palace for the first 3 days where they were accommodated in the finest guest suite of rooms and the most luxurious case was taken to make them feel at home, even to the extent of providing special kitchens for preparing the Afghan national food. After 3 days they removed to their special apartments at Claridge's hotel where they stayed for nearly a month and inspected everything worth seeing in the British metropolis which has made England the premier and most powerful country in the world. The Amir flew over London and sailed in a submarine, whence while submerged under the sea, he wirelessed an affectionate message to his queen, Surayya Shah Khanam, in London. He was invited to Oxford where while conferring upon him the degree of D. C. L. the Vice-Chancellor welcomed him and his queen as a second sun and moon, came from the east to illumine their distant kingdom in the west.

The Amir now purposes to visit Poland and Russia and thereafter Persia and Turkey before concluding his memorable tour. It remains to be seen how many things will excite the curiosity and enlist the interest of this enlightened sovereign anxious to extend his knowledge and experience and to utilize both for the benefit and improvement of his distant Oriental Kingdom.

THE TERMAGANT

By SITA DEVI

HIRENDRA was on the look-out for a house. During the preceding summer vacation, he had left Rangoon, with his family, intending to return alone after the expiry of the vacation. But his wife Prova changed her opinion suddenly and instead of remaining in Calcutta, returned with her husband. They had given up the flat, which they rented before and had to put up at a friend's while they looked about for suitable lodgings.

Prova was very uncomfortable in her present lodgings and their child too was probably not liking it overmuch. She howled day and night and made her parents' lives unbearable. So we might be sure that Hirendra did not set about his job, in a half-hearted way.

The whole of the afternoon, he spent going up and down the stairs of all the vacant flats of the town. In the evening he returned and called Prova. "Look here," he said as his wife made her appearance, "I have found out a flat. It is in—th St. But I doubt whether you will like it." I could not find any other as good."

"Oh, I will like it surely," Prova said with enthusiasm "anything with four walls and a roof will do for me now."

"Don't be too sure of that," her husband said "your enthusiasm always runs away with you, but I am sorry to say that it does not last long enough. Please consider it quietly for a moment, before you jump at it. Otherwise you would want to give it up after two days. My college will open next week, and I don't think, I will be able to run about in search of rooms then."

"What's wrong with the flat?" Prova asked, now a bit subdued.

"Nothing much," Hirendra said "in fact, it is rather good, considering the low rent. The two rooms are fairly large, airy and well-lighted. The flat is new and so it is not a refuge for all the mice and cockroaches in creation. But the neighbours are not good. There are Mohammadians and Madrassis behind and on the side, there is a native Sahib. These are the most objectionable. The

flat, we are thinking of taking, was formally rented by a Bengalee gentleman. They pestered him so much, that he left. So consider well, before you accept.

Prova was taken aback a little. 'Is the Sahib a heavy drinker?' She asked

"It is not a Sahib, properly speaking" Hirendra said with a laugh "and not a drunkard at all"

"Then what is it?" Prova asked in surprise

"It's a black Mem-Sahib," Hirendra said "she is a perfect terror. No one dares to stand up before her in open fight"

"Oh, a woman?" said Prova, apparently relieved "you fear a woman so much? Engage the flat at once, I will be all right there if I find that I am no match for her in fighting, I will make friends with her."

"That's all right then," said her husband with a laugh, "It is because of this wisdom, that you are the real rulers of mankind, though you are called dependents. Very well, pack up your things, while I go and engage the flat"

Next morning they left for their new home. "Thank God, I am out of that hole," said Prova, as soon as she got into the carriage.

"Don't be in a hurry to thank anyone, before you have had some experience of your new home." Said her husband

Prova had no opportunity of taking stock of her neighbours, the first day. Her luggage and furniture piled up mountain high engaged all her attention. It was no easy job, arranging all these and at the end of the day she felt too exhausted to do anything but sleep.

Next morning she got up very late. It might have been later, but for some shouting, which woke her up rudely. It was a feminine voice, but very deep and coarse. "It's my money, not yours," screamed the possessor of the voice. "How dare you?"

Then there was the noise of breaking china.

Prova got out of her bed hurriedly. Her window was open and so was the window of the

adjoining flat, but a dirty screen gave her neighbours some privacy. It could be clearly understood that a fight was raging within. Prova shut her own window with some unnecessary violence.

This woke up Hirendra too. "Why in such haste?" he asked "is it raining?"

"No, but there's thunder," his wife said.

Hirendra was in no hurry to get up. "What a shame," he muttered as he turned round to find she interrupted sleep "to wake one up so early."

"Early indeed!" his wife said, "it is considerably past eight," with this she hurried out to make the tea and serve out the stores to the cook.

This cook had been with her for a long time and he did not need much directing so after finishing her tea and setting out the stores, Prova came out in the small balcony in front and looked about her.

In front of the house, on the other side of the road was a girl's school. It had a big compound, partially surrounded by trees, which screened it from the sight of the passers-by. But Prova could see it fairly well. The classes had not yet begun and very few girls were present. These were probably boarders and were swinging and riding on sea-saws. The ground floor of their flat was rented by a Mahomedan shop-keeper, he was sitting in front on a stool dressed in a high cap and a striped *loongi*.

On the right hand side, there was a Madras family and on the floor above a Mem-Sahib. A crowd of dark children were playing about on the next balcony. The English woman of the second floor, came out and casting a look at her new neighbour went again.

Prova had been busy inspecting her neighbours, but she did not know, that she herself was undergoing a closer inspection from some one. Turning round accidentally she came face to face with a lady, who stood on the balcony of the adjoining flat, with her arms akimbo, scrutinising Prova from head to foot. She would be about forty years of age, and was dressed as a Mem-Sahib. Her complexion was very dark, and her features failed to indicate to what race she belonged. That she had some Mongolian blood in her, was apparent. Her eyes were small and very bright. She was a huge mass of a woman and her temper was written plainly on her face. Prova understood

at once that this was her famous neighbour. A younger girl was peeping at Prova, from behind her, she appeared to be her sister. As soon as they saw that Prova had noticed them, they sailed inside their room majestically.

Prova too went in and found that Hirendra had got up and was about to take his tea. "Whom have you been ogling so long?" he asked, as his wife came in.

"The person whose fame reached us even before we came here," Prova said.

"How is she?" her husband asked "can one fall in love with her, at first sight?"

"I could not," Prova said "you might try your luck."

But Hirendra did not seem over-enthusiastic. He finished his tea; and went out for a stroll.

Prova got the breakfast for her daughter and then went in to superintend the affairs of the kitchen. There was a verandah, behind the kitchen and a small winding staircase leading up to it, from the backyard. Prova came out on the verandah, and found to her satisfaction that the house was fortunate enough not to possess the famous back lane of Rangoon. She was extremely disgusted with this thing, when she first set foot here. It is usual, in Rangoon, to have a narrow lane, between two rows of houses. And from all the flats of all the houses, on both sides, refuse and filth of every description are showered down on it. A sweeper employed by the municipality cleans it once early in the morning, but within five minutes it becomes covered again with kitchen refuse, dust, rotten vegetable, and eggs, scraps of paper and other kinds of filth. The ground floors of the houses are generally occupied by the Burmese, who do not believe in climbing stairs. They have very little disgust for these obnoxious lanes, being accustomed to them from childhood. Indeed, Prova was surprised to see many Burmese women, cooking on stoves, which they placed almost in the lane. That a shower of refuse, might add to their list of foods any moment, did not seem to disturb them a bit.

So she was glad to see that there was no back-lane here. There was a yard behind, on which a large number of clothes of every pattern and colour were hung out to dry in the sun. Prova guessed, there must be a laundry closeby. On the opposite side of the lane, there were a number of wooden houses. In these the servants and durwans

of the landlord lived, and there were also some poor tenants. Prova's arrival was evidently no secret. She found women and children staring at her from every door and window of the building in front.

Suddenly her attention was distracted by a shrill scream. Simultaneously with that a small and very dark girl was flung into the yard. She kicked and cried so lustily that no-body could have doubted her intense perturbation of spirit.

All of a sudden the black Mem-Sahib made her appearance, in the adjoining verandah. "Shut up, you dirty native brat," she cried, "you are howling all day long."

All of a sudden the black Mem-Sahib made her appearance in the Verandah

Her voice shut the girl up very effectively. A woman, most probably her mother, darted out, and dragged the girl in. The Mem-Sahib cast a look at Prova, then went

inside. The Mem-Sahib's fame was well-earned, thought Prova, with a smile.

She saw or heard no more of her famous neighbour that day. The Mem-Sahib locked up her rooms and went out. She must have returned very late, for Prova did not hear her come back.

The next day too, passed off, amidst perfect calm. But towards evening things began to look lively again. Hearing loud voices, Prova ran to her window and peeped from behind her curtain. A furious fight was raging inside the Mem-Sahib's bed-room. The lady was holding a young Sahib by his necktie and slapping him hard with the other hand. The man muttered something and struggled frantically to be free. He too was hitting her once or twice, but she took not the slightest notice of that and went on with her work grimly. The young girl whom Prova had seen the day before, stood silent by the widow of the other room.

The Lady was holding a young Sahib by his necktie

Prova, being a Bengali girl, was unaccustomed to such sights. In her world, if there was to be any beating, the man administered it, and the woman suffered. She felt pity for

the poor Sahib and closing the window, went away to the kitchen.

The small Madrasī child, who had created such an uproar the other day, was sitting on the verandah of the kitchen. She appeared quite at her ease, as if the verandah belonged to her small self. She was dressed out elaborately. Her hair was drawn away tightly from her forehead and hung in a pig-tail down her back. A huge bow of scarlet ribbon was fastened to it, with a safety pin. She had eardrops of gold, set with red stones, black glass bangles round her wrists and silver anklets. She wore a frock of purple poplin, which reached down to her ankles. She had shoes on too and looked very important and self-satisfied.

Prova could hardly restrain a smile, at the sight she presented. But the girl was quite at ease and asked her whether she wanted to buy eggs.

"Have you got any for sale?" Prova asked.

"Yes, my mother has got lots of them," she replied. "Every morning she takes one and my father takes one and they give me half an egg. But my uncles are not given any."

Before Prova could reply, the girl's mother made her appearance. She was good-looking on the whole. She had an orange-coloured saree on, with broad red borders. There were two rows of ear-rings on her ears and two ornaments on her nose too. She pulled up the girl with a jerk, saying, "This girl is very naughty, madam. She will come and talk with everyone she sees. She fears no one."

"But she seems to fear that Mem-Sahib all right," Prova said.

"Oh that one?" Said the Madrasī woman, "she is no woman, madam, she is the very devil. She beats even men."

The woman talked on. Prova learned from her, that the young Sahib was the Mem-Sahib's husband. He lived on his wife and so had to accept her slaps and boxes as part of the day's business. The young girl was the Mem-Sahib's sister. She too, did not escape her sister's loving hand. No servants would enter that house for fear of life, so they had to do all the housework. The Mem-Sahib was a good dress maker and earned a lot of money. She alone provided for the family. Her husband took life easy. His wife's temper alone, spoiled the unruffled

calm of his existence. He had tried once or twice to assert his masculine superiority, but had given it up very soon as a bad job.

This happened to be one of the Mem-Sahib's bad days. At night too, her shouts and screams troubled Prova's sleep. The Mem-Sahib was on the first floor, while immediately above her, on the second floor, lived a Gujarati family, who had many children. These happened to be playing a little boisterously. Suddenly a scream was heard. It was the Mem-Sahib "Damned swine!" she cried "I cannot sleep at all. What the devil are you doing up there?" Her window was thrown open violently and a stream of filthy abuse poured forth in English and broken Hindi.

"What kind of a man is that Gujarati fellow?" said Prova "Cannot he break her teeth for her? How could they tolerate such abuse? Even my blood is boiling though I am a Bengali woman, the meekest creature in creation. Don't you feel angry too?"

"Not at all," said her husband. "It is none of my concern. If they can take it all lying down, I don't see why I should get angry for them. I wonder why this beauty of a Mem-Sahib calls them Madrasis. Probably she thinks, all Indians belong to that province."

"She seems to look down on us natives, very much," said Prova, "though she herself is darker than a negro. But what kind of a woman is she, I wonder. The noise of children playing never ought to upset any woman. The night of my daughter's weekly performance is drawing near. The Mem-Sahib's ire is going to descend on me, I suppose."

"Well, you will have to look out for yourself," her husband said. "I gave you fair notice, so you cannot blame me."

"Oh I am not afraid," said Prova. "Do you think I am totally helpless? I shall ask my Ayah to stay with me, that night. She can beat the Mem-Sahib even in wealth of bad language."

"All right," said Harendra with a laugh. "It will be a contest worth seeing."

But fortunately Prova was spared the ordeal of a verbal warfare with the termagant. Her child shrieked long and loud, and after leading her parents a lively dance all night, fell asleep towards the small hours of the morning. But the Mem-Sahib slept on, apparently, through all these troubles and turmoil. Prova got up very late and remarked upon this strange abstinence of the lady.

"Perhaps she kept quiet, seeing that it was a small child," Hirendra said.

"Oh indeed!" said his wife, "as if she cares twopence for children. Did not she abuse the Gujrati children that day?"

Suddenly a furious uproar in the street broke through their conversation. They ran out on the balcony, to see what the matter was. The Mem-Sahib as usual!

Whatever might have been the case at night, her temper was none too sweet in the morning. She had just returned home, and standing on the balcony was giving the hackney coachman a very good bit of her mind. She had given him four annas, which he was refusing to accept with some heat. The Mem-Sahib was explaining that she could not give more to a 'coolie' carriage.

"Go away, man, go away", she cried, "how much do you want for that wretched 'coolie' gharry? Do you think it is a motor car?"

The irate coachman made a hideous grimace, "Oh, what a big Mem-Sahib", he shouted, "have you ever ridden in a motor car?"

The lady went in and came out again almost at once. The next moment an empty tin, which had contained condensed milk before, was flung with unerring aim on the shaven head of the coachman. The bystanders set up a shout. The hackney coachman saw that he had small chances of winning in the contest and drove off uttering words of filthy abuse "I am going to the police station to report", he shouted. The crowd melted away slowly.

"She is getting insufferable," Prova said, "I wish there were somebody valiant enough to give her a good thrashing I would reward him profusely. Because people are afraid, she is taking advantage of it. Today she hits a hackney-carriage man, next day she will hit a gentleman."

"See how chivalrous our sex is," her husband said. "A man won't hit back, even if you throw tins at him."

"I call it cowardice, not chivalry. She is not a woman, she is nothing but a female bear."

The Mem-Sahib's temper fluctuated remarkably, within a short time. Barely half an hour had passed when she was heard asking Prova's Ayah why the baby cried so much, during the night. Prova was surprised to find that she did possess something like a heart, after all. The Ayah came

in and informed her that the Mem-Sahib next door, knew of a very good medicine for stomach ache. If baby cried again, she could fetch it from her.

So the days passed on. The lady next door, provided them with diversion, oft and on, so Prova did not feel too dull. She used to draw up a chair on the balcony and watch her neighbour's movements. The young Sahib had very little to do, so he too would come out on the balcony, quite often and watch his neighbours, specially the female portion of it. Prova had often to retire owing to his attention. But if the Mem-Sahib happened to be in, he would never venture out. There was a gramophone in their living room. He would put on some records of dance, music and exercise his legs a bit, to while away the tedious hours. He could easily have asked his wife to be his partner. But she did not evince any interest that way. She would sit with her sewing machine in the back room, working furiously and shouting imprecations at her husband, which made him forget his steps.

The Mem-Sahib's customers were various. Prova found them very interesting. Two stout ladies were often seen. They would take full ten minutes to climb up to the first floor. Then they would sit down and pant for five minutes, after that they would talk business. They would always order dresses of gaudy colours and very thin materials. The skirts would be too short and there would be nothing much, on top too. The Mem-Sahib would listen to them very politely. Probably they were her richest customers, so she wanted to be in their good graces. But sometimes, she would be seen to smile, after these ladies left.

The rains had set in, but the evening happened to be clear, fortunately. In order to make good use of it, Prova and Hirendra went out for a walk. Their child too had been taken out by the Ayah. The cook alone remained in the house.

After finishing their walk, the couple paid a visit to the cinema. So when they returned, it was close on nine o'clock. As their carriage approached near their flat, Hirendra cried out, "What a crowd! I wonder what the matter is."

"Oh dear," cried Prova in alarm, "I had left the child at home. I hope, nothing has happened to her."

"You needn't be alarmed," said her

husband. "A crowd here is no unusual thing, thanks to our good neighbour."

"But why don't I see the Ayah, leaving from the balcony?" said Prova. "She is not a person to remain indoor, if there's any thing doing in the streets."

As soon as the carriage stopped before their door, their fear vanished. The Mem-Sahib was indulging in a peculiar kind of war dance, in front of the shop, which was situated in the flat beneath Hirendra's. Abuses and vituperations, in all the languages she knew, poured forth in an unceasing stream from her lips. Her husband was standing at the foot of the staircase. Perhaps he was considering, whether to advance to the succour of his valiant wife or to beat a wise retreat. All the shopkeepers, coolies, cabbies and risksawpullers had gathered around to witness the performance.

Prova and Hirendra got down in a hurry and ran upstairs. Then they came and stood on the balcony to enquire in the matter.

It appeared that a nephew of the Mem-Sahib visited her very frequently. He had bought four annas worth of soda water from the shop below and had not paid for it. When the man asked for his money, the youngster had referred him to his aunt. The man had next approached the Mem-Sahib, who told him plainly that since she had not taken his wares, she saw no necessity of paying for them. The poor man was at his wit's end. He did not know what to do, which made him quite furious.

Today the Mem-Sahib was going out with a huge trunk, most probably to buy materials, for the dresses, she had got orders for. The fool of a shop-keeper fell into a panic at once. The Mem-Sahib was escaping, he thought and he would see nothing more of his four annas. When fools are in panic, they would go farther than the most valiant. So up he jumped and shouted, "Hey coachman, stop Mem-Sahib, pay me first, then you may go."

The fat was in the fire, with a vengeance. The Mem-Sahib discarded all ideas about shopping, for that day, she had the trunk brought down from the roof of the carriage and got down herself. The shop-keeper retreated within his stronghold, from whence he tried in vain to defend himself. Prova and Hirendra had appeared when the curtain was about to descend, on this tragicomedie.

"You son of a coolie" the Mem-Sahib was shouting, "did I take your filthy soda

water? Come out, I will beat you with my slipper. I would have gone in if it had been a good house, but I cannot go inside a coolie's room."

"The nephew says, the aunt will pay and the aunt says the nephew will," said the shop-keeper. "I should like to see the brother-in-law, who will sell anything to you again."

This must have hurt the Sahib's self-respect. "See here" he shouted, "don't utter that word again."

The shop-keeper did not agree to this reasonable request. Again he called upon that relative by marriage to witness his plight. The Sahib thought it high time to do something. He took off his coat and discarded his muffler as well. "Come on man" he cried, rolling up his shirt sleeves "come outside."

The shopman did not accept his invitation and even his wife was far from pleased at this show of conjugal love. She was offended probably, at this hint, that she alone was not a match for any living being. She gave him a push, saying, "You needn't butt in. I have got my shoe for him. Get away." The poor young man retreated and began to put on his coat again.

When the repeated invitations of the Mem-Sahib failed to bring out the shop-keeper to receive the shoe-beating, she began to go up the stairs to her room, abusing the shop-keeper and his forefathers all the while. Even when up in her flat, she came out on the balcony to give the passers-by their due share of her attention. The crowd began to hoot and clap. The Sahib pulled his wife by the arm once, to make her come inside, but an energetic push soon made him know his place.

"But where has the Ayah gone?" Prova said. "The child is sleeping."

The cook said that the Madras woman, down-stairs, had been taken ill suddenly. So her daughter had come for the Ayah. She had not come up again. The Ayah had asked him to look after her sleeping charge and to call her, if she woke up. As the child had been sleeping quite calmly, he had not gone for the Ayah.

"Go and ask her to come up," said Prova. "I don't want her to sit there gossiping."

The cook went down and returned with the Ayah. The woman downstairs had suddenly been overtaken by the pains of travail, but as she had none to help her, she

had begged Ayah to come to her. She had sent her entreaties to Prova, through the Ayah, asking her to allow Ayah to stay with her during the night. Prova sent her woman down at once. During the night the piteous cries of the woman, broke through her sleep again and again.

In the morning, she found that the Ayah had already come up and was attending to her duty after a bath. "How is the woman?" Prova asked, "Has the baby come? What is it, a boy or a girl?"

The Ayah replied that it was a girl. Her tone showed a total lack of enthusiasm. Prova thought it was due to the baby being a girl. "But what's the difference between a son and a daughter?" she asked, "why are you so cast down? A girl is as much of a human being as a boy."

The Ayah exclaimed. It would not have mattered at all, she said, had the girl been normal and healthy. But this one was deformed and ugly. If she lived, she would be the source of never-ending sorrow and trouble to her parents.

"Oh dear, what a pity!" said Prova, "I was just thinking of going down to see the baby."

"Don't go, madam", the Ayah said, "you will make the mother more ashamed. She thinks it a disgrace. She has got high fever too, it is best for her to remain quiet."

Prova asked what was wrong with the baby. The Ayah said that it was hare-lipped and club-footed. Its mother had suffered the tortures of the damned in giving birth to it. Her husband had left the house in anger, when he heard that the child was like that. So the woman was left alone and helpless.

"Good Heavens!" said Prova, "Can a man be such a monster? Take these two rupees and buy some food for the woman. Who is with her now?"

The Ayah said that a Mahomedan woman was with her and she would stay till the afternoon. Afterwards, the Ayah would go. It was expected that the inhuman beast of a husband would return by that time. The woman went off with the money to buy milk.

Prova was retiring to her bed room, when she stopped at the sound of the Mem-sahib's voice. She was asking some one whether the new-born child was a boy or a girl. The Mahomedan woman came out to reply to her, and shot back to the room as if afraid to

stand out-side. But the Mem-sahib's curiosity was far from satisfied and she began to descend the winding staircase heavily, in order to learn everything in detail.

Prova returned to the back verandah, a bit curious. A turmoil broke out almost at once, down stairs. Shouts in mixed Hindi, Tamil and English, were heard, but she failed to understand anything. But the Mem Sahib's voice rose, as usual, above the storm-screaming, "Son of a dog, dirty swine, etc." Sounds of slapping were also distinctly heard, though Prova could but guess, who the administrator was.

After a while the Mem-sahib came up panting. Her dark face was quite red with fury and exertion. The Ayah too returned almost at the same time.

"Who were the people fighting and quarreling downstairs?" Prova asked.

It appeared that the husband of the sick woman had just come back, heavily drunk. He had begun to abuse her for giving birth to such a deformed child and was threatening to strike her. The Ayah and the Mahomedan woman were scolding him and his wife and elder daughter were crying. At this juncture, the Mem-sahib appeared on the scene and asked what the matter was. On hearing the cause of the trouble, she abused the Madras, in very filthy language. The man was too far gone to know what he was doing and he too answered her in like language, the Mem-sahib gave him two or three resounding slaps and one blow with her shoe to finish with. Then as the man escaped with his life, she too left their room and went up.

"It served him right", said Prova, "The Mem-sahib is more than a match for him. But how is the patient?"

The woman was better, the Ayah said. But the baby had scarcely any clothing. The mother too had no proper bed-clothes or blankets, she was lying on a mat. The man was extremely frightened and it was not known when he would return. In the end, she requested Prova, if she had any worn-out baby-clothes to give it to that poor woman's child.

As Prova was about to enter her room to look for any sort of clothing, she might give away, the Mem-sahib was seen descending the stairs again, with a heavy blanket and a suit case. The Ayah rushed down, unable to check her curiosity. A few minutes later, she rushed up again. She was brim-

ming over with news. The Mem-sahib had struck everybody dumb with her munificence. She had given the woman a blanket, which must have cost at least thirty rupees. And she had given the baby, one bag full of frocks, caps, socks and wraps. They were very beautiful, some were of silk, some of cotton and some woolen. All were of her own sewing and contained yards and yards of lace and most beautiful embroidery. Such clothes for such an ugly baby! They were fit for a princess.

Prova was surprised. "Strange", she said, "a person, who is ready to kill a man for the sum of four annas. I should like to ask her the reason, only I don't speak to her."

The Ayah said it was not at all difficult. As soon as the elder Mem-sahib would go out, she would get the desired information from the younger.

Fortunately, the opportunity presented itself very soon. After breakfast, the Mem-sahib went out as usual to do her shopping. Her sister came out and stood on the balcony. The Ayah rushed out at once to have a bit of gossip with her. Prova felt too shy to go out, but she also sat down in a place, from whence it would be easy to hear them.

The Ayah asked the younger Mem-sahib, about those clothes, given to the baby. To whom did they belong?

The girl was silent for a time, then she replied, "Those are my sister's child's."

"Is the child gone?" asked the Ayah.

"Yes," said the girl.

They went on talking and the whole history came out, presently. The elder Mem-sahib had been married very early to a drunkard. The man had a lot of money, but he had squandered it all on drink and other vices. His poor wife was much younger than he, and strange to say, she was a shy timid thing then. She feared her husband very much, and suffered his blows in silence.

Three or four years after marriage, she gave birth to a daughter. Unfortunately, the girl was born deformed. The man got mad with anger and abused his wife to his heart's content. He had no objection to venting his anger on the innocent cause of it, but that his wife came between and received it all on herself. No one liked the puny and deformed child, so she became entirely her mother's concern. She was the only object, upon which all the pent-up

affection of her heart was lavished. She would guard it jealously as a tigress guards her cubs and would permit none to see it even. As soon as her husband would go out, she would sit down to sew for her child. She was a great expert at this. No other baby, in that quarter, had such a wardrobe. But none, alas, was so ugly. She would dress the baby up in her fine clothes and walk about with her inside the rooms. She would never take it out.

But even this bit of happiness was not long for her. Her husband returned home one night, excessively drunk even for him. He pushed the child down from the bed. The girl was too weak to survive such a blow and expired.

What happened next, the mother could not clearly remember. She became fully conscious again the next day and found herself in the lock-up of the police station. She heard that she had wounded her husband very seriously, with a chopper. He was in the hospital. She was acquitted in the trial, and fortunately, another freedom too awaited her. Her husband left her and she saw no more of him. After a few years, she heard that he was dead.

Though she was left without any means of subsistence, she did not have to suffer. She began to earn fairly well as a dress-maker. But she changed completely. From a shy timid woman, she became a termagant. Like the famous Emperor of Rome she wanted the whole human race to have one single neck, that she might cut it with one stroke. The male sex became obnoxious to her, and beautiful children only gave rise to hatred in her heart. She acquired an amazing stock of bad language and became quite free with blows.

But such is the need of companionship in a human being, that even such a person could not lead a solitary life. This young Sahib married her for her money and was made to swallow abuse and blows even together with his meals. But it must be said for the Mem-sahib, that the meals were quite good. Her younger sister had no other shelter, so she too lived with her hot-tempered sister.

Just at this juncture, the Mem-sahib returned from her shopping. Seeing her sister on the balcony, she flared up at once. "Why are you staring like an owl?" she asked. The girl escaped inside at once.

Prova was rather struck with the story.

All judged the Mem-sahib, by her outward demerour, but few knew that her heart still contained the fountain of pure love. The memory of her lost child, still made

her human and womanly. She could remember that she was a mother once.

After that Prova ceased to speak ill of the Mem-sahib.

AFGHANISTAN IN WORLD POLITICS

By DR. TARAKNATH DAS, Ph. D.

HIS Majesty the King of Afghanistan's visit to various Asian and European countries has stirred up considerable speculation among the statesmen of the world. This is due to the fact that the Afghan King is a man of character and progressive ideas; and he is travelling not for the purpose of pleasure and squandering state-funds as many of the Indian Princes and others do, on the contrary, he has left his country, as a serious student of world politics to secure first-hand information on the subject and to establish personal contacts with the leading statesmen of the world, so that he will be able to serve his country more effectively.

British statesmen and soldiers are apt to ignore an Asian ruler and spread the notion that he is an indolent autocrat; but in the case of the King of Afghanistan, a distinguished British soldier Lt. Gen. Sir George McMahon, K. C. B. in an article "Afghanistan in War and Peace" published in the National Review of January 1928, characterises the young monarch, in the following way. —

"His Majesty, the King of Afghanistan is an earnest student of progress, and of the adoption of as much of the ways of the West as may suit the psychology of his upland folk. Education, industry, transportation on modern lines are all emanating from his young head, which grew to manhood in his own rugged hills."

There is not the least doubt of the fact that Great Britain wanted to reduce Afghanistan to a mere British protectorate. For this purpose several Afghan Wars were fought, although unsuccessfully. It is a historical truth that the Anglo-Russian Entente (1907), which was so necessary to the policy of encirclement of Germany, led to the understanding that Afghanistan and Tibet and Southern Persia would be within

the British sphere of influence, whereas Mongolia and Manchuria and Northern Persia would go to Russia. Article I of the Conventions (Anglo-Russian Entente) regarding Afghanistan reads as follows. —

"Great Britain disclaims any intention of changing the political position of Afghanistan and promises neither to take measures in Afghanistan nor to encourage Afghanistan to threaten Russia. Russia recognizes Afghanistan as outside her sphere of influence and agrees to act in political relations with Afghanistan through Great Britain and to send no agents to Afghanistan."

This Anglo-Russian understanding against Afghan independence was never acknowledged as binding by the late Amir of Afghanistan, and it made the Afghans feel that they must protect their national independence through close co-operation with other nations. So during the World War Afghan sympathies were with Turkey and the Central Powers and Turko-German military and diplomatic missions were received by the Afghan Government. But the late Amir Habibullah Khan judiciously and persistently refused to attack India at the suggestion of Germany and Turkey, because Turkey and Germany were in no position to aid Afghanistan with military forces or arms or munitions. It was evident that Afghanistan would not have been able to hold her own against British forces from Beluchistan and India and the Russian forces from Turkestan and Persia.

Since the conclusion of the World War and the fall of Imperial Russia, Afghanistan's military and diplomatic position has been considerably strengthened. Soviet Russia's repudiation of the Anglo-Russian Entente, conclusion of Afghan-Russian pact, and Anglo-Persian misunderstanding made it possible for Afghanistan to take a decided stand against Great Britain, and favor Turkey

in her struggle against Greece. She also expressed in various ways good-will to the people of India in her struggle for independence.

In 1919, alarmed by the Afghan-Russian pact, Britain, in violation of the then existing treaty between Afghanistan and herself, attacked Afghanistan. The adventure was both costly and sanguinary because of the bravery of the Afghans. Britain did not hesitate to adopt a policy of frightfulness and used bombs from aeroplanes on unfortified cities and villages to create panic among the Afghan people. Indian national sympathy was overwhelmingly in favor of Afghanistan and fearing serious revolutionary trouble in India, Britain did not try to march to Kabul but made an agreement with Afghanistan.

The success of Afghanistan in securing alliances and close friendly understandings with Soviet Russia, Persia and Turkey, and the recognition accorded to Afghanistan, as an independent state by Germany, Poland, France and other European Powers have forced Britain to give up the theory of making Afghanistan a dependency. Britain, therefore, had to recognize Afghanistan as an independent nation, and signed a treaty on November 22, 1921, to that effect. Mr. Hirtzell, Deputy Under Secretary of State for India has summarised it as follows:—

"Satisfactory written assurances having been given by Afghanistan that Russian Consulates—that is of course propaganda bases—should be excluded from the Indo-Afghan frontier, the way seemed open to fruitful negotiations. The two governments agreed to respect one another's internal and external independence; to recognize boundaries then existent, subject to slight readjustment near the Khyber; to receive legations at London and Kabul and consular officers at Delhi, Calcutta, Karachi, Bombay, Kandahar and Jalalabad respectively. The Afghan Government is allowed to import free of customs duty such material as is required for strengthening of their country. So long as the British are assured that the intentions of the Afghans are friendly, this proviso applies to arms and ammunition also. The export of goods to British territory from Afghanistan is permitted, while separate postal and trade conventions are to be concluded in future. Further, each party undertakes to inform the other of major operations in the vicinity of the border line."

The geographical position of Afghanistan, the present condition of World Politics and

the growing military power of the Afghan State are in favor of Afghanistan's existence as an independent Power. The existence of Anglo-Russian rivalry forces Great Britain and Russia to be considerate to Afghanistan. It seems that the Soviet Russian policy is to influence Afghanistan to commit to a programme of recovery of Beluchistan and march towards the South which will cut off British land communication from India to the Persian Gulf. It is needless to add that Great Britain will oppose, with all her might such a move on the part of Afghanistan. It is, however, known that Great Britain will not be unwilling to look upon with favor, if Afghanistan tries to extend her influence to the North, towards Central Asia. But the wise ruler of Afghanistan is not inclined to adopt any policy of adventure; on the contrary, it is apparent that he is anxious to develop the resources of the land and bring about educational, economic and social progress of the people.

It may be emphasised that the ruler of Afghanistan fully realises the fact, that if ever Russia and Great Britain agree to crush Afghanistan, then it will not be possible to maintain her independence, unless the peoples of Asia and some of the European states take a stand against such a programme. Thus recently the Afghan monarch has been reported to have said that he believed in the principle of the League of Nations which guarantees territorial integrity of all nations, but it seemed to him that a League of Asian Nations was necessary to protect Asian Independence. It seems that this belief is at the bottom of the positive policy of friendship between Afghanistan, Persia and Turkey and Afghan interest in cementing friendship with the peoples of India, China and Japan. In this connection it should be noted that the second Pan-Asian Conference, which held its sessions at Shanghai last November, decided to hold its next session in Kabul this year.

It is quite apparent that the present ruler of Afghanistan is fully conscious of the need of establishing closer relations with European Powers other than Great Britain and Soviet Russia. It is evident from the fact that the Crown Prince of Afghanistan has been a student in the French Military Academy at Paris for the past few years; and Italian, German and other scientists and Engineers are welcome in Afghanistan. Afghanistan is full of valuable mineral resources, specially

* The complete text of the treaty, with two "schedules" are to be found as Appendix VII of the *British Blue Book*; Statement exhibiting moral and material progress and condition of India during the year 1921.

oil; and it has been reported that the Afghan ruler is interested in developing his country industrially, by securing support of international capitalists and also by connecting Afghanistan with Europe by building railroads. It has been also suggested that Afghanistan may seek American capital to promote various industrial enterprises. The King of Afghanistan rightly believes that his country can be transformed industrially as "The Switzerland of Asia"

Some of the Pan-Islamist leaders of India cherish the hope that the King of Afghanistan will take the leadership in freeing India from British rule and establish a Moslem Empire in India. But King Amanullah of Afghanistan, on his way to Europe, passed through India and when he was so enthusiastically received by the people of India, he, by his actions and speeches, made it clear that the Moslems of India should practise religious toleration and work for the progress of India in co-operation with the Hindus.

Recently it has been reported that, when a British newspaper-man asked His Majesty the King of Afghanistan, to give his views on Anglo-Afghan relations, the latter replied to the effect that he would be in a better position to form his views after his interview with Sir Austin Chamberlain, the British Secretary of State. It seems that Great Britain will be quite anxious to assure friendliness with Afghanistan, that Russian influence may not be predominant at the border of India. In the past British attitude

towards Nationalist Turkey and the Lusanna Conference was influenced to a large extent by the then existing situation in India and for the purpose of winning the Indian Moslems on the side of the British Government in India; similarly the new crisis in Indian political life, as indicated by the decision of the All-India National Congress, Indian Liberal Federation and the All-India Moslem League to boycott the Simon Commission, will certainly influence Great Britain to be conciliatory to Afghanistan.

Afghanistan has become a vital factor in the World Politics of today and her importance is bound to grow. Thus European Powers such as Italy, France and Germany which have no territorial contact with Afghanistan and Asian states like Japan and Turkey, not to speak of India and China will be forced to take special interest in Afghan attitude in World Politics. No doubt major energy of Afghanistan will be directed towards her relations with Great Britain and Russia, but friendship and understanding with such powers as France, Italy, Germany and Japan will be of great value to her in every way. Thus it may be safely asserted that His Majesty, the King of Afghanistan who is a soldier and statesman of high character, is on a Mission to promote the interests of his people and state internationally and to learn actual possibilities for Afghanistan in the field of World Politics.

New York U.S.A.

February 20, 1928.

THIRD CLASS

By RABINDRA NATH MAITRA

A railway coach, painted yellow. Bundles big and small tied in cloth, a score of dilapidated and soiled tin trunks, a dozen or ten baskets, some twenty canvas hand-bags, two dozens blankets, country-made and foreign, half a dozen tattered quilts of old cloth, cocoanut *hoolahs* with earthen bowls for the tobacco galore, and small round metal or tin boxes for betel for chewing, and metal glasses for water. In the midst of all this, shoes—pumps, Indian

slippers, Derby shoes, Indian shape with up-turned toes, and canvas shoes: shoes of Chinese make from Calcutta, strong slippers from Taltollah and from Thanthania, ornamental slippers from Cuttack and shoes from Agra—specimens old and new, all together.

Inside the carriage near the top there was a notice: "To seat 24." Just four benches and a half for twenty-four people. The half bench was in the possession of the orderly of the Collector Sahib. Within the

benches, between their empty spaces, were bugs by the million; and on the benches, forty one people closely packed—men and women, boys, old men, children. Turbans, felt or cloth caps and embroidered caps; loose robes of Mohammedan mendicants, ochre-dyed garments of Hindu jogis, loin cloths, saris of women, plain white dhotis without border, dhotis with borders of the *juice-ball* pattern and of the thick and thin line pattern, and trousers and tunics—a remarkable harmony of all these.

Smells, to be sure. The door of the water closet was tied up with a string; there was no latch. Under one bench was a dead rat; under another, some banana skins rotting for many a day. *Hookah* tobacco, Indian leaf-rolled cigarettes, cigarettes, *hashish*, coconut oil and strongly smelling floral oils, dirty blankets and cloth quilts, the huge bundle of the not very clean Kabules and the uncorked bottle of rum which the orderly of the Collector Sahib had. All these smells combined in one.

The stuffy heat of August, and with it was the noise of the little children crying. Three or four passengers were trying all at the same time to lean out of the same window for a whiff of fresh air. In this situation a perspiring young woman was making a vain attempt within her discreet wimple to cool herself with a little breeze by carefully fanning herself with the hanging lappet of her sari. In a corner an old woman had drawn her feet up to her body and was sort of gasping in an excess of fever.

Ting! Ting! Ting! and the screech of the Syren.

A Station. "Cakes and pastries!" "Betels and Cigarettes." "Porter, come this way!"

"Where do you want to get in by here? Can't you see it all full? Get along that way!"

"I say, Mr. Guard!"

"You damn..."

"I say, Ticket Babu, where can I get a seat?"

"Why don't you get inside this?"

"He won't let me!"

"Won't he? Is the carriage his father's property? Come along, get inside quick! Hallo, Good Morning, Pedro!" and the Ticket Babu tripped along towards the Guard's compartment.

"Quick, Mahesh, get in quick, he is waving the flag!"

Jerrk!

"I say, my good man, so you must come inside?"

"Just for two stations, friend; do please move this big bundle of yours a bit; that's a good fellow. Ah, how hot it is!"

The screech of the Syren.

Jerrk! Bang!

Hat on head, white coat and trousers, red of face, comes in the Flying Checker. The young woman got frightened and moved away from him. The checker advanced two steps towards her, and stood almost touching her, and shouted out to the old man in front of him, "Out with your ticket!"

"Yes, Sir!"

"Now then, be quick about it—move off, you damn..."

The up-country boy who was sitting on the floor near his feet became frightened and fell down in trying to move away.

"Your ticket?"

"I couldn't get time to buy it, Sir! I shall go as far as Daspur."

"So you haven't got a ticket? Now then, your money! out with it quick!"

"Here it is, Sir, just seven annas."

"That won't do, must pay a rupee!"

The man took out four annas more from the knot in a corner of his towel and gave the sum to the checker. That was all he had.

"Must pay more!"

"Where am I to get it from, Sir? The ticket costs eight annas, and I have paid eleven annas—I have no more money!"

"Eight annas for the fare, and eight fine."

"Do excuse me for this time, Sir."

"Very well, don't do it again! I say, move off, I want to get out! you woman there!" He pushed the frightened young woman with his elbow and trod on the feet of the old woman, and was out of the compartment.

"Oh, oh, I am killed!" the pitiful cry of the old woman.

"Sahib, you took my fare, but where's my ticket?"

"Don't howl!" the Sahib entered another carriage.

"Baladpur! Baladpur!" shouted the station-porter. Once more the same old cries and noises, and the same pitiful and eager attempt of the passengers to get inside the carriage; and the queer Hindustani of the

Station-master, and cries of abuse from the railway porters, and the noise and clamour as well as pitiful cries of the packed third class passengers. The Station master shouted "Sound the bell, I say, there!"

"Do stop, my father! O Sahib, my father, do stop the train for a minute!" cried out an old woman with a small bundle in her hand and came near the train.

"Get away, old woman! It's started!" The old woman said in tones of frantic prayer—"My poor Bipin won't live, my father; I came down this morning to the doctor's and here is his medicine that I am taking with me." And while she said this she was on the carriage, when the Ticket-Babu held her and got her down. The train was in motion. The old woman threw her bundle down on the platform, and wailed out, "O my poor Bipin!" The rest of her words were lost in the noise of the train.

The train was running. I was wondering how long it would take for a re-acting of the Black Hole tragedy if all the windows were closed, when the train stopped. The thirsty passengers shouted out together—"Water-man! Hi, Water-man!" and forthwith from fifty windows on all sides came out a hundred and fifty empty *lotas*, glasses, cups and mugs.

"Hi, Water-man, this side!"

The water-man, dark of complexion, bare-footed, with a cap on his head, came with a black bucket, and stood nearby, and said in a bullying manner—"This side, eh? You would have water by just ordering it, hey?" Then he said in an undertone—"two pice for a *lota* full!" Filling his left fist with coppers the water-man was going back with the empty bucket in his right hand, when the orderly of the Collector Sahib awoke from his doze, and bawled out, "Water-man, bring here water." The water-man turned his eyes red with anger; but when he saw Mr. Orderly with his long beard and his fine turban, he put

down on the ground his bucket and made a very low *salaam* and said, "Good morning, your honour! Please wait a little, I'll go and get fresh water."

Feeling like a conquering hero, Mr. Orderly came back to his place and began to twirl his moustache.

The train was to have stopped for ten minutes, but twenty minutes passed, and still the train would not start. To escape the heat inside the train I got down on the platform. A porter was coming.

"I say, can you tell me why the train is waiting so long?"

"Don't know." The porter went away.

The Bengali Ticket checker was coming.

"Mr. Checker, why this long wait for the train?"

"The lady of Mr. Caddie is having her lunch."

"Mr. Caddie—who is he?"

"What good your knowing?" he said in English. I understood that it would not help me if I knew that, and so I kept quiet.

The checker went away.

The soda water man was coming my way jingling his empty bottles.

"My good man, can you tell me who Mr. Caddie is?"

"He is a jute-broker from Nilganj, travelling in the second class."

The "lady" of Mr. Caddie came and the Station-master accompanied her and saw her settled in her compartment. The Eurasian guard asked the Station-master if everything was all right, and raised his flag, and the train started.

Suddenly, it struck my ears, that wail of the old woman—"For pity's sake, my father, do keep the train from going for an instant! Bipin, my son, O my poor Bipin—"

Srimati Laxumi Bai

Mrs. Sumitra Bai A. Zahir

It is one of the most encouraging signs to find that Indian women have been trying to organise themselves for their own betterment. The good news comes from Hyderabad (Sind) that recently some prominent ladies in Sind convened the Sind Provincial Ladies Conference at Karachi. The authorities of the Indian Girl's School at Karachi organised a Handicrafts Exhibition during the sitting of the Conference. Mrs. RUPCHAND BILARAM, a prominent women social worker of Sind who, recently erected at her own cost a

Miss Tehmina Dhanji Munshi

comodious building at Karachi to be utilised as a Ladies' Club House, welcomed the delegates on behalf of the Reception Committee of the Conference which was presided over by Mrs. HOUMI MEHTA. The prominent organisers of the Conference were Mrs. CHATURSING, Mrs. JAIRAMDAS DAULATRAM, Mrs. TYABJI (Secretary to the Reception Committee), Mrs. KHENCHAND and Mrs. DHARMADAS.

Mrs. IRAVATI MEHTA of Benares has been awarded the Kaiser-i-Hind Gold Medal in appreciation of her social service work.

Several Indian ladies have been nominated by government on local bodies in British India viz. Miss TEHMINA DHANJI MUNSHI (Bulsar Municipality), Srimati LAXMI BAI (District Educational Council, South Canara), Mrs. N. PAUL (Palmcottah Municipality), Mrs. ANNAPATY AMAL, B. A. L. T. (Conjeevaram Municipality). In the Baroda State Dr. SUMITRA BAI A. ZAHIR has been elected as a municipal councillor. Mrs. ZAHIR is the doctor in charge of the Kojipura Dispensary, Sidhapur.

THE STRUGGLE FOR MANCHURIA

By SCOTT NEARING

MANCHURIA is one of the richest economic prizes in the Far-East. Chinese and Japanese business interests are now engaged in a struggle for the control of the Manchurian prize which can end in only one way,—with the expulsion of Japanese monopoly and special privilege and the establishment of Chinese economic domination over the whole 365,000 square miles of its area.

Economic life is surging up in Manchuria at a prodigious rate. Thirty years ago there was not a mile of railway in the territory and the population was negligible. Today the railways of Manchuria make up about 40 per cent., of all the railways in China and the population is at least 35 millions.

Manchuria has been made by railroads. Soil is rich, but water communications are inadequate. Until railroad building began the fertile plains, mineral deposits and forest areas were practically closed to use. Railroad construction has converted this territory into an immense source of food and of the raw materials of industry.

Some idea of the great economic opportunities that are presented in Manchuria may be gained from the experience of the Chinese Eastern Railroad. The facts appear in North Manchuria and the Chinese Eastern Railway, published in Harbin by the Chinese Railway Printing Office in 1924. Later data were provided by the Railway Offices.

The concession to build the Chinese Eastern was given in 1896. It ran for 80 years. The Russian government stood behind the project as it was an important link in extending the Russian Empire to the Pacific. The Chinese Eastern passed to joint Russian-Chinese control on October 3, 1924.

Apart from any political significance which the Chinese Eastern Railway may have, its task from an economic point of view, was to build up a virgin territory, in which cultivable land was uncultivated; timber and mineral resources unexplored; in which the most primitive system of agriculture and pastoral life existed; in which the scattering population had practically no

contact with the outside world.

The railroad has organized a number of departments to open and wake the country. It has three experimental farms; an agricultural laboratory, two demonstration creameries and a cheese factory; a cattle-breeding farm, five organizations of cattle-breeders. There is a plague prevention station which distributes vaccines. The railway has wool-washing and pressing plants. It rents agricultural machinery to farmers and in the case of new settlers, ploughs up the heavy turf for them charging the cost of the service to the price of the land.

Besides these activities in the field of agriculture, the railroad promotes local industry, mining, forestry, lumbering.

The program sounds ambitious. But its base is only 1079 miles of main line; 458 miles of siding and 297 miles of service track (1634 miles in all) in a territory nine times as large as the State of Ohio and nearly twice the size of France. Roads are extremely inadequate. Heavy operations (mineral mining for instance) can be carried on only within about ten miles of railway lines.

Still, the economic life of the territory is developing. Through the period of World War, revolution and Chinese civil war improvement has continued. Freight shipments are an excellent test of the development:

Export and Import Freight to North Manchuria Carried by the Chinese Eastern Railway. (1000 tons)

| Year | Export | Import | Total |
|------|--------|--------|-------|
| 1913 | 582 | 279 | 861 |
| 1915 | 799 | 321 | 1120 |
| 1920 | 1006 | 255 | 1261 |
| 1921 | 1361 | 326 | 1687 |
| 1922 | 1601 | 392 | 1993 |
| 1923 | 1805 | 456 | 2261 |
| 1924 | 1964 | 480 | 2444 |
| 1925 | 2344 | 496 | 2840 |
| 1926 | 2754 | 600 | 3354 |

Freight imports have improved. In 1926 they were more than twice the 1913 and 1920 tonnage. Freight exports are nearly five times the 1913 figure and nearly five times the 1920 figure. Values, of course, would show a very much greater change than do tonnage figures.

Manchurian products are still chiefly agricultural and exports are almost exclusively so:

Products of Manchuria (Million Harbin Dollars)

| | Total Value | Per Cent. |
|--------------|-------------|-----------|
| Agriculture | 264.0 | 82.5 |
| Forestry | 30.0 | 9.5 |
| Cattle | 18.5 | 3.8 |
| Manufactures | 4.5 | 1.4 |
| Mining | 3.0 | 0.9 |

of the exports, 94 per cent., are agricultural products.

Before the World War the Chinese Eastern operated at a deficit: \$106 million in 1907; \$5 million in 1910; \$2.9 million in 1913. The reorganization took place in 1920. The normal pre-war deficit was from three to five million dollars per year. The figures after 1920 were:

| | |
|---------------|---------------|
| 1921 (loss) | \$1.3 million |
| 1922 (profit) | 2.8 million |
| 1923 " | 3.3 million |

Subsequent figures have not been published, but estimates, made by apparently well-informed people in Harbin, placed the profit for the year 1924, 1925 and 1926 at \$30 million Harbin dollars. Whatever the exact figure the prosperity of the road is obvious enough.

Japanese and Russian imperialists were the pioneer railroaders in Manchuria; the Russians built the Chinese Eastern railways; the Japanese built the South Manchurian. Thus Manchuria became a market for foreign goods (mostly railway materials); an immense source of export; and a territory to which millions of Chinese workers could migrate.

The Japanese have absorbed the business of Southern Manchuria. They control the South Manchurian Railway, in which their interests are estimated at about \$600 million. They hold Dairen, the principal Manchurian port, which is now second only to Shanghai as a Chinese commercial centre. They take nearly two-thirds of the total exports of South Manchuria and provide 40 per cent., of the imports. In 1927 there were 1005 Japanese

firms doing business in Manchuria; 584 engaged in commerce, 292 in industry; 83 in transportation; 27 in farming; 14 in mining. The total capital of these firms was \$275 million.

Thus Japanese business interests are skimming the cream from South Manchurian economic life. But they are not doing it with impunity. The population of Manchuria is Chinese and the Chinese are fighting the Japanese tooth and claw. The reasons for this struggle are primarily economic. Incidentally, they are social and racial.

Japanese imperialist pioneers hoped to colonize Manchuria with a Japanese population. Had they succeeded, they would have had a firm hold on the territory. But colonization proved impossible, first because of the severe winters and second because the Japanese in Manchuria were forced to compete directly with the Chinese immigrants from Shantung and Chihli.

Japanese living standards are very much higher than those in China. But as cultivators and merchants the Japanese are certainly not superior to the Chinese. When the Japanese went into Manchuria, therefore, outside of their monopoly of railways, minerals, etc., they were forced into direct competition with the Chinese millions who were being driven out of Shantung, Chihli and other provinces by the constant warfare, by crop failures, by rising prices, and who were lured to Manchuria by cheap land and by the great demand for labor on railroad construction and in coal mines. About 400,000 Chinese immigrants went to Manchuria in 1924; 500,000 in 1925; 600,000 in 1926. In 1927 occurred what the *Chinese Economic Journal* describes as "an entirely unprecedented influx of immigrants and refugees from Shantung and Chihli, as well as from farther south, from Shanghai in particular and from the interior provinces of Shansi and Honan." On the face of the figures there is evidence that approximately a million immigrants will come into Manchuria this year." This migration was accelerated, in the latter part of 1927 by a serious crop shortage in Shantung.

Railroad building, the development of industry, mining and lumber and the great influx of immigrants into Manchuria have raised land values; expanded business; and multiplied the opportunity for profit in Manchuria. Good crops have added their quota to this prosperity wave.

Who is to make the profits?

Clearly it will be impossible for the Japanese interests to hold a monopoly in Manchuria. The Chinese underbid them as colonials and as traders. Within the last few years groups of Chinese business men have begun a movement to challenge the whole Japanese position in Manchuria, including their railroad monopoly. "For the past ten years there has been considerable interest shown among Chinese in the proposed construction, independent of either Japanese or other foreign capital, of certain railways in Manchuria, especially in South-Western Manchuria." If the port of Hulutao is developed, according to this plan, "It would serve to make the Peking-Mukden Railway and the other purely Chinese lines which might connect with it, entirely independent of traffic from the South Manchurian Railway, and not dependent upon the Port of Darien. The Japanese are keenly aware of this eventuality." (*Chinese Economic Journal*, March, 1927, p. 331.)

The Japanese are so keenly aware of this eventuality that they have lodged a vigorous protest with the Chinese against the violation of their "treaty rights" involved in Chinese rail-road building in Manchuria. The *Chinese Eastern Times* of August 16, 1927, published the complete text of the new Japanese demands. The Japanese demand the right to build six branch line extensions on the South Manchurian Railway, which

will give them a complete railway monopoly of Southern Manchuria. They demand the right to develop cattle and sheep ranches and the forest and mineral resources of Manchuria and inner Mongolia. They demand special rights of residence and land ownership; and the right to police the territory occupied by their nationals. They insist that political disturbances be stopped and that no military forces, either Chinese or foreign be permitted to enter this territory.

Japanese imperialism cannot survive in Manchuria unless it enjoys some form of special privilege. The Japanese know this. That is why they write into their treaties the special economic provisions behind which they are now making their stand.

Chinese business men cannot hope to exploit Manchurian economic opportunities so long as Japanese interests monopolize them. The Chinese business men know this, and they also know something of the vast economic profits that will be reaped in Manchuria in the coming years by those who control railroads, mines, industries, banks, land.

Here is a fundamental economic conflict. Japanese and Chinese economic interests both want the profits of Manchurian economic life. Neither is willing to share. They cannot both have them. Therefore there is every likelihood that they will continue to struggle until one or the other of the two rivals is eliminated.

Mr. GUTTERMAN turns self-pity into humor, in *Scribner's* :

VINDICATION

By ARTHUR GUTTERMAN

"The foolish mob ignore me now," he mourned ;
"Applauding mediocrities and schemers,

They scorn me, as the world has ever scorned,
While yet they lived, its prophets, poets,

dreamers ;
But on these walls wherein, by all forgot,

I toil in want and sorrow, men hereafter
Shall place memorial tablets ;" "Yes, why not?"
I owned, and turned away in silent laughter,
Remembering a little boy who said,
"Just wait? You'll all be sorry when I'm dead!"

Decline of the Rice-Eating Races

The downfall and retrogressions of Asian races is largely ascribed to their rice diet by Mr. Matsumura, writing in the *Jitsugyō Nihon* (Tokyo, Japan). The retrogression of India, great in olden days and famous for her culture, is entirely due to the rice diet of her people, he

Japan Testing Out Potato Bread To Replacing Rice Diet

declares. He points to the Hindu race as the model of a decadent civilization. "Lack of proper amount and variety of vitamins in the food, needed for the proper growth of brain power, have brought about this deplorable result," he goes on.

The Chinese Yuletide

"In China a number of festivals are observed, of which the most important are the Dragon Boat Festival, the Harvest Moon Festival and the New Year, and it may be noted that these correspond roughly to our Whitsuntide, Thanksgiving and Yuletide. The New Year and the events that lead up to and follow it form the chief festival in the Chinese Calendar. And if we take the trouble to compare the Western Yuletide with the Chinese New Year we shall find some extraordinary similarities which may lead up to the assumption that away back in the prehistory of man they had a common beginning. We have the presiding deities of the two festivals bearing an extraordinary resemblance to each other—sacrifices

The Chinese Yuletide

are offered to Tsao Chun or Tsao Wang, the kitchen God, by every family in the country. The presiding spirit of genius of the Western Yuletide is Santa Claus, St. Nicholas or Father Christmas, the present day form of the little God of the Hearth of our forefathers of the European forest -- because he was the God of Hearth he always makes his entry to our homes by way of the chimney.

Arthur De C. Sowerley--*The China Journal*.

Bamboo the Infant Gorilla

Bamboo is the most human animal infant in captivity for his ways are decidedly like those of a normal baby of our own species. That should not be the least surprising, for he is in fact a blood cousin, very distantly removed, but nevertheless from the same ancestral stock as

Bamboo

homo sapiens--modern civilized man. In all probability *Dryopithecus* was the common ancestor of the modern man-like apes and human beings.

Literary Digest

Leather from the Sea

"Wholesale leather dealers are now obtaining marine leather from man's traditional enemy, the shark, and the sawfish, a huge member of the ray family and closely allied to the sharks, has recently been added to the list of commercial leather producers. It yields a leather pronounced quite as valuable, commercially, as that of the shark. Shark leather, owing to its peculiar fabric and crossweave, has far greater strength than most other animal leathers. When treated and tanned,

it becomes very soft and pliable, yet tough, and shows great resistance to stretching. Many sharks yield leather of beautiful hue.

Landing a Giant Sawfish off Key West

"The abundance of sharks in many parts of the tropical oceans, the ease and economy with which they can be captured, as well as the proximity of the shark-fishing stations to ports from which the hides can be exported without reshipment to the great leather centers, are attracting many to the possibilities of shark leather as a world-wide industry.

Literary Digest

Germany's Discipline of Sport

Sport is the substitute in Germany for conscription, which is forbidden by the Peace Treaty, as is well known, and the reason the German chooses this postwar Ersatz, according to some English writers, is that the fighting qualities of the British soldier during the war, an amateur soldier, compelled German respect and admiration. Not sport for the sport of the thing, but sport as a means to an end, is the idea of the powers that be in Germany.

Wealth from Ambergris

While ambergris may be unknown to the majority of people, it is the base of perfume's pleasing fragrance, as well as the chemical element which makes the best perfumes expensive. The "pros-

This Whale Is Worth About \$4,000, a Humpback Variety Common in the Pacific but Never Known to Be a Producer of Ambergris

pecting ground" for this substance is the whole seven seas, and every mile of the shore line of all the continents and islands. It is naturally most abundant in the waters inhabited by sperm whales, which usually prefer water that is colder than that chosen by other whales. Ambergris floats, and the occasional piece of it which becomes dislodged from the body of the whale may drift for thousands of miles by wind, tide and currents.

The world's supply of ambergris has never been sufficient. Gray ambergris is the best quality, and is therefore most in demand. Only limited quantities of gray ambergris have been available during the past year, with the result that the latest New York quotation upon it is now \$35 per ounce. The world's greatest source of drift ambergris, where it is usually picked up at sea before it ever reaches shore, is in the Indian ocean and the China sea.

ENGLISH

JOURNAL OF FRANCIS BUCHANAN (kept during the survey of the District of Shahabad in 1812-1813). Ed. by C. E. A. W. Oldham (Patna Government Press). Pp. 192+XXXVI, with 3 maps. Rs. 2-9.

Dr. Buchanan (afterwards Buchanan Hamilton) while making his statistical survey of "Eastern India" under orders of Wellesley, not only wrote a Report (short and mutilated selections from which were printed in three volumes in 1838 as *Martin's Eastern India*) but also kept a diary or Journal. Thanks to the liberality of the Bihar Government, the full reports and journals for the various Bihar districts are being published now. For the work of editing them no better selection could have been made than the late Mr. V. H. Jackson and Mr. C. E. A. W. Oldham, who had made the Patna and Arrah-Gaya districts peculiarly their own by tireless study of topography and personal tours. Mr. Oldham enjoys in respect of Bihar topography, folklore, ethnology and antiquities the same position of pre-eminence as an authority that the late Mr. W. Crooke did with regard to the United Provinces.

The Journal itself is eclipsed in interest and importance by Mr. Oldham's introduction, notes and appendices, which contain a wealth of information that no ethnologist can afford to ignore. "It is in the field of archaeology that Buchanan did some of his most valuable pioneer work in this district.—Even up-to-date, most archaeologists seem to have contented themselves with revisiting sites referred to by him" (p. X).

WARREN HASTINGS'S LETTERS to Sir JOHN MACPHERSON; Edited by H. Dodwell, *Faber and Gwyer*. Pp. 218 with four illustrations. 15s.

Sir John Macpherson, who was a member of the Governor-General's Council from 1781 and officiating Governor-General in 1785-86, had previously acted as Hastings's friend and advocate in England in defending him before the Ministry, and Hastings greatly loved him. These letters

(101 of them being from Hastings) throw some light on Hastings's policy and motives, though they will not lead to any revolutionary change in the writing of the history of that period. But their chief value lies in their "revealing the Governor-General in undress, with coat and wig laid aside." He sincerely loved Macpherson and freely unbosomed himself to his friend, so long as their friendship lasted. To the biographer of Hastings the letters are of interest, but the historical student will derive more benefit from Prof. Dodwell's masterly introduction in twenty pages. We have the almost incredible story of two acts of English agents treating (unknown to each other) with Nana Farnavis at the same time (p. XXVI).

Readers in Bengal will be interested to read how the founder of the Zamindar family of Cossimbazar, viz., Kanto Babu (the *discreet* of Hastings), was publicly misrepresented as a fierce and haughty tyrant,—while he was really a meek and benevolent gentleman. Hastings writes to his friend that "from the weight of evidence (i.e., popular report) *Contoo*, ought to be very tall, meagre, and bony; with whiskers like a Saracen's, the teeth of a shark, and claws of a tiger; his countenance fierce and his manners haughty and assuming." This was exactly the reverse of truth and Hastings slyly gives the hint by adding "The rest of his character will shew itself in a minute's conversation." (P. 116.)

X

ECONOMICS OF KRAMI; By Rajendra Prasad. Published by the Bihar Charkha Sangha, Muzaffarpur, 1927. 41 pages. Price 3a.

It is a clear exposition based on solid facts and those who wish to understand the question ought to read the pamphlet right through. The author has calmly discussed the objections which are often raised against home-spinning by those who cannot see how *charka* and handloom can economically clothe us all. The main objections are two, viz., (1) home-spinning does not pay, because

only a couple of rupees or even less per month; and (2) khadi costs more than mill-made cloth. That is to say, neither the producers nor the consumers can have any reason to be satisfied with khadi. As a matter of fact, however, these objections are not valid. A sure income of a rupee or two per month means a lot to those who have no other, and goes a long way in relieving the appalling poverty of the masses, and the question of price does not arise when one spins and clothes oneself with the home-spun. Of course, those who do not spin, but buy khadi are now at a disadvantage. But the price of khadi has considerably gone down since its introduction, and it is the object of khadi organisations to make it as cheap as mill-cloth. But there are men who shake their head and say that this is impossible, that the idea of man-power competing with steam-power is preposterous, and that the sooner India is industrialised and thickly dotted with mills the better. The author has shown how vain the hope is of starting as many mills as the country needs. Where is the capital? The present condition of the Bombay mills will be an eye-opener to those who have considered in all seriousness the present circumstances of the country. Moreover, every machine and every part of a machine has to be purchased in foreign countries, and, what is worse, to be replaced sooner or later. Who get the benefit of the capital which goes away? But more serious is the problem of unemployment. All are convinced that the decay of our cottage industries has been mainly responsible for our present poverty, compelling us to scramble for agricultural land. But there is neither land sufficient for all nor can intensive cultivation properly feed us every year if food grains worth at least 50 crores of rupees have to be bartered away for cloth.

If cottage industries are to be revived what better industry is there than the production of cloth, a primary necessity of life standing next to food? What industry can be as extensive as this, as suitable for women and for the idle moments of men, individually as cheap and yet as far-reaching in its result? Unfortunately, the critics of khadi do not suggest its substitute. Day by day village occupations are dwindling down, and the prospect is indeed gloomy in spite of the Royal Agricultural Commission. Take for instance, the new menace of rice-mills. Rice is undoubtedly made cheaper to the trader. But thousands and thousands of the poor women of the country have been deprived of their occupation of husking paddy by which they maintained themselves. What substitute can the women find in their villages? This is the case with every industry which existed in the country but is now worked by machines made in foreign countries. There is no redistribution of employment as might have been the case, could India make the machines or export manufactured goods. This is the most perplexing problem confronting us. India is undoubtedly drifting to the western type of industrialism, in which the relation between capital and labour has been anything but satisfactory. If khadi can partially solve the problem at least for the present we ought to be thankful to its organisers.

THE TAKLI TEACHER (with 27 illustrations). By Richard B. Gregg and Maganlal Gandhi. Published

by the Technical Dept., All-India Spinners' Association. To be had from Satyagraha Ashram, Sabarmati. 72 pages. Price 6as., postage 1 anna.

Takli is the Gujarati name of the hand spindle for spinning and the Takli Teacher is a well-written complete guide on the subject from the preparation of cotton to the formation of hanks of yarn. One of the objects of the writers is to make the Takli an educational appliance so that little boys and girls may not only learn the art of spinning but may also be moulded in their character by the practice. It claims to develop in the young mind more than a dozen qualities, and the claims are not extravagant. Of course the *charka* does the same, but the Takli being simpler has undoubted advantages.

But it all depends upon the teacher who guides and controls the young learners, whether any of the two disciplines the mind or encourages habits exactly contrary to what are aimed at. Given the right teacher who knows how to interest little children in spinning and allied operations, the Takli will prove wonderfully efficient. Indeed, if one desires to educate children by practical lessons it will be difficult to discover a better object than the production of cloth. The cotton-plant grown in the school garden will furnish extremely interesting lessons on plant life, and agriculture and botany in their varied aspects will naturally follow. The ginning, the carding, the spinning, the weaving, and, if the syllabus be ambitious, the drying and the washing, each affords highly interesting and practically useful subjects for lessons. Almost the whole course of mechanics can be practically taught with the help of the simple machines employed in the different processes. The All-India Spinners' Association may prepare for the guidance of teachers a series of three books of graduated course for schools. Such books written by competent writers are likely to remove the prejudice of those educational authorities who look upon the Charka and the Loom as mere instruments for the productions of cloth.

The pamphlet lays stress on the commercial aspect of spinning by Takli, and leaves the educative influence to the background. And it is right for every teacher knows that direct teaching of moral principles often proves a failure. It wearies the children and a bore is always shunned even by a disciplined mind. It would be well if a smaller Takli Teacher were written for those teachers who do not like to trouble themselves with theories or cannot decide the most suitable form for adoption in their classes. A simple guide book taking what to do without giving reasons will prove practically useful to the majority of our school teachers. Among the various forms of and materials for Takli perhaps the best would be made of a barked disc of clay and a splinter of bamboo with a downward notch at the point. The children may be encouraged to make their own Takli. A disc, thicker in the middle, keeps the shaft better fixed than one of uniform thickness. A metallic Takli requires an artisan to make; a slate disc is too thin and the shaft becomes shaky in time; wood might do but requires a carpenter and there is no wood as suitable for the shaft as bamboo. Spinners always wish to ascertain the count or "number" as it is called of their spun yarn. The book gives a rule, which,

however, requires a set of weights and great length of yarn. Perhaps the easiest method is to count the number of yards which go to weigh as much as a copper half-pice (weight—50 grains). If it is 6 yards, the number is one. Divide the number of yards by 6, the quotient gives the "number". A serviceable balance for the purpose can be made of a rectangular strip of wood, about a foot long as the beam with two pans suspended from the two ends. Our Indian steel yard (*lula*) is still better, its fulcrum of string being fixed once for all in relation to the weight of the pan which may be a smooth strip of wood for suspending the yarn.

The Takli has a long history. In India it is at least as old as the *Rigveda*. The Vedic Aryans wore woollen garments and Takli must have been used, when vegetable fibres such as hemus (both *san* and *caanabisi*), and flax came to furnish materials for cloth, the Takli proved highly efficient. Their long fibres as well as wool do not require as many twists per inch as the short staple of cotton and hence the spinning was rapid. When however cotton came to the field, the need for multiplying motion and some sort of rest for the spindle was felt, and *charka*, the highly ingenious machine, was invented. The date is perhaps not much earlier than the beginning of the Christian Era. The Takli though now transferred to Charka continued to hold its own as a separate instrument for spinning cotton, and the finest yarn for the famous Decca muslin was got with a light Takli spun in a smooth cup as rest. For spinning silk and *tussur* from cut cocoons, for twisting several strands of thread, for spinning *sann* hemp fibres for fishing nets, it is still extensively used. A heavier form in which the disc is replaced by a cross of wood is still the only instrument for spinning vegetable fibres for string. It is perhaps desirable for beginners to practise spinning jute or hemp either with this or with heavy Takli before they take to spinning cotton.

We do not know the ancient Sanskrit name of Takli. Probably it was *Kartu* (कर्तु), from the root *Krit*, to spin. This root gave the word *Kartona*, spinning, which became cotton through Arabic. By a common trick of the popular tongue, *Kartu* was turned into *tarku* (तर्कु), the later Sanskrit name for spindle. When *tarku* was placed in the Charka, Sanskrit *kartanachakra*, the spinning wheel, there was the need of a name for the hand spindle, and it became known as *tarkuti* (तर्कुति). This distinction is well-preserved in Bengali in which *takur* (তাকুর) is the name of the hand-spindle, and *takuu*, shortened into *talo* (তালু—তালু) that of the spindle of the Charka.

Oriya has also slightly different names and so also other Sanskrit languages. Takli is no other than *tarkuti*, and the Marathichuti (चुती) apparently so different is derived from the same

J. C. Ror.

COW-PROTECTION IN INDIA: By L. L. Sundara Rm., M.A., Fellow of the Royal Economic Society (London). Published by the South Indian Humanitarian League, No. 436, Mint Street, George Town, Madras. Pp. viii+202+ii. Price not known.

The author has discussed the subject from the standpoint of (i) Religion, (ii) traditions and dogmas, and (iii) humanitarianism. He intends to discuss the economical problem in a separate volume. This volume contains ten chapters, viz.—(i) Introduction, (ii) Religious codes and their significance, (iii) The Hindu attitude, (iv) The Teachings of Buddha, (v) Zarathustra and his religion, (vi) The Sikh view-point, (vii) The Moslem outlook, (viii) The Humanitarian attitude, (ix) Medicinal values of the products of the cow and (x) History of cow-protection.

The author has tried to deal with the subject impartially, and the book is worth-reading.

COMPARATIVE STUDIES IN VEDANTISM: By Mahendranath Sircar, M.A., Ph.D., Professor of Philosophy, Sanskrit College, Calcutta. Published by the Oxford University Press. Pp. XIII+314. Price Rs. 10.

We welcome the book as a valuable contribution to the Vedantic Literature. It is a scholarly treatment of Neo-vedantism. He has drawn materials not only from Sankara, Ramanuja, Nimbarka, Vallabha and Baladeva but also from Vacaspati, Citsukhacharya Vyasa-raja-Swami (of Nyayamati) fame, Madhusudan ("Advaita-Siddhi"), Sarvajna Jñani, Vedantadesika, Jva Goswami ("Sat sandarbh") and others.—Scholars who are more admired than read or understood. The author has dealt with the ontology and epistemology of the Vedanta as well as with its practical aspects.

Besides the Preface, there are seven chapters in the book under the following headings:—

- (i) Epistemological Approach
- (ii) Categories of Existence.
- (iii) Appearance
- (iv) An Estimate
- (v) The Creative order
- (vi) Sources of knowledge
- (vii) Realization and discipline.

The author has, throughout, taken a comparative view of the subject. His exposition is clear and his critical reflections are instructive. The book is recommended to the students of the Vedanta.

THE CENTENARY OF THE BRAHMO SAMAJ. An appeal to the *Brahma* Public and to all fellow-thrivers. By Prasanto Kumar Sen, M.A., LL.M. (Cantab) of Gray's Inn, Barrister-at-Law. Published by the Students' Emporium Booksellers and Stationers, Patna, Pp. 49.

The booklet has been sent to us for review. Our interest is purely historical and we shall discuss the subject from the standpoint of history.

The author tries to prove that the *Brahma Samaj* was really founded on the 11th of March, Saka 1751, corresponding to the 23rd January, 1830. But his conclusion is based upon meagre evidence drawn from secondary, and tertiary sources. The earliest and clearest statement on the subject is that of Maharshi Devendranath Thakur. He writes in his autobiography:—

१७५० शकेर भाद्र मासे योडानौकोत्थ कमल बसुर वाडी भाडा
जम्या तादीने प्रथम ब्राह्म समाज संस्थापिन हय । (पद्य परिच्छेद
पृ: ७१—७२. द्वितीय सम्स्करण) ।

The following is a literal translation of the above passage :—

"In the month of Bhadra, Saka 1750, the Brahma Samaja was first founded in a hired house belonging to Kamal Basu in Jora-Sanko."

Saka 1750 corresponds to 1828 A. D.
On the 26th of Vaisakha, Saka 1786 Devendranath delivered a discourse on the following Subject—

ब्राह्म समाजेर पंचविंशति बसुरे परीक्षित वृत्तान्त
(25 years' experience in the Brahma Samaj)
In this discourse the following passage occurs :

"निनि १७५० शके कमल बसुर वाडीने ब्राह्म समाज रोपय
करेन । १७५१ शके एर स्थाने ताहा प्रतिरोपिन हय" ।

"In 1750 Saka he [=Rammohan] planted the Brahma Samaja in the house of Kamal Basu in 1751 Saka that was transplanted here" [in the ground of the Calcutta Brahma Samaja afterwards known as the Adi Brahma Samaja].

There is an earlier authority still and this authority is no other than Rammohan Ray himself. He wrote a letter to James Pattle, Esq., on Nov. 21, 1828. In this letter he makes mention of—

(a) 'the institution lately established in Calcutta' and also of

(b) 'The first discourse delivered on the opening of the institution.'

The same statements occur, with a slight variation, in his letter to Babu Dwarakanath Tazore written on Nov. 20 1828.

[The variation is in the use of the word "formed" in place of the word "established" quoted in a"]

The first discourse referred to above is the following :—

परमेश्वर उगमना विषये प्रथम व्याख्यान । श्री रामचन्द्र रम्भा
कर्तृत्व । ब्राह्म समाज । कलकत्ता । बुधवार, ६ भाद्र, शकाब्द ।
१७५० ।

It means—"The first discourse on the worship of God by Sri Ram Chandra Sarma Brahma Samaja, Calcutta, Wednesday, 6th Bhadra, Sakabda 1750."

So we see that the Brahma Samaja was established on the 6th Bhadra, Saka 1750 (the 20th August, 1828).

There is a serious mistake in Mr. Sen's booklet. He writes in italics the following passage :—

"The date of the opening day of the Brahma Samaj viz., the 11th of Magh (23rd or 24th January) was fixed upon for its anniversary."

It is quoted from the autobiography of Mahareb Devendranath Tazore translated by Satyendranath Tagore and Indira Devi. The passage has been wrongly translated. The original Bengali passage is :—

"ब्राह्म समाजेर गृहप्रतिष्ठार दिवस, ११ माघे, साम्बद्धनिक
ब्राह्म समाज प्रवर्तिन हस्त" (पद्य परिच्छेद, द्वितीय सम्स्करण पृ: ७१)

'ब्राह्म समाजेर गृहप्रतिष्ठार दिवस' does not mean the opening day of the Brahma Samaj but it means "The day of the consecration (प्रतिष्ठा) of the house (गृह) of the Brahma Samaja."

'The consecration of the Brahma Samaj building' is not the same as "the foundation of the Brahma Samaja."

Hence the conclusion is that the Brahma Samaja was founded on the 6th of Bhadra, 1750 (20th August, 1828) and its prayer house was consecrated on the 11th of Magh, 1751 (23rd January, 1830).

MANES CHANDRA GHOSH

"THE INTERPRETER GEDDES—THE MAN AND HIS GOSPEL": By Amelia Defries (with portraits and illustrations) Published by George Routledge and Sons Ltd., Broadway 68-74 Carter Lane, London, E. C 1927. Pp 331. Price 10s 6d

Patrick Geddes stands for life—for the study of living things in their environment. Possessing a mind vast and intense Professor Geddes has in turn applied himself to the various living subjects of the world—though he is popularly known as a botanist and townplanner. Biology, Economics, Sociology, Geography, Physics and Philosophy have all at one time or other attracted him. A man of abundant sympathies he has tried to interpret to us his wonderful conception of life.

Such a man who is more an institution than an individual excites study and in this present volume we have an illuminative study of him by Miss Defries. Amelia Defries who seems to know her subject well has attempted to interpret The Interpreter Geddes to us and in this effort she has not been a failure. Her treatment of her subject is a bit novel but interesting.

The book which begins with a foreword by Rabindranath Tagore is a neat attractive volume divided into 15 chapters. The chapters include one on The Outlook Tower and one on Art and Sex both of which seemed to us particularly interesting. We invite the attention of educationists to this volume which would amply repay perusal.

R. C. G.

THE HISTORY AND ECONOMICS OF THE LAND SYSTEM IN BEHAL By K. C. Chaudhuri; with a Foreword by Sir P. C. Roy. The Book Company, Ltd. Calcutta. Pp 148, price Rs 5.

The book is divided into two parts—Part I, covering nearly two-thirds of the book, traces the history of land settlement in Bengal from the earliest days of British rule; and Part II discusses the economic evils of the present system of divided ownership of land in Bengal, in which neither the Zemindar nor the ryot can look upon himself as the actual proprietor, and suggests remedies.

The author thinks that Lord Cornwallis made a great mistake in entering into a permanent settlement with the Zemindars of Bengal and thereby recognising them as the virtual proprietors

of the land, to the exclusion of the cultivators, who were its real proprietors. A system of permanent settlement with the latter would have saved the Government and the people from much subsequent harassment and would have been also conducive to the best interests of the country. But, as Sir P. C. Ray points out in his foreword, it is easy to be wise after the event. When Lord Cornwallis entered into a permanent settlement with the Bengal Zemindars, he did so because the only other practical alternative that presented itself to him at that time was a settlement with the revenue farmers (which would admittedly have been far worse) and because he sincerely believed that he was helping to create a class of gentleman farmers who would play the same part in the improvement of Indian agriculture as Townshend, Bakewell, Rookingham and others had played in the improvement of English agriculture. If the Zemindars have grown indolent and spent on selfish pleasures all the increased increments of land values that they have received since 1793, the fault can hardly be laid at the door of Lord Cornwallis. The Zemindar is the author's *beloved*, for whom he has not a single good word to say in the course of the first hundred pages of his book. We hold no brief for the Zemindars, who as a class have been true neither to themselves nor to the people placed under their charge; but we think that the author has not tried to grasp the peculiar difficulties of their position in the early stages of the Permanent Settlement, when with very inadequate incomes and insufficient collections they were called upon to meet the Government dues regularly. The author holds the Zemindars responsible for their failure to pay the Government revenues regularly, saying that such failures were intentional—were, in fact, arranged by the Zemindars themselves in order to bring about forced sales of their estates, when they hoped to repurchase them *benami* at a reduced revenue from the Government. Though this explanation has sometimes been given, it is hardly convincing. A more reasonable explanation of their failure seems to lie in the heaviness of the Government assessment, amounting to nine-tenths of the net collections, which the Zemindars were not always able even to collect from their tenants, much less pay to the Government. The fact that with the gradual settlement of waste lands and consequent improvement in the position of the Zemindars, sales for arrears of Government revenue became much less frequent, also militates against the author's view-point.

In the Second Part of his book, dealing with the economics of land settlement, the author somewhat relents from his attitude of hostility towards the Zemindars and shows a better appreciation of the difficulties of their position. Thus at page 115 he says:

"Though the law leaves the Zemindar the power to make permanent improvements, the inducement for doing so does not exist to any appreciable extent. Fully deprived of his right of weeding out the unfit cultivators, and effectively discouraged from making improvements, the Bengal Zemindar occupies today a position which is extremely anomalous." Discussing the pros and cons of the various systems of land settlement, he comes to the conclusion that a system of pure peasant proprietorship would be the most suitable

system for Bengal at the present moment; and he asks the Government to introduce this system in Bengal by bringing out the Zemindars. As a first step, the Government may pass permissive legislation enabling the more solvent tenants to buy out their Zemindars by paying them the capitalised value of their rent. This would involve no burden upon the state and the Zemindars also would incur no pecuniary loss. If the Zemindars object to this kind of expropriation, they may be told that "the Permanent Settlement did not confer full proprietary rights on them unconditionally and for all time to come." Such proprietary rights as were conferred upon them in 1793 have been already seriously curtailed by Government tenancy legislation; and this process will go on in future until the Zemindars have been converted into mere rent receivers. Why not, then, go the whole hog at once and buy the Zemindars out in the interests of agriculture (which under the present system of divided ownership is daily going to the dogs) and of society at large?

The reader will note the analogy with Irish land legislation in these proposals of the author. We wish he had discussed the question of expense a little more in detail. To us, that seems to be an insuperable obstacle to the realisation of the scheme. He has, however, produced a remarkable and thought-provoking book and we strongly commend it to the notice of all readers of this Review. The publishers also are to be congratulated on the excellent get-up of the book.

ECONOMICS

WESTERN WORLD TRAVELS: By Lalchand Naikarai Karni, Advocate, Larcana (Sindh), price Rs. 1.

The book gives an account of the author's travels in England, America, Egypt, Palestine and many other countries of the West. The author seems to be much interested in sight-seeing and revels in moving from one place to another. The book, however, does not make much interesting reading.

SITGES IN ANDROSOV AND HIS TIMES: By Professor R. A. Kulkarni, M. A. Extension Sangli. Price Rs. 1-8.

The book is a useful help-book for university students, and is done with much care.

MISCELLANY: By Dharendra Kumar Mukerji, M. A., B.L., of the Bengal Civil Service, published by M. C. Sarkar and Sons, 90-2 A, Harrison Road, Calcutta.

The book is a collection of miscellaneous articles on such subjects as "English Prose literature," "The Bardwan Raj Public Library," "Our Industrial Needs" and "The Religious Out-look of the Day," and shows the range of the author's sympathies as well as interests.

THE CHILD ACTORS: By Harold Neucomb Hillebrand, published by the University of Illinois, Price Rs. 1.

It is a welcome production for the students of Elizabethan stage, for it traces the history of children's companies from 1100 to 1615 A. D. The author of the book is to be congratulated on

presenting a large mass of material in a coherent and agreeable way.

DIWAN CHAND SHARMA

THE ART OF JAVA: By O. C. Gangoly, *Editor Rupam*. Published from 6 Old Post Office Street, Calcutta.

This is the second volume of the series entitled "Little Books on Asiatic Art," launched by Mr. Gangoly. The booklet contains 67 illustrations and 16 diagrams to elucidate the history of Indo-Javanese art—one of the most remarkable branches of Colonial Indian art. In emphasising the importance of this line of study Mr. Gangoly rightly observes: "The art of Java really recovers to us one of the lost pages of Indian Art and helps us to reconstruct the continuous development of the history of Indian Art. It is one of the cutting frontiers of the civilisation of a Greater India stretching itself to shores beyond the moving sea." What a rich harvest is awaiting us that way is amply demonstrated by the author whose discrimination, taste and above all comparative vision render his tribute to Greater Indian Art an object of permanent inspiration. Lovers of Indian Art will find him here, as in the pages of his 'Rupam', an illuminating guide and an ardent interpreter. So the Greater India movement in history and art will get a grand impetus from this noble attempt of the author to place in the hands of the public the largest possible specimens of this art at the cheapest price.

We beg to strike here none the less a note of caution. Starting our investigation from India to Greater India—from the centre to the circumference as it were—we may fall unconsciously into the habit of assuming every important manifestation of Greater Indian art and culture as a mere projection of or deviation from Indian models. But that attitude is unhistorical and it would stand in the way of our appreciating fully the specific contributions of our colonial brethren, their originality, their ethnic individuality—in fact, all that goes to develop the local colour, nay more, the regional equation which is no less important and determining a factor in the creative plane than the personal equation in the domain of literature. The impact of the Malayo-Polynesian spirit on the Indian one is no less striking and important a line of investigation and Mr. Gangoly should have remembered that the prolonged researches and painstaking analysis of experts like Prof. Krom in Java and Mon Permentier in Cambodia, had led them to conclusions that do not bear him out in his rigidly logical hypothesis that in as much as India is the main source of artistic creation in Greater India "the transformation is a degeneration into rather than an evolution, developing an Indonesian type." Those who had the privilege to watch the rich variety of ornaments and costumes in the different provinces of Java and to listen to the wonderful Polynesian orchestra Gamelan, supplying the musical and rhythmic commentary to our Ramayana and Mahabharata, and above all those who had the chance of witnessing in the mystic fonde of Javanese twilight, the strikingly original procession of forms in the Wayang Shadow Plays, will admit that the federal interaction and interpenetration of Indian

and Greater Indian cultures has produced aesthetic results of inestimable value.

INDIAN CULTURAL INFLUENCE IN CAMBODIA: By Dr. Bijan Roy Chatterjee Ph.D. (London) D. Litt. (Punjab) Published by the University of Calcutta Pages XV+303.

Dr. Chatterjee is one of the few Indian scholars who had made the history of ancient Hindu colonisation a subject of special study. Those who have read his brilliant summary of Indo-Javanese culture in his 'Indian culture in Java and Sumatra' (Greater India Society Bulletin No. 3), has been convinced that he has brought along with a thorough historical spirit, a rare penetration into the culture-history of Greater India. The present volume under review, was crowned with the doctorate of the London University and happily the University of Calcutta has published it as one of its series on Indology. Within the small compass of three hundred pages Dr. Chatterjee has condensed the voluminous pages of research from the prolific pen of French savants like Bergaigne and Barthélemy and Coedès, Aymonier and Parmentier. The extremely lucid and engaging style of the author makes his narrative read like a novel. Starting from the twilight regions of 'Early legends and tradition' in the history of the Hindu Colony of Cambodia, the pioneer in colonisation Brahman Kaundinya, his marriage with Soma, the daughter of the local Naga chief and the foundation of the Indo-Cambodian line of Kings—the author gradually takes us to the surer and firmer grounds of historical research when we find important Sanskrit inscriptions of extraordinary interest. With the instinct of a true historian Dr. Chatterjee is not satisfied merely in tracing the Indian influence on Cambodia but is ever ready to show how the ideas and institutions of India were transformed when introduced among foreign races. Transformations were indeed inevitable and far from being invariably degenerations, often led to phenomenal creations, as we find amidst the stone-epics of Bayon and Angkor Wat down to the 11th Century A.D. The author has treated the political and cultural history in an organic way and his dramatisation of Indo-Cambodian annals is so succinct and vivid that even a layman, with no knowledge of French or of the formidable publications of the French school of archaeology, will fully appreciate the story.

Successful presentation apart the book embodies some original findings of the author that is bound to attract our attention. Dr. Chatterjee is the first to point out that from the 5th century onwards, Magadha and Pala Bengal played a more important role in Greater India than the colonists from South India. The penetration of Nagari script in Javanese epigraphy together with the legend of Dipamkara's voyage to the centres of colonial culture in Sri Vijaya as have recently been found in an early Nepalese manuscript, all go to strengthen the brilliant hypothesis of Dr. Chatterjee. Not stopping with scripts and epigraphy, he ventures to open other promising fields of comparative study, those of the cults and folklores. He shows how the Mahayana doctrines had spread to Sri-Vijaya and Kamboja from Magadha (pp. 218-258). So also how the Tantra-yantra and Tantric iconography

penetrated Greater India, mainly from Bengal (pp. 258-267). His comparison of a Bengali folk tale with a Cambodian Fairy tale is equally brilliant and thought-provoking (pp. 267-275). In architecture, if the Mahabodhi temple had supplied models or suggestions to Burma and Cambodia, the recent discovery of the Paharpur temple in North Bengal dated as early 479 A.D. is about to link up the brick architecture of Eastern India with that of our far Eastern Colonies, especially Java and Champa. Resemblances no less striking have been detected between in the domain of iconography,—especially in the bronzes of Nalanda and Java. So, Dr. Chatterjee's book has appeared in a very opportune moment, opening new vistas of historical research. We congratulate him heartily on his publication and recommend it to all lovers of the culture history of India and Greater India.

KALIDAS NAO.

SANSKRIT-ENGLISH

BEAUTIES FROM KALIDAS : By Mr. K. A. Padhye B.A., LL.B., *Vakil High Court, Bombay. New Bhatwadi, Girgaon, Bombay, 1927.*

Considering the fact that "though the Indian people are proud of Kalidas, they do not study him," the attempt of our author in presenting the beauties of the Poet in a moderate compass deserves the sincere thanks of the lovers of the Poet and Sanskrit literature. The most beautiful and effective passages are culled under five heads: devotional description of Nature, dialogues, emotional, and proverbial sayings. All these go to show the power and charm of the greatest poet of India.

Mr. N. C. Kelkar adds a very suggestive Foreword in course of which he compares the Poet with the other luminaries of Sanskrit literature. In the introduction the author discusses the various points bearing on the life and art of the Poet. He quotes and also summarises in an appendix the ingenious views of Pandit Lachmidhar Kalla as the influence of the *Pratyabhinyā Dorshana* of Kashmir on the Poet. A collection of the encomiums on the Poet, both by Eastern and Western writers is an interesting feature. An appendix is fittingly devoted to the innumerable smiles of Kalidas. The paper on "Kalidas and Music" by Sardar G. N. Mujumdar, which is reproduced as an appendix is a profitable study in itself. We could only suggest the inclusion of the interesting study of Dr. Satyacharan Law on the ornithology of Kalidas.

RAMES BOSE

HINDI

PRANANATH : Translated by the G. P. Srivastava, B.A., LL.B. Published by the "Chand" Office, Allahabad.

This is a translation of the late Mr. R.C. Dutt's "The Lake of Palms." This second impression shows its popularity.

MIR KASSIM : By Mr. Harikarnath Sastri.

Published by the Kashi Vidyapith, Benares. To be had of the Jnan Mandal, Benares, 1927.

The Jnan Mandal series, of which this work forms a volume, is a very valuable contribution to Hindi literature. It has almost entirely devoted itself to the publication of political history of India.

Mir Kassim, though he was one of the later Nawabs of Bengal who were a mere creature of the English, possessed a character of his own. He came to a conflict with the English and lost his all, but he could not follow in the footsteps of Mir Jafar who agreed "the enemies of the English are my enemies." His history is a good political lesson for the Indians, specially when the Hindus and Muslims do not see their way to come to a common conclusion for a political fight against the foreign rulers. The work has been carefully compiled, and we hope it will succeed in attracting the popular mind.

SUDDHI PRANIKAR : By Kashiram Barmā. Published by Seth Narainlal Hanshilal, 20 Apollo St., Fort, Bombay.

Validity of the present Suddhi movement is shown in this book with the help of Hindu scriptures and traditions. Some mantras are given at the end.

RUDRA KSHATRIYA PRAKAS : By Thakur Rudra Singha Tomar, Secretary, Idraproshta Kshatriya Sabha, Delhi.

Traditional history of the Kshatriya clans together with their social customs is briefly described in this book. We have a connected account of such important clans as played important parts in Indian history. It will be found useful to scholars in comparing these materials with those derived from inscriptions and coins. The story of the Gaurand Maurya (?) are specially interesting. We think the author should have given reasons for taking Buddha to be one of the Mauryas. These data like those of the Bengal *Kulasastras* should be tackled with caution.

JARASANDHABADHA MAHAKAVYA : Edited by Mr. Drogarata Das, B.A. The Kamalmani-granthamala office, Benares.

This is an incomplete epic dealing with an incident of the *Mahabharatam*. Here Krishna does not appear as merely given to philandering business, but is a hero and skilled in martial affairs. The editor has added notes on difficult words.

RAMES BASU

BHARTIYA NARANI OR INDIAN RULERS : By Sri Jagdish Sinha Gahlot. Published by the Hindi Sahitya Mandir, Ghalaghar, Jodhpur. Price Re. 1-4

This handy volume of 138 pages, though not marked by erudition, is a welcome contribution to Hindi literature so poor in works on Indian States, as a book of ready reference for the Hindi-knowing public interested in the Indian States. It is a compilation of useful information on the general condition of the 700 states including the independent kingdoms and their area, population

and annual income, besides the race and the date of birth and installation of the rulers and a list of the treaties and alliances between the British Government in India and the Indian States. At the end are given extracts from important pronouncements made by British statesmen regarding the States from time to time. The price is rather high.

R. N. C.

MARATHI

DHARAT VANDANA (a short Gazetteer of Hindustan): By Shridhar S. Dhanangkar. (Poona) Rs. 1-8

This small volume of 214 pages falls between two stools; it is too short to serve as a Gazetteer of a vast and varied country like India and its contents are too detached and too lacking in compact arrangement under general principles to be a geography of India. However, as a very brief compendium of the information supplied in the first four volumes ("Indian Empire", or general information) of the latest edition of the *Imperial Gazetteer of India*, followed by 86 pages of descriptions of famous places, it should prove of some use to vernacular readers.

SIR R. BADEN-POWELL (a biography). By Y. D. and L. D. Jyoti, with a Foreword by the Hon'ble Sir G. V. Mehta, Scout Commissioner, Bombay. Publishers Phoenix and Eagles, Surat. Price Rs. 1-8

India is interested in the biography of Sir R. Baden-Powell only as the originator and founder of the Boy Scout movement. But curiously enough in the book under notice not even half a dozen pages are allotted to explain the nature of the movement which has opened numerous branches in India or to answer objections raised against it here and elsewhere. A full account of the organisation of the movement in India would have enhanced the value of the work.

SELECT STORIES FROM THE CHITRAMATA JAGAT. By several writers. Published by the Chitra-Shala Press, Poona. Pages 300. Price Rs. 1.

A collection of stories and humorous writings likely to be popular among Marathi readers.

SHAKTUCHA BHAI OR SHAKU'S BROTHER. By Capt. Gopal Rao and Mrs. Limaye. Publisher Mr. N. G. Limaye, Chikhawadi, Bombay. Pages 91. Price 0-12-0.

The sub-title of this book viz., stories of love and war really indicates the nature of the stories.

This is a collection of short stories contributed from time to time by the writers to several Marathi periodicals. There is a ring of family air about the book which is a joint production of husband and wife and the writer of the foreword being the elder brother of the former, and the book is named after Shaku, the daughter of the writers, whose picture adorns the title page. The stories in themselves also show considerable originality and will be read with pleasure.

MANUSKRIT (with Marathi translation). By Mukund Shastri Mirajkar. Publisher—the Chitra-Shala Press, Poona. Pages about 600. Price Rs. three.

The foolish demonstrations of the burning of Manuscripts by some hot-headed Brahmin haters at Mahad and also in Madras have not been able to put the work out of existence as is evidenced by the fact that it has now appeared in a more permanent and beautiful garb and is likely to attract greater attention of Marathi readers to the hoary book of laws. In the preface covering 40 pages is given a brief summary of the work.

V. G. Arre

PORTUGUESE

A INSTRUCAO PUBLICA EM GOA: By Soutinho Rodrigues. (Lisbon) 50 Pp

This is a reprint of an article published in the *Seara Nova*. Senhor Rodrigues, a son of Goa, now working in the Medical College of Lisbon, is naturally anxious to improve the education of his native land. He traces the history of educational institutions in Goa territory from the earliest Portuguese occupation, and mourns the decay of learning, the lowering of the general intellectual level and the departure from modernism in India under Portuguese sway. He writes "Goa has a tradition the honouring of which imposes responsibilities it is necessary to give to her education greater efficiency so that she might be raised in future into the seat of a central University. The Universities of Calcutta, Bombay and Madras—founded on a date posterior to the Medical School of Goa founded in 1801 by Miranda e Almeida—are today centres of the investigation and diffusion of science which do not fear in any way to stand comparison with the best of their kind."

Goa ought not to be contented with sending her sons to foreign universities and herself stagnating in mental decrepitude, without any high hope which might spur her to existence without a superior spiritual ambition which might justify a fruitful future. Goa ought to endeavour to throw away the heavy and sorrowful load of vicious traditions by reaping the copious and prolific harvest of contemporary ideas." (p. 46)

On the popular language his views are: "It is this Marathi, half barbarous, vitiated with Portuguese and Kanarese vocabularies, and at times softened by the Marathi and Sanskrit idioms of the missionaries, that is the vernacular idiom of the Goanese" (p. 39). Konkani is, then, nothing except the Marathi of primitive times, not yet refined by the poplar locutions and forms and perverted, in the New conquests [i.e., Bardia and Salsette], by modern Marathism, among the Shavri Brahmins by Sanskritisms, and among the Christians of Goa by Portugueseisms and other vices peculiar to a mixed language. And this dialect, disfigured and polluted by all foreign usages—is the vernacular idiom of the Goanese." (p. 32).

YAS

ASSAMESE

SAKUNTALA: By Ram Narayan Edited by Rai Sahib Durgachar Bar-Kutika, Retd. Inspector of Schools, Assam. Published by the Editor from 24-1 Upper Circular Road, Calcutta.

It is a matter of satisfaction that the Rai Sahib, on his retirement, has given himself wholly to the

onerous task to collecting and editing the old literature of Assam. We here have the story of *Sakuntala* in an epic form, written by Ram Narayan, surnamed Kaviraj Chakravarty. This poet lived at the Court of Assam, during the reign of Radra Sinha, and wrote his work about 1734 A. C.

Though the poet derived his materials from the Sanskrit sources, he embodied new episodes in order to embellish his poem which is on the whole a new thing in old Indian vernacular literature. The style is simple and the language shows the proximity of the tongue of Assam to that of Bengal even about the middle of the 18th century. This work will be found useful by scholars interested in the comparative study of the eastern group of the Indo-Aryan languages.

RAMES BOSU.

BENGALI

ASHROM CHATURSUT (PART 1): *Student life*: By Surendra Kumar Sastri. Published by Nighore Chandra Butta, Bharata Aushadhalaya, Dacca. 12 annas. For students 8 annas.

There are good points in the book but some of the precepts are demoralising. We cannot recommend the book.

MAHES CHANDRA GHOSH

MAHATMA ASWINI KUMAR: By Sarat Kumar Ray. Messrs. Chakraverty Chatterjee and Co. Ltd. 15, College Sq. Calcutta, 2nd Edition. Price Re. 1 as. 8. 1928.

The first edition of the book was published about a year ago. Its publication in the second edition within such a short time proves that it commanded a wide popularity. In this edition our author has added several new chapters, viz., Aswini Kumar and Brahmoism, Preface etc. As we said when reviewing the first edition we reiterate again that this excellent and well-illustrated biography will be accorded a welcome reception from all quarters.

P. C. S.

SANGIT-SUDHA: By Sreemati Premalata Devi with an introduction by Sj. Gopeswar Banerjee. Dbl.-Cr. Oct. 171+12, cloth bound. Price Rs. 3.

The authoress, who is an amateur musician of repute and a pupil of the great *ustad* Gopeswar Banerjee, has given in this excellent book the word and music, in *Akar Matric* Indian notation, of 55 representative Kyal, Tappa, Thumri, Bhajan, Hori, Gajal and Bengali songs. The songs are mostly by famous composers such as Sadarang, Adarang, Samad, Kadar, Tulsidas, Shori and others. Some of the Bengali songs are by the authoress herself. The work of notation has been faultlessly done and the general get-up of the book is excellent. We congratulate the authoress, who is a daughter of Sir Rajendra Nath Mukherjee, on her success as a writer and a composer in the field of Indian musical literature.

TAN MALA: *A book of Kyal Music containing*

sixty songs and notations giving necessary Tans and *Bhats*. By Sangitacharya Gopeswar Banerjee, published by Dacarkin & Sons, Calcutta. Royal Oct. 170+12, paper cover. Price Rs 3 only.

Sangitacharya Gopeswar Banerjee is one of the foremost musicians and musical writers in India. He has published many standard books on Hindu music and this fresh addition is on a par with its predecessors. It is a book which by providing notations for Tans and *Bhats* will remove a real want. For students of music always find it hard to master Tans and *Bhats*, most notations being restricted to the mere body, i.e., *Asthayi*, *Antara*, etc., of the song. We expect the book will have a wide circulation among music lovers.

SANGIT LAHARI—A book of Kyal, Tappa and Thumri songs: By Sangitacharya Gopeswar Banerjee. Royal Oct. 251+18 with two three-colour plates of the author and the Maharaja of Mayurbhanj, who generously defrayed the expenses of the book. Published by the author. Paper cover. Price Rs. 3 only.

The book is one of the best we have seen on Kyal, Tappa and Thumri music. It contains many famous songs as well as short notes on pronunciation and the reading of the notations. Sj. Banerjee is doing real good work by his excellent publications. The present revival of classical music is not a little due to his untiring energy and self-less service to Hindu music. We hope all libraries and connoisseurs will obtain whole sets of his works which are practically the only comprehensive series of books in Bengali on the different branches of Hindu music.

GOPESWAR-GITIKA: A book of songs with notations containing various compositions by Sangitacharya Gopeswar Banerjee: Royal Oct. 82+12, two plates. Price Rs. 1-8 Author Rameschandra Banerjee.

The author Sj. Rameschandra Banerjee, B.A., is the eldest son of Sj. Gopeswar Banerjee and is also an expert musician, the winner of numerous medals and prizes. His effort at classifying and publishing the songs composed by his gifted parent enables us to know the latter more intimately; for Sj. Gopeswar Banerjee is not only a musician of rare talent, but he is also a first class composer. The 36 songs in the book should find a place in all collections of good books on music.

ASHOK CHATTERJEE.

NEPALI

NEPALI SHAHITYA (Chaturtha Bhag): By Parasmoni Pradhan and Seshmoni Pradhan. Published by Mackinnon & Co. Price 7 as.

The authors deserve congratulations on the success they have attained in bringing out this excellent text-book in Nepali vernacular at such a cheap price for boys of the 5th class standard in primary and secondary schools. A special feature of the book is the large variety of subjects dealt with within a short compass, which is sure to make it interesting as well as instructive to its readers. Great care seems to have been taken to inform young minds with knowledge of up-to-

Ahmedabad and published by the Gujarati Vernacular Society. Paper cover: pp. 388. Price Rs. 1. (1927).

Amongst the very few Gujaratis who are making genuine exertions to build up a literature of Science in the language Mr. Shah is one. This book of his is written on the model of Thomson's Introduction to Science, and the reader would feel that this model has been copied and carried out most successfully. The chapters contain most valuable and useful information as to the history and development of various sciences and altogether this book supplies a long-felt want in Gujarati. This is likely to prove a landmark in the path of Scientific Literature.

NIGHANTU ADAISHA (the first Part): By Vaidya Bapalal G. Shah of Hansot, near Broach. Printed

at the Aditya Printing Press, Ahmedabad. Cloth bound. Pp. 701+14+20+56. Price Rs. 6-6. (1927)

This substantial tome is a treatise on the Vegetable Materia Medica of our country, and contains various valuable prescriptions of renowned authors with critical notes. Ample quotations are given from various Literatures, and the utility of about 700 different medicinal plants discussed, their names in the different Vernaculars and their Latin equivalents find a place in this book, which, on the whole, is a most remarkable work turned out by a native Vaidya, on the most up-to-date research lines. It is bound to prove useful to the profession and to those laymen who take an interest in medicinal drugs and there are many such amongst us.

K. M. J.

THE SARASWATI PUJA IN THE CITY COLLEGE HOSTEL

By RABINDRANATH TAGORE

(Authorised Translation for The Modern Review)

THE Ram Mohun Roy students' hostel is attached to, or under the control of the City College, an institution connected with the Sadhuran Brahmo Samaj. Certain students recently waxed grim in their determination, just there, and nowhere but there, to perform a ceremony of image worship. It is not true that the religion of the Hindus would have in any way been hurt by omitting to celebrate a particular worship in a particular place; while, on the other hand, it may rightly be said that it is Religion which is hurt by needlessly hurting the feelings of any religious community. Nay, it would not even be wrong to add that, if by some clever trick, the object of one's worship can be used as a means to outrage one's opponent, that does not redound to the glory of but is rather an insult to the divinity. If any votaries of Saraswati can think that she will be pleased by being used as a stick to deal a painful blow to a community which they cannot bear, they evince but scant respect for their goddess.

Be that as it may, this much is certain that, if any third party, impelled by a sense of public duty, dares to refer the question to the arbitrament of reason, he stands to become the target for the onslaughts of an

excited batch of students. And no one cares, if he can help it, to get mixed up in a controversy wherein there is every chance of rudeness of conduct usurping the place of argument,—for, it is not every one to whom that weapon is available.

Unfortunately, the incident was not confined to a clash between the students and the authorities of a particular college, nor is the principle involved one that concerns only their limited circle. So I feel that I should fail in my duty, if owing to personal disinclination, or risk of odium, I keep silent.

There was a time when the religious-differences in Europe broke out in sanguinary conflicts. Those differences are still there, but they no longer lead to quarrels. And, because of that, the European peoples have been able to achieve both social order and political power. The special sense which makes it possible to maintain differences and yet abjure conflicts, may be called the Spirit of Swaraj. For, it is superfluous to say, Swaraj can only become true by the cultivation of that self-restraint which may enable every one of its sections to keep within their respective limits.

Differences due to religion are much greater amongst Indians than amongst the

peoples of any other part of the world. And intolerance of one another, based on these differences, is the greatest of all obstacles in the way of their advance towards true self-government. That is why, in our country, it is all the more essential to cultivate the good sense which may serve to prevent our religion itself being aggressively used to create dissension of the most destructive kind.

This, of course, we all know, and we all say. And, on our political platforms, we display a wonderful restraint of speech and broadness of mind, especially when one of the parties there happens to be endowed with an overwhelming power of offensive. But, when it comes to a case for the practical exercise amongst ourselves of this same restraint and broadmindedness, it becomes clearly evident that there is some defect inherent in our character working against the spirit of coherence which is necessary for creating national life.

Where a multitude of men live in the same country, social adjustment and freedom of self-determination become for them the greatest fulfilment. And every great people strives with disciplined effort and sacrifice to attain this fulfilment. But man has certain evil instincts, the sinister influence of which tends to retard or destroy his achievement. The chief of these is the propensity of bravado in an iniquitous intrusion of one's own individual tastes and opinions into the region of others' rights, especially when Religion is insulted by giving such bravado its name. If some Shakta should adopt the principle that his religion is vindicated only if he forcibly sacrifices animals to his goddess in some Vaishnava place, then such external observance of his religion needs must hurt the inner truth of that religion itself, therewith grievously wounding the whole social organism. In some cases, those who commit this outrage may, by the sheer violence of their passion, gain the victory; but would that victory be real? On the contrary, does there not lurk a real danger to its well-being in a country which can permit such outrages without protest?

We have always gloried in the fact that it is against the spirit and teaching of Hinduism, intolerantly to create disturbances in one another's religious field. It is because of this that, in sect-ridden India, the Hindus have always unconcernedly given room to alien religions in their country, without any

attempts forcibly to encroach on them. The Hindu has always said that the method of worship must depend on the temperament of the worshipper; and that, so long as he obeys the rules in which he believes, both divinity and devotees are satisfied. The Hindu further says that, if in a place set apart for a particular form of worship, the adherent of a different sect should come and, by guile or force, prevent its due performance, it is the Deity of all sects who is thereby blasphemed. If the Hindu means what he says, then the Hindu religion is not satisfied merely by the performance of a particular ceremony of worship, but requires such performance to be made in its rightful place, in a spirit of true devotion, without annoyance to believers in a different form. The Hindu who, in the intoxication of power, does otherwise, is banished, by reason of such wrongful worship, from his God.

So far for the injunctions of religion, which should be above every other consideration. But let us now come down to a lower plane. On this we have for our guide certain valuable rules of social courtesy. If a particular religious community has charge of a certain college, then mere gentlemanliness dictates that the students of such college should not wound the religious beliefs of that community. And if there be some amongst the former devoid of this quality, then it becomes a case for the external social force called law. It is the fear of this law that prevents any member of society from taking it on himself forcibly to disregard the rights and privileges of any other members. If the Hindu students of Aligarh College, in an access of sectarian pride, should, whether in broad daylight or in the secrecy of night, desire to worship Kali within its precincts, that would not only be against religion and gentlemanliness, but also against the law; that is to say, no civilised society can, for the sake of its own safety, afford to allow this kind of thing to happen. So the culprit in such case will not only suffer the inward shame of having committed an ungentlemanly act, but also be liable to the outward penalty prescribed by law.

On this the question may be raised, was the performance of Saraswati Puja in the Ram Mohun Roy Hostel illegal? Those who have been in charge of the Hostel, ever since its foundation, say that it is against the rules.

Unless and until the contrary is proved, we must accept their statement. But even if any of the students should dispute it, they must make their protest in a constitutional way. That is to say, the appeal must be made either to the University or to a Court of Law,—never to their own boisterous willfulness.

In our own family house in Calcutta, the number of other inmates who are engaged in its various concerns would probably outnumber our family members and, excepting those of them who are Musalmans, they are all image-worshippers in their respective communities at home. If they should suddenly take it into their head that they have the right to worship their goddess in our prayer hall, and if sundry big and influential countrymen of ours, for some religious or social, political or personal reason, should support them in this idea, then, if strong enough, they would be able to dislodge us with contumely and settle the matter to their own satisfaction; but, for all that, would they be able to call it a civilised proceeding? Or hold it out as an example of the Swaraj that is to come? Taste, manners, opinions, religion—these are all personal matters; that is to say, they may take any form according to one's own impulse or habit, passion or predilection; not so the law, which in all civilised societies is impersonal and may not be taken by the individual into his own hand, however obstreperous or well-armed he may be.

No doubt occasions can be conceived when, even at the cost of danger and suffering, it becomes one's duty to break the law. If it be claimed that this is such an occasion, then that is tantamount to saying that the authorities of the Hostel may have been legally, but were not morally right in trying to prevent the Saraswati Paja being performed there. Suppose I admit this for the sake of argument, even then such justification cannot be pleaded within the bounds of the City College Hostel alone. In that case, it would not be right to restrain Mahomedan students, if in accordance with their own religion they wanted to sacrifice a cow in the grounds of a hostel occupied by them but managed by the Hindus. Such restraint is there only to prevent needless hurt to the religious feelings of the Hindus; and every one knows that it is calculated to wound the religious feelings of the Brahmos to hold image worship on their premises.

The only remaining contention might be,

that the Brahmins should not have felt hurt. The same thing can as reasonably be urged by the Mahomedan students of my previous example. They may likewise say that it is not reasonable for Hindus to feel hurt at a cow-sacrifice, considering that they themselves sacrifice the buffalo which also involves the killing of an animal of even larger size, and one that does our ploughing; and gives us milk, just like the cow; moreover, in order to strengthen their contention they can even quote certain Vedic customs sanctioning the practice of cow-killing. But whatever the arguments may be, it is obvious that it makes no difference in the pain and annoyance that is felt.

I have also heard it argued that there can be no valid comparison between Saraswati Paja and cow-sacrifice. But the reader should remember, that is not a comparison instituted by me. The Musalman, who, on the one hand, thinks cow sacrifice to be enjoined by his religion, also thinks, on the other, that idol worship is an insult to God. He would, in fact, be inclined to use as much force to restrain, or give as much punishment to deter, idol worship, as the Hindu would to prevent cow-sacrifice. If cow-killing is a sin in Hindu eyes, the Musalmans have proclaimed in their history, in letters of blood, that it is a sin beyond all other sins to worship any created thing as God. So that the Muslim's comparison between Cow-sacrifice and Saraswati Paja does not, in his view, seem to be so inapt after all.

However, that may be, it should be the first duty of those, who are so loud in their assertion that their religion demands the performance of their own sectarian worship even on ground occupied by a different sect, to proceed to perform this religious duty on Musalman and Christian territory; for, within the narrow confines of the Brahmo Samaj, there is no sufficient scope for the display of their courage of conviction. They will say in reply that where they lack the power they are relieved of the duty. Does their determination, then, refer only to the Brahmo Samaj, against which force can be used with no great danger to their own physical safety? In such case I have only this much to tell them that they must be prepared to be done by as they would do.

Because, in our country, the bride's relatives are in the weaker position, it often happens that the bridegroom's party boast of their own superiority, by reason of the

humiliating depredations they are able to inflict on the weaker side. It goes without saying that in such conduct there is neither righteousness nor courage. If this same mentality should tend to crop up, every now and then, in the fields of religion, or politics, or national work, can that be a thing to boast of by one side or the other? Should it not rather be a source of the gravest anxiety to the national Leaders?

In spite of its rules against image worship on the premises, the City College, during a long period in the past, has been accepted and utilised by students of every religious sect. If now some group of men should, by propaganda of cajolery or intimidation, succeed in putting it into difficulties, that would be sowing the seed of rankling thorns in the mind of one of the communities of our own countrymen. Would that be a hopeful outlook for our thousand-times divided people? Would it amount to a cultivation of the spirit of Swaraj which is to give legitimate freedom of self-expression to all natural differences in the communities that come under it?

Those who are the rulers of India are Christians. As to power, they have more than is possessed by any other religion in India. As for contempt and hatred, they are wanting in neither for the Hindu rites and practices. And yet they have not taken to thrusting the Christian form of worship into our homes, our schools, our temples. Had they done so, they would doubtless have had showers of benedictions on such crusade from the pious pundits of their own church. Nevertheless, they have preferred to do without such benediction, rather than propagate their religion by force in the fields sacred to non-Christian religions.

It is my one hope that these *mleccha* Christians may not learn their lesson from the profoundly shastric and devoutly ritualistic religious preceptors of the leaders who are giving their blessings to, or at least withholding their censure from, these gallant throwers of mud and refuse, wielders of bludgeons and old shoes, in the thrilling battle that is to win the victory for their purest of religions.

CORRESPONDENCE

"Monuments of Varendra"

Will any of your numerous readers kindly help me to obtain the following information about a lecture delivered by Mr. Akshaya Kumar Maitreya, B. L., C. I. E., Director of the Varendra Research Society, at the Indian Museum, Calcutta, in 1927? I understand from three different scholars who were present at the lecture that the learned lecturer told the audience that the inscription of the 5th year of Mahendrapala discovered by me at Paharpur in the Rajshahi district in the working season of 1925-26 was not an inscription of the Gurjara-Pratihara Emperor Mahendrapala I. The title of Mr. Maitreya's lecture was "Monuments of Varendra." I shall be much obliged if any of your readers will kindly refer me to any publication where Mr. Maitreya's lecture was published this particular point referred to.

Yours etc.
R. D. BANERJI

"Anti-Separate Electorate League"

It is a happy augury for the future of India that the Muslim intelligentsia have at last realised

the baneful effects of separate electorate and communal representation in various legislatures which are sapping the very foundation of Indian nationalism and Swaraj, and so have resolved to abolish it for good. The more I think of separate electorates the more I am convinced that it should be given a decent burial. Communal representation is a negation of nationalism. It retards the growth of solidarity between the different sections of the Indian people. The more we delay in abandoning separate electorates the more we suffer. Those who have foresight and broader outlook must admit that by maintaining separate electorate we, the Muslims, are in a way creating much anti-Muslim feelings among the non-Muslim section of the Indian people, and partly helping them in uniting against the whole body of Muslims of India. Thus the Indian Christians, Jews, Parsis and Sikhs will, in course of time, combine with the Hindus and their united forces might be arrayed against the Muslims being thus isolated from the rest of the Indian people by separate electorate. And then the Indian Muslims will have to fight against enormous odds—on one side against the Bureaucracy, and on the other, against the solid phalanx of the Indian people in which the position of the

Muslims will be intolerable. So the only effective remedy to break this possible united combination against the Muslims lies in joint or mixed electorate and not in separate electorate or communal representation. And here the Muslims should bear in mind that as long as the Muslims can be used as tools to advance Imperial interests in India and outside (such as Arabia, Bahrain, Iraq, Persia, Egypt, etc.) the Government will see that the Muslims are patted on the back and favoured. That far and no further. That is to say, when the interest of the Indian Muslims clash with the Government, then the Govt. will not help the Muslims against the non-Muslim Indians. Now it is in the interests of the Muslims that we should abolish the separate electorate and adopt joint electorate without any further delay.

The Muslim leaders should now concentrate their attention upon eradicating this pernicious system—the separate electorate. To remove the misconceptions and misapprehensions prevailing among the Muslims about the introduction of joint electorate in legislatures and self-governing institutions, a separate association is urgently needed. So I venture to suggest that as a branch of association of the Congress, an "Anti-Separate Electorate League" (or "Anti-Communal Representation League") like the All-India Spinners' Association, should be formed at once. This League will carry an extensive educative propaganda among the Muslims against separate electorate and kindred subjects and soon will be able to convince the Muslims about the utility of joint electorate, and mischiefs of separate electorate which is doing much harm to the cause of India. The moment the Indian Muslims accept the joint electorate thus creating mutual trust and confidence in the people, the moment we establish Swaraj on a permanent footing, joint electorate should be an article of faith with the present-day Muslims of India.

MD. AZHAR

Prof. Radha Krishnan on Indian Philosophy

Prof. Radha Krishnan has recently produced a work on Indian Philosophy in two volumes in which, unfortunately, he has not done justice to an Indian scholar whose publications he has laid under contribution but whose name he has not considered necessary to mention in his work. Will the Professor explain if he hunted all the volumes of the *British Medical Journal* to find the extract he has given as a footnote on p. 356 of his work? We suggest that he has not done anything of the sort, but has copied it from Rai Bahadur Sris Chandra Basu's *Introduction to Yoga Philosophy*, pp. 46-48, published in vol. XV—

part IV of the *Sacred Books of the Hindus*. The extract he has given is a second-hand one and he ought to have, in fairness, mentioned the source to which he was indebted for it.

On p. 368, he mentions on the authority of William James, Nitrous Oxide gas and alcohol as stimulating ecstatic consciousness. But he has not stated the name of the man to whom the credit for the above view really belongs. The same scholar from whose work he has evidently quoted the extract referred to in the last paragraph, wrote as far back as 1833-84 in the pages of the *Arya* of Lahore on "*Pratyahara Anaesthetic*" which has been published as chapt. XI of his *Introduction to Yoga Philosophy*, of the existence of which Mr. Radha Krishnan cannot pretend to be ignorant. Was it a sealed book to him? He has referred, in his work, to Baladeva's *Govinda Bhashya* and *Prameya Ratnavali*. Has he consulted the original works, which so far as I am aware, are not printed in Devanagari character, but in Bengali. Rai Bahadur Sris Chandra Basu translated these works into English and published them in the *Sacred Books of the Hindus*, as Vol. V. Was not Mr. Radha Krishnan aware of this fact? If so, why has he not mentioned it in his work? I suggest that he derived his information about Baladeva from Sris Chandra's translations. He has referred to Vijnana Bhikshu's commentary on the Vedanta Sutras. There is only one edition of this work published in the Chowkhamba series at the expense of Sris Chandra Basu, who also made it known to the public by his translation of its introduction in the pages of the *Theosophist* for 1898. Sris Chandra Basu's "*Studies in the Vedanta Sutras*," published in the *Sacred Books of the Hindus* Series, should have been referred to in a work which professes to be a History of Hindu Philosophy, for it was he, for the first time, who submitted the different commentaries on the Vedanta Sutras to critical and comparative study in the above-mentioned publication. His own commentary on the Sutras deserves recognition.

Full justice has not been done, to several authors who have written on the Vedanta Philosophy in Bengali. The complete translation of the Purva Mimamsa Sutra of Jaimini into English by Pandit Mohan Lal Sandal, M. A., LL. B., was published for the first time in the *Sacred Books of the Hindus*. This has not been referred to by Professor Radhakrishnan, who has not also referred to Kunte's *Shaddarshana Chintanika*. This shows how limited has been his reading in the preparation of his work, which does not reflect credit on the university in which he occupies the Chair of Philosophy.

THE CITY COLLEGE

By C. F. ANDREWS

IT is with very great diffidence and hesitation, that I have decided, on invitation, to write out in full some of the thoughts that have been pressing on my mind at this crisis in the history of the City College.

In the heated atmosphere that prevails today, I am aware that my entering into the controversy at all may be resented. Nevertheless, since I feel morally certain that an issue of great national importance is involved, which ought at once to be made plain, I have made up my mind to risk any misunderstanding as to my purpose,—stating clearly at the outset, that it is the general principle alone which I shall discuss, leaving aside the minor local matters. For, I have strong hope, that if I can convince any of the students by my writing, that high national interests are vitally concerned, they will refrain from pressing any further the boycott on which they insist today with such persistence.

Let me assure them at once, that both by temperament and inclination I should naturally take up, if I could, the students' point of view. For, all through my life I have been a rebel against the tradition of the elders, and in sympathy with the ideals of the young. But in this particular question, I find myself unable to go with the student boycotters as far as the main principle is concerned.

Again, let me make perfectly clear, before I begin, that I am open to correction, if I put the case at all unfairly. In what I write later, I am simply going upon what is generally accepted as the basis of the controversy.

My argument is briefly this. It appears to me, the more I think it over, that the students' attempt to coerce the college authorities into allowing public image worship to be performed in the Ram Mohun Roy Hostel is contrary to the spirit of mutual toleration and forbearance which was introduced by the Unity Conference and confirmed by the Madras Congress Resolution, in December, 1927. It is this aspect of the City College dispute, in relation to the Unity Conference,

that I wish to present with all due deference and respect, as one of the members of that Conference from its earliest sittings in 1924.

From the intimate knowledge which I obtained, by practical experience, of those exceptional days at Delhi, during Mahatma Gandhi's twenty-one days' fast, I have been quite convinced that the Unity Conference, inaugurated on that occasion, was one of the greatest events in Indian History, in modern times. It will have, in the end, if its spirit becomes general, the most far-reaching effect. For it was moral rather than political.

At the most solemn moment of all, in that upper room, at the end of the twenty-first day, when the fast was broken, Mahatma Gandhi asked those who were present, as his friends, to be prepared to sacrifice life itself in the supreme cause of national religious unity. Swami Shraddhananda was there. Hakim Ajmal Khan was there. Dr. Ansari was there, also, and many others.

Mahatma Gandhi had the sovereign right to ask for this sacrifice of life, because he had freely offered his own. How often, since then, he has almost completed the offering, in his own person, everyone in India knows well. If it was God's will, he would only too gladly lay down his frail tortured body, giving it, in death, the rest which he never allowed it in life. For no other object would he more gladly die than to see the spirit of brotherhood in religion prevail throughout the Motherland.

Swami Shraddhananda, who had been one of my dearest personal friends and had loved me like a brother to the end, actually fulfilled in literal deed his promise given at that time in the upper room when Mahatmajee ended his fast. For he laid down his life in sacrifice for religious peace. I, who knew him, in his own heart's depth, can truly testify (if any testimony were needed for so plain a fact) that at the moment of death nothing but pure love was there in his heart going forth in forgiveness to the one who dealt him the deadly blow. His martyrdom consecrated once more the cause of Indian

religious unity, and showed how supremely difficult it was in its achievement.

Hakim Ajmal Khan, whom I knew hardly, less intimately than Swami Shradhdhananda, had also in his own way kept faithfully his promise to Mahatmaji, given in that upper chamber. For, in spite of extreme ill-health, he struggled on heroically to the end with his arduous work of restoring peace at Delhi. Himself a doctor, he knew what grave risks he was running all the while; yet he never spared himself for a single moment. I saw him for the last time, shortly before he died. He was looking very ill; but his courage was as high as ever and his hope undaunted. It was easy to see from his worn face, that the strain of this work of religious conciliation in distracted Delhi was wearing him down. No other thought occupied his mind so much as this. Now at last he has fulfilled his pledged word, which he gave to Mahatma Gandhi in that most solemn hour of all.

Dr. Ansari is still with us, full of the spirit of peace and reconciliation and goodwill, himself the living embodiment of that gentle courtesy, generosity and consideration for others, which the Unity Conference required for the healing of religious strife. We are all praying that his life may be prolonged. How faithfully and truly he also has kept his promise to Mahatmaji, at the breaking of the fast, the whole of India has borne witness. For, at the most critical moment of all, when the unity resolution had to be passed, he was nominated by every province to be President of the All-India National Congress and elected unanimously.

Thus the price that has already been paid to restore the spirit of mutual goodwill, so sorely needed in India, in order to carry out the Unity Conference resolution, has indeed been a heavy one. The martyrdom of Swami Shradhdhananda; the sudden death, through heart-failure, of Hakim Ajmal Khan; the shattered physical health of Mahatma Gandhi himself—these, and other sacrifices besides, have been freely offered. But, in and through all, the national decision has at last been reached, that in religious matters, mutual courtesy, forbearance and goodwill should take the place of hard insistence upon rights and the laying down of meticulous legal enactments.

This national decision, thus reached at last after much conflict, has its

own indirect bearing on every side of Indian life. It is not in any way a new principle for this country; because it can be found engraven on stone in the Rock Inscriptions of Asoka which are more than two thousand years old. It represents India's 'Edict of Toleration', continually repeated from age to age at each outstanding epoch in her national history. Nothing else except this spirit can possibly give true freedom in a continent such as India, with its conglomeration of races, castes, and religions. A type of character is needed, represented in countless individuals, actively peaceable towards others and ready to live in harmony with all men. Only as each individual realises this active courtesy, can the diverse religious elements exist side by side with each other in unity and concord.

Really and truly, this is the only national solution that will ever work in India. Out of all the turmoil of Hindu-Muslim tension, men have come back to that. Furthermore, this lesson, that India has learnt at such tremendous cost afresh today, the world, as it grows more intimate, through closer contact, will have to learn tomorrow. For, this racial and religious unity problem is not confined to India alone, and mankind, as intercourse becomes closer, will have to learn it soon. India will then be in the vanguard of the moral forces of the world, if only her own historical mission has not been repudiated by her children.

The Unity decision, taken at Madras, was a free decision, freely accepted, and in accordance with the genius of the Indian people. It was not proposed to them by any outside power. It was there finally agreed, that in religious matters nothing on either side, however cherished, should be so pressed to an extreme as to interfere with the wishes of others of a different religious persuasion. There should be a willingness, on either side, to forego rights, which might be claimed on strictly legal grounds, if only by doing so the higher interests of national unity and goodwill could be kept unimpaired.

Since that decision was taken, and consecrated by suffering and death, a new spirit has appeared in the country. The Hindus, on the one hand, have not insisted on what they regarded as the exercise of their full religious rights. The Musalmans, from the other side, have answered courtesy by courtesy. Certainly, when we compare

the first four months of 1928 with those of 1927, we can hardly be too thankful for the almost miraculous change that has been wrought. Mutual goodwill, for the sake of the higher national cause, has been constantly in evidence. It is true that the riots have not wholly died down, and that in distant and remote places they still break out occasionally. But the difference between this and what was happening in Calcutta itself and elsewhere, only a year ago, can hardly be fully estimated, except by those who endured those earlier times, when human life was everywhere in danger. Such things are rapidly forgotten by those who went through them; but I can personally remember the shock I received, when returning from South Africa, last September to find Calcutta almost like a besieged fortress, or an armed camp, with military stations at every big cross road, over a large part of the town. I was horrified by the accounts which were told me concerning quite recent events. They were appalling to listen to, and almost unbelievable. Since then, I have travelled from one end of India to the other, backwards and forwards, during the last few months, and I can bear witness that the change has been nothing less than phenomenal. In places where riots were an almost daily occurrence, and quiet people lived in daily fear, there is now confidence again. No one has wished any longer to drive things to an extreme, or to insist on his own rights at any cost. It has been realised, through a bitter experience, that along that pathway nothing but misery can be expected.

It may be said, in answer to this, that the City College trouble is a local matter, and its issues can be localised accordingly; that it is a quarrel that can easily be settled, if the College authorities are ready to give way. Personally I have thought very far along those lines; and if I had come to the conclusion, that it was nothing else than a local college trouble, involving a personal dispute between the Principal and the students, I, for my part, should never have written a line about it, or ever brought forward these great national considerations. But the more I have thought it over, the more certain I am, that it cannot be localised. It is also clear to me, that the spirit of insistence and coercion, by means of boycott, in this instance, is contrary to the spirit of mutual consideration and forbearance for which the Madras Congress stands. It is a

return to the state of internecine war and mutual destruction. It appears to me, not the pathway of religious peace, but an avenue leading directly back to civil strife.

It may be said, again, that the analogy does not hold between this insistence on Saraswati Paja being publicly observed in the Hostel of a Brahma College (which after all is a Hindu affair) and the insistence on Hindu music being publicly played before a Muhammadan mosque. I have thought out this matter also very closely, and again and again I am driven back to the conclusion that this analogy does really stand. Therefore, I cannot but fear that the militant religious spirit, which is being excited, will have its repercussions in much wider circles.

It may be requested from me, that I should ask the College authorities to be forbearing and courteous and peaceable, and not the students only. Unhesitatingly I am ready to do so, not only now, but on any future occasion. My one desire is, that religious toleration should be always carried out, up to the uttermost limit possible; and if any compromise could be suggested whereby public image worship could be celebrated, without directly contradicting the principles on which the Brahma College was founded, I would press for it by all earnest methods of persuasion. But as far as the buildings of the Raja Ram Mohan Roy Hostel are concerned, I myself, as an impartial and peace-loving person, who would wish to take the students' side, can see no compromise. I have considered the building, and it is far too integral a part of the College to be separated from it. Also it is definitely, as its name denotes, a non-sectarian Hostel, open to Christians, Brahmans, Muhammadans. These would conscientiously object to public image worship within the non-sectarian Hostel where they resided.

If it be argued again that the bulk of the resident students are orthodox Hindus today, it is perfectly logical to reply that they came of their own accord to a Brahma College, choosing the City College rather than any other. They are equally at liberty to leave that College, if, after having tried it, they feel their consciences hurt by anything that is required under its rules. But an intensive boycott of the College, in order to introduce an innovation, is an entirely different matter. This stirs up the dying embers of religious strife and inflames religious passions.

If, lastly, it be argued, that the money spent in building the Raja Ram Mohan Roy Hostel was Government and not Brahmo money, such an argument leaves me quite cold; for, I have been a Professor in a Government-aided College for ten years, from 1904-1914, at Delhi, and I know all about the conditions of Government grants. The Government money was given to the City College with the full knowledge that it was a Brahmo foundation, just as similar money has been given all over India to Sanskrit, Hindu, Sanatan Dharma, Muhammadan, Arya, Sikh and Christian Colleges, with the full knowledge that in each special case, special rules would be observed by the different religious interests concerned.

The Saraswati Puja can rightly be celebrated with great religious ceremony at the Hindu College, Delhi. There have been Christian students admitted to the Hindu College, and they could not possibly have

raised any objection. A Christian public religious festival could at any time be performed in St. Stephen's College which is just across the road. The Hindu students there could not possibly raise any objection. But if the Christian students, in the Hindu College, insisted on their own religious festivals being publicly performed within the Hindu College, or vice versa, then nothing but confusion would follow. The present religious peace among the Delhi students could not be observed for a single day, if this obvious mutual understanding were broken.

It is not possible to carry out the argument to all its logical conclusions, nor is it necessary for me to do so. What I plead for is, that the new spirit, which was accepted at the Unity Conference and also at Madras, may be welcomed in full measure, on both sides, in the present controversy. Then, I am sure, it will be brought to a satisfactory conclusion.

Satirical verse on current themes prospers rather more in England than here, hence this in *G. K.'s Weekly*. Perhaps our poets think too much of the moon. The Industrial Conference was drawn together to discuss questions of difference between Capital and Labor.

LOONY LULLABY

By F. KESTON CLARKE

(The Industrial Conference continues its deliberations at Burlington House, Piccadilly)

Hush-a-bye baby, on the tree-top,
Be like your ancestors: they didn't grouse—
Start evolution, and where will it stop?
It may lead to Hell or to Burlington House.
Burlington House!
Burlington House!
The Ape has ascended to Burlington House!

Hash-a-bye mine, deep in the mine,
Be patient, be hopeful, and bear charitee.
It's dark and it's dirty but fragrant and fine
Compared with the blith that's in Piccadillee—
Piccadillee!
Piccadillee!
They're all nice clean hands down in Piccadillee!

Hush-a-bye newspaper, mind what you say
(Best not to mention the bait or the mousetrap),
Truth makes good copy, but Truth couldn't pay
The bill for the breakfast at Burlington House.

Burlington House!
Burlington House!
They're all demi-Monds down at Burlington House!

Hash-a-bye Cook, for it's vulgar to brawl!
When everyone's trying so hard to agree,
They'll never call you the nice names that
they call
Alfred and Jimmy in Piccadillee.
Piccadillee!
Piccadillee!
They're all very polished in Piccadillee!

Hash-a-bye Conscience, your small voice is gone
And forgotten by those of superior tons.
Isaiah's dead, but his soul marches on—
Down Piccadilly to Burlington House,
Burlington House!
Burlington House!
they're counting the silver at Burlington House!

INDIAN PERIODICALS

India a C 3 Nation

K. R. R. Sastri M. A., B. L., F. R. E. S. writes in *The C. W. Magazine* on the peculiar position of India among the nations of the world. His article, which is absolutely to the point and devoid of all verbiage is reproduced below:

It has been pronounced 'admauseum' that East is 'gorgeous', that India is 'the brightest jewel in the "Imperial Diadem"', that the Taj at Agra is a superb structure in all-white; not so often does one say that India is a 'poor' country in all vital aspects. Nor even once is it remembered by favoured globe-trotters that the poorest country is saddled with the highest paid office.

What ancient glory and present helplessness can produce is writ large over the whole of this country. Just peep into any Year Book: if there are 100 biographies of prominent men and women in the world, India has not even four of her sons sketched. There is room for an unknown "Bulji" but no place for a famous "Bose"; a "Rudford" looms large but not a "Ray"; another "Robey" aloud but not a "Rama." Read any list of world's greatest men. Out of 28 there is none from India in the Daily Mail Year Book. John Wesley finds a place but not an Asoka. There is Luther but not Buddha. Again in 60 greatest dates of the world's history, there is only 'one' assigned to India! Ivan the Terrible Tsar of Russia has a date but not Asoka the Great.

Take a leaf from the educational progress made by civilised countries. If it is the P. C. of illiteracy India leads with 94 per cent. while U. S. A. has 7.7 p c. England has 1.8 per cent. and mountainous Scotland has 1.6 per cent. Or again, if we read the proportion of Elementary School attendance, while

| | | |
|---------------|-----|-----|
| India | has | 100 |
| Japan | " | 493 |
| Canada | " | 545 |
| Great Britain | " | 563 |
| and U. S. A. | " | 803 |

But when it is a question of payment to the expenses of the much-advertised League of Nations—a body almost impotent in cases of disputes between the Big Few—India comes next to Great Britain in the Empire.

If any student of comparative history were to read about world's Navies and Armies, India has absolutely no International status and her bedecked Maharajas are picturesque non-entities in matters international.

Time and again is one bored with the observation that India is an agricultural country. But what is her cultivated area per agricultural worker?

| | | | |
|----------------|-----|------|-------|
| While U. S. A. | has | 45.8 | acres |
| Australia | " | 25.6 | " |
| Great Britain | " | 21.0 | " |
| South Africa | " | 6.1 | " |
| India | " | 2.7 | " |

It is the lowest in the scale of nations. Of infant mortality and the numbers of epidemics that claim a heavy toll of precious human lives, India does demonstrate a shockingly high percentage.

Little historic sense shows those who praise India's progress all these years—If Globe-trotters after a fortnight stay in this 'vast continent of differing castes and creeds' give a tribute to the Indian Civil Service and the bureaucracy, it is all cant. When D3 countries are turned into A3 states, primeval India has been allowed to go down to the last step in the ladder.

Judge you will by any test the present state of India. 'It is a C: 3 nation'; she has millions but she is disarmed; she is a 'dependant' country while Czecho-Slovakia is free; she is in abysmal darkness of 'illiteracy.' Her starving millions are often a prey to epidemics, floods and cholera, and she has to pass the test of fitness for self-government; while world's history shows constitutions-making through national conventions she has to get doses of responsibility from 7000 miles away filtered through a tripartite stand. Was ever in the world's history a more helpless state of national affairs? How one yearns for a Garibaldi to instil unity and courage at this hour into this helpless land?

Bengali Banking in Bengal

Banking of the modern sort and on a large scale is carried on in Bengal mostly by non-Bengalis. But Bengalis are rapidly coming to the fore in this field as can be seen from the following account of Prof. Benoy Kumar Sarkar in *Welfare*. Says Prof. Sarkar.

I shall speak first of all of the co-operative banks. You know that the Co-operative Credit Societies Act was passed in 1904. This means that about the time Young Bengal initiated the *Swadeshi* movement, the co-operative banks were being only talked of. To-day there are about 13,000 such institutions, large, medium and small, provincial and rural. It is necessary to pause a minute here in order to understand the significance of banking enterprise on co-operative lines. All these banks are run almost exclusively with the resources of the peasants in the villages, most of whom belong to the class of our illiterate fellow countrymen.

But all the same the resources of these people are functioning through the medium of these banks and they are operating a capital of about 8 crores.

Then he says:

Since my return to India towards the end of 1925, I have been trying to collect a complete list of all the joint-stock Bengali Banks in Bengal, as well as prepare a more or less complete statistical account of their resources and different kinds of transactions in which they are interested. For one reason or other it has not been possible as yet to collect adequate informations on the subject. But a more or less rough calculation has yielded the result that there are about 500 credit institutions, known generally as "loan offices", run on the joint stock principle in our villages, subdivisions and district head quarters. This figure should appear to be imposing, only if we remember that about 1905 the number of such banks could be counted at fingers' end and that in 1912-13 there were not more than dozens throughout Bengal.

Now, what is the meaning of these 500 or so banking institutions in Bengal? Let us try to understand the economic significance in a realistic manner. Suppose that each possesses a paid-up capital, an average of Rs. 25,000 to take the most modest figure. This means that our combined bank capital should be estimated at Rs. 125,00,000. If now each is doing business, say, ten times the capital, which again is a very modest estimate, it is clear that we Bengalis have been doing business, in and through the joint stock banks alone, to the extent of 12½ crores. In other words, taking our population at 5 crores, our *per capita* banking business is Rs. 2-8-0 per year. Every man, woman and child of Bengal, no matter how rich or poor, can be credited with a two-rupee eight-anna annual business operated through the medium of these banks. Certainly this is great compared with the situation in 1905, when the total amount of banking business along modern and joint-stock methods done by us was too little to yield any figure per head to the entire Bengali people.

Age of Marriage for Women

S. Bhagirathi Ammal says in *Stri-Dharma*.

It is interesting to read the controversy over the child marriage Bill and the protests against it from a few of the ultra-orthodox section and to see how one-sided they are in looking at the whole question. Has it ever struck them that the women and the young girls of India might hold an absolutely different opinion on the matter, and have they asked their wives and mothers and the other women-folk of their homes as to what they think about it, before expressing their own views? Have they asked their young daughters and sisters whether they wish to be married at the age of 10 and 12 and bear children at a tender age, undergoing all the difficulties and sufferings involved therein? It is a most important question vitally concerning the women and children of this country who should have self determination in this matter and they alone have the moral right to

say whether they want the Bill or not and the men should have no voice in passing it, however much they may protest. Not a single woman or women's association has protested against the Bill so far, and every thinking person in the country must have taken note of that.

The argument has been brought forward that the women of India are not educated and therefore they are not in a fit position to express their own views and the men must come to rescue them and be their protecting angels. Education is not needed to form an opinion in this matter, for which the women's experience is sufficient. If only the opinion of the women is taken on this matter, specially that of the young girls, the people concerned with this Bill, the Government will find how important it is to pass it immediately without any more wrangling, for they know the miseries of child marriage as no man can know. No amount of quoting Shastras can help the situation now, and it will not lessen the appalling maternity and child mortality in the country. What might have been good in the religion at a particular time cannot continue to be so for endless ages, and things must change according to time.

Man is afraid that he might lose his power over woman and that if these reforms are made she will no longer be his slave. It is very comfortable for him to have a young wife to minister to his happiness and look after his house, cook his food, etc., no matter how he treats her, and he is afraid of having her as his equal master of her mind and body. Men of 40 and 50 can marry a child of 10 or 12 and no Shastras object to that, nor does public opinion disallow it. Only "the giving away of girls in marriage after attaining puberty leads the parents into rigorous Hell" according to a correspondent in the *Hindu*. While the hell to which the parents go is a prospective or imaginary one, what about the Karma or the sending of their girls now to a living Hell by selling them to old widowers who cannot get women of their own age, because of this pernicious custom of child marriage.

It is time that women should come forward to assert their will and rights.

Child Labour in Carpet Factories

Mary J. Campbell draws a heart-rending picture of child labour in Amritsar in the same journal. We draw the attention of Government to it. She says:

I had occasion to visit one of India's most famous Rug Factories in Amritsar a short time ago. Friends in the homeland wanted some rugs chosen for them and I went over for the ostensible purpose of choosing patterns, and learning about prices. After walking down one of the long work-rooms of the Factory, I came away with a sad heart. The rugs were all that could be desired in pattern, in texture and in design. Hundreds of them were being woven in the looms, but it was the workers that brought sorrow to my heart. In almost every case I found one man and five or

six boys working at a loom. Boys of 10 and 12 years of age were working away most industriously. I enquired about their lives. It seemed inexpressibly sad that boys so young as these who already show traces of the hard lives they have to lead should have to work from dawn till dusk, day in and day out. They were all exceedingly thin and pale. The Guide noticing that I was greatly perturbed over their sad condition said: "It is much worse down the line."

I passed on admiring the beauty of the artistic rugs but thinking more of humanity who were weaving with restless fingers the beautiful patterns that would eventually adorn palaces in India and other lands. The ages of the boys seem to decrease farther down the factory.

Coming to a splendid rug 20 ft. x 14 ft. and of a beautiful design I stopped before it. A young man sat in the centre of the loom weaving. At the outer edge a tiny boy with claw-like fingers was wearily weaving in the coloured threads. "He is not more than five," said the Guide. His appearance showed this to be probably true.

At 7 o'clock every morning the little child must be dragged from his bed and taken away to work. He is not given permission to leave the loom until 12 o'clock when all the workmen take a recess for food, and a little rest. At 2 p. m. he again resumes his task and plies away till sundown. It was 6-30 p. m. as I stood there talking.

Turning to one of the overseers, I said "These children are all so small. How are you able to keep them steadily at work for so many hours? Do you have to punish them?" "No," he said, "We do not use any physical punishment. We just frighten them with words." Who could not read between the lines just what this may mean to the little boys who are in the hands of these task-masters. This little five-year-old earns two annas daily.

Not one, but many children from five to twelve years of age work in that Great rug factory,

Starvation

We find in the *Oriental Watchman*.

"I MAY remark," says Dr. Haig, "that those who starve themselves may feel very bright and well at first, after the usual gastric symptoms of discomfort give way, for they are being nourished on a stimulating flesh diet from their own tissues, and are saving some of the force usually expended on digestion."

"Later on, however, when their reserve of albumens has long been used up, and the tissue albumens get low, they discover that they have been living on capital which should never have been touched, and which it is difficult to replace; for, with all their forces, including that of digestion, at a low ebb, it will take a comparatively long time to assimilate sufficient albumens to keep the machine working, as well as to replace lost capital. These considerations sufficiently account for the fact, of which I have seen many instances, that those who put themselves on an unaccustomed diet, often dangerously diminish their allowance

of albumens for some time before they discover that there is anything wrong, and great difficulty is then experienced in getting back to physiological levels.

"Thus while ten grains of albumen per pound of body weight are required for an active life, nine grains per pound are about the minimum that an adult can continue to take with safety."

"When in the case of sickness there is a diminution in the amount of albumens taken, there should also be a lessening of the force expended, otherwise there will be loss of strength and vitality. When the digestion is good, loss of weight means that the albumens should be increased, and this can be readily done by increasing the amount of milk and eggs taken. Where the diet is much lessened in quantity, rest in bed is generally advisable."

The *Indian Review* says:

We understand that Mr. Dwijendra Nath Mukerjee has been appointed Engineer Sub-Lieutenant in the Royal Indian Marine. He is at present under training at the Royal Barracks, Portsmouth. This is the first instance of an Indian getting a Naval Commission, and he will be the first Indian Officer of the Royal Indian Navy.

Rambles in Greece

Prof. K. Zachariah, M.A. (Oxon) concludes his series of articles entitled "A Fortnight in Greece" in the March number of the *Presidency College Magazine*. In this article the Professor gives descriptions of Athens, and various places in the Peloponnesus which he visited during his itinerary. Athens he says, is:

Indeed 'the eye of Greece', the feature in the whole physiognomy most moving and bright and finished. But its very perfection robs it of some of the Charm that often invests the primitive and immature. When the Homeric poems were composed, she was but a village or cluster of villages round a bare rock.

About the Peloponnesus we read:

Tripolis is the only town in Arcadia—which is as it should be, for Arcadia is not for town-dwellers. Baedeker describes it as one of the most important places in the Peloponnesus; 'it is the seat of an archbishop and contains a gymnasium and a seminary for priests; the population is 10,500.' Neither the gymnasium nor even the archbishop and priests is likely to prove much of an attraction; but Tripolis is on the way to Sparta; thence a car takes you along forty miles of narrow, winding mountain road through some of the finest and fiercest scenery in Greece. At the end is Sparta, with the great wall of Taygetus behind and the bubbling Eurotas below; but Time, she who must be obeyed, barred the way to us. Even more inaccessible is the temple of Phigaleia, of historic memory, for, it was built—so says

Pausanias—to commemorate a merciful release from the great plague of 430 and was planned by Ictinus himself, architect of the Parthenon; its beautiful frieze is now in the British Museum. Most difficult of all to abandon was Delphi of the oracles—but again ease of communications decided for us between Delphi and Olympia, that and the *fiennes*. The usual route to Delphi is by sea from the Piræus to Itea at the head of the small bay of Saloni and from there by car; and Baedeker says cautiously, 'the times of the return journeys are irregular.'

Nauplia is one of the most attractive towns in Greece. 'The beautiful and healthy situation of the town, its handsome new buildings and the un-Grecian cleanness of the streets invite the traveller to a stay of some time.' So says the prosaic and practical guide-book. If the traveller stays, it will not be for the new buildings which are what he would find in any provincial town, nor for the neatness of the streets which would be remarkable in Greece alone, but for the striking beauty of its position. The town is on a little peninsula, which forms one side of an open, sweeping harbour, dotted with islands. The sea is of the clear blue so rare except in the Aegean, turning in the dusk to the wine-dark colour which Homer noted and which shades off into the purple of the hills beyond. The coast has that clean and austere grace of line which only a rocky shore can show. Behind the town towers the steep walls of the Palamidi, crowned with its Venetian fortress, its strong red-brown a foil to the rest of the picture.

The Heron of Epidaurus was the most sacred sanctuary of Asclepius, the god of healing. The whole place is now strewn with stones and bits of columns and with anxious care we traced out the ground plans of the temples, of colonnades and walls, of the kataraktion or hostel, of the tholos or round temple, where mystic rites were celebrated; enough of the last has been reconstructed in the museum to make its design intelligible to the layman. Then we had a race in the stadium, sunk between its sloping green walls; it is curious, but characteristically Greek, to attach a racecourse to a hospital-sport and amusement are elements of well-being. So we find a theatre too, the best preserved of all Greek theatres, fashioned from the cup of a circling hill. In the centre is the dancing floor or orchestra, surrounded by a ring of grass, beyond which rise the rows of semi-circular seats of stone, one above the other, the highest nearly 200 feet above the orchestra. At intervals run passages from side to side and up and down. The Greeks were an open-air people and they had an open air worthy of looking at and living in. If your eye strayed from Agamemnon or Alceste, it had something even better to dwell on, the white pilgrim road winding among the hills, sprinkled perhaps, as when we saw it, with winter snow.

Mycenæ, now forlorn is situated in the heart of the Argive hills. The sun came out as we passed into the citadel through the famous Lion Gateway. It was not very far away, at Nemea, that Hercules slew his lion, but the balanced lions rampant of Mycenæ perhaps trace their pedigree, by some strange filtration of art, to similar motifs of Sumerian Ishtar. Anyhow they

were a fit symbol for the robber chiefs of this acropolis, who waxed wealthy by preying on the rich caravans that made their way along the valleys: for, as Berard has shown, waste and empty as the outlook now is, Mycenæ commanded the route from the Argolic Gulf to the Saronic. Wealthy they were, no doubt, for, did not the old Greeks call it 'golden' and did not Schliemann find below the agora rich tombs with crowns? The hole gapes there still, below the circle of stones. But far more interesting are the so-called beehive tombs further down the hill, in shape like enormous beehives or pointed domes, lined with well-hewn stones, finished buildings with nothing rough or careless about them. There is perhaps no other site in Greece so vocal of the beginnings of history as Mycenæ, as far as the eye could see there was no intrusive later notes.

The line to Olympia runs along the edge of the coast, always in view of the sea, often at a stone's throw, in a few places where the hills descend sheer to the water actually on piers with the waves lapping below. This marriage of hills and gulfs is characteristic of Greece, where the ridges run down and the inlets run up to embrace them. One travels slowly and with sufficient time to look at the passing panorama—the islands, the snowy Aetolian mountains to the right, the torrents in which the water scarcely covered the bouldered beds, the olive groves shimmering in the breeze, the currant fields full then of bare bushes, the rare clumps of oak trees, the casks of wine at Patras along the crowded quays here and there old Venetian forts in ruin the coats on the hill sides. We never saw a cow or ox in all Greece, although we were told they exist, readers of the classics will remember how often shepherds appear and how seldom cowherds. It is a most casual train and stops at stations as it likes. The temples of Olympia lie in the dust and scarce a pillar stands in all the sacred enclosure, but you can see the foundations and bits of columns which the patient industry of German excavators brought to light again from the deep silt with which the floodful river, Alpheus, and its tributary, the Kladeus, had covered them; for almost alone of Greek cities Olympia lies in a river valley, on low land, subject to inundations and earth-quakes and receiving its full measure of both, but it was never really a town, only a shrine, a centre of worship and fellowship, not of inspiration like Delphi. Here was the temple of Hera, one of the oldest of Greek temples, in which Pausanias saw a wooden column, and the great temple of Zeus, father of the gods, once glorius with the gold and ivory statue which Phidias, the Athenian, made. Here were the small 'treasuries' of the various cities, like pretty maids, all in a row; and numberless statues on their bases, of which two happily survive, and many later buildings. Close by was the stadium or race-course of which only a part has been excavated, where every fourth year the athletes of Greece came to compete for the green wreaths and undying fame which were the rewards of victory: for their names were inscribed on stones, poets wrote odes to them and their cities set up monuments in their honour. What a brilliant and busy scene it must have been at festival time when the Greeks forgot for a moment their petty feuds and

remembered their kinship. But now Olympia is a picturesque waste, untenanted but by a watchman, who keeps a suspicious eye on visitors. The ground is thick with blocks of limestone, but between them, in the grass thousands of short blue irises were then blossoming, filling the air with scent; and among the pines the birds flitted and chattered. Nowhere else in Greece is there such a lovely, such a pastoral, scene. Two sides are bounded by the streams and on the third rises the steep Kronos hill, clothed to its top in ever-green shrubs and trees. Thus should the past be sepulchred, its bones laid in soft grass and flowers, under the shadow of great trees. There are wonderful things in the little museum. The pediment groups of the temple of Zeus are earlier than those of the Parthenon, less perfect but more human and more appealing. The metopes represent the labour of Hercules. At one end of the hall is the Nike of Paconius, dedicated by the Messenians after the Spartan surrender at Sphacteria, wingless now and headless, but still victorious. But the chief treasure of Olympia is the Hermes of Praxiteles, one of the very few original masterpieces which time has spared, removed now from the museum for fear of earthquakes and housed in its own little shed and embedded to the knees in plaster.

Hinduism and its Future

The Maha-Bodhi says

The Hindu religion.....as a religion is the oldest religion in the world. As such, it suffers from its dotage. As early as 600 B. C. a strong and vigorous protest was made against its social tyranny and spiritual pretensions. The religion had already become deteriorated on account of the machinations of the priest-craft. Its parity was obscured by the venal folly of the clergy. The society became divided into four castes, which were said to spring from the four limbs of the God Brahma. A greater insult to the great God could never have been conceived. That he should have predestined his creatures to live the lives ascribed to the four castes shows the depth of the ignorance of the people who have swallowed the priestly pretensions. The rise of Gautama Buddha marked the Renaissance of ancient Hinduism. It strove to bring rationalism to the door of the people. Gautama Buddha, the greatest religious teacher of the world and the greatest of Indians, and indeed, the greatest man ever born in that dim dawn of history perceived and conceived ideas which have since transformed and revolutionised the history of the world. Indians know little about the great work of this great teacher of man. He inveighed against the Brahminical claim to divine knowledge. He denied that the keys of the gates of Paradise could only be purchased by offering bribes to the gods in the shape of bloody sacrifices and large gifts to the Brahmins. His view was that every man could work out his own salvation and that such salvation was open to him who cultivated purity of body and mind, and above all lived the life of selflessness, and devoted himself to human service. He swept away the claim of the priest-craft, denied that there was any Heaven or Hell outside the range of Brahminical

imagination, denied the existence of Vedic Gods and brought man back to the fold of reason and sane social life. His religion took a hold on the people and the memorials of his faith scattered over the length and breadth of the country show the vogue it once enjoyed in the land of his birth.

Buddhism was the dominant religion in India for about 1,200 years after which it was expelled with the revival of Hinduism brought about by the re-establishment of Hindu Kingdoms and the vigorous preachings of Shankaracharya and other fanatical Acharyas. The fact is that in their decadence and national decrepitude the people wanted a visible solace, and they found it in the idols and religious rituals which characterised the latter day Hinduism. The people had got tired of a faith in the abstract invisible, unseen, and unknown truths of Buddhist metaphysics. The bold and vivid portraiture of gods gave the proletariat a feeling of their nearness to them and for the time being they deluded themselves into a belief that the gods in Heaven have descended to Earth to be with them, guide their course of life and comfort them to their sorrow, heal their wounds and ensure their salvation. All the rigid formalism of Hinduism were re-introduced with such modifications as were expected to appeal to the sight and sense of man.

The revival of Hinduism in the 9th century was soon followed by a succession of Muhammadan invasions which destroyed some of the greatest landmarks of Buddhism and Hinduism. The doctrine of the sword made no distinction between the followers of Nirvana and of Brahma. They treated both alike as heretics and in their conquering zeal burnt their libraries, mutilated their monuments and sacked their hidden treasures. The downfall of the Muhammadan rule brought into its train the European conqueror. The political subjection of India both under the Muhammadan and Christian rule has led to the steady decay of Hinduism; for, with the conqueror came the missionary belonging to the conquering faith and during the last 300 years no less than one-fourth of the Hindus have become converted to alien faiths. Hinduism remained a sheltered religion so long as the Hindu kings were its patrons. But it was flung open to the world competition as soon as the foreign conqueror established his foothold in the country, with the result that Hinduism has now to run a competitive race for its existence with all the other religions of the world. As a social system Hinduism is an utter failure. For, it divides society into artificial and water-tight compartments and is destructive of the unity and solidarity which it should be the object of all religions to create and to conserve. Hinduism is thus the very antithesis of a true social uniting factor. Its revival is only possible with its complete reform, by the abolition of the caste, the suppression of the Brahmins and the abolition of idolatry.

Women and Politics

Lady Cynthia Mosley, daughter of the late Lord Curzon, writes in the *Indian Review*.

The old adage used to be "a woman's place is the home," and it is still used by people who want to keep women out of public life in general and politics in particular. It seems to me the tables can be turned very successfully on such people by saying that it is precisely because the home does occupy the largest part in a woman's life that it is becoming increasingly important for her to take an active interest in public life, especially politics.

Three things seem to me to be necessary to a really full and happy home life—a husband, children, and the home itself (in other words a house). Now whether the husband has a decent job, gets good wages and is able to earn sufficient to keep himself, his wife and children, depends upon politics.

Then when it comes to the children, it is vitally important to every mother to be able to feed her children, clothe her children, bring them up healthy and strong, educate them, and find them jobs in life that will bring them in a decent livelihood. All that depends upon politics.

The provision of houses is one of the most urgent political questions to-day. What is more natural than that women should take a vital interest in this question? So, from all three aspects is an overwhelming case in favour of the most devoted wife and mother taking an interest in politics.

The Seed and the Soil in Leprosy

Dr. Ernest Mueir the famous scientist of School of Tropical Medicine, Calcutta, writes on the above in the *Indian Medical Record*. We reproduce his words below in toto:

From the beginning of the days of bacteriology great emphasis has been laid upon the part played by organisms in the causation of disease. This was natural, as a new discovery had been made which created very wide interest; but the interest created in bacteria and bacteriology has tended to obscure other factors, the relationship of which to disease is of no less importance. To put the matter clearly, we have the seed and the soil; bacteriology has put so much emphasis upon the seed of the disease that we have almost forgotten about the soil.

We should think very little of the agriculturist, who tried to improve his seed but paid no attention at all to the manuring of the soil; or of any one who while attending to the manuring of the soil, neglected the improvement and selection of suitable seeds. The fault of the therapist will be no less if he allows microscopic organisms to obscure his whole field of vision; so that he pays no attention to the soil of the human body in which these organisms grow.

In acute diseases, such as enteric or small-pox, the general resistance of the body is important; but special immunity, whether natural or acquired, is generally of even more importance with regard to the onset of the disease. Once the attack has begun, there is comparatively little time to alter the soil of the body. The organisms grow with luxuriant growth whatever the general resistance of the body soil may be.

In tuberculosis the general resistance of the body is highly important but there is, I think, general agreement, that acquired immunity, due to innumerable slight infections beginning from infancy, has an even more important part in determining the course of the disease than even general resistance has. We get patients, robust and healthy, coming from a non-endemic area into Calcutta for work or education, but the robustness and health stand them in poor stead when they come into an endemic area in adolescence or early adult life without previously acquiring immunity. Leprosy, on the other hand, appears to differ from other diseases as far as its prevention by acquired immunity is concerned. There is an immunity in leprosy, but it only appears when the disease has reached its more advanced stages and large quantities of leprosy tissue are broken up and their toxins are discharged into the body. This being so, we have to depend almost entirely upon the general resistance of the body. There may be a certain amount of natural immunity in certain people but certainly it is not in evidence and the difference between those who take leprosy and those who do not is much more easily explained by the state of their general resistance.

It is perhaps necessary to mention that some writers have gone on the supposition that not only does leprosy produce acquired immunity in individuals living in an endemic area but that a race immunity is gradually formed and that this immunity has been responsible for the dying out of leprosy from Europe. There is little substantial evidence to back up this assertion and all the facts of history go to point to the causes of the disappearance of leprosy from England and from most of Europe as being the improved standard of living, the establishment of a partial system of isolation of lepers, and improved hygienic conditions. It would appear that Europeans are just as liable to acquire leprosy to-day as ever they were or as are the natives of endemic countries the more sanitary and hygienic conditions under which they live alone protecting them from the disease.

In both prevention and treatment of leprosy, therefore the soil is of much importance. The healthy human body forms an unsuitable soil for the growth of the lepra bacillus but the manures and fertilisers which will render it a suitable soil are innumerable. Among them may be mentioned other accompanying diseases, as well as laziness, overwork, irregular habits, insanitary conditions and any of the countless causes which lower the general resistance of the body.

It is the extreme chronicity of leprosy and its lack of immunity-producing power which renders it so much dreaded. These features are most found in the nerve type, which produces disfigurements and deformities.

It has now been realised that the general resistance of the body in tuberculosis is important; but however important it may be in tuberculosis we also find in that disease, the equally important factor of acquired immunity; while in leprosy we have to depend on the general resistance alone. Any treatment in leprosy therefore, which neglects the general resistance, is bound to fail. This fact was recognised by Jonathan Hutchinson, who surmised that leprosy was due to faulty dietetics, especially the eating of preserved, decomposing

food, but true as his surmise was, he only hit upon one out of many causes which render the body liable to the growth of leprosy. Failure to inoculate leprosy upon any of the lower animals marks it out as a disease differing radically from tuberculosis, although it agrees in many points with the latter disease. Rat leprosy is another disease similar to human leprosy which also is confined to one particular animal, although a case of rat leprosy in a human being has been described by Marchoux.

Whatever special drugs are used in leprosy, their application should not be considered the most important part of the treatment. Such means as tend to improve the general health of the body are of even more importance. These are as follows:—

(1) The removal of all other accompanying diseases. We have found by experience that in almost every case of leprosy there is some other disease which has lowered the general resistance of the body. When the diagnosis of leprosy is made the first question must always be: What is the predisposing cause? and a thorough search must be made to find it out; and when it is found the first consideration must be its removal.

(2) *Diet*.—There must be proper proportion of proteins, carbohydrates, and fats, and a sufficient supply of vitamins. The food must be adequate in amount but not excessive. It must be fresh and not preserved. All rich and indigestible food must be excluded. The patient should take plenty of fruit and vegetables, which should not be overcooked, fresh milk and dairy produce and the whole grain of cereals.

A minimum of meat and fish, should be used in hot climates; only the best fish and meat should be used and that absolutely fresh.

(3) The patient must take sufficient exercise if he hopes for recovery. He must seek to render every muscle in his body hard and firm. Abundant, well-regulated exercise is most important in leprosy as it raises the resistance and lessens the risk of serious reactions.

(4) Habits must be regular especially with regard to rising and going to bed, and the hours of meals. Work hours should be regular and overwork and worry should be avoided.

If these rules, which are simple to understand although difficult to carry out, are adhered to, more improvement may be expected than will result from the administration of any special drug.

It is not meant by the above to discourage special treatment which also is useful and in most cases absolutely essential for recovery. The intention is rather to help the general practitioner to realise that in a disease like leprosy, where there is no specific for the destruction of the seed, the greatest emphasis must be laid upon the treatment of the soil to render it sterile and unsuitable for the growth of the lepra bacillus.

Sheep for the Punjab

R. Branford, M. R. C. V. S. Live Stock Expert to Government, Punjab, writes in the *Journal of the Central Bureau for Animal Husbandry and Dairying in India* about

the possibilities of large scale sheep ranching in the Punjab. He is of opinion that this would prove a very profitable industry for the Punjab provided a little energy is expended by the people and government to remove minor difficulties. We read,

The Punjab farmer is neglecting an opportunity to add to his wealth by not paying more attention to sheep. There is no doubt that the province could carry more sheep than it does. On the Hissar farm, 1½ acres of irrigated land support one sheep, purely as a side show, i.e., the sheep are not grazed on the crop but grazed only on fallows, stubbles after harvest, canal banks, etc. The irrigated area on the Hissar farm is admittedly more than usually productive of grazing but it can safely be assumed that every 3 acres of irrigated land in the province could carry one sheep. The irrigated area of the province is about 15,000,000 acres, while the total number of sheep is 4½ millions. The irrigated area of the province alone is thus capable of carrying more sheep than there are now in the whole province. At the present time sheep are maintained mainly in the *barani* (rain-fed) tracts; the irrigated areas carry comparatively few.

Sheep when properly looked after are undoubtedly profitable. The Hissar farm flock averages 500 ewes. One lamb is taken each year from each ewe. The actual births average about 90 per cent. per annum. The average profit from this flock for the 8 years 1917 to 1925 was Rs. 3,393 for the 4 years 1917-21 it was Rs. 5,560. The profit is calculated after deducting all casualties among the sheep and all over-head expenses in connection with them (including officers' salaries, etc.), but no deductions are made for land rent or land revenue.

Sheep are only a side show on the Hissar farm and the writer has never had time to pay them adequate attention; yet they have always paid.

Why do not the large landholders take up sheep? The two main reasons are:—(1) Difficulties in marketing; (2) Disease.

The first difficulty could probably be overcome by co-operation. Co-operative wool sales in England have made astonishing progress in the last few years. The Hissar farm has to a large extent overcome the difficulty by selling its wool direct to the Cawnpore Woollen Mills, and accepting their expert's valuation. I think they have generally treated us fairly. This year they paid 17 annas per pound, i.e., Rs. 87-2-0 per maund. Local rates varied from Rs. 28 to Rs. 40 per maund. Farm wool is, of course, superior in quality to country wool, but there is no doubt that the real value of 1st quality Bikaner wool was higher than Rs. 40.

The difficulty as regards mutton prices I have never been able to overcome. The military authorities have never taken any interest in my offers to supply them with mutton, but have always referred me to contractors who have offered me Rs. 5 per sheep for animals averaging over 80 lb. live-weight. When sent to Delhi for sale, only Rs. 7 have been received per sheep, though mutton was selling at 14 annas per seer. A sheep of the live-weight of 80 lb. must surely average more than 20 seers mutton. In addition to the mutton the minimum value of which is Rs. 17-8, the skin-

wool offal, all have a value. It seems unfair that the breeder can only get Rs. 7 for an article worth at least Rs. 18 to the retailer. The marketing difficulties are very real. The individual sheep owner cannot cope with them. In the Punjab miracles are being performed by the Co-operative Department. I hope they will turn their attention to sheep.

About 500,000 sheep die annually in the Punjab from parasitic diseases. Eighty per cent. of these casualties would under efficient management be prevented. For all practical purposes sheep are outside the purview of the Civil Veterinary Department. It is rarely possible to take a flock of sheep to a hospital, and often equally impossible or not worth while, to take an individual sheep. If a Veterinary Assistant does see sheep, while he is on tour, he probably cannot make the necessary arrangements to dose the flock for parasites, even if he realizes that that course is indicated. An extension of the Civil Veterinary Department, coupled with an improvement in the education of its cadre would be able to overcome difficulties as regards diseases.

—

Oldest University in the World

Islamic World quotes the following

It is a sign of the times that the Egyptian Government, spurred on by many deputies, should be contemplating the partial refashioning of the ancient privileges and activities of Al Azhar, the oldest university in the world (writes a correspondent of the "Manchester Guardian")

There were, of course "universities," established in the world before the reign of Al Muizz, the Fatimid Caliph at Cairo, the founder of Al Azhar. In Greco-Roman times there were many schools of philosophy and letters. These, however, were not "universities" in the sense of the term which began to be accepted in the 14th and 15th centuries, when a university was regarded as a corporate body devoted to study, teaching and examination; nor did they have any influence on the educational institutions of the Middle Ages, institutions (such as those of Paris, Oxford, and Cambridge, all thirteenth century; or of Vienna, Bologna, Heidelberg, all fourteenth century) founded in connexion with cathedrals and monasteries. Al Azhar, the Moslem University at Cairo, stands apart from all these European institutions being much earlier in date, and although similar in original conception, different in development.

ITS FOUNDATION

The establishment of Al Azhar, which means "the blossom" or the flower, came about in this way. In the year 969, Jonhar, General of Al Muizz defeated the Abbasids in Egypt and Syria. A new dynasty was there upon founded in Egypt, the Fatimid dynasty, which was to rule North Africa for three centuries. Al Muizz promptly celebrated his triumph by moving his capital from near Kairovan, and founded Cairo ("Kahira," the City of Victory). Four years later he had erected in the new city the mosque of Al Azhar, a huge public library, and several medreses or colleges. Students of these institutions, which he endowed

abundantly, received instruction in "grammar" [then, of course, a much wider subject than it is now] literature, the interpretation of the Quran, jurisprudence, medicine, mathematics, and history. This Caliph Muizz was an enlightened man, one of many such characters in the early centuries of Islam. He has been called the Mamun of the West, or the Maecenas of Moslem Africa.

The educational institutions thus started flourished exceedingly, and in 988, at a time, that is, when Christian Europe was largely enveloped in darkness, Aziz Billah, son of Muizz, converted the mosque and the medreses into a university. From that day almost to the present Al Azhar has been a beacon of Islam, which various successive rulers of Egypt have made it their duty to keep lit.

The teaching of Al Azhar, which, until the introduction into Islamic countries, during the nineteenth century of Western education, quite unquestionably was the focus of learning in Islam and which, although its influence may recently have declined, still is a force which radiates outside Egypt, is mainly theological. As the largest, as well as the oldest, university in the Islamic world, it draws its students from North Africa, India, Afghanistan, Malaya, Persia, Turkey, China, Arabia, and so on, although it should be mentioned in this connexion that it exists for the Sunni section of Islam, the Shafi section not being specifically catered for. The students are grouped under the four Orthodox rites, that is, the Hanafi, Shafi, Maliki, and Hanbali sects.

FIFTEEN THOUSAND STUDENTS

It is a little difficult to estimate the numerical strength of Al Azhar. At one time it is reported to have harboured over 20,000 students but a figure of upwards of 10,000 was that usually given a few years ago. Two thousand of these are resident. How far the students are representative of the whole of Islam it is also difficult to estimate, some observers allege that its cosmopolitan character is greatly exaggerated, and that outside Egypt its influence is negligible.

Al Azhar can be entered at the age of eight. Children are taught to read and write and to learn the Quran. They finish their education at about 10 or 12. Those staying on to pursue higher studies, such as Commentaries on the Quran and the Traditions, Moslem Law, and so on, remain until 21 or 22. Taking their degrees of mudari or sheikh (professor or doctor) they pass out into the world conveying with them traditions which have been handed down unbroken for centuries.

It is possible that after the eclipse of Egypt, in the sixteenth century, Al Azhar may have tended to become reactionary or obscurantist; that depends rather on the point of view. Not very much is known of its activities from the beginning of the sixteenth to the beginning of the nineteenth century. Its influence was diminished by Mohammed Ali, and restored under the British domination of Egypt. Since, however, in the Declaration of Independence in 1822, the number of students is said to have increased to 15,000. With the increase in Egypt's population, decentralisation has been inevitable, so that there are now, in places like Alexandria, Tantah, and so

on, institutions which are, so to speak, offshoots of Al Azhar.

REFORMERS' VIEWS

The precise value of Al Azhar to Egypt and the Moslem world is a matter of controversy. Many of Al Azhar's sheikhs are men of marvellous learning, and if their authority is declining, as at the moment it certainly is declining, that fact in itself is not necessarily a sign of improvement.

Reform must come slowly, persuasively, and it must come as if from Al Azhar itself. The radical changes that are so comprehensively talked of in Egypt as being vitally necessary are interesting, but it would be unwise to force a revolution on so old and honourable an institution which, whatever its deficiencies in the eyes of those who fain would "Westernise" everything, is still the one home of Arabic learning that has kept its integrity during the assaults on Islam by Christian or pagan Powers.

Why the Simon Commission Came in 1928

Mr. R. R. Diwaker answers the question as follows in the *Volunteer*.

The most important reasons as to why the commission came earlier are:—(1) The Tory Government in England being shaky and being afraid that the reins of Government would pass into the hands of the Labourites it wanted to tie the hands of the future Government with the report of a Commission lest the Labourites would be too liberal. But, in our opinion, the Tories need not have been so much afraid of the generosity of their brethren towards us because we know that where India is concerned a Labourite can be as bad as a Tory. This was proved during the short period of one year and more when Mr. Ramsay MacDonald was at the head of affairs. This has again been proved by his attitude towards the infliction of this Commission on India now and in the present form. (2) They wanted to announce it earlier than last December so that they might avoid the opinion of the Congress before the Commission was announced. That was the reason why the Viceroy tried

to win over Indians individually and announce the Commission in order to make the Congress face a *fait accompli*. (3) They thought that India was weakest at this time being torn by a record number of Hindu-Moslem riots of a deadly nature. So in their opinion this was the best time to strike the nail on the head which may seal the fate of India for decades to come.

Ancient Ideals of Education

T. L. Vaswani writes in the *Vedic Magazine*.

Education in ancient India was not merely of books. It was humanistic and it was practical. Is not the hand as sacred as the head and the heart? The sanctity of manual work must be recognised again. I would have our schools teach craft work and cottage industries; also gardening, painting, choral singing, dramatic art and dramatic science. A new emphasis on games is needed,—not the "soft" games of which students are fond to-day, but the "hard" games. They will help the students more than the books which often end in head-ache. Games will give health to students. An eminent doctor rightly said that health was "the natural right of every human being." This "natural right" our students often surrender to "examinations." This education is devaluing. Games also will secure what may be named natural communism. False, artificial distinctions between rich and poor students disappear when they play together. Games, too, give a sense of self-realisation.

Knowledge and Seva joined hands together in the ancient Asramas. I would have every school feel the inspiration of the spirit of service. The end of education is not information, is not intellectual cleverness, is not selfish purposes. The end of the education as Aristotle pointed out long ago, is service. "Paradise lies at the feet of the mother,"—said the great Prophet of Arabia. And I humbly submit that swaraj lies at the feet of the little ones. Train them in a school of *shakti*,—of strength and service and sacrifice; and the little ones of today would be the Builders of Tomorrow.

Cinematograph Committee as seen by America

The same journal also gives the following :

Photoplays Confected at Holywood have become the subject of an acute controversy in India. British officials and others contend that they are destroying British prestige in the eyes of the Indian people, lowering Occidental women in their estimation, and debauching the Indian views of life in general. Indian publicists, on the other hand, contend that this denunciation is inspired only by British envy of the success of Americans, who supply 95 per cent. of the movies exhibited in India, and by their desire to substitute in their stead screen plays of British manufacture. They declare that India must refuse to be made a dumping-ground for British films. While this controversy rages, the Government of India has appointed a committee to investigate the matter and report to it. With its membership equally divided between Indians and Britishers, and with an Indian lawyer-politician—Dewan Bahadur T. Rangachariar—as chairman, this body has been going from town to town in India recording statements made by persons in various walks of life—women as well as men. According to a dispatch sent out by the Associated Press of India from Rangoon (the capital of Burma) and printed widely in the Indian Press, Mr. J. M. Symms, Director of public instruction in that Province, condemned the American films as

“...inartistic and vulgar, and harmful to the white woman's reputation. Western films could do much good if they were better.”

The *Amrita Bazar Patrika* (Calcutta) quoted a British lady—Mrs. V. G. Conson, of the Bengal Presidency Council of Women—as telling the Committee that,

“...sexual plays were more objectionable in the East than in the West, due to the Indian outlook upon demonstrativeness being such as it was. Suggested that rarts of films depicting public houses (drinking saloons), night clubs, and night life of the Western cities, as well as the pictures in which the villain attained his objects, should be eliminated from the (movie) shows. “Revolutionary subjects and mob violence,” said Mrs. Conson, “might lead to undermine the British prestige.”

The Indian Nationalist attitude is very ably set forth in an editorial in *The Hindu* (Madras), which asserts :

“...the real object of the inquiry was to make out plausible case for restricting the import of American films on the plea that they misrepresented Western civilization, and had a tendency to pervert the morals of Indian audiences, and for encouraging the British film industry, which has ever since the war been in the doldrums, by showing it consistent preference. America now enjoys practically a monopoly in the film field, 95 per cent. of the films shown even in Britain being American. There is widespread suspicion that the real object of the inquiry is to check this supremacy and bolster up the inefficient British industry.”

Mr. A. Rangaswami Iyengar, the newly appointed editor of this powerful organ of Indian

opinion, suggests in the course of the same editorial that an attempt is being made to convert the movie industry into a State monopoly under government management. A plausible plea is advanced in favor of that arrangement as tending to “ensure the maintenance of high moral standards, a fair market and the distribution of useful educational and propaganda films.” In reality, however, if a new government department were established for such a purpose, it would provide openings for “aspiring young Britons, and would look upon itself, consciously or unconsciously, it does not matter, as the unofficial agent of the British film industry ; it would have a strong temptation to shut out American films on the ground of their supposed immorality...the censorship under its aegis would become an intolerable nuisance, strangling all indigenous attempts at improving and adapting the art to the conditions of the country and...it would furnish a formidable addition to the armory of loyalist propaganda which is being so effectively manipulated to break national unity and frustrate national aspirations.”

A New Method of Treating Malaria

We find in the *China Journal*.

Not many years after the discovery of “Bayer 205,” the remedy for sleeping sickness, science again has surprised the world with “Plasmoquine,” the new malaria remedy which promises to be of the greatest value to all tropical and sub-tropical countries.

From the year 1638, when, through a chance discovery by the wife of the viceroy of Peru, the curative effect of cinchona bark was determined, up to the present time quinine has been looked upon as a sovereign remedy for malaria. Since about a hundred years ago, when it was first obtained in a pure state, it has conquered the world as a febrifuge ; and in view of the blessings which the alkaloid undoubtedly brought with it, the defects and disadvantages of the quinine treatment of malaria have been put more or less in the background. One is only surprised that since quinine is such an outstanding remedy for malaria, intermittent fevers have not been more effectively checked. For, as a matter of fact, to-day, just as three hundred years ago, malaria is by far the commonest disease of all warm countries. To take one example only out of many, in India about five millions of people succumb every year to intermittent fever.

An explanation for this failure of quinine is here offered. In that worst form of malaria, the much-dreaded subtertian malaria, quinine is unable to destroy those forms of the malaria parasite which are chiefly responsible for the spread of the disease. To understand what happens, it must be borne in mind that there are two different forms of this microscopic parasite to be found in the blood of malaria patients : first the neutral malaria plasmodia, also known as schizonts, which cause the regular return of the attacks of fever by their developing in masses in the blood vessels, and secondly, the sexual forms of the malaria parasites, the so-called gametes, which, owing to their

peculiar shape in subtertian fever, have been termed crescents.

The benefit which quinine confers in these cases is only temporary. By its action on the schizonts it is able to control the individual attacks of fever, but it does not affect the root of the evil, for sooner or later the dreaded attacks recur and the sexual quinine-resistant gametes are formed and are then carried to other persons by malaria mosquitoes. Thus the disease continually spreads in spite of the careful administration of quinine. Here lies the chief defect of quinine therapy, compared with which the other deficiencies, such as the bitter taste, the common oversensitiveness of the patient to quinine, the by-effects, such as *tinnitus aurium* and stomach troubles, the not infrequent habituation to quinine and the danger of giving quinine during an attack of the dreaded blackwater fever, appear unimportant. New investigations had to seek a remedy superior to quinine. The laboratory experiments were troublesome and protracted, but, finally, the tremendous expenditure of time, labour and cost received their due reward, when the synthetic malaria remedy "Plasmoquine" first came to light. With this drug something quite new was created, for it is not obtained from quinine, but it is an independent quinoline derivative.

It differs from quinine in various important ways. It is about ten times as effective, rapidly destroys the malaria parasites in the human blood and, unlike quinine, quickly kills the sexual forms of the parasites, which are responsible for the conveyance of the disease. This means that the spread of the diseases is effectively checked when it is used, and it is clear what this must mean in the realisation of a general sanitary clearance. Other points which may be mentioned are that "Plasmoquine" is almost tasteless, that even if used for a long time it does not become less effective, and that it may be given safely during an attack of blackwater fever.

This does not mean that quinine has become superfluous. Such an assumption would be absolutely wrong. For the effective treatment of tropical fevers a combination of small doses of quinine with this new synthetic remedy has proved most useful. Quinine in such small doses scarcely has unpleasant effects, but destroys the neutral schizonts of the malaria parasites, while the plasmoquine destroys the crescentic gametes, and so prevents relapses and the further spread of the disease.

Although it is relatively only a short time since the discovery of plasmoquine, excellent results have been reported from all the principal countries. Professor Muhlen, the well-known expert in tropical diseases in Hamburg, has made special trials in the Balkans and in Central and South America, and states that by the discovery of plasmoquine, a new victory has been obtained over one of the most deadly enemies to the health of mankind.

What Sort of Man is Primo-de-Rivera

Primo-de-Rivera the strong man of Spain is little known in countries outside Spain; pro-

bably because Mussolini the Italian dictator holds the world's attention. A writer in *L'Illustration* attempts a summary of this wonderful man which has been translated in the *Living Age*. We are told:

Perhaps the most melancholy thing about this man who came into power overnight, and who feels the precariousness of his position as much as he does the power, is that the country he loves best of all utterly misunderstands his character and his work.

Two forces sustain him at the present time, two moral forces—the loyalty of the King, whose monarchy he has probably preserved in peaceful prosperity, and the impersonal but unanimous satisfaction of a nation that is naturally indifferent to politics but is aware of its present state of tranquil well-being. The truth is that Primo is a humorist, a temporizer, a powerful but joyful human being. He began with only one clear idea—to establish order in a country where order did not exist. Setting out from he knew not where, with the army behind him, he has arrived; he knows not where, and finds the army against him, for it too he has submitted to the all-pervading discipline. He is the opposite of a despot; he moves about and lives like the simplest citizen. He has no police protection; he has set up no material organization to administer his government. *Mussolini reigns through his troops; Primo reigns in spite of his troops*—which he has sent forth to battle in Morocco. He stands alone.

T. P. O'Connor on Thomas Hardy

The Right Hon'ble T. P. O'Connor writes on Thomas Hardy in the *Daily Telegraph*. He puts more stress on the inner man, the seer Thomas Hardy, than on his deeds: Lays bare the main spring so to speak of that great intellectual machine, says he:

He came of a long-lived stock; his mother was in the sixties when she died, and he lived to a splendid age. So did Jean Jacques Rousseau, but throughout his life you can see Rousseau's suffering from that brooding melancholy which comes, doubtless, sometimes from profound meditation on the riddle of human life and human suffering but is also an indication of certain taint in the nervous system. Popular phraseology puts such men as born tired and there is some truth in the rough epitome. Men of that type derive from ancestors on whom great misfortune or wonderful fortune—one or the other—has produced an exhaustion of the nervous system of which their descendants reap the consequences.

Whatever the reason, so it was with Thomas Hardy; he was born melancholy, and he remained melancholy throughout his life. All the dazzling glory which he achieved as one of the most illustrious figures of his generation, his supremacy as the greatest master of fiction in his day and generation—all these things left the inner man untouched; he remained in that inner soul of his like one of those lonely creatures who from the

watchtower in the ocean—as, for instance, the guardians of the Eddystone Lighthouse—look out from their solitude on raging waves and appealing hands, and know nothing of life but their inner thoughts and their sad experiences.

Taisho Edition of Tripitaka

The Pacific World says:

The publication of the Taisho edition of the Tripitaka undertaken by Dr. J. Takakusu in collaboration with Dr. K. Watanabe will be completed in the course of the present year. The great work was started about four years ago. Of the 55 volumes, octavo size, of about 1,000 pages each more than 40 have already been issued. For the past four years, the two distinguished editors, particularly Dr. Takakusu, have been taking great pains to make the edition the best that has ever been issued, going with minute care over revision and collation of even the most trivial matters. When the last volume is issued in November this year, as it is planned, they will have the satisfaction of seeing one of their life works completed in a splendid manner.

The Tragedy of India

C F Andrews writes in the *World Tomorrow*:

It has been my lot for nearly a quarter of a century to watch every turn of the tide of human affairs in India in order, wherever possible, in close company with Indian friends and fellow-workers as leaders and guides, to make some humanitarian advance. But it has unfortunately become my growing conviction that whatever might have been the value of foreign rule in the past in India under the British, that period is now very quickly drawing to an end. The "Reforms" have not come a day too soon. Indeed, they have been pitifully, tragically late—too late. And they have not been drastic enough. Unless a far more drastic change is made and made very quickly, any process of gradual, orderly evolution will be no longer possible. Revolutionary outbreaks will take its place. It is time in India that this "tragedy" of foreign rule is brought to an end, and full self-government granted, whereby India may take her place in the League of Nations, no longer under the tutelage of Great Britain, but in her own sovereign right.

Democracy and Corruption

Modern politics has unfortunately been moulded more by corruption than by the ideals of Democracy, Liberty, Equality, Justice and Fraternity. We have experienced this in our small way in India also, where swindlers and imbeciles have been often allowed to enter

the nation's legislatures on the strength of a party label. In America the case is far worse. We read in the *New Republic*.

The Republican leaders occupy in relation to the oil scandal a peculiarly humiliating position. Their party organization is convicted of having accepted large sums of money from a man who had corruptly bought from a Republican administration public property of enormous value, and of trying to conceal the source of the contribution.

The following description of American political mentality is more interesting.

A large majority of American voters support one party or the other for reasons which are not much influenced by the proof of corruption in the party to which the voter belongs. The ordinary politician is judged by his ability to get results. He is willing and accustomed to elect his candidates, if necessary, by dubious or actually corrupt practices. It is his primary business to deliver the vote, and the most congenial and effective way of manufacturing votes is to spend lots of money. The "better element" in both parties who contribute the money have cultivated a convenient habit of not inquiring too closely about the way in which the money is spent. Until recently, no doubt, almost all large cities could boast of fairly vigorous groups of local reformers, who would occasionally lead revolts against the party machine and its questionable methods, but they have always been amateurs in politics, and their protests usually wilted after election. They never took sufficient account of the economic motivation of political groupings or the strength of the inducement in a capitalist democracy to force the voters into party molds and so establish permanent majorities. A complicated political system like ours, in which there are so many elections and so much voting, and in which millions of votes have to be recruited and polled, requires for its operation the services of professional politicians who are all more or less mercenary and all accustomed in one way or another to buy votes. They are cynical by necessity, and their cynicism has come to dominate the popular attitude toward party politics. It is generally acknowledged to be an occupation in which cheating is permitted by the rules of the game.

Man and the Anthropoid

Talking about old world objections to accepting Evolution as a working theory explaining the descent of man, Bernhard J. Stern writes in *Evolution*:

Man is his eagerness to rationalize his own futility, and to compensate for his own shortcomings, usually exaggerates the differences between himself and his next of kin to the disadvantage of the apes.

Much romantic nonsense has been written about the importance of the structural differences between man and apes. Drummond, for example, speaks of man alone as having the ability to appreciate

divinity because his posture permits him to raise his eyes from the ground to look heavenward. We shall resist phantasy and devote our attention to actual observable differences.

Among real differences between man and the anthropoid the writer mentions the following:

Look at your hand. Move your thumb. Notice that it can be swung toward or from any other finger: it is "opposable" as anatomists say. This makes the hand effective in holding and using tools. The thumb of an anthropoid ape is much shorter than the human thumb and it cannot be moved toward and from the other digits. An ape therefore, finds it difficult, sometimes impossible, to pick up a pin between his thumb and forefinger. When he drops to the ground he walks on his knuckles and his toe-like thumb is useless.

Man's big toe, which is a powerful lever on which the whole body can be raised and which is therefore a mechanical device for walking, is distinctively human, for the big toe of the ape is not a toe at all but rather a thumb. To convert the foot of a gorilla into that of a man, Dr. Gregory has shown that the big toe must be extended and rotated so that it rests flat on the ground instead of facing the other toes. The bones of the toes must be shortened and made to lie parallel so that the foot is narrowed, and the foot must be turned to lie down rather than in. Schultz has shown that this is exactly what happens to the foot of the human embryo in the course of its development.

The difference between the brain of the anthropoid and of man has been much discussed but recently Professor Tilney has contended that the brain of the gorilla is manlike in all fundamentals, and Dr. Smith has said "No structure found in the brain of an ape is lacking in the human brain, and on the other hand the human brain reveals no formation of any sort that is not present in the brain of the gorilla or chimpanzee. So far as we can judge, the only distinctive feature of the human brain is a quantitative one, namely a marked increase in the extent of three areas in the cerebral cortex... which are relatively smaller in the brain of the anthropoid apes." When it is realized that both literally and figuratively man uses only a very small fraction of his brain matter, it will be recognized that this difference is not as important as is commonly assumed.

Trustification of the British Press

We read in the *Literary Digest*.

\$125,000,000 WERE OFFERED in fifteen minutes as subscriptions to the new issue of \$15,000,000—5½ per cent debenture stock, made by the Northcliffe Newspapers, Ltd., for the purpose of establishing a circuit of provincial papers, and London press dispatches further advise us that a quarter of an hour after the subscription lists opened, the lists had to be closed. Viscount Rothermere, proprietor-in-chief of the Northcliffe Newspapers, Ltd., who is the younger brother of the late Lord Northcliffe, declares in an article in his *London Daily Mail* that, to those

with technical knowledge of British journalism, it has for some time been apparent that one section of the national press which still lags behind the rest in enterprise and development is that of the provincial evening newspapers. Very few existing publications of this class, he points out, are equipped with the large resources required to maintain the best possible supply of news and pictures, for most of them are isolated economic units and suffer in quality from their lack of connection with a powerful press organization. But the Rothermere enterprise is not the only one in England that attracts the attention and arouses some concern among various sections of the press as to the future of editorial independence. Another group of newspapers is controlled by the Berry brothers, who, as a contributor to the *London Morning Post* notes, has been acquiring publications at a great rate of late years, the most famous of which is the *London Daily Telegraph*. Then came the cessation of the publication of *The Westminster Gazette* and its fusion with the *London Daily News*, which leads the *London Spectator* to say—

"The trustification of the British press is no new symptom but it is a process which has developed rapidly since the war, and it is probably one of the most serious problems which democracy has to face in this country. What has been happening in Great Britain is similar to what has occurred in the United States, except that in the latter country, owing to its size, the press is not dominated by New York in the sense that the British press is dominated by London. As journalism must be conducted on commercial lines, it is difficult to see how this tendency of combination and trustification is to be avoided, and we fear we have no ready-at-hand solution to offer. But we confess to a feeling of something akin to dismay when we compare the ownership of the British press to-day with that of thirty years ago. The successful and independent newspaper proprietor is becoming a *rara avis*. The costs of newspaper production have become so great, and the capital outlay involved so considerable, that few private owners are in the position to meet the demands made upon their purses: for newspaper ownership except in special cases, is not the Eldorado that it is sometimes supposed to be.

Indian News in U. S. A.

The following extract regarding the Simon Commission's visit to India from the *American Current History Magazine* is a fair sample of the kind of news that are served to the American public by their Press.

The Simon Commission, which arrived in Bombay from England on Feb. 3, has begun and continues to prosecute its investigation of the operation of the present system of government in India. The bitter dissensions between Hindus, Moslems, the depressed classes, and the Anglo-Indian population as to whether the commission should be boycotted or co-operated with seem to furnish relevant evidence as to India's ability to use wisely an immediate extension of the powers of self-government it has already received.

Otherwise these differences between Indians apparently have not affected the program of Sir John Simon and his colleagues. After a considerable stay in Delhi the commission proceeded upon an extensive journey of inspection. Wherever they went they were warmly welcomed by large numbers of Indians of all classes, while their presence was ignored or resented by others. No serious disorder attended their journey.

Four events stand out among the many incidents connected with the commission's stay in Delhi and their attempts to conciliate those Indian leaders who were incensed because Indians were not included in the commission. A proposal by Sir John Simon that the investigation should be carried on by a joint free conference of seven Indian and seven British members presided over by the viceroy was contemptuously rejected by the Indian extremists. The Council of State the upper house of the central Indian Legislature, voted by thirty-four votes to thirteen to elect representatives to co-operate with the commission. The Legislative Assembly, the lower house of the Legislature, expressed itself in favor of a complete boycott of the investigation by a vote of sixty-eight to sixty-two. Warning was given to the Indian leaders by Lord Birkenhead, Secretary of State for India, and Ramsay MacDonald, leader of the Labor Party, the official Opposition in the British House of Commons, that the investigation would be pushed through and action taken regardless of whether Indians should or should not co-operate with the commission. In a speech at Doncaster on Feb. 17 Lord Birkenhead said:

I wish to make it as plain as I possibly can that either with the assistance of the Indian Legislatures or without their assistance this commission will carry its task to a conclusion. * * * Those who are organizing this boycott will in my judgment, discover month by month how little representative they are of that vast, heterogeneous community of which we are now the responsible trustees. They will discover millions of Moslems, millions of the depressed classes, millions in business, and the Anglo-Indian community who intend to argue their case before the commission, and the commission will ultimately report to Parliament. If organized political opinion—a very small fringe in India—chooses to maintain itself in silent boycotting and aloofness, nevertheless the work of the commission will be performed. * * * I wholly misread the temper of the sophisticated, political intelligence of my countrymen if they [the Indian opposition] succeed in proving that India is ripe for an extension of the existing constitution by refusing in the first place to work for it and by declining in an organized boycott to examine its workings with a view to reform and possible extension.

Briefer, but equally indicative of the united determination of Great Britain to carry on along the lines established by the preamble of the Act of 1919 and extended by the creation of the present statutory commission, was the message which Ramsay MacDonald sent to Vernon Hartshorn, one of the Labor members of the commission: "It is reported here that if your commission were successfully obstructed a Labor Government would appoint a new commission on another and

non-Parliamentary basis. As you know, the procedure now being followed has the full confidence of the Labor Party and no change in the commission would be made."

The net results of the developments to date thus seem to be as follows: There is a wide divergence of feeling among Indians as to whether they should co-operate with the commission in its investigation or boycott it and refuse to accept its findings, no matter what they may be. The politically organized radicals have carried the boycott in the Legislative Assembly and intensified their demands for immediate home rule status as a step toward complete independence of the British Empire. In general, the Hindu politicians are uniting in a rather definite anti-British movement, while the Moslems and the representatives of the depressed classes are rallying to the support of the British procedure. The commission sought by every possible means to conciliate the Indian political leaders, but having found this impossible, proceeded with their task. Great Britain, through the official spokesmen of both the Government and the Parliamentary Opposition, has plainly and forcibly declared that she will carry through her program, seeking the co-operation of all Indians who will work with her and disregarding the opposition of those who will not. Such a situation is fraught with possibilities of importance to both India and Great Britain.

Are Accidents due to Carelessness?

We get an answer in the *Literary Digest* which says:—

Few Accidents are properly chargeable to carelessness, asserts Sydney Ingham safety engineer of the Ludlow (Mass) Manufacturing Associates in a communication to *The Safety Engineer* (New York). What is generally called by this name may usually be traced to something more fundamental—poor eyesight, alcoholism, late hours, defective nourishment, and so on. Any safety engineer who is not willing to look behind such a cause assigned for an accident, thinks, Mr. Ingham, will not get very far toward an intelligent analysis of his problems. He writes:

"Carelessness may be a mental or a physical condition. A case comes to mind in which the woman involved was on the verge of being discharged for carelessness, which had resulted in several falls and collisions. It was suggested that her eyes be examined. The poor woman could not see. When she had been fitted with proper glasses, she stopped appearing in the accident statistics and kept her job. Apparently there was no one more careless than she in the plant: really she was cautious, but could not see.

"Management can cure this type of 'carelessness' by proper physical examination. The obvious remedy for this condition is don't hire people who are physically incapacitated for the job in mind.

"What is to become of the physically incapacitated is another problem, relating to accident prevention; though it looms up larger as a problem in social equity, and in my opinion will have to be solved from the sociological aspect that it presents.

By BENARSI DAS CHATURVEDI

Mahatma Gandhi and Mr. Andrews on joint Imperialism

In my notes on "Indians Abroad" for the month of March I had to criticise very strongly our countrymen in Kenya for their fatal mistake in demanding *due share* in the trusteeship of the Africans and in asking for their '*nomination along with Europeans to represent Native interests.*' I ended my criticism with a request to Mahatma Gandhi and Mr. Andrews for a declaration of their views on this subject. I am glad that they have done so in the columns of *Young India*. Mr. Andrews writes in an article named 'Fiji for the Fijians':—

One of the most serious dangers in the way of attainment of Swaraj in India in the fullest sense of the term—moral and spiritual, as well as political and geographical,—may be this. We are likely to be tempted to 'assist' the white rulers in their 'trusteeship over the natives,' whether African, Fijian, or Malay. The most dangerous clause, of that kind, was put in the latest White Paper from Whitehall, which states that the trusteeship over the natives in Kenya may be shared by the immigrant communities. The Government official in the Legislature pointed to that plural—"communities," not 'community'—with satisfaction, and regarded it as an assurance that Indian equality with the white immigrants was not to be threatened. But there are different kinds of equality; and we who are fighting against imperialism do not wish for a moment to be equal partners in imperialism over the native Africans; for that, in plain language, is what the hypocritical word 'trusteeship' really means. Pandit Banarasidas Chaturvedi was quite right in protesting in the *Modern Review* against the insidiousness of that plural.

Once I gave a somewhat sinister name to this 'joint-imperialism.' I called it the 'jackal policy.' The great British lion would allow India to follow it on its march of finding its prey, and would allow India to pick the bones after the lion's feast was over. I said that nothing in the world must let us ever 'play jackal' to the British lion over the native races.

There is no more dangerous offer ever made than the old Roman imperialist offer,—*Divide et*

Impera 'Divide and Rule.' Everywhere imperialism feeds upon this policy everywhere it is sure to be tried. The temptation may soon be offered in South Africa for the Indian to take sides—we will not say too openly *against* the native African; for that would be giving away the secret. But the bribe will be offered, that it is much better for the Indian not to 'interfere' in native affairs, or not to 'have too much to do' with them, etc., etc.—advice which may have some meaning at a certain stage, but which may also lead to a fearful estrangement later, if it is carried out in the interests of the white race against the African race.

In Kenya, one can already notice the same bribery beginning. It is openly said by European settlers that it would be very unwise for Indians to ask for the common franchise, because that in the long run would mean both Indian and European being swamped by the native vote. If one asks the natural question, 'Why not? It is their country, not ours' then one is called a Bolshevik by the European and the argument is at an end.

After giving long quotations from an article of Rev. J. W. Burton Mr. Andrews concludes thus—

Just as a straw will show what way the wind blows, so these things are indications of a great struggle that lies ahead. Italy today is furiously imperialist under Mussolini, although not long ago Italy was crying out loudly against Austrian imperialism. The one remedy against the disease of imperialism that ancient Indians discovered centuries ago is contained in the words of the *Upanishat* which I freely translate as follows: "Those who see God in all things and all things in God, they attain immortality."

Mahatma Gandhi makes the following comment on this article of Mr. Andrews:—

Though what Dinabandhu says is the truth and nothing but the truth, I fear that if the British imperialist rulers offer the Indian emigrants in any part of the world, sufficient inducement, they will succumb, and imagine that they are 'equal partners' not knowing that they are but 'jackals.' But the hope lies in Imperialists never offering enough inducement and the native wit of the Indian emigrants seeing through the thin veil of imperial maya.

Will our Indian leaders its Kenya carefully read the opinion of these two great workers for Indians overseas—Mahatma Gandhi and Mr. Andrews?

Among Indians in Fiji

Rev. A. W. Mcmillan has contributed an interesting article to the *Youngmen of India* giving a summary of his work among our people in Fiji.

He tells us of the useful work done at the Y. M. C. A. at Nausori. This work is being carried on in Hindustani. It is to be noted that the Europeans of Fiji objected to associate with the Indians in their Y. M. B. A. at Suva and therefore this new branch had to be opened at Nausori. We cannot condemn too strongly this attitude of these Europeans of Fiji, who by this act of theirs have brought discredit to the Y. M. C. A. movement.

Rev. Macmillan says that during the year 1927 there was a considerable increase of dissension between Hindus and Mahommedans in Fiji. This is really deplorable.

Then he tells us of his work in connection with temperance movement. He distributed several leaflets in Hindi and English and delivered many lectures among our people all over the colony. He is one of the founders of the Fiji League against alcoholism. He notes with regret that there is anti-Prohibition sentiment among the Europeans in Fiji. By means of personal friendship, illustrated lectures, discussions and deputations Rev. Mcmillan has done very useful work for our countrymen in those far off islands and he deserves our congratulations for it.

It is not an easy thing for an Englishman to work for colonial Indians. On the one hand, it is very difficult for him to gain the confidence of the Indians, who suspect him of some ulterior motives while on the other, he becomes an object of contempt and ridicule at the hands of the arrogant whites who believe in the religion of White Race Supremacy. It, therefore, requires considerable patience and an exemplary spirit of tolerance on the part of the worker to continue the work under such depressing circumstances.

Rev. Mcmillan had now gone back to New Zealand and his place has been taken by Mr. J. H. Waller. It is to be hoped that Mr. Waller will continue the work in the same spirit as was shown by his illustrious predecessor.

Andrews School, Nadi (Fiji Islands)

I have received a copy of the report on the working of Andrews School at Nadi. The school has made considerable progress. It opened with 25 boys on the roll on 1st February 1927 and to-day there are more than 130 pupils out of whom 35 are girls. The school has three teachers on the staff.

Arrangement has been made for teaching the following subjects:—Reading, Writing, Arithmetic, Grammar, Geography, Nature study, Free-hand Drawing and Hindi. The school was visited by the Governor, the Director of Education and the Secretary of Indian Affairs, all of whom were satisfied with the work done. Dr. Deva Sagayam writes to Mr. Andrews:—

"It is our desire that the girls' department should be organised separately as a girl's school. The Director of Education recently visited the school and is of opinion that the boys' department should form the nucleus of a large provincial school for Indians to be shortly established in this district. In case such a school is established we would like to convert the present school entirely into a school for girls to be called after your name. A girl's school is a crying need in Fiji. I would like to have your assent to this proposal before we proceed further."

I understand that Mr. Andrews has gladly given the required permission. It is to be hoped that under the wise and sympathetic guidance of Mr. J. Caughly, the Director of Education, the school will soon become an important centre of Indian education in The Fiji. The Sabeto Indian school which was established by Mr. Andrews has also been progressing satisfactorily. It opened with 36 boys and to-day there are 58 boys and 7 girls on the roll. Dr. Deva Sagayam, who manages both these schools deserves our congratulations.

[The picture of Andrews' school of Nadi has been, by mistake, printed with a wrong title on page 551.]

Mr. Sastri

The South African Indian Congress at Kimberley requested. Mr. Sastri to prolong his stay in South Africa and we are glad to note that he has acceded to their request. The Indian Opinion pays the following tribute to him in its issue of 30th March:—

"There are strong forces at work whose only aim is to see the last of the Indian and they are apt to easily distract the minds of even the right thinking men into doing the wrong thing, and

Mr. Sastri's magnetic personality has done much to avert that state of things in the past and will no doubt do a great deal in the future. This fact was very clearly proved when the Liquor Bill was introduced into Parliament with the colour-bar clause in it. Had it not been for the presence and personality of the Rt. Hon. Mr. Sastri then we feel almost certain that we would not have seen the favourable elements that were at work at the time nor would we have seen the favourable turn that it eventually took.

We have also the question of education to be settled. The Commission will be sitting next week to inquire into the question. The community will no doubt put its claims before the Commission. But the matter will not end there. The community looks to Mr. Sastri as an educationist to use his own influence in the matter and it would be a great misfortune if Mr. Sastri were to leave these shores without bringing about satisfactory solution of that important question. For these and many other reasons we are very pleased that Mr. Sastri has consented to prolong his stay and the community will doubtless appreciate the great sacrifice Mr. Sastri is making in the interests of his countrymen."

We hope the Indian public at home also will appreciate this decision of Mr. Sastri to prolong his stay in South Africa.

Arrangement for Colonial Boys at Dayalbagh Institute, Agra

The Radhaswami Institute at Dayalbagh, Agra is one of the best educational institutions in our country. It teaches students upto the Intermediate class and has a technical school attached to it. Sahebji Maharaj, who is at the head of the institute, is very much interested in the problem of the education of our countrymen abroad and he has kindly made an arrangement for four colonial boys to receive technical education at Dayalbagh. Here is an extract from a letter from his Secretary:—

(1) We have arrangements for a 2-year course in Mechanical and Electrical Engineering and one year course in Weaving. Both theoretical and practical instructions are imparted. In fact, the students here have the greatest facility for practical training on account of the Technical School being attached to our Model Industries. The Model Industries, as you know, possess an up-to-date workshop, the machinery and other equipments having cost us to the tune of four lacs of rupees. Besides the Engineering and Weaving courses, we have provision for training in Footwear and Dury Farming.

You will notice in the Prospectus that students for the Engineering courses must possess certain

qualifications. These qualifications are necessary as without them the students cannot follow the theoretical courses provided for the classes. It is, however, not necessary that the colonial boys should take up these courses. They may join the Workshop as apprentices and receive only practical training. In the Footwear Department no theoretical instructions are imparted at present, but there are facilities for a thorough practical training.

(2) We shall be glad to take up four colonial boys, to begin with. But care must be taken that only willing students, possessing good moral character, are sent up. Generally boys who are failures elsewhere are shunted off to Technical Schools where they prove no better, and the institutions are blamed for nothing.

(3) I am sorry our present resources do not admit of our doing all we wish to do for our poor countrymen. At present we charge no fees from the boys coming for Technical Education. In addition to this concession, we shall provide Hostel accommodation for the colonial boys and shall arrange two scholarships of Rs 50 a year each for them as special case and Rs. 7 per mensem as stipends for those joining as apprentices.

It is to be hoped that our colonial friends will take advantage of this kind offer of Sahebji Maharaj.

Death of a Satyagrahi

Maganlal Gandhi, nephew of Mahatma Gandhi, passed away at Patna the other day and our country has suffered a great loss by the untimely death of this Satyagrahi. The work that Bhai Maganlal did in South Africa during the days of the Satyagrah struggle is well-known to the students of the questions of Indians abroad. When hundreds of our people were going to jail it was Maganlalji who took over the entire charge of Mahatmaji's Ashram at Phoenix and thus sacrificed his intense desire to go to prison. It was very much easier to go to jail than to remain out and manage the whole thing. Maganlal Bhai was the life and soul of our *Charkha Sangh* and Mahatma Gandhi has never had a more efficient and trustworthy co-worker in his life.

His premature death will be a severe blow to Mahatmaji. May God give him strength to bear this calamity in his present state of health.

NOTES

Venereal Diseases Among British Troops in India

In his article on how ruling India injures England the Rev. Dr. J. T. Sunderland quotes from official papers some statistics relating to the incidence of venereal diseases among British troops in India. As recent reports were not available in America, he had to depend on some old parliamentary returns. Some more recent statistics with some observations thereupon are extracted below from the Annual Reports of the Public Health Commissioner with the Government of India, by way of supplementing Dr. Sunderland's figures.

VENEREAL DISEASES British Troops

1910. (Average Strength 56,561)

"There were 4,954 admissions with one death. The ratios are 87.6 and 0.02, respectively.

| | Actuals | Ratio for 1,000 | Actuals | Ratio for 1,000 |
|---------------|------------|-----------------|------------|-----------------|
| | Admissions | Deaths | Admissions | Deaths |
| Northern Army | 1,826 | 1 | 72.9 | 0.04 |
| Southern " | 3,125 | ... | 100.0 | ... |

The incidence of venereal disease for eleven years

| | 1909 | 1910 | 1911 | 1912 | 1913 | 1914 | 1915 | 1916 | 1917 | 1918 | 1919 |
|-----------------------------|------|------|------|------|------|------|------|------|------|------|------|
| Ratio per 1,000 of strength | 67.8 | 58.9 | 53.7 | 55.5 | 52.5 | 55.2 | 29.1 | 36.8 | 52.0 | 62.6 | 87.6 |

The above table indicates a striking rise in the admission rate since 1915, which has occurred in spite of every local effort on the usual lines to check the incidence of the disease.

1920 (Average Strength 57,332)

| | Actuals | Ratio per 1,000 | Actuals | Ratio per 1,000 |
|---------------|------------|-----------------|------------|-----------------|
| | Admissions | Deaths | Admissions | Deaths |
| Northern Army | 2,803 | 2 | 88.6 | 0.06 |
| Southern Army | 3,963 | 3 | 158.6 | 0.08 |
| Army of India | 6,775 | 4 | 118.2 | 0.07 |

The causes of the increase in the incidence of venereal disease amongst the troops in India are varied and complex and many factors considered to have had an influence are extremely difficult to substantiate.

1921. (Average Strength 58,631)

The admission ratio per 1,000 for 1921 was 110.4. The figure indicates a check in the steady rise in the prevalence of these diseases since 1916.

1922. (Average strength 60,166).

Venereal diseases. The admission ratio per thousand decreased from 110.4 in 1921 to 84.7 in 1922; this being the 3rd successive year showing a decrease.

Requests for Translating "India's Case for Freedom."

Dr. J. T. Sunderland has written to the editor of this Review that he has received applications from some Indian gentlemen for permission to translate the chapters of his book, "India's Case for Freedom," published in this Review, into some Indian language or other and publish them in book form. He thinks, and we are of the same opinion, that the question of publishing translations of his work in book form may be considered after the publication of his book. He has asked the editor of this Review to receive and dispose of applications for translating his book.

An American Estimate of Educational Progress in India

An increase of 9,113 recognised institutions of learning and 482,000 students in the fiscal year 1924-25 over figures for the preceding twelve month period is shown by the latest report of the Bureau of Education of the Government of India, according to Vice Consul Robert L. Buell, Calcutta. This increase in registration, however, is not as encouraging as it may seem at first glance, since 400,000 of the 482,000 additional students are of primary school status, says the report. Allowance must also be made for the normal growth in population.

The Indian Government's expenditure for education in 1924-25, when school and college attendance totaled 9,797,311 students, amounted to \$31,936,610, less than 10 cents for each person of the total population. In the United States the

annual expenditure is \$16.25 per capita for public school education. Little real advancement has been made in the education of the masses, according to the statistics of the Bureau of Education. Of the country's vast population of 320,000,000 it is stated that 90 per cent. is illiterate.

In order to be able to form a comparative estimate of our rate of progress, let us take the case, not of any advanced peoples, but of the Negroes. According to the *Sunday Times of London*:

Educationally the advance of the Negro goes on. At the close of the Civil War there were 15 negro colleges and schools in America. To-day there are five hundred. The number of scholars in the public schools has jumped from 100,000 to 2,000,000. Every year £1,000,000 is spent on negro education.

The negro race is knocking at the door of white civilisation, asking for admission to the representative institutions of the world.

Famine in Birbhum

The district of Birbhum in Bengal is in the grip of famine. The principal crop of that district is rice. Owing to the failure of that crop, the people are in great distress. Sixteen rice mills in and about Bolpur are idle and 2000 workers have to face starvation. The farmers, too, and the landless agricultural labourers are without food. Most cultivators have exhausted even their stock of seed.

The Rural Reconstruction Department of Vitta-bharati has been collecting accurate statistics of those affected by the famine in the villages near Bolpur. Its reports make very painful reading. Many people have had no food for days together, many have been living on one scanty meal a day, many have been living on boiled leaves of the peepul tree, and many have left their villages for unknown destinations. In many villages the women cannot come out of their homes because of want of clothing.

The teachers and students of Santiniketan have formed a committee for the relief of the famine-stricken people. It has begun its work in right earnest. All contributions in money, cloth, and rice will be gratefully received and acknowledged by Professor Jagadananda Ray, Santiniketan.

[Anglo-American Journalistic Misrepresentation

The following news despatch from London, published in the *New York Times*,

presents a glaring instance of Anglo-American Journalistic misrepresentation:—

An American woman's attack on Hindoo manhood lies behind to-day's announcement by the Government of India that a committee would be appointed to inquire into child marriage in India. *The Daily News* asserts.

The truth of the situation is that from long before Miss Mayo was born, Indian social reformers have been working to bring about the needed social reforms. Recently Renter's agency in India has sent a cable to London of which also the object is to show that Miss Mayo's book has stimulated social reform activities in India. These are attempts to prove that writer's good intentions from the results assumed to have been produced by her nefarious work.

An Italian Statesman's Views on War and Occidental Civilisation

The New York Herald (Paris edition) of March 18, gives the following summary of a speech delivered by Count Sforza, the former Foreign Minister of Italy in New York:

"Not Red propaganda but 'the stupidity of conservative Governments,' is making Bolshevists, according to Conte Carl Sforza, former Italian Minister of Foreign Affairs, who has arrived here for a lecture tour. Aghast at the possibility of another war, he said that such a catastrophe would mean the collapse of all European institutions, including the Church, and the triumph of Bolshevism everywhere.

A lesson could be learned, he continued, if people would study the manner in which Oriental nations look upon the States of the Occident to-day. They despise such States, he said, and that feeling is a penalty exacted by the war.

"We had made the Oriental believe during a century that our civilization was higher," he said. "Now they have judged us through our deeds, not caring what may have been right or wrong in the last war. All our Western prestige has sunk there."

One need not say much about the ethical values of the Western Civilization in practice. It is undoubtedly true that reactionary government by their arbitrary actions, such as imprisonment of honest and highminded patriots without any trial, promote revolutions.

Increase of Population Among the European Nations

Prof. Werner Sombart in a recent lecture delivered at the London School of economics pointed out the following interesting fact:—

"Between the years of 1800 and 1914 the population of Europe increased from 180,000,000 to 452,000,000, and the population of Great Britain, Germany and the United States rose from 100,000,000 in 1800 to 495,000,000 in 1910."

The above figures clearly show the enormous increase of population among the nations of the West. It is a fact that during the past hundred years the *percentage of increase* of the population among the nations of Europe and America has been far larger than that of Asia.

Many of the Western scholars glibly speak of "Yellow Peril," "Rising Tide of Color" and "menace to white men" because of the increase of population among the so-called "coloured races." But the fact is that unless death-rate decreases in the Oriental countries and unless the people of the Orient begin to migrate to less densely populated countries, during the twentieth century the percentage of increase of the population among the western nations will be still greater, and it is quite probable that in two centuries the so-called white people will outnumber the people of the Orient.

British Foreign Office Banquet to the King of Afghanistan, and the High Commissioner for India in England

The Times (London) of March 15, 1928, prints a graphic description of the Foreign Office dinner given in honor of His Majesty the King of Afghanistan, who "sat in a gold chair at the right of Sir Austen Chamberlain, who presided at the head of the table." In page 16 of the same issue of *The Times* the names of the persons who had the honor of being invited on this state occasion were printed. Among the invited, we found mention of the "High Commissioner for Canada, the High Commissioner for Australia, the High Commissioner for South Africa, the High Commissioner for the Irish Free State, the High Commissioner for Southern Rhodesia." We did not, however, find that the High Commissioner for India was honored with an invitation. It is very unlikely that *The Times* made a mistake by omitting the High Commissioner for India. In case the Foreign Office did not see fit to invite Sir Atul Chandra Chatterjee, the High Commissioner for India in England, it would

mean that either India's High Commissioner in England does not enjoy a status to be invited on such an important occasion or it is a part of the programme of "studied insult to the people of India." Although Sir Atul Chandra was not honored with an invitation, all the ex-Viceroy of India and the Secretaries of State for India, including Lord Olivier, were invited to this banquet.

Britain's relations with Afghanistan are primarily due to the existence of the British power in India. In the past the British Government fought three sanguinary wars against Afghanistan, for which Indian manpower was lavishly used and India had to bear the cost of the operations. These wars were fought presumably on the ground of "defending India from foreign aggression." Today the King of Afghanistan is being honored in London, as the most distinguished Royal guest, for the primary purpose of promoting Anglo-Afghan and Indo-Afghan friendship and it is rather peculiar, to say the least, that the High Commissioner for India in England was not even invited to the foreign office banquet given in honor of His Majesty the King of Afghanistan.

It is well-known in all quarters that Sir Atul Chandra is a loyal and devoted servant of the British Government; and he has served his British Imperial masters very faithfully, even in the League of Nations' International Labor Conferences. Recently he has successfully pleaded for a large appropriation for the erection of an India House, for the office of the High Commissioner for India.

British Foreign Office's failure to invite Sir Atul Chandra, while all the High Commissioners from other parts of the British Empire were accorded the honor, was a studied insult to India. The members of the Indian Legislative Assembly should inquire about this incident.

T. D.

Religious Observances in College Hostels

At an informal conference of nine principals of Calcutta colleges, which was convened by Principal J. R. Banerji of Vidyasagar College and Principal G. C. Bose of Bangabasi College, and was held on Thursday the 8th March, 1928, the following resolution was passed with only one dissentient:—

"While we recognise that College authorities should grant free liberty of conscience to students in matters pertaining to their own faith, we are of opinion that the Governing Bodies of Colleges have also rights of conscience, and so on general principles we should be opposed to any pressure being brought to bear on the authorities of a Brahmo, Christian, Hindu or Muhammadan college to permit or recognise religious observances contrary to their faith in any hostel under their control, irrespective of any pecuniary assistance received from public funds."

Principal J. R. Banerji was absent owing to an accident.

The holding of the conference was due to the celebration of the-Saraswati Puja at the City College Hostel by some of its students against its rules.

Prehistoric Remains in Chota-Nagpur

In the Royal Society of Arts, London, Sir Edward Gait delivered the first Sir George Birdwood Memorial Lecture on the 10th February last. The Right Hon'ble Viscount Chelmsford was in the Chair. The subject of the Memorial Lecture was "Ancient Bihar and Orissa." In the course of his Lecture, Sir Edward said,—

"The amount of historical information now available varies greatly in different parts of India. It is practically non-existent in the case of Chota-Nagpur. On the other hand, this sub-province is exceptionally rich in pre-historic antiquities. It is the only tract in Northern India where palaeolithic implements have been found. Neoliths are very common."

Referring to the explorations of Rai Bahadur Sarat Chandra Roy in the pre-historic sites of Chota-Nagpur Sir Edward went on to say—

"Copper and Bronze ornaments and utensils of a later date and phallic emblems in stone or terracotta are frequently dug up; and in some places finely finished and bored beads of crystal, cornelian and other stones are often picked up after rain. Coins of the Kushan kings have been found. There are numerous remains of stone temples and sculptures and also of buildings made of bricks like those in use in Bihar more than 2,000 years ago. There are extensive burial grounds where massive sepulchral stones cover groups of earthenware jars. These jars contain calcined human bones, together with earthenware lamps and other vessels, and also copper and bronze bracelets, rings and other ornaments, crystal beads, etc. There are remains of ancient copper

mines. Near one of them several hundred copper coins were recently found. They are a very rude imitation of the coinage of Kanishka, and had evidently been cast in moulds. Many of them were in an unfinished state, so that the place where they were found was probably a mint. The form of the letters on them suggests that they date from about the seventh century of our era.

"These various relics show that the old idea that the present aboriginal inhabitants of the Chota-Nagpur plateau have always been its principal occupants is no longer tenable, and that they must have been preceded, in some parts at least, by a more civilised race. In Ranchi there are widespread traditions of its former habitation by an ancient people called Asurs, to whom the present inhabitants attribute the burial places and ruins which I have just described. They are reputed to have been a tall and powerful race. It is impossible to say if they were identical with the Asurs of Vedic literature, but the facts that the latter were also worshippers of the Phallus and are said to have been expert in the working of copper suggest the possibility of some connection. Rai Bahadur S. C. Roy finds some remarkable resemblances between the Asur sites in Chota-Nagpur and the finds they yield and the ancient ruins of Harappa and Mohen-jodaro in the Indus valley, of which we are still anxiously awaiting a detailed account. According to another recent writer, the earliest known rulers of South Bihar were Vedic Asurs, and if so, they would naturally have spread thence into Chota-Nagpur. Whether these ancient people were exterminated or absorbed by the newcomers, or were driven to other parts of India, is a riddle that cannot now, and perhaps never will be, solved."

The Chairman the Right Hon'ble Viscount Chelmsford former Viceroy and Governor-General of India, in proposing a vote of thanks to the lecturer said :

"Personally I have found the most interesting portions of the lecture to be those where hints were given of contact with other parts of India and with the outside world. The first was the conjecture made by Rai Bahadur S. C. Roy that there were some remarkable resemblances between the Asur sites in Chota-Nagpur and the finds they yielded and those of the ancient ruins of Harappa and Mohen-jodaro in the Indus valley. Nothing could exceed the importance of that contact if it were established, but he fancied a pretty quarrel might arise between those who attempted to establish that contact and the official view in regard to the matter, because he understood the official view was that in that eastern portion of India there were no remains which could be assigned to pre-Mauryan times. It was to be hoped that Rai Bahadur Roy would prove to be right, because in matters of archaeology nothing was more important than such contacts. Those who had taken an interest in ancient history had had their interest enormously aroused by the contacts established in recent times between Crete and Egypt and the various civilisations in Mesopotamia, and it would be magnificent if it were possible to establish some evidence of contact between the remains in India and the remains of

early times which were to be found in those great countries."

Sir Charles S. Bayley, the first Lieutenant Governor of Bihar and Orissa, in seconding the vote of thanks, said,—

"The lecturer has shown how much was owed to the labours of people like Sir John Marshall, Dr. Spooner, and Rai Bahadur Sarat Chandra Roy and, indeed, Sir Edward Gait himself.....I could not help thinking, when the lecturer referred to the emperors who had built Pataliputra and made it such a marvellous city, of the irony of fate which had left it to me to found the modern city of Patna."

Famine in Bankura

It is our painful duty to report that famine has again broken out in the district of Bankura. An appeal signed by Mr. G. S. Hart, District Magistrate of Bankura, states :—

"The rainfall last year was deficient, especially at the times when it was most needed for the planting and subsequent growth of the paddy crop which forms the mainstay of life to a great majority of the population of this District. Investigation has shown that over large areas either no paddy could be planted at all or the crop planted was only a miserable fraction of the normal yield. The smallness of the harvest affects not only the rayats and petty landholders but also the labouring class. Many of the rayats have to resort to manual labour and thus the number of men wanting work is greatly increased but the amount of labour available is less than usual. These two classes are therefore faced with the certainty of great distress which will become more and more acute until the next harvest is gathered in."

Bankura is now in the throes of a severe famine with all its concomitant evils, such as scarcity of water and cholera and other epidemic diseases. In the course of the last thirteen years, the District has had to pass through three such visitations. Such repeated calamities have depleted the resources of the population to withstand famine even for a short time.

The Bankura Sammilani, a Society organized for the people of Bankura and registered under Act XXI of 1860, which maintains a Medical School and Hospital, successfully undertook famine relief on two previous occasions and won the confidence and generous support of the public. This time the Sammilani has appointed a famine relief sub-committee consisting of the following members :—

Ramananda Chatterjee (President) ;
Rai H. K. Raha Bahadur, Post Master General,
Basanta Kumar Chatterjee, Dy. Accountant
General, (Treasurers) ;

Bejoy Kumar Bhattacharyya, Vakil ;
Bejoy Kumar Chatterjee, M. L. C. ;
Bhola Nath Banerjee, Retd. Executive Engineer ;
Braja Kishore Chowdhury, Bar-at-Law ;
Kedar Nath Ash, M. L. ;
Kshetra Kali Ghose ;
Radhika Prasad Banerjee ;
Rishindra Nath Sarkar, Advocate (Secretary) ;
Krishna Chandra Ray, M. L. (Asst. Secretary).

The Sammilani earnestly appeals to the generous public to give it all possible help. Contributions will be thankfully received and acknowledged by Ramananda Chatterjee, 91, Upper Circular Road, Calcutta.

There are in these days many calls on the resources of charitably disposed persons. Nevertheless, it is hoped the cry of the famished villagers of Bengal will meet with adequate response.

The Brahmo Samaj Centenary Essay Competition

On the occasion of the celebration of the Brahmo Samaj Centenary a number of medals and prizes will be awarded to the writers of the best essays on the following subjects :—

1. The Brahmo Samaj and Ram Mohun Roy. Open to children up to the age of 12.
2. The work of the Brahmo Samaj during the last hundred years. Open to boys and girls of High Schools.
3. The influence of the Brahmo Samaj on the progress of India. Open to College students.

The essays may be written in any of the following languages :—

- | | |
|-------------|--------------|
| 1. English | 7. Telugu |
| 2. Bengali | 8. Tamil |
| 3. Hindi | 9. Malayalam |
| 4. Urdu | 10. Knapese |
| 5. Marathi | 11. Oriya |
| 6. Gujarati | 12. Khasi |

The essays must reach Mr. H. C. Sarkar, Secretary, Brahmo Samaj Centenary Committee, at 210-6 Cornwallis Street, Calcutta, on or before June 30, 1928.

Rabindranath Tagore's New Novel in "Vishal Bharat"

Readers of Hindi will be glad to learn that Rabindranath Tagore's new novel *Kumudini* will begin to appear serially in the Hindi magazine "Vishal Bharat" from its May number.

Just Demands of Railway Men

At a public meeting held in Calcutta on April 25 last to express sympathy with the E. I. Railway workmen in a practical manner Mr. C. F. Andrews stated that there were five points which appeared to him both reasonable and moderate in the workmen's demands, namely :—

(1) No workman should be paid below a minimum rate which should be fixed for the lowest paid workmen so as to ensure a living wage.

(ii) Railway workmen at Howrah and Lilloanah should be remunerated for bank holidays and festival off days in the same manner as at Jamalpur.

(iii) Since under the reconstruction scheme it might be assumed that a smaller number of hands would turn out no less work than before and since the railway had been making good profits for the last three years, an increase of pay should be given to the workmen, provided they were ready to accept the re-construction programme set forward by the Railway Board.

(iv) A comprehensive scheme should be started whereby Indian workmen would be offered quarters near the workshops at a low rent. This had already been done for high-paid service, which was mainly Anglo-Indian and European. It should be extended to the lower paid Indian workmen according to their requirements, and a temporary allowance should be given to those to whom no quarters could be offered. Such a housing programme would amply repay the State owing to the increased health and contentment of the workmen.

(v) A representative body should approach the Agent to open discussion along those general lines with a view to end the strike.

The suggestions made by Mr. Andrews are quite reasonable and moderate.

Where the State owns a railway, it stands in the place of the capitalist. Like other capitalists it is in a position to hold out longer than its employees who may be on strike. But the position of vantage occupied by capitalists is due to their getting rich at the expense of labour. Not that all capitalists intentionally cheat the workers of their just dues. The whole system of distribution of wealth is so unjust that perfectly honest and fair-minded capitalists often unintentionally and unconsciously withhold their just dues from their lower grade employees. It is this iniquitous system which enables capital to feel strong enough to starve strikers into surrender. But this mental attitude is just as inhuman as if one were to say, "Accept my terms or I shoot you down." For, in either case, whether the worker is shot down or practically starved to death, the ultimate result is the same. Just as the workers should not think of

gaining their object by physical violence, so capitalists also should not think of obtaining a victory by the indirect threat of shooting them down or starving them into submission, both of which are varieties of physical violence. Arbitration is the only right method.

The Bombay Mills Strike

Owing to the strike of the mill-hands most cotton mills in Bombay are closed. As soon as there are strikes, the Government should take the first opportunity to arbitrate. But this is not done. Things are allowed to drift and take a serious turn, and then it is alleged, shooting becomes inevitable. But, considering that British labourers are physically better fed and more unsubmitive than our mill-hands, one wonders why shooting is resorted to more often in India than in Great Britain. Perhaps it is inaccurate to use the word "wonder" in this connection; for some of the main reasons for the freer use of fire arms in India by the police and the Europeans are well-known—human life is cheap here and the people have no political power.

Educational Expenditure of American Cities

The New York Times writes:

American cities are now spending more than a third of their total expenditures on public schools, the Commerce Department announced today. The aggregate outlay for these schools in the 250 cities of the country having more than 30,000 population was \$607,059,853 in 1925, or 37 per cent. of the total city payments and \$1451 per capita.

Cities having more than 30,000 population in 1916 were estimated to have spent but \$630 per capita on schools.

The 250 cities in 1926 had a debt of \$932,000,000 incurred in previous years for permanent school improvements, while the similar debt of such cities in 1916 was but \$335,000,000.

The 250 cities in 1926 had investments in school buildings, grounds and equipment of \$2,112,000,000, while the cities of 1916 had only \$750,674,000 so invested.

One dollar is roughly equivalent to three rupees. What percentage of their incomes do our municipalities spend on education?

Afghan Students and Their King in Berlin

In the course of a description of King Amanullah's reception at Berlin, an American paper writes:

King Amanullah with President von Hindenburg at his left walked along a line of some twenty-five Afghan youths, most of them students in Berlin institutions of learning, who shouted "Ullah, Ullah!" as they whipped their hats off their heads. There was no trace of kingly hauteur about the Afghan ruler as he acknowledged this expression of loyalty from a little group of his subjects far away, like himself, from their mountain home.

KING RETURNS STUDENTS' SALUTES.

Instead of saluting perfunctorily and hurrying forward King Amanullah, with a really friendly smile lighting his face, paced slowly past the swarthy youths, carefully saluting each in turn.

Suddenly, a girl stepped forward and handed her liege lord a packet tied with gold ribbon containing a gift for him. This he acknowledged with a special salute and smile, and handed it to an aide walking behind him, while more shouts of "Ullah" rang out.

The population of Afghanistan is eight millions according to the highest estimate, whereas that of India is 320 millions. If Afghanistan can send 25 students to Berlin, India ought to be able to send a thousand. But in comparison with the number of Afghan students there the number of Indian students is very small.

World's Greatest Radio Station in Germany

With the formal opening of the new radio sending station at Zeesen, fifteen miles from Berlin, Germany now possesses by far the most powerful station of the kind in the world. It has the tremendous energy of 120 kilowatts, or six times that of Daventry, the most powerful English station, and about a half more than Schenectady. The steel masts that bear the antennae are nearly 700 feet high.

So Germany's defeat in war, however brought about, does not mean her defeat in everything else.

National and Sectional Activities

In the course of his presidential address at the Jubulpore session of the Hindu Mahasabha Mr. N. C. Kelkar said:—

It is inevitable that public-spirited men should be incessantly called upon to take part in a variety of activities, some of which may, to a

superficial observer, appear to be mutually inconsistent or contradictory. But the man who cares to look deeper into things can easily get over this sense of contradiction. It is, of course, a difficult task to reconcile work for a particular community with work for the nation as a whole. But we of the Hindu Mahasabha have now learnt by long experience to reconcile the two, and I am glad to find that, with the advance of time, the number is decreasing of those who would characterize whatever is sectional as necessarily anti-national. In all purely national matters even the staunchest supporter of the Hindu Mahasabha ought, of course, to be able to say that he is an Indian first.

This is quite a sane view.

The Hindu Mahasabha and Politics

Whether the Hindu Mahasabha should have anything to do with politics was a question which was incidentally referred to at the Subjects Committee meeting of the Mysensingh session of the Bengal Provincial Hindu Sabha. The view which the present writer expressed was that, though the Mahasabha was not primarily, mainly and directly concerned with politics, it ought to express its opinion on political questions if the interests of the Hindu community be prejudicially affected by any resolutions and activities of the Indian National Congress or sectional bodies like the Muslim League; but the main object of the Mahasabha is the social betterment of the Hindu community in the widest sense. In trying to bring about such improvement it really subverts the highest national ends.

It should be presumed that the leaders of the Mahasabha are aware of the dangers and disadvantages of turning a religious community into a political party. That excellent weekly, *The Catholic Herald of India*, now defunct, wrote something very apposite on this subject on October 1, 1924. It said:—

Besides religious ignorance, Dr. R. Tagore's diagnosis, attributing the revival of inter-communal violence to the Khulafat campaign, contains a good deal of truth. It is the peculiar danger of identifying politics with religion, from which Christians in India have so much to fear, but which has recoiled on the authors themselves. Politics should always be permeated with religion and sanctified by its principles, but to turn a religious denomination into a political party profits neither religion nor politics. Catholics in other countries have had sad experiences in this matter. Mr. Gandhi has belied his own principles, in themselves perfectly sound, by playing too much of the

political tune on the religious string, and the string has snapped.

Let India be loved and defended by all Indians; let patriotism be a common privilege of every creed, let India's love be their common love and mutual bond. She is great enough to inspire every one with patriotic devotion. Patriotism should be the common platform of all the creeds, and unite them in one single passion; but it severs them, directly it is made the privilege of selected religions.

The Lilloah Strike

We know strikes are the very last means which should be resorted to for the redress of the grievances of labour; they should never be lightly entered upon, as they involve much suffering and often lead to violence. But if owing to any cause workmen have to strike, the employers should not vindictively try to starve them into surrender. In the case of the Lilloah strike Mr. Andrews has expressed the opinion that the grievances of the men are substantial—"they are wretchedly paid for most substantial work, and still more wretchedly housed; and it is nothing short of a standing disgrace that the Government should have refused to build decent quarters for workmen, allowing them to continue to live amid the filth of Howrah, where pools engendered diseases on every side." And yet it is argued by advocates of India's connection with the League of Nations in British interests that that connection has very greatly benefited Indian labourers.

After a detailed study of the Lilloah strike Mr. Andrews has come to the conclusion that the Bengal Government should without a moment's delay establish a board and invite each side to submit its case to it for arbitration.

Hindi Translations of Tagore's Works

The Poet Rabindranath Tagore has, by an agreement, given the proprietor and editor of this Review the sole right of publishing Hindi translations of all or any of his Bengali works in prose and poetry. Those, therefore, who have hitherto published such translations with or without his permission should desist from publishing new translations or new editions of old translations. Publishers of translations already in print should settle with Babu Ramapanda Chatterjee the terms

on which they may lawfully go on selling their present stock in hand until it is exhausted.

Allahabad Public Library

The latest annual report of the Allahabad Public Library shows continued progress. Its subject catalogue is an excellent piece of work and shows, what we have known by long use of the library, that its directors have made good selections in keeping it up-to-date. *The Pioneer* only states a fact when it says that "there can be few public libraries in India outside the big seaport towns to surpass this in catholicity and completeness." Though we left Allahabad twenty years ago we still find the Allahabad Public Library occasionally more serviceable than any in Calcutta. From the numbers of books in Indian languages issued to depositors, given in the report, we find that the library keeps Hindi, Urdu and Bengali books also.

The Bengali Out door Game of "Hadu-du-du"

The Bengali out-door game "Hadu-du-du" is good alike for physical exercise and teamwork. Its other great recommendation is that it is entirely inexpensive. Familiarity often makes us blind to the real merits of our own games which are obvious to foreigners. A young Hungarian of the name of Francis Balazs, who has been touring in Eastern countries in connection with the World Youth Peace Congress, was recently present at a Hadu-du-du Tournament in Calcutta. He has, according to the *Calcutta Municipal Gazette*, given his impressions of the game in the following words to Mr. Narayan Chandra Ghosh, the director of the game:—

The most pleasant experiences are those that come as surprises. I am extremely glad that you called my attention to your national game.

Hadu-du-du is a very interesting one and I enjoyed it immensely. It is a game into which the player's whole personality enters: his physical fitness as well as his temperament. One jumps across the line with the tenseness of *nerve* and *muscle*, another is hopping gracefully, while a third tries to tease the opponent.

It is a game that is both *individualistic* and *socialistic*, a characteristic of human beings as they are. Beyond the danger-zone the player enters alone. He has the whole world against

himself. But overwhelmed or coming to the end of his breath, he falls back upon the community. Into adventures the individual only dares to enter. The defence, however, is displayed by all together.

It is quick and ir retrievable. One little mistake, and the player is lost. Then again it often goes on for a long time without offering any thing interesting; while in the next moment, all of a sudden, something very exciting happens. This is all so much like life.

I shall surely try to introduce *Hadi-du-du* into Transylvania for its genuine human qualities.

The work you are doing in keeping alive this and other peculiarly Indian games, deserves all praise. No less admirable is another of your society's aims, to study and practise other nation's games as well. I hope some time I shall have time to tell you about the national games of the Hungarians.—Francis Balazs.

Outrages on Women in Bengal

With reference to one of our notes in the last issue, *The Indian Social Reformer* observes that "it is not the business of politicians but of the police to prevent outrages on women." That is true, of course. But when the police cannot or does not do so, "politicians" and others must do so. In Bengal the police have not been able to adequately grapple with dacoities; hence defence parties have been formed in some villages with the knowledge and consent of the Government. Similarly, not only have the police failed to cope with the evil of outrages on women in some Bengal districts, but when a Bengal M. L. C. asked whether the Bengal Government would take any special steps to prevent such outrages, the reply was in the negative. Only a fraction of the outrages that actually take place come before law-courts, and only some of these cases end in the conviction of the accused. What is worse, in quite a number of cases no trace has yet been found of the girls and women outraged though months, and in a few cases, years have passed since the prosecution of the ravishers. For these reasons, among others, we suggested that in Bengal "Hindus, young and old, should be more courageous, willing and able to protect girls and women than they are, and girls and women should also be taught the arts of self-defence." This has "surprised" our contemporary and led it to indulge in the platitude that it is not the business of politicians but of the police to prevent outrages on women.

Our contemporary goes on to ask :—

Does the presence or absence of the purdah materially affect the risk of such outrages? If so, there must be more outrages in non-purdah provinces, like Bombay, Madras and the Central Provinces than in Upper India? We are not aware that this is the case. In fact, we think that this is not the case. Then, again, we should like to have a sight of the statistics which, the *Modern Review* says, show that Hindu girls are victimised in larger number than Muslim girls. *Prima facie*, we should say that cannot be, as women not inured to the purdah are likely to be able better to look after themselves, and girls who do not observe purdah or observe it less strictly are generally more resourceful in an emergency than women who are brought up in strict seclusion. If actually a larger proportion of Hindu girls go astray, there must be other counteracting causes, and the raising of the marriage age and education of girls will bring about in their train other necessary reforms calculated to make women strong-minded and self-reliant.

As we said, "In writing this we do not indirectly suggest that purdah should be made stricter among Hindus," and our contemporary has quoted that sentence, we do not see the relevancy and necessity of its questions and of its lay sermon on the value of not observing purdah. Though living in benighted Bengal, we have long known these things and pointed out repeatedly that women who enjoy freedom of movement are more courageous, resourceful and self-reliant than those "inured to the purdah." We have, therefore, frequently urged that the abolition of the purdah would be one of the indirect effective remedies for outrages on women. But as, for reasons on which we do not like to dwell in detail, there are many brutal ravishers in some districts of Bengal, not used in their society to the free movement of women, and as that fact jeopardises the honour of non-purdah girls and women more than that of those who are beyond the ken of these evil-minded brutes, it is necessary during the period of transition from purdah to non-purdah for us men to give all the protection we can to girls and women who have occasion to move about outside their homes.

As for the statistics which *The Indian Social Reformer* wants, we shall give them presently. Week after week some time ago Babu Krishnakumar Mitra gave statistics of outrages on women in Bengal in his weekly, the *Sanjivani*, which were very laboriously and carefully compiled, and have remained unchallenged to this day. Of course, the figures related only to published cases. The following table gives the religion, civil condition and numbers

of the women outraged during the period for which the figures were compiled:

| | Hindu | Muslim | Christian | Unknown | Total |
|-----------|-------|--------|-----------|---------|-------|
| Unmarried | 40 | 21 | 2 | 3 | 66 |
| Married | 213 | 82 | 0 | 8 | 303 |
| Widowed | 87 | 5 | 0 | 4 | 96 |
| Unknown | 137 | 33 | 1 | 30 | 206 |
| Total | 477 | 146 | 3 | 45 | 671 |

Though Muslim women greatly outnumber Hindu women in Bengal, the latter are outraged in larger numbers than the former. It is needless to dwell here on the causes of this state of things.

Our contemporary writes, "If actually a larger proportion of Hindu girls go astray," etc. We wrote about outrages on women. We suppose, to be outraged and to go astray are different things.

Our contemporary is a master of sociology and social reform problems; but we may without offence claim to possess some detailed knowledge of social conditions in Bengal which it does not possess.

"The City College Incident."

The Indian Social Reformer has published a leading article under the above caption. As its main observations have been answered in its own columns by a member of the City College Council, we need not take the trouble to do so again in detail. We shall comment on only a few sentences of the article. Our contemporary says:

In our previous comment on the incident we pointed out that the Hostel was not a church. The *Modern Review* retorts that it is not a temple either. Quite true. But a Hindu puja is not solely a temple affair, and domestic worship is more important in Hinduism than temple worship."

Our contemporary forgets that the Hostel students claim to be fighting for the right of what they call "congregational worship" in the Hostel, by which they mean corporate worship. Now such worship is not generally a domestic affair, but is performed in temples, of which sometimes temporary structures serve the purpose. That at any rate is the case in Bengal. We do not know what it is in Bombay and Madras. We possess only a vague general knowledge of those provinces and have, therefore, never engaged in any controversy which requires detailed knowledge of them.

Our contemporary says:—

"Saraswati, the Hindu Minerva is the proper patron saint of an educational institution with high ideals such as those for which City College and its devoted Principal stand and it is a great pity that the trouble should have arisen about Saraswati Puja."

We, too, are sorry that any students should have thought that one of the ways of propitiating the Goddess of Knowledge is to teach a lesson to those who impart knowledge to them. We hope our serious-minded contemporary will excuse us for confessing that the idea of a Brahmo College having Saraswati as its patron "saint" has vastly amused us. The Brahmos of Bengal may be quite wrong—they may be fools, but as they profess to be worshippers of the One God who is formless, how can they have a goddess of a polytheistic pantheon—we do not mean the least disrespect to her, as the patron "saint" of their college? And is Saraswati a saint (or a deity) by the by? It is not usual to think and speak of Hindu gods and goddesses as saints.

As our contemporary thinks that "Christian Missionaries are striving hard to make the Christian Church in India continuous with the ancient religious culture of the country", it is to be hoped that it has already suggested to the Madras Christian College to make Saraswati its patron saint and its suggestion has been accepted.

As regards "conserving every particle of of the past which has the slightest cultural or character value," the editor of *The Indian Social Reformer* would not have thought it necessary to write what he has done, if he had been acquainted with that portion of Bengali literature which has been created by Bengali Brahmo authors, including Brahmo *kathakats*. Had he read even those Bengali speeches and sermons of Keshub Chunder Sen alone which unravel the spiritual truths underlying the conceptions of some Hindu Gods and Goddesses, his apprehensions would have been set at rest. We beg to be pardoned for writing about Bengal. Our only excuse for doing so is that Brahmoism arose in Bengal, its first teachers were Bengalis, most of the literature they and other Brahmos of Bengal have created is in Bengali, and the City College is managed by Bengali Brahmos. We are not, of course, so presumptuous as to suggest that Mr. Natarajan should have read or should read Bengali literature before lecturing to or admonishing the Brahmos of Bengal on cultural matters, including ancient Hindu culture. We are

quite ready to learn from him and other teachers, as we have hitherto done with great advantage. But as platitudes are apt to be rather boring, one does not like to be pelted with them, if it can be helped.

All Parties Swaraj Constitution

On the 22nd February last the All Parties Conference passed a resolution appointing a Committee to report to the Conference on the following subjects: Constitution of the Swaraj Parliament—whether bi-cameral or uni-cameral, Franchise, Declaration of Rights, Rights of Labour and Peasantry, Indian States. A report of the Committee has been published, and suggestions and criticisms have been invited from the public.

The Committee of the Conference consists of twenty-two members, including the two co-opted members. Though one of the subjects to be considered by the Committee was and is Indian States, it does not appear that any member has been chosen to represent even the biggest or the most progressive ones. The reasons for this omission are unknown and may never be known. As regards British-ruled India, two members come from Delhi, five from the U. P., four from Madras, six from Bombay, four from the Panjab, and one from Ajmer or Rajputana. No member has been chosen from Assam, Baluchistan, Bengal, Bihar and Orissa, Burma, Central Provinces and Berar, Coorg, and N. W. F. Province. This shows that out of a total population of 246,960,200 living in British-ruled India, 118,221,640 or nearly a half have not been drawn upon for drafting a Swaraj constitution for the country. This circumstance may be accounted for in various ways. It may be that among these 118 millions of people no one was found sufficiently qualified to be given a place among the "constitutional experts and political thinkers" (as they are called in the report) who form the Committee. It may be that the All Parties Conference asked some leading men from each of the unrepresented Provinces to accept membership of the Committee, but none was found willing or able to do so. It may be that only those Provinces which were regarded as the most progressive, enlightened or influential were considered entitled to representation in the Committee. Or it may be that it was not intended or thought necessary by the organisers and directors

of the All Parties Conference to make the Committee democratic and representative. What the real reasons were are not known and probably will never be known.

The report is an important document and records the recommendations, of the Committee, including the opinions of dissenting members on some points. It does not generally state the reasons for the recommendations, decisions or dissentient views, probably because it was impracticable to do so, or, even if practicable, would have made the report bulky and delayed its publication. For similar reasons suggestions and criticisms must likewise be generally brief and without any statement of reasons.

Declaration of Rights. This is comprehensive. Nevertheless, we support the dissenting opinions that it should be stated that the sovereignty of the Commonwealth belonged to the people and was inalienable, indivisible, and imprescriptible. At the end of Article 2 the words—"and by duly constituted courts of law" should be added. The articles suggested to be introduced by Mr. Srinivasa Iyengar regarding the equality of castes and communities may be given a place in the Declaration of Rights, provided it is made quite clear that only equality as regards political, civic and economic rights and opportunities is meant. Personally, we are in theory and actual practice in favour of equality in social and religious matters also. But there are large numbers of orthodox people who ought to be *persuaded* to accept such equality, not forced by law to do so.

The Indian States. The recommendations regarding the Indian States are acceptable. As Dr. Bessant's reasons for disagreement with paragraphs 1 and 3 are not given, it cannot be discussed. Pandit Madan Mohan Malaviya is right in suggesting the omission of "and people" in paragraph 3 ("agreement between the Commonwealth and the Government and people of the States"), because there is no available means of treating with "the people" of the vast majority of the States.

Language. The language of the Commonwealth should be both Hindustani and English. In the provinces, the local languages, with old and modern literatures, and English may be used. In Hindustani-speaking provinces, the people will use Hindustani and English. Similarly, in a provincial area speaking Tamil, for example, Tamil and

English will be used. What we mean is that as in Hindustani-speaking areas educated people are to be bi-lingual (speaking Hindustani and English), so in Tamil-speaking areas also (for example) they are to be bi-lingual.

The Committee's recommendation is that "in the provinces, the local languages will naturally take pride of place, but Hindustani and, if necessary, English can be used" We do not say that in the provinces of which Hindustani is not a mother-tongue, it *must not or shall not* be used. What we suggest is that in such provinces it should be perfectly optional to use either English or Hindustani in addition to the local vernacular. Patriotic bias or animus should not blind us to the fact that for cultural, political and commercial intercourse with the world abroad we require to know at least one European language, and as English is the most widely spoken of such languages and many Indians know it already, it would be best and most expedient to continue to learn and use it. Educated Indians would, therefore, be in future, as many of them are already, bi-lingual. In Hindustani-speaking areas educated people need not learn more than one language in addition to their vernacular. In other areas also the educated people should not be obliged to know more than one language besides their vernacular, and that language would be English both as a world lingua franca and an Indian lingua franca. The arrangement we suggest would place an equal educational burden on Hindustani-speaking and non-Hindustani-speaking areas. But if any arrangement be made by which non-Hindustani-speaking persons would be obliged to learn Hindustani and English in addition to their vernacular, they must be tri-lingual, whereas Hindustani-speaking persons need be only bi-lingual. Of course, educated people may, if they can and like, be tri-lingual, quadrilingual, etc. What we want is that the linguistic burden should press equally heavily on the people of all provinces.

Many of us dislike English (the present writer does not), because it is the language of a conquering people. But as the Urdu script is the script of an once conquering people but is no longer so, so under Swaraj English would be only the language of the wholom conquerors and rulers of India. Therefore, as the Urdu script has been prescribed to be used in the alternative, there

should not be any reasonable objection to the use of English under Swaraj, particularly as it facilitates world intercourse.

Uni-Cameral or Bi-Cameral Legislatures
As there are to be both Central and Provincial Governments and as members are to be returned to the Central Legislature "on an uniform population basis," the more populous provinces would return more members than the less populous ones. In the circumstances, the less populous ones might complain of "the tyranny of numbers". So in order to counteract this "tyranny", there should be a second Chamber of the Central Legislature on the American plan, to which each province would send an equal number of members. In our opinion the Central Legislature should, therefore, be bi-cameral. The provincial legislatures should be uni-cameral.

Franchise We are for literacy or minimum income franchise for the present, and adult suffrage later, not earlier than ten years or later than twenty years after the holding of the first elections on the literacy or minimum income basis. During this period of ten or twenty years, all children and illiterate adults must have at least free elementary education, as provided in Article 5 of the Declaration of Rights. There is much to be said in favour of Mr. Vajiraghavachariar's suggestion to give the franchise to every person whose educational qualifications were not below matriculation or its equivalent.

Rights of Labour and Peasantry The recommendations of the Committee on this subject are good. There is no harm in accepting Mr. Joshi's suggestion that the right to strike should be definitely recognised.

Distribution of Powers between Central and Provincial Governments While agreeing with the recommendations of the Committee in the main we would support the following: Mr. S S Iyengar's opinion that "Fees" should be a provincial subject, Mr. Vajiraghavachariar's suggestion that Excise should be a Central subject.

As the 'Meston Award' has not given general satisfaction, the committee, in our opinion, should deal with the *Distribution of Revenues between the central and Provincial Governments* also. It is connected with the distribution of powers between the Central and Provincial Governments. For without adequate funds powers cannot be

adequate by exercised for the good of the people.

Other Items. We are for joint electorates, with, if necessary, reservation of seats for minorities in all provinces on an uniform plan only for a definitely fixed period not exceeding ten years. We are against the reservation of seats for majorities in any province eventemporarily.

We think the redistribution of provinces on a linguistic basis is not practicable all over India. In the case of some areas, e. g., the Oriya-speaking tracts, the idea should be given effect to. In cases where linguistic redistribution is merely a cloak for obtaining a communal majority, we are against it.

The N.-W. F. Province, Baluchistan, Delhi, Ajmer-Merwara, Coorg, etc., are not singly populous enough and rich enough to be able to support a Governor apiece, a legislature apiece, and other paraphernalia of a "Reformed" province. They may and should be given the advantages of the best form of Government and executive and judicial administration prevalent in India by being associated or amalgamated with the nearest "Governor's Province." If they do not agree to such a step, they can only have their judicial and other departments approximated to the best that is in India. In no case have they the right to be a financial burden on the rest of India. Even as matters stand at present, many of these areas are not self-supporting, as the following figures taken from the *Statesman's Year-Book* for 1927 will show:

| Area | Year | Revenue Rs. in lacs | Expenditure Rs. in lacs |
|---------------|---------|------------------------|----------------------------|
| Ajmer-Merwara | 1924-25 | 25.9 | 27.8 |
| Baluchistan | | 20.79 | 78.41 |
| Coorg | 1925-6 | 13.7 | 14.1 |
| Delhi | 1926-7 | 35 | 80.6 |
| N.-W.F. Pr. | 1924-5 | 77.2 | 270.8 |

It is not possible in this note to discuss Mr. Jawaharlal Nehru's suggestion that "the constitution should establish a democratic socialist republic in India," particularly as details are wanting and as there are different kinds of socialism. He also wants election by "economic units". The suggestion may be discussed if concrete examples be given to make it easy to understand what exactly he desires. "Elections by economic units" may "automatically do away with the problem of communal representation"; but other problems may take its place. There

may be bitter strifes among economic units as there are among religious communities. The numerical strength, the revenue-yielding capacity, etc., of the different economic units would, no doubt, be taken into account.

A Suggestion for Constitution-makers.

We wish to draw the attention of the All Parties Conference to the subject of the allotment of revenues to the different provinces for provincial expenditure. They all know that though Bengal is the most populous province in India and though Government collects very large sums of money within its boundaries, it is allowed to keep for its provincial expenditure a sum which is less than what any other major province is allowed to keep. Bengal's provincial allotment is utterly inadequate for its large and disease-ridden population. It is starved on the plea that it enjoys a Permanent Settlement of the land revenue. We will not argue that point now. The we shall say only this that, if the Bengal landlords are gainers by the Permanent settlement, they do not generally make the people of Bengal sharers in the advantages of that arrangement. constitution-makers may recommend its abolition, if they like. But in any case they should recommend an equitable allotment of revenues for provincial expenditure to all provinces.

It may be that there are other provinces which have been as unjustly treated as Bengal in the matter of allotment of revenue for provincial expenditure. In their case also the wrong should be righted. It would produce greater national solidarity in India, if the grievances of one province were sought to be redressed by the leaders of the other provinces also. It is for this reason that, though Bengal is unrepresented in the All Parties Conference Committee, we hope that this subject will engage its attention.

Jogendranath Chaudhri

Mr. Jogendranath Chaudhri, the distinguished lawyer of Allahabad, passed away last month in his residence in that city at the age of eighty. Tributes have been paid to his great ability as a lawyer by such distinguished members of the bar as Sir Tej

Bahadur Sapru. He was a great scholar, too, and a voracious reader of books, every English mail bringing to him a fresh batch of them for study. He began life as a professor in the General Assembly's Institution (now the Scottish Churches College) in Calcutta, and was well-known for his uncommon command over English.

The Leader says: "We think it is acknowledged by almost all that no one has ever practised in the Allahabad High Court who equalled Mr. Chaudhri in sheer brilliance of advocacy."

Mr. Chaudhri was not "politically minded." "He was far too shy and retiring ever to be tempted into public life. A solitary occasion when he could be induced to attend a public meeting was in 1905 to join in Allahabad's protest against Lord Curzon's convocation address, libellous of Indian character." Yet, as *The Leader* recalls,

Our all-wise Government ordered or allowed a police search of Mr. Chaudhri's house due to suspicion that he had something to do with bomb-throwers and their organization. A letter addressed to him by a Bengali acquaintance telling him about possible arrangements for him at Dehra Dun where Mr. Chaudhri thought of spending a part of the summer, was got hold of by the police, as it contained references to 'rice', 'milk' and 'rasgulla'. The police officer asked Mr. Chaudhri for the meanings of these words and Mr. Chaudhri replied 'rice means rice', 'milk means milk' and 'rasgulla means rasgulla'. But the police interpretation was that rice was the code word for gunpowder, milk for picric acid and rasgulla for bomb. This house-search was regarded by everyone at Allahabad and elsewhere who knew, or knew of Mr. Chaudhri as a political outrage. But we suppose we need not add that neither private representation nor a question in the Council nor press criticism was successful in forcing an expression of regret from the Government for the most wanton insult that had been offered to one of the quietest of men and most respected of gentlemen in the whole province.

We do not think the police search of Mr. Chaudhri's house lowered him in the least in public estimation. It was not an insult to him but to the intelligence and good sense of the Government which had ordered it.

The British Press on the Simon Commission Boycott

Many British papers are at present adopting a rather amusingly inconsistent attitude towards the boycott of the Simon Commission in India. In their opinion the

boycotters are insignificant both in numbers and influence, and the boycott is fizzling out. They hold that those who are eager to co-operate with the Commission and cordially welcomed it are more numerous and influential and their number is increasing. At the same time these very newspapers are fulminating against the boycotters and are surprised and disappointed at their foolishness! But what man in his senses ever got furious with a really contemptible opponent?

Officials and Subordinates in Railways

As thousands of E. I. railway workers have declared a strike, it would be useful to have an idea of the rates of pay of the highest and the lowest grade of railway employees. In the course of his presidential address at the seventh conference of the B and N-W. Railwaymen at Gorakhpur Rai Saheb Chandrika Prasad said:—

The salaries of the highest officials of the B & N-W. Railway are Rs 3000 per month for the Agent and Rs. 2200 per month for each of the four Heads of the Accounts, the Locomotive, the Traffic and the Engineering departments, whilst the pay or wages of the lowest employees is about Rs. 9 per month only, giving a proportion of 333.3 and 244.4 to one. This shows that each of the highest officials takes as much as 333.3 or 244.4 men of the lowest rank get from the railway, whilst such officials pretended to show before the Lee Commission that their emoluments in thousands of rupees per month were insufficient to defray their expenses, yet they maintain that their subordinate workers should be satisfied with Rs. 9, 20, 50, 100, a month. The surprise is that the Lee Commission, the Secretary of State and the Government of India have admitted the false claims of the higher officials but none of them gave a moment's thought to do justice to the lower employees, who are daily deteriorating in physical condition and general health for want of proper nourishment.

The Legislative Assembly has repeatedly voted for an imperial inquiry into the long standing grievances of the poor men, yet the Government of India, professing to be the Trustee of the people of India, have suppressed the decision of the people's representatives in the Assembly.

What is true of the B. & N-W. Railway is generally true of the other big lines.

The Rai Saheb proceeded to add:—

The officials maintain that they pay their subordinates at the market rates. It is very wrong of the officials to treat their fellow workers like goods and chattels. This is quite contrary to the provisions of Article 427 of the Treaty of Peace concluded at Versailles by the High Contracting Nations in June 1919, which declares

owing to changing times is inevitable. The author of the *bhashya* (commentary) on Parasara Samhita has plainly said that even if the injunctions of some scriptures be transgressed in bringing about such changes, no guilt is incurred and therefore no expiation is necessary.

The Pandit further declared: "The external form of our religion which has been in existence for a thousand years must be changed according to the Sastras. Abundant proofs exist in the Sastras that we have made such changes before. That in doing so, we have sometimes adopted a path contrary to the dicta of our *maharshis* ("great sages") and acknowledged this path as the path of *dharma*—of this too proof can be found in the Sastras."

"The external form of Dharma has to be changed according to the Age. That *Acharya* (custom) has to be changed is not a new idea to Hindus. No one can reckon how often during the Ages such changes have been made in the Hindu society. Consequently, it is certain that for the preservation, improvement and expansion of our race and religion, we shall have to adopt *Acharya* suited to the times and give up that formerly practised."

In the paragraphs devoted to the so called untouchable and depressed classes, the Pandit declared that the true strength of the Hindu community lies in those classes. "In the circumstances if we do not give them equal rights in our society, then our suicide is inevitable in a short time." He pleaded for universal toleration.

It was a very remarkable speech that he delivered.

The resolutions passed at the Mymensingh session of the Hindu Sabha related to many pressing problems, and should be carried out by the Hindu community in their entirety.

Indian Hockey Team in England

Of the ten matches played by the Indian hockey team in England, they have won nine and lost one, which is the first match of the tour which was characterised by wretched weather conditions. At the "At Home" given in London to the team; and to the Indian world cyclists Sir Atul Chatterjee said, he was sure the visits of such teams was the best method for bringing about international understanding. He was convinced that the success of the team would enhance

the international prestige of India. He hoped other teams would follow the example.

A Little Girl's Heroism

A tale of extraordinary courage on the part of a six-year-old girl at Doddaballapur is related by the Deputy Commissioner, Bangalore. When two days ago he witnessed a fire accident there, it appears a hut in the poor quarters of the town caught fire in the evening when all inmates were out on work. When the hut was half burnt, the girl who was playing near by, rushed in and brought its younger brother three-years old, and placed it on the road.

The girl then rushed in again brought out a babe of six months safely and then fell down on the road badly burnt all over but alive. The hut was destroyed and very great admiration and enthusiasm is evinced by one and all for the silent courage of the girl, who rescued the children from certain death.

The Deputy Commissioner has recommended five acres grant and other rewards and help to her and her family. The brave girl in hospital is smiling.

Claim of Protection for "Indian" Oil

The Indian Chamber of Commerce of Calcutta rightly points out the oil industry seeking protection is one which is hardly Indian in any sense of the term, except that it is geographically situated in India. It has a foreign capital, a foreign directorate and even foreign investments.

The Chamber protests strongly against the precipitate hurry in referring the case of the oil industry and the extremely insufficient period of 68 days by which the Tariff Board are to report. It strongly objects to the procedure adopted by the Tariff Board of not publishing the oil companies' representation and their decision to hear local evidence only. Any increase in price will hit the consumer hard, and the Indian Chamber recommends full and free competition between the imported and indigenous oil unimpeded by tariff barriers.

In a letter addressed to the Secretary, Government of India, Commerce Department, the Secretary of the Maharashtra Chamber of Commerce, Bombay, urges that the time of acceptance of representations and submission of the Board's report should be extended, and that the public should be informed of the oil companies' case to enable them to formulate their views as consumers and tax-payers. It is also urged that the cost of production should be made one of the terms of reference. The Chamber has submitted that the time for submission of the report should be extended to the end of October.

Discipline and Slavery

Taking their cue from some Politicians and journalists of Bengal some of our

students have begun to consider discipline synonymous with slavery. Their attention is drawn to an article on "Obedience and Discipline," written years ago by Sister Nivedita, who was a fearless lover and champion of freedom, and published in the last April number of *Prabuddha Bharata*. Says she :—

"The power of obedience is what we, as a people, require. It is a mistake to imagine that obedience is a form of servility. True obedience is one of the noblest expressions of freedom."

Before freedom comes training. The child must be disciplined that man may be free. Discipline means, before all things, the mastery of how to obey."

"To the great, strength is first necessary, and next, discipline. It is the discipline we have had that determines our power of endurance. Power of endurance is always the result of discipline. By great impulses alone little is achieved. They sometimes bring about ill instead of good."

"The youth of European nations is full of iron discipline, and to this they owe their success in combination."

Ridiculous Misrepresentation of India

The *Manchester Guardian's* Madras correspondent has written to that paper that "the most wealthy professional men in India refuse to spend more than five pounds, or, at the outside, ten pounds, a year on the schooling of a son." However ridiculous such falsehoods may be, they mislead people in England, who do not know the truth.

Let us take the case of school children. In Rabindranath Tagore's school at Santiniketan, boys and girls have to pay a monthly fee of Rs. 25, and they are generally children of middle-class parents. The fee alone comes to twenty pounds a year. There are besides expenses for clothing, books, stationary etc.

In Calcutta colleges even the poorer class of students cannot maintain themselves and get an education at an expense of less than two pounds a month or twenty-four pounds a year.

Sons and daughters of "the most wealthy professional men" spend very much more than the sums mentioned above for their education.

"Suttee"

Rev. Edward Thompson's "Suttee: A Historical and Philosophical Enquiry into the Hindu Rite of Widow Burning" is almost as well timed as Miss Mayo's "Mother India." Sir H. V. Lovett reviews it in the *Asiatic Review* for April and recalls the news of the self-immolation of a young widow as Barh in

Bihar a few months ago, in order to suggest that one swallow does make a summer. He quotes Mr. Thompson as saying that it would be "easy to show that suttee in one form or another, public or private and irregular has occurred almost every year in some part of India between 1829 and 1913 ; and probably it will still occur, though at longer intervals."

The reviewer quotes a passage from Sir Surendranath Banerjee's "Nation in Making," written in 1925, which shows that Indian writers must be very accurate and must weigh their words, if they are not unintentionally to play into the hands of our political opponents. The passage runs as follows —

"The Hindu widow's lot remains very much the same as it was fifty years ago. There are few to wipe away her tears and remove the enforced widowhood that is her lot. The group of sentimental sympathisers has perhaps increased, shouting at public meetings on the great Vidyasagar anniversary day, but leaving unredeemed the message of her great champion."

That the number of active helpers of the widow is small is true. But it is not true to suggest that their number is as small as it was fifty years ago. True. The number of widow-marriage associations and widow-marriages is on the increase. The late Sir Ganga Ram's association for the re-marriage of widows is well-known. Every month it brings about a few hundred such marriages. Such marriages are taking place in many Bengal districts by the dozen. There are, besides, schools and homes in many places where widows receive general and industrial education.

It was not quite a correct description of the state of things when Sir Surendranath wrote the passage, and the quoting of it now is calculated to produce a still more incorrect impression.

Indian World Cyclists

LONDON, April 19

Four Indian motor (?) cyclists, three Mukherjees and Bose, who left Calcutta in December 1926 and arrived in London, were the guests of the Indian Students' Hostel to-day.

In an interview with Reuter, they said they were quite fit and had an adventurous journey through Iraq, Syria, Turkey, Bulgaria, Hungary, Austria, Germany and Holland. They will be resuming their journey shortly.

Ex-Maharaja of Nabha's Internment

In the Commons, replying to Mr. Thurtle, Earl Winterton stated that the ex-Maharaja of Nabha

labour should not be regarded merely as a commodity or article of commerce.

It guarantees "the right of Association for all lawful purposes by the employed as well as by the employers," and "the payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country."

The workers are surely entitled to a living wage to cover the cost of a reasonable standard of life in their own part of the country. This means their pay and allowances should be sufficient to defray the cost of food, clothing, house-rent, and other contingent expenses of themselves and their dependents (wife, children, etc.)

The Rai Sahab's reference to the Versailles Peace Treaty should be found useful and timely by the representatives of Indian Labour at the next International Labour Conference at Geneva. The question of a minimum living wage for workers in India should be brought before the conference in a pointed and prominent manner.

"Independence by All Possible Means"

Before the last Madras session of the Indian National Congress its declared object was the attainment of Swaraj by peaceful and legitimate means. At the Madras session "Independence" was substituted for "Swaraj." It became plain at the last session of the Punjab provincial conference that some persons there wanted it to be declared that it was the object of the Congress movement to win independence by "all possible means."

"All possible means" may include means which are moral or immoral, righteous or unrighteous, lawful or unlawful, pacific or warlike. We need not here go into all such implications of the phrase. Let us confine ourselves to the alternatives of peaceful or military campaigns. Without entering into the question of the *desirability* of a war of independence, it may be stated that all the principal political parties in India are agreed that such a war is under present circumstances *impracticable*. That opinion may be right or wrong, but it exists.

Another indisputable fact is that all the legitimate peaceful means have not yet been tried even partially. So it cannot be said that Swaraj or Independence cannot be gained by peaceful means.

For these reasons we are not in favour of theoretically heroic statements of the means whereby the Congress may gain its end. That body has or should have a

practical outlook, so far at any rate as its methods and means are concerned. It does not exist for the promotion of speculative political philosophy.

Maganlal Gandhi

The untimely death of Mr. Maganlal Gandhi has been suitably referred to in our "Indians Abroad" section. The object which brought him to Bihar, where he died, was quite in keeping with the high idealism which characterised all his activities. He went to Bihar to help in promoting the movement started there to secure for women greater freedom of movement, speech and action outside their homes than they now enjoy. He has practically died a martyr to the cause of woman's emancipation. A most fitting memorial to him would be an active organisation named after him for furthering "the woman's cause," which is also man's.

Dr. Sudhindra Bose

We cordially welcome Professor Dr. Sudhindra Bose to his and our motherland, to which he returns after an absence of a quarter of a century. He has been forced to give an undertaking to stay in India only for six months during which he is not to engage in any political activities. It is to be hoped that the Government of India does not expect him to keep his mind inactive and his eyes and ears shut.

Cawnpore "No Punitive Tax" Campaign

On account of communal riots in Cawnpore in the months of August and September last year a private police tax has been imposed on the people of that city. It falls on innocent and guilty alike. There is a widely prevalent belief that there are employees of the Government who foment "religious" dissensions. That may be unfounded. But there can be no doubt that British policy and policy in India are to some extent responsible for these strifes. It is also true that Government has not taken any effective steps for the prevention of religious riots. It is part of its duty to maintain law and order. Far from admitting its neglect of duty in this respect, or at least its failure to do its duty,

it tries to throw all the blame on the people of the localities where, "religious" riots take place. Under the circumstances the people of Cawnpore are justified in refusing to pay the punitive tax.

Bardoli No-tax Campaign

The revised rates of assessment on land introduced at the recent re-settlement in Bardoli taluka in the Bombay Presidency are 22 per cent. above the old rates. The contention of the rayats is that this has been arrived at in an arbitrary and unjust manner, that the Settlement Officer disregarded popular representations, that the economic condition of the taluka has been getting worse year after year, and that the assessment is an oppressive burden. The rayats and their champions have made every possible effort to obtain justice but have failed. As a last resource the rayats have resolved not to pay rent at the increased rates, and they are manfully sticking to their resolve. It would be quite easy for a powerful Government to ruin a small number of villagers. But there can be no glory in such a victory, if victory it may be called. On the other hand, if the people's spirit be not crushed in spite of financial ruin, it would be clearly a shameful defeat for the Bombay Government. It is to be hoped that that Government will behave in a statesman-like and just and generous manner.

The late Maharaja of Mayurbhanj

The untimely death, at the age of 29, of the late Maharaja Putna Chandra Bhanja Deo Bahadur of Mayurbhanj is a great loss to the people of that State in Orissa and to the cause of education and culture. He had inherited many of the good qualities of his father, well-known for virtues not commonly met with in men of his class. The late young Maharaja gave a lac to the Ravenshaw College, Cuttack, for electric installations, etc., in its laboratories, and made other donations for the encouragement of education and learning. He was also a patron of music and historical research.

Bengal Provincial Hindu Sabha

The address delivered in Bengali by Maharaja Bhupendra Chandra Sinha Sarma of Susang, Chairman of the Reception Committee of the Mymensingh session of the Bengal

Provincial Hindu Sabha, brings to light some facts which are not generally known. One is that many castes showed diminished numbers at the census of 1921 from that of 1911. They are Mali, Dhopa, Gop, Kumar, Muchi, Namadas, Patni, Teli and Tiyar. This has been the case in many other districts also. The Hindu Sabha has passed some resolutions, like that in favour of the remarriage of widows which, if acted upon, are calculated to arrest this tendency, and lead to an increase of population among these and other similar castes.

Another fact is that some aboriginal tribes have adopted Hindu cults and customs without being assigned to any particular caste. Latterly, they have begun to express dissatisfaction at not having the services of Brahmins to officiate as priests. It should not be difficult for the Hindu Sabha to remove the cause of this discontent.

In summing up the Maharaja drew attention to some social, economic and political problems which the Hindu Community in Mymensingh (and elsewhere in Bengal, too) has to face.

In his presidential address in Bengali Mahamahopadhyay Pandit Pramathanath Tarkabhushan dwelt on many important topics, to only a few of which we can refer here. He showed both from history and from the Puranas that many foreign and non-Hindu tribes, such as Saka, Yavana, Huna, Khassa, etc., have become part and parcel of the Hindu community. He cited a verse from the Bhagavata to the effect that even a Chandala acquires the right to Vedic sacrifices and other observances prescribed in the Vedas by accepting the Bhagavata Dharma.

As regards those who were once Hindus but renounced Hinduism to accept a different religion, he declared that there was no sastric obstacle to their reconversion to Hinduism.

He denounced in strong terms the hypocrisy of those who persecute others for practices of which they themselves are guilty in private.

His outstanding pronouncement was to the effect that "human society is not a cast iron frame incapable of change." Like man, society also is living and maintains itself by necessary changes. Therefore, any attempt to preserve the outward form of Hinduism as it existed in the age of the Vedas or of the Smritis is bound to fail. Change in religion and social structure

had been deprived of his title, rights and privileges by the Government of India, because he had not observed the conditions under which he was permitted in 1923 to sever his connection with the Nabha State. On the contrary, he had repeatedly participated in disloyal activities, had engaged himself in propaganda, associated with notorious agitators, and had spent a considerable sum in press campaigns in several provinces, some of which were of the most virulent and untruthful character. He had been informed, on apprehension, of the reason for his detention for which no period had been fixed.

Earl Winterton makes a profuse and reckless use of venomous adjectives because he knows he cannot be compelled to substantiate the charges against the ex-Maharaja of Nabha.

That he, like other detenus, is to be detained for an indefinite period is only in accordance with the most superior brand of justice. Men whose offence is proved by open trial in a law-court are imprisoned for a definite period; but men against whom

there is no evidence, none at any rate that can bear the light of day, are deprived of their liberty for an indefinite period!

Bengal Detenus

According to a statement made by Lord Winterton in the Commons sixty persons are still under restraint under the Bengal Criminal Ordinance and four had been put in jail under Regulation III of 1818. All of them are under detention for an indefinite period. They are said to be guilty of offences for which other men have been tried and imprisoned and released after serving out their term! But the offence of those against whom there is no proof is necessarily so heinous that some of them have paid for it by dying of illness contracted in prison and many others still remain deprived of their liberty.

SOUTH AFRICA AND INDIA

Olive Schreiner's Message

By C. F. ANDREWS

I

SOUTH Africa has produced already one supreme literary genius during the comparatively short period that has elapsed since the first migration of Dutchmen and Englishmen from Europe. Olive Schreiner will live in history, not only as a great writer, but also as a noble personality and a fearless champion of the African races.

Her first novel, 'The Story of a South African Farm' made vividly real to the outside world the strangely remote civilisation of the Boer farm life in South Africa. Mr. Gladstone did more than anyone else to bring this unique novel to the notice of Europe. As written by a very young, unknown writer, it was a revelation. Since that date, Olive Schreiner's name has taken its place in world literature among the immortals.

But few outside South Africa have realised how brave this frail woman was in her defence of the rights of the Bantu races, whom she loved. To the Indian immigrants also, although she never came into close

contact with them, she held out a hand of sympathy and welcome. Brought up in the very midst of deep colour prejudices and racial antipathies, her outstanding fearlessness was all the more remarkable and significant. It would be difficult to find another instance of whole-hearted sympathy, such as hers, among the Dutch people of her own day and generation. Her brother, the Hon. W. P. Schreiner, perhaps came nearest to her; and it is well known that she influenced her brother more than any other person.

I was very fortunate in picking up, in a second-hand book stall in Capetown, a very small book which Olive Schreiner had published more than twenty years ago, before the inauguration of the 'Union of South Africa'. It is called 'Closer Union.' Though written for Europeans, it is in reality a very noble plea for the inclusion of the Bantu races in the Union as an organic member of the whole body-politic. The essay was still-born. It excited, strangely enough, no opposition. Not that its thesis was accepted. Rather, it was ignored. I could not find South Africa, who

even remembered the book, so short-lived had been its career. Yet it is a very inspiring book, full of critical issues even today; and it is prophetic of the future. No other pamphlet, written in South Africa, comes near it, in my opinion, in living interest.

In the earlier part of the book, Olive Schreiner deals with the problems arising between the two races from Europe, the Dutch and the English. These chapters have their own interest. But in the second half she rises to heights of splendid eloquence and fervent enthusiasm, as she comes to the one subject that interests her most deeply of all—"the native question." The word 'native' has still to be used in South Africa, unfortunately, because it is, in actual speech, the one common word for the African. But Olive Schreiner herself did very much indeed to introduce the true word, 'Bantu' in order to signify all Africans resident in the South. She uses the word frequently in this essay.

In dealing with the 'native question,' Olive Schreiner comes naturally to the Indian problem. I shall quote, almost in full, what she says on that subject. In these two articles, I have ventured to quote so copiously Olive Schreiner's own words, because they enable a practical understanding of what is happening, much more graphically and pictorially than any description by a lesser writer.

No one knows the vast country districts of the illimitable South African veldt more intimately than Olive Schreiner. None had studied the problem of the Bantu population more thoroughly. Brought up there as a child, with the non-European races around her, she seems to have formed her own philosophy of humanity, on sound and wholesome lines, and to have clung to her own true humanitarian instinct all through her pained and troubled life, in spite of the depth of race and colour prejudice on every side. Her own friends, whom she gathered around her, as life went on, were inspired by her example. At Capetown, and elsewhere, little groups were formed of those, whose deepest interest in life was to see that, on every occasion, when some great issue arose, the Bantu races should not be trodden under foot by the more powerful civilisation from the West, which was determined at any cost to assert itself, and to possess the land,

with all the diamonds and gold that lay beneath it. She writes as follows:—

"I hold the native question to be the root question in South Africa; and as is our wisdom in dealing with it, so will be our future.

No exact census exists of the population of South Africa, but it is roughly calculated that there are about nine million inhabitants, eight millions of dark men and 1 million of white.

The white race consists mainly of two varieties of rather mixed European descent, but both largely Teutonic, the Dutch and the English; and though partly divided at the present moment by traditions and the use of two forms of speech, the Taal and the English, they are so essentially one in blood and character that within two generations they will be inextricably blended by inter-marriage and common interests, as would indeed, long ago have been the case had it not been for external interference. They constitute therefore, no great problem for the future, though at the present moment their differences loom large. Our vast, dark native population consists largely of Bantus, who were already in South Africa when we came here; of a few expiring yellow varieties of African races, such as the Bushmen; a small but important number of half-castes, largely the descendants of imported slaves whose blood was mingled with that of their masters, as is always the case where slavery exists; and a very small body of Asiatics. It is out of this great heterogeneous mass of humans, that the South African nation of the future will be built.

For the dark man is with us to stay. Not only does the Bantu increase and flourish greatly, as is natural in his native continent, and under the climatic conditions which are best suited to him; not only does he refuse to die out in contact with civilisation, as the Bushmen have largely done; not only can we not exterminate him,—but we cannot even transport him, because we want him! We desire him as thirsty oxen in an arid plain desire water; or as miners hunger for the sheen of gold. We want more and always more of him—to labour in our mines, to build our railways, to work in our fields, to perform our domestic labours, and to buy our goods. We desire to import more of him when we can. It has more than once happened in a House of Legislature that bitter complaints have been brought against the Government of the day for employing too many natives on public works, and so robbing the landowner of what he most desires—native labour.

They are the makers of our wealth, the great basis rock on which our State is founded—our vast labouring class.

Every great nation of the past or present has contributed something to the sum total of things beautiful, good, or useful, possessed by humanity; therein largely lies its greatness. We in South Africa can never hope exactly to repeat the records of the past. We can never hope, like Greece, to give to the world its noblest plastic art; we can never hope, like Rome, to shape the legal institutions of half the world. The chief glory of England,—that wherever she goes, whether she will or not, and even against her will, she spreads broadcast among the nations the seeds of self-governing institutions,—may never be ours. But the

than twenty years ago, in the very midst of her discussion of what is called the Native Question, is significant of the spirit of the writer. She had a very high regard for Asia. The fact that the Bantu had advanced so much further in social qualities than the negro in other parts of Africa, she puts down to the theory that there was constant immigration from Asia all along the East African coast, which led to a mixture of blood. Whether her theory of racial admixture between Asia and Africa is correct historically, or not, is not the point. The point is this, that this gentle lady, brought up in a Boer farm, under a burden of racial prejudices hard indeed to overestimate, was able to throw off this burden so completely, and to look upon such an intermingling of racial characteristics between Asia and Africa not only without any inward opposition or repulsion, but with evident approval and appreciation.

I have probably given sufficient in a single chapter to create an interest in India in this high, intellectual, womanly genius, of German parentage; for her father was a German. Her long Boer tradition in South Africa made her a true South African; for, she was brought up from her very babyhood on the veldt, upon a South African farm. It will be best to reserve for a second chapter any further endeavour to explain, partly in her own words, her vision of race union and race sympathy, in South Africa.

The study of the glowing ideal of this woman of singular genius, concerning the racial future of mankind, will be well repaid in India. For, there is no country in the world to-day that is nearer to India, in its own race problems, than South Africa. This lady novelist and essayist may give her own vision; but what is needed besides, after the ideal has been formed, is for a body of scientific thinkers from both sides to carry forward, detail by detail, the slow solution of this, the most difficult of all the major problems, that are to-day perilously affecting mankind.

II

In the earlier chapter, Olive Schreiner's ideal of racial unity in South Africa was roughly sketched out in her own words. In that unity, she had a place for the Indian, side by side with the European

and the Bantu. Her picture of the Bantu race was nobly drawn. Its steady future development was, more than anything else, to be the deciding factor in the destiny of South Africa. She faces the whole problem of race, without swerving for a moment in favour of her own white race against others. Rather, the principle of 'noblesse oblige' runs through every word she writes. It needs to be added, that up to the very end of her life she maintained this attitude without any compromise. One of her truest and best friends, Mrs. Ruth Alexander, the wife of Advocate Alexander of Capetown, has carried on her work after her death. Without any shadow of reservation, she and her husband also have stood out for absolute racial equality, political, social and economic.

It is a delight to read Olive Schreiner's sonorous sentences, and I shall give the readers of the *Modern Review* the salient passages in full. She writes:—

'If we realise that the true wealth of a nation is the health, happiness, intelligence, and content of every man and woman born within its borders: if we do not fail to understand that the true crown of honour on the head of a dominant class is that it leads and teaches, not uses and crushes; if, as the years pass, we can point with pride to our native peoples as the most enlightened and the most free, the most devoted to the welfare of its native land of all African races; if our labouring class can in the end be made to compare favourably with that of all other countries; and if, for the men of genius, or capacity, who are born among them there be left open a free path, to take their share in the higher duties of life and citizenship, their talents expended for the welfare of the community and not suppressed to become its subterranean and disruptive forces, if we can make our State as dear to them, as the matrix in which they find shelter for healthy life and development, as it is to us; then I think the future of South Africa promises greatness and strength.

'But if we fail in this? If, blinded by the gain of the moment, we see nothing in our Bantu people but a vast, engine of labour; if to us the Bantu labourer is not a man, but only a tool; if he is dispossessed entirely of the land, for which he now shows that large aptitude for peasant proprietorship, for the lack of which among their masses many great nations are decaying; if we force him permanently in his millions into the locations and compounds and slums of our cities, obtaining his labour cheaper, only to lose what the wealth of all the gold reefs and diamond mines could not return to us; if, uninstructed in the highest forms of labour, without the rights of citizenship, his own social organisation broken up, unbonded to us by gratitude and sympathy, and alien to us in blood and colour, we reduce this vast mass to the condition of a great seething, ignorant proletariat—then,

I would rather draw a veil over the future of this land.

For a time, such a policy may pay us both as to labour and lands: we may work gold mines where the natives' corn now stands, and the dream of a labourer at two-pence a day, which has haunted the waking visions of some men, may be realised. But can it pay ultimately?

Even in the commercial sense, will it pay us in the direction of manufacture and trade, if ways the labouring classes of other countries are steadily increasing in skill and intelligence ours remain in the mass, mere hewers of wood and drawers of water, without initiative or knowledge? Will it even pay us to have him robbed of his muscular strength and virility by a sudden change to unhealthy conditions of life? If we poison him with our cantenies, and immerse him in our city slums, will he, even as a machine of labour, remain what he is?

What has attracted me so much in this essay of Olive Schreiner, in addition to its literary charm, is the parallel to India which I have found in almost every word she utters on the race question. For, India represents an even greater congeries of races than South Africa; and the struggle for racial unity in India is many centuries old, while in South Africa it has only just begun.

Towards the end of her essay, Olive Schreiner works out a very beautiful simile of the mother having younger children of her own by a husband, who has brought into the family other children by a former marriage. She uses this, as an illustration of the difficulties confronting a great ruler, who has to rule with fairness and equity, not only over his own people, but also over other races. I have never before seen this imagery used in literature with reference to the problem of racial unity. When I read it, I felt very deeply indeed, that in the Hindu-Muslim unity problem it was, really this singular grace of character, this sensitive sympathy for others, this consideration of humanity that was needed, far more than anything else. It will be well to give Olive Schreiner's whole illustration with its sequel, asking my readers to bear in mind all through a vivid recollection of India itself; she writes as follows:—

‘Lastly, if I were asked what in South Africa is our deepest need at the present moment, I should answer, Great men to lead us.’

‘In an ordinary household, where a woman brings up the children she herself has borne, who share her blood and to whom her instincts bind her, she needs no exceptionally great or rare qualities to rear her children and govern her house in harmony. But if a woman should marry a man

having children by another wife, and they two should again have children of their own, and even receive into their family one or two children by adoption, then, to make her work a success, that woman would require altogether wider and more exceptional gifts. The animal instinct which binds her to what is hers by blood would not suffice; and unless carefully watched and controlled might totally unfit her for the work she has to do. She would need, not merely those high intellectual powers which enable us to understand types of mind widely distinct from our own, but those still rarer graces of the spirit, allied to intellectual gifts, but distinct from them, which make the love of justice inherent in an individual. If she possessed these qualities, in balanced proportions, the domestic world she ruled over might become a centre of unity and of desirable human relations. If she possessed none of them, it would become a hell.

‘So the man fitted to be the national leader of a great heterogeneous people requires certain qualities not asked for in the leaders, even the great leaders, of a homogeneous race. Our call in South Africa today is not for a Cavour or a Talleyrand, nor even at the moment for a William Wallace, or a Robert Bruce. The man who should help to guide us toward the path of true union and a beneficent organisation must be more than the great party leader, the keen diplomatist, the far-seeing politician, or even the renowned soldier. He may be some of these, but he must be much more.

‘He must be a man able to understand, and understanding to sympathise with, all sections of our people. Loving his own race and form of speech intensely he will never forget that it is only one among others, and deserving of no special favour because it is his. He will understand the really colossal difficulties, which a white race has to face in dealing with a labouring class severed from it by colour. He will realise to the full the difficulties the Bantu faces, when, his old ideals and order of life suddenly uprooted, he is confronted with a foreign civilisation which he must grasp and rise up to, or under which he must sink, and he will seek by every means in his power to help him to bridge the transition without losing his native virtues. At all costs to himself, he will persist in holding up before us the ideal, by which he is himself dominated, of a great South Africa, in which each element of our population, while maintaining its own individuality, shall subserve the interests of others, as well as its own till from this sense of mutual service, and from that passionate love of our physical Mother Earth, which is common to all South Africans, shall grow up the wide and deep South African feeling which alone can transform us into a great nation. In spite of many mistakes and many failures, and the sorrow which walks beside all who strike out new paths for the feet of men, such a man would form the true centre of our national life, and, however fitfully and slowly, would lead our national conscience to shape itself in harmony with that ideal. For, beneath the self-seeking and animal instinct which covers the surface of our lives, lies that which in its saner moments does recognise singleness of purpose where it finds it, and I

only that a wide justice and humanity between men is righteousness—the righteousness that exalteth a nation.

'It is said that when centuries ago a great Hollander died, the little children cried for him in the streets. When our national leader dies, the hearts of a complex people will put on mourning for him, from the kraal in Kafirland to the solitary Karroo farmhouse and the cities where men congregate. And when, with the passing of the years, the mists of present self-interests and racial antagonisms have faded from before our national eyes, men standing beside his grave will recognise him for what he was—the father of his people.

'What South Africa calls for today is simply for a man, with a clear head and a large heart, organically incapable of self-seeking, or racial prejudice.'

It is not easy to find one single man,

who is able to fulfil in South Africa such a high destiny as that. But General Botha came very near, in heroic and regal character, to such a fulfilment. The present Prime-Minister, General Hertzog, has also qualities which make him deeply loved and profoundly respected by all.

In India itself, there are those who have learnt by birth and experience to set forth this higher type of human character. If we leave aside for a moment such unique outstanding figures as Gandhi and Tagore, we may point with genuine pride to the President of the All-India National Congress, Dr. Ansari. A country which can produce a character such as his, at the most critical time, need never despair.

COULD INDIA, FREE, PROTECT HERSELF?

By J. T. SUNDERLAND

DOES any one question whether India, if free, would have sufficient men, sufficient fighting ability, and sufficient material resources to enable her to protect herself against external aggression? Let us see what are the facts.

1. First, as to physical location and surroundings. There is probably not a country in the entire world better situated for natural security, for natural safety from attack, invasion or aggression by other nations, than India. It is a vast peninsula which nature has thrust, all by itself, far down into the Indian Ocean. On its northeast, north and northwest, that is, on its almost entire land border, it is surrounded and to a most extraordinary degree protected by vast ranges of mountains the loftiest and most difficult of passage in the world. The rest of its boundary is ocean, with no country within thousands of miles from which there is probably the slightest danger of attack.

2. As to men. India has a population of 320,000,000, from which to draw soldiers in time of need. This is twice the number of Russia, five times that of Germany or Japan, more than six times that of France or Great Britain.

In 1918, an estimate was made of India's available military manpower, that is the number of her men between the ages of twenty and forty. It was found to be over 40,000,000. Here is a source of supply for soldiers greater than that exists in any other nation in the world except China.

3. What about the fighting quality of these men? It is true that the Indian people, as a whole, are more peacefully inclined than Europeans. But all history shows that peaceful nations often produce the bravest and most effective armies known, when there is need to defend their liberties and their country. Such armies fight from duty, from principle, from true patriotism, their courage is moral, not merely physical; and they come nearer than any other soldiers to being invincible.

But as a fact, fully one hundred million of India's population consists of what is known as her "fighting races,"—her Sikhs, Maharrattas, Rajputs, and others.

As for the qualities of Indian soldiers, notice some testimonies of British authorities.

No Englishman of the past generation knew India better than Lord Curzon, for five years its Governor-General and Viceroy.

military and naval leaders and commanders equal to those of any nation.

Finally, has India material resources with which to carry on successfully a war of defence: coal, iron, timber, oil, and others? It is well-known that to-day these are as important as men. Is not India wanting here? No, she is not. She has all these in abundance beyond any nation of Europe except Russia. Indeed, there are not more than two or three nations in the world that possess these indispensable requisites for war in such almost inexhaustible quantities as does India. Japan has shown herself able to defend herself both by land and sea, and yet her material resources, of all the kinds named, are scarcely more than infinitesimal compared with the vast resources of India.

From all these facts it will be seen utterly without foundation is the claim that India needs the so-called protection of any foreign power; or that, if once master in her own house, she would not be able to make herself as secure from outward molestation as any nation in the world.

Sooner or later India will be free, either with the freedom of equal partnership with Great Britain, like the freedom of Canada and South Africa, or with the freedom of absolute independence. No future event is more certain than this. And the date of the attainment of this freedom cannot be long delayed without disaster to Britain as well as India.

When India becomes free, no nation will have cause to fear her. Notwithstanding her vast population and her unexcelled potential military strength, she will not be a danger to any people, as so many nations are. On the contrary, cherishing ideals of peace and goodwill, as she does, her freedom and her occupancy of an important place in the world will be a powerful influence in favour of

world peace. Gandhi and Tagore are a sufficient guarantee of this.

Many Indians, following Gandhi, believe that India, when free, will need nothing for her protection from aggression by other powers except her own peaceful spirit and her determination to deal with all nations justly, fairly, without aggression on her part and without giving any ground for offence. Most of her leaders, Gandhi and Tagore among them, are strong believers in treaties of peace, and arbitration; and there is every reason to believe that when she becomes master of her own career, she will, among her earliest acts, seek to make her security doubly secure by negotiating with all the leading nations, treaties of complete arbitration like that which France has proposed to the United States, pledging India on the one hand and those nations on the other to settle all their disputes and differences by reason and justice, and not by force, thus making war between them impossible. Thus she will be relieved from that shameful and shocking necessity of being compelled to waste on a great army and navy the nation's revenues which are so sorely needed for education and the welfare of the people.

However, if India finds, such against her spirit and her earnest desire, that she must arm, that she can obtain safety in no other way, then the world may be perfectly certain that *she will and to the full*, making herself as formidable as Japan, and far more because her supply of men and material resources are so much greater. *And she will be unconquerable.* Never again will the great Indian people allow themselves to be robbed of their freedom and their nationhood by any foreign power. The lesson they have learned in the last century and a half will last them a thousand years.

A TRIBUTE TO THE REV. DR J. T. SUNDERLAND

By TARAKNATH DAS, Ph. D.

India will remain eternally indebted to the Rev. Dr. J. T. Sunderland; and it is not possible for me to express adequately the feeling of appreciation and gratitude I cherish towards him. However, on the

occasion of the celebration of his eighty-sixth birth-day, I feel it to be a privilege to write these lines, to enlighten the Indian public and the friends of India abroad.

About twenty-one years ago, while study-

ing "Prosperous British India" by the late Mr. William Digby, I came to know of Dr. Sunderland's work. I found that the eminent English authority on India, in discussing the causes of famines in India, quoted long passages from the writings of the Rev. Dr. Sunderland, published in the *New England Magazine*, some time in the nineties of the last century. Dr. Sunderland pointed out that the famines in India were not due to scanty rain-falls or the lack of production of food-stuffs, because while millions starved in India, ship-loads of food-stuffs were being exported from the country. The awful abject poverty of the people, caused by exploitation was the real cause of Indian famines. He came to this conclusion as the result of his studies and observations, while visiting India.

In 1904, when I was in Boston, I came to know that Dr. Sunderland had written an article on India in the *Atlantic Monthly*, discussing the causes of unrest in India. This article created such an unfavorable impression about British rule in India, that the late Lord Curzon personally wrote to the *Atlantic Monthly* that the publication of such articles was harmful to British interests.

In innumerable ways Dr. Sunderland has served the cause of India and tried to interest American people, even men like the late Andrew Carnegie and others, to aid the people of India in their sufferings under an alien rule. During these efforts of his, he became convinced that strong British influence in America and other countries was constantly at work against Indian interests and to keep India in subjection and to lower her in the eyes of the civilized world. This fact made him redouble his energies, in a spirit of righteous indignation.

He keenly felt the need of representation of India's cause in America and other countries and thus counteracting the anti-Indian activities of interested Americans, Englishmen and Indians. During the stay of Lala Lajpat Rai in America (1914-1919), Dr. Sunderland aided him in every possible way; because he felt that by doing so he was pleading India's cause, the cause of one-fifth of the population of the world, before the international court of world public opinion. With Lala Lajpat Rai, he was instrumental in organising the India Home Rule League of America and co-operated in editing

Young India, the organ of the organization.

During the last few years, among his other activities, he has devoted his time to write an authoritative work on "India's Case For Freedom". He knows his subject more thoroughly than many Indians, because he regularly studies at least a dozen Indian dailies, weeklies and periodicals; and very few important books on India written in the English language has escaped his attention and perusal. Certain chapters of the above book have been lately published in the *Modern Review* of Calcutta; and I have reasons to believe that all responsible Indian leaders feel that, by this work alone, not to speak of his forty years' constant activities in favor of India, Dr. Sunderland has rendered a very valuable service, not only to the cause of India's Freedom, but to the cause of Indo-American friendship and to the cause of better understanding between the East and the West. To day, when many persons are engaged in misrepresenting India, Dr. Sunderland by his action has proved that the cause of Freedom should be fought in every land, and for a truly religious man, there is no room for racial or religious prejudice.

One may ask what is the motive behind Dr. Sunderland's interest regarding India. It is needless to say that there is not the motive of gain of any form or character. After an analysis of his life, (about which it is very hard to secure much information from our worthy friend, because he does not want to speak of his own work), I have come to the conclusion that he is a very remarkable man, he can be well-compared with an ancient Hindu sage or a prophet of the Old Testament. He has devoted his whole life for the causes of Truth, Justice, Liberty and Human Brotherhood.

When he was young, he championed the cause of the abolition of slavery in the United States of America and worked ardently with the great men of that time. Later on, he devoted his best energies to the cause of Religious Liberty and Toleration. As a man of God, a student of Comparative Religion and devout Christian of the Unitarian sect, he stood against all forms of religious bigotry and tried his best to promote better understanding between the peoples of all religions and all races. With that noble spirit of sympathetic understanding, he

visited the countries of the Orient and became interested in the peoples of the East, and worked and is still working for the furtherance of the cause of Human Brotherhood.

To know the Rev. Dr. Sunderland intimately has been one of the great privileges of my life. His burning sincerity and loyalty to the highest ideals of life have been an inspiration to me. When he speaks for the cause of the oppressed peoples, he champions it with the deepest passion for Truth.

Knowing as I do all of Dr. Sunderland's devotion to the cause of India, I can safely assert that in the eighty-seventh year of his age, he devotes more time daily to serve the Indian cause than any Indian youth in America or India. Dr. Sunderland, as I know him, works like a Yogi of the Bhagabat Gita, who thinks that it is his privilege to serve and work; and the result is in the

hands of God. Thus he is a confirmed optimist; and his optimism has its magnetic force which I experienced in a very difficult situation in my life.

We should pay homage to the Rev. Dr. Sunderland, a friend of oppressed humanity. The best token of tribute to him by the people of India will be their efforts to carry out the ideals of Truth, Justice, Freedom and Human Brotherhood, which he has championed during his life. He will feel happier, if the Indian leaders and public respond to the idea that "India's Case For Freedom" should be spread all over the world and through the support of World Public Opinion, the struggle for Indian Freedom be won, if possible without violence and bloody revolution.

Florence, Italy.

VIDYASAGAR AND VERNACULAR EDUCATION

By BROJENDRANATH BANERJI

II

SUPREME GOVERNMENT APPROVES THE SCHEME OF VERNACULAR EDUCATION

The Home authorities at last realized that the education of their Indian subjects was a part of their duty. On 19th July 1854 the President of the Board of Control signed the great Despatch—rightly known as the *Educational Charter of India**—which gave such an impulse to education in India. In January 1855, a start was made in carrying out its provisions in Bengal, by the appointment of a Director of Public Instruction (in succession to the Council of Education) and, shortly afterwards, by the constitution of the University Committee,—of which Vidyasagar was elected a member in order to prepare a scheme for the establishment of Universities at the Presidency towns of Calcutta, Madras

and Bombay.* We also find from the *Public Procdgs.* dated 12th December 1856 (p. 7) that the Pandit was appointed a Fellow of the Calcutta University when formed.

The Despatch of the Court urged a greater expansion of primary education than Halliday had suggested in his scheme. The Governor-General, however, was in favour of introducing the scheme gradually and making a beginning with certain districts only. He did not object to the occasional inspection by Vidyasagar of the vernacular schools in Bengal, if it were found that his more important duties, as Principal of the Sanskrit College, would not suffer, but the terms of the Court's Despatch would not allow of his being made a Superintendent of Vernacular Education, as it was settled that the work in future should be done by the

* Letter from Ishwarchandra Sharma to Capt. H. C. James, Private Secretary to the Hon'ble the Lieut. Governor of Bengal, dated 3rd July 1854.—*Education Con.* 19 Octr. 1854, No. 118.

* Letter to Pandit Ishwarchandra Sharma, dated 26th Jany. 1855.—*Public Con.* 26 Jany. 1855, No. 154, also No. 153. (I. R. D.)

Director of Public Instruction and by the Inspectors under him. At the same time the Governor-General was strongly impressed with the necessity for establishing Normal Schools for the training of vernacular teachers.*

Although a Director of Public Instruction was appointed, Halliday felt that he could not do without the help of a man of Vidyasagar's ability, if the scheme of vernacular education in Bengal was to be made a real success, as the following extract shows :—

"...The Lt.-Governor remains of opinion that a person so specially qualified for the work as Pandit Ishwarchandra Vidyasagar may be very advantageously employed, for a time at all events, even under the new organization of the Education Department, and he requests that you will consider and report in what manner his services may be most usefully made available without injuriously interfering with his duties as Principal of the Sanskrit College."†

The Director of Public Instruction, in reply, suggested the temporary appointment of Vidyasagar as Inspector of Schools, until the services of the permanent incumbent—Mr. Pratt—would be available. This proposal however, did not commend itself to the Lt.-Governor, who wrote as follows :—

"I should not anticipate any advantage from a merely temporary employment of Pandit Ishwarchandra.

He is a man of a very decided character who has formed and expressed strong views on the subject of vernacular education which, if permitted, he will no doubt endeavour to carry into effect with energy and intelligence according to the scheme approved of.

But I do not see that he could be expected to effect, if temporarily employed, and left to understand that any time, three weeks or three months hence he is to retire from the work on the appearance of Mr. Pratt as inspector.

I do not see why Ishwarchandra should not, under the name of Officiating Sub-Inspector, and with the salary sanctioned by the Supreme Government, be directed to carry into effect in the three or four zilas mentioned in my plan of the scheme of vernacular instruction which I have recommended and which has been approved by the Supreme Government.

This need not interfere with Mr. Pratt, who besides the task of inspecting what Ishwarchandra has done, will have abundant occupation as Inspector of English and Anglo-Vernacular schools and colleges in the zilas to which the plan already approved of has destined his labours to extend.

This scheme of Bengali vernacular instruction is of the deepest importance. I believe the method, which I devised with great pains and after much enquiry, to be the most promising and it would be a pity to wish its failure by placing one of the chief instruments of its execution in an embarrassing and erroneous position in which it would be difficult for him to exert himself with effect.*

On 20th April 1855, the Government of Bengal wrote as follows to the Director of Public Instruction about the best means of utilizing the services of Pandit Ishwarchandra Sharma :—

2 With regard to your proposal to employ Pandit Ishwarchandra Sharma as an Inspector of Schools for a time merely, and until the services of Mr. Pratt are available for that duty, the Lt.-Governor is disposed to doubt the expediency of such an arrangement, for not only would the Pandit be necessarily unable to effect any results of importance during so brief an incumbency, but to place a man of his mature views and experience in a temporary position like that proposed, and with the understanding that he would be liable to be removed from it at any moment, would evince, the Lt.-Governor thinks, less consideration on the part of Government than the Pandit's character and great qualifications for the duty in question justly entitle him to.

3. The Lt.-Governor is of opinion that Pandit Ishwar Sharma may at once receive directions to set on foot the scheme of vernacular instructions which was recommended in the Minute [24 March 1854] drawn up by His Honour when a Member of the Council of Education in March last, and which scheme was generally sanctioned in the letter from the Supreme Government, forwarded to you with this office letter of the 23rd ultimo, three or four of the zilas in the neighbourhood of Calcutta being selected by yourself, in communication with the Pandit, for the introduction of the scheme. This will not, particularly at the present time, interfere in any way with the Pandit's duties at the college. The details of the Pandit's employment on this duty should be arranged for the present in direct communication with yourself, and will eventually be carried on in co-operation with Mr. Pratt and under his immediate superintendence. While employed in this way the Pandit should draw the allowances specified in the Minute above referred to, viz Rs 200 a month (exclusive, however, as recommended by you, of his travelling charges), in addition to his allowances as principal of the Sanskrit College.†

VIDYASAGAR ESTABLISHES A NORMAL SCHOOL FOR TRAINING VERNACULAR TEACHERS

The Director of Public Instruction immediately called Vidyasagar and discussed matters with him. The Pandit was made Assistant Inspector of Schools, South Bengal, in addition to his duties as the Principal of the Sanskrit College, on a salary of Rs. 200 a month from 1st May, 1885. The selection of qualified teachers for the proposed new Model Vernacular schools was his first task. This subject was one of extreme importance as he knew that the success of the Government educational measures would depend mainly on the proper training and equipment of the teaching staff. Early in May 1855, he issued notices inviting candidates for vernacular teacher-ships to undergo an examination in the vernacular at the Sanskrit College. More than 200 candidates from the neighbouring districts appeared and, on examination, it was found that very few among them could take charge of the Government Model Schools without further training, and thus the necessity of a Normal School for training teachers was established beyond doubt. In this connection Vidyasagar was desirous of having the Bengali School called (Patshala) formerly attached to the Hindu College, placed under his care and superintendence. This institution, he told the Director, might be made to serve an important purpose in connection with the training of teachers for the vernacular schools in the mofussil, by affording the means of testing their qualifications as teachers, and by its being raised, under his own careful supervision, to the status of a Model School for imitation.* In the following letter (dated 2 July 1855) to the Director he clearly set forth the special object for which he advocated the establishment of a Normal School and the arrangements for conducting it:—

"I have the honour to represent that under present circumstances it is very difficult to get a good number of competent vernacular teachers. To supply this want the establishment of a Normal School or class has become absolutely necessary. I beg, therefore, most respectfully to submit the following plan for such an institution for your favourable consideration and sanction.

I would propose that two masters, one at Rs. 150 and the other at Rs. 50 per month, be employed for the present to undertake the task of training up the teachers for our new vernacular schools.

I have lately, with the co-operation of my assistant, examined upwards of 200 candidates for teacherships in the new vernacular schools, out of which number 92 only have been found to be eligible for the situation of teachers. Of this last number, however, very few only are qualified to undertake the duties of teachers immediately,—the remainder require previous training. I would, therefore, beg to propose that these form the Normal class and that they be attached to it for six months, which period in my humble opinion will be quite sufficient to make them fully competent for the post of teachers.

As most of these men do not belong to Calcutta, and as they are not in circumstances well enough to afford for their living here, I would recommend that a stipend of Rs. 5 per month be allowed to 60 of the best of them while they remain in the Normal class. To ensure their continuance in the class and subsequent service in the vernacular schools, I beg to suggest that they be required to subscribe to covenant containing the following conditions:

That they shall continue in the Normal class for such period as may be necessary for their training.

2nd. That when appointed as teachers they shall serve Government for at least three years.

3rd. That they shall accept situations of not less than Rs. 15 a month to which they may be posted within certain districts to be named in the covenant.

4th. That in default of the fulfilment of any of the above conditions, they shall each of them pay a fine of Rs. 60.

I would further propose that the Normal class or classes be established in connection with the Patshala, as in that institution they shall not only have the benefit of observing the mode of teaching and the management of the classes thereof, but by being made occasionally to teach them, they shall acquire a practical knowledge of the art of teaching.

For the post of Head Master of the Normal classes, I would recommend Babu Akshoy Kumar Dutt, the well-known editor of the *Tatwabodhini Patrika*. He is one of the very few of the best Bengali writers of the time. His knowledge of the English language is very respectable and he is well informed in the elements of general knowledge, and well-acquainted with the art of teaching. On the whole, I do not think that we can secure the services of a better man for the post. For the second mastership, I would propose Pandit Madhusudan Bachaspati. He is a distinguished ex-student of the Sanskrit College, an able and elegant Bengali writer, well-acquainted with the art of teaching, and, in my opinion, in every respect qualified to fill the post for which he is recommended.

The above arrangements are intended to meet, for the present, all requirements for teachers in the vernacular schools and should immediately be carried into effect. There is one difficulty, however, which I beg here to bring to your notice. It is the want of accommodation for the

* Letter from the Director of Public Instruction to W. Grey, Secretary to the Government of Bengal, dated 1st May 1855.—*Education Cons.* 19 May 1855, No. 88-89.

Normal classes in the building now occupied by the Patsha'a. This building is scarcely sufficient for the purposes of that school and can by no means accommodate the additional classes. Arrangements for room should, therefore, be so made that the classes may be opened as soon as their establishment is sanctioned."

The scarcity of qualified teachers for vernacular schools was at that time felt everywhere, and both the Director and the Bengal Government gave their cordial approval to the Pandit's plan, as Rs. 500 a month was but a small expenditure, considering the benefits to be derived from it, viz, the production of 60 well qualified teachers every six months†. A Normal school was formally opened, on 17th July 1855, under the immediate superintendence of Vidyasagar.

The following details based on the Pandit's report on the Normal school will give the reader more of its early history.‡

For want of a separate building the Normal School was located in the Sanskrit College and was open only in the morning as no spare rooms were available in the College building during the usual college hours§. The school consisted of two classes, the higher of which was under Akshoy Dutt, the Head Master, and a well known Bengali writer, and the lower under Pandit Madhusudan Bachaspati, the Second Master. It made a start with 71 pupils, and monthly stipends of Rs. 5 each were awarded to the 60 most deserving amongst them. No candidate under the age of 17 years, or above 45 years, was eligible for admission, men of the lower castes being excluded at first. Students were taught from the *Bodhodaya*, *Nitibodh*, *Sakuntala*, *Kadambari*, *Charupath* and *Bahyabastu*, and attended lectures on Geography, Natural Philosophy and Natural History. Examinations were held monthly and the inattentive pupils were dismissed.

* Education Con. 12 July 1855 No. 89.

† Ibid. Nos. 88, 90.

‡ General Report on Public Instruction in the Lower Provinces of Bengal Presidency for 1855-56 pp. 37-39, App. A.

§ The Pandit, later on, represented to the Director the need for a separate building for the school, as the first arrangement was not only inconvenient but retarded the progress of the Normal pupils who, instead of six hours' study, had only the benefit of two hours.—Vidyasagar to D. P. L., dated 8 August 1856. Education Con. 29 Aug. 1856, No. 125.

Those who were found to have made creditable progress were selected for teacherships. In the examination held in August 1855 ten pupils were passed, in September fifteen, and in November thirteen; of the passed students 29 were appointed to the Model Schools, and the remaining 9 placed at the disposal of Mr Pratt, the Inspector of Schools, South Bengal, at his request, for employment by him in the aided and indigenous schools.

The test for admission at the commencement was a fair knowledge of the vernacular which was ascertained by the candidate reading the *Nitibodh* with fluency and correctness, and explaining passages from it with tolerable accuracy; but this test, having subsequently been found too low, was raised after a few months, when a familiar acquaintance with the *Nitibodh*, *Sakuntala*, *Betal Panchabagnshati*, and *Introduction to Sanskrit Grammar*, was required.

VIDYASAGAR OPENS GOVERNMENT MODEL VERNACULAR SCHOOLS

As already stated Vidyasagar took charge of his new office on 1st May 1855. To facilitate his work, four Sub-Inspectors* were placed under him. In the following report of Vidyasagar we get an interesting narrative of the measures adopted by him to introduce the scheme of vernacular education into the districts of Nadia, Hughli, Burdwan and Midnapur—

"On the 1st May 1855, I took charge of the office of Asst. Inspector of Schools. Previous to taking charge, I had submitted to the Director of Public Instruction a memorandum of the measures which I would adopt on being appointed to my new post. These measures were all sanctioned by that officer in his letter of the 26th April 1855, which authorized me to enter upon my duties and forwarded for my guidance, the Minute of His Honour the Lieut-Governor when a member of the late Council of Education, together with other papers on vernacular education. 2. Agreeably to my memorandum aforesaid, I first engaged myself in selecting my Sub-Inspectors, and having selected them, despatched them to the interior to inspect suitable towns and villages for the Model Schools. I was next engaged in examining a large number of candidates for teacherships in the new schools, out of whom I selected 22. Most of these men, however,

* The Sub-Inspectors were: Harinath Banerji, Madhav Chandra Goswami, Tarasankar Bhattacharya and Vidyasagar's second brother-Dinatanidhu Nayaratna. They were appointed from 1st May 1855 on a monthly salary of Rs. 100 each, plus travelling charges.

were found not competent to take immediate charge of schools. The establishment of a Normal School became, therefore, necessary to give them a previous training, and a plan for such an institution being submitted was sanctioned by Government, and the school duly opened by the middle of July.

3. By the middle of June the Sub-Inspectors returned from the interior and submitted their reports. I selected five villages in each district for the Model Schools. It appearing most expedient to open the schools first in the district of Nadia, I submitted a report on the 25th to the Director (through the Inspector of Schools, South Bengal) soliciting his sanction to the establishment of schools in that district, and to the commencement of operations from the first of July following for which I made the necessary arrangements. In this report I made no mention of the expenditure to be incurred on account of the schools, because I understood from the papers forwarded for my guidance that, that point had been settled. But the Director was of opinion that it was necessary to obtain the orders of Government upon the subject and therefore desired that my report should have reference to it. Accordingly, on the 28th I sent in a second report, proposing the establishment of six schools in each zila, and the appointment of three teachers to each school at a monthly cost of Rs. 70.

4. His Honour had proposed in his Minute the establishment of five schools in each zila with two teachers to each school, at an expenditure, not exceeding, as I understood, Rs. 55 per month. But as a fresh reference was to be made to Government upon the subject, as above stated, and as it appeared to me that the requirements of each district could not be well met by five schools, I proposed in my second report the establishment of six. I also took this opportunity to propose the appointment of three instead of two teachers to each school, as I had reason to believe that the latter number would not be sufficient. In this report I solicited sanction to the establishment of schools in all the four districts, because I thought it most convenient to obtain the orders of Government upon the subject at once, instead of submitting the point on four different occasions.

5. On the 30th June I waited upon the Director and found him very anxious for the immediate commencement of operations. I also understood from the conversation I had with him that in anticipation of the sanction of Government I might adopt measures for opening the schools. Measures were accordingly taken by me to commence operations in Nadia.

When at the beginning of July I again waited upon the Director in the hope of receiving final instructions, he shewed me a letter from the Inspector in which I found objections were taken by the latter officer, to my report, in consequence of no mention having been made in it of the following points: Course of instruction, Class-books, Sale of books in the schools, Distance and direction of schools from Police Thanahs, Rules for attendance, Schooling fees, etc. I explained to the Director that the first two points had not been mentioned by me, because they had been settled in His Honour's Minute, and the third, fourth and fifth points were admitted by him to be too

unimportant to retard our operations. With reference to the sixth, namely schooling fees, the Inspector had strongly urged that the system should be introduced from the opening of the schools, and in this view the Director appeared to agree. I represented to him that personally I also was strongly in favour of the fee system but that I did not think it expedient to introduce it into the new schools from the commencement, as its introduction might, to a certain extent, throw impediments to our success. It was on this consideration alone, that His Honour was pleased to suggest in his Minute, that admission into the new schools, should at the beginning and for some time be gratuitous. I further represented to him that in case fees were insisted upon I and my Sub-Inspectors would be placed in a very awkward position, as we had told the villagers in positive terms that the schools would be free at the commencement. The Director, however, did not agree with me, and directed me to think over the matter again. Thus this important point remained unsettled, and operations were consequently postponed.

7. I have observed in paragraph 5 that measures had been taken by me to commence operations at the beginning of July. Teachers had accordingly been sent by me to some villages to await the opening of the schools there. I was now obliged to recall them, but at Kanchrapara a school had been opened through a misunderstanding of my instructions before the teachers who had been sent there could be called back. When on my way to Balagarh I visited that village on the 6th July, to postpone the opening of the school that was to be established there, and heard that it had already been opened, I thought long on the propriety or otherwise of stopping it. But as I expected to receive the final orders within a few days, I came to the conclusion, that the one which has been opened might be allowed to go on. But unfortunately those orders directed me to strike out Kanchrapara from the list of villages for Model schools, in consequence of representations made to the Director by certain Missionary gentlemen that the new school would be prejudicial to the interests of an English school which they have at Ghoshpara, a village about 4 miles distant from Kanchrapara.

8. On the 6th July, as aforesaid I was obliged to go to the interior, agreeably to engagements which I had made with the inhabitants of Balagarh and Krishnagar Vernacular School Committee to visit those places to report upon the application of the former for a Model School, and of the latter for a grant-in-aid. I also went over to Boichai to make certain enquiries regarding the vernacular school there.

9. I returned from the interior by the middle of July and on the 26th of that month, I submitted a third report upon the establishment of the Model schools. In this report I explained at length the inexpediency of introducing schooling fees from the beginning.

10. I waited upon the Director on the 6th August and learned that final orders had that day been passed upon the subject of the schools, and I was referred to the Inspector for information regarding them. When I called upon that officer in the course of the day, he shewed me the orders in question, which authorized me to open

Model Schools in five villages in each of the zilas of Nadia, Hughli, Burdwan and Midnapur at a monthly cost of Rs. 50 per each school. The orders also required that the schools were to be opened on the understanding that the inhabitants of each village should build a suitable school house, and engage to keep it in repair and that measures should be adopted to erect a gallery and attach a garden or playground to each school-house. The Inspector promised to send a copy of these orders for my guidance, but as the same was not received up to the 14th, I called his attention to the subject, and got a reply from him on the same day, embodying the purport of the orders.

11. The above orders threw fresh difficulties in my way. I had made arrangements with the inhabitants of sixteen out of the twenty villages where schools were to be established, for the erection of school-houses only, without my reference to galleries and play-grounds, which I did not know would be required. With the inhabitants of the remaining four villages, who were generally not in easy circumstances, I had stipulated that a portion of the expenses for the school-houses would be defrayed by Government. In making this latter arrangement, I was guided by His Honour's Minute from which it will be seen that His Honour meditated the construction of these buildings at the expense of the State. I was personally directed by His Honour to the same effect when I was sent by him to the interior in May 1854.

12. Accordingly on the following day 15th August, I wrote to the Inspector representing that if the condition of galleries etc., was enforced, our operations could not immediately be commenced, because it would then be necessary to send the Sub-Inspectors again to the villages selected to sound the inhabitants as to whether they were prepared to meet the additional expenditure of galleries, etc. and if not fresh villages will have to be selected, the inhabitants of which would act up to the conditions.

13. On the 16th I received a reply from that officer explaining that galleries etc., were not to be considered as conditions, but that it should be ascertained if the villagers were unwilling to give this additional aid. The letter also authorised me to open schools in the sixteen villages, the inhabitants of which had agreed to erect school-houses, and stated that a reference had been made to the Director regarding the remaining four. On the next day, I received another letter from the Inspector conveying authority to me to open schools in all the twenty villages. The important question of schooling fees was also decided by the Director and I was directed by the Inspector in a later date, 15th August, to postpone the introduction of the same for a period of six months, after which it was not to be deferred, if possible.

14. Operations were accordingly commenced in the district of Nadia, and on the 23rd August a school was established at Belgoria. Since then fifteen schools (5 in Nadia, 4 in Hughli, 4 in Burdwan and 2 in Midnapur) have been opened up to this day.

15. After operations had commenced I received a letter from the Inspector on the 28th August enquiring whether any pledge had been given by

me to the inhabitants of the four villages who were unable to defray the total cost of school-houses, that schools would be established in them and if otherwise, directing me to select other villages in their stead. 'It is true I had given no positive pledge at the beginning to the inhabitants of the villages in question but on receipt of the Inspector's letter of the 17th August authorizing me to open schools in all the twenty villages, I had assured them that schools would be established in their villages. The requisition of the 28th item, was therefore rather late. A school had already been opened at Jowgong one of the four villages on the 26th August, or two days before the receipt of the Inspector's last letter referred to. I may here mention however, that the people of two of the four villages have subsequently been induced by me to bear the entire expense of school-houses.

16. I now beg to enter upon an account of the other measures adopted by me in connection with vernacular education. In my memorandum sanctioned by the Director I had proposed that arrangements should be made to make the school-books as cheap as possible. To this subject I directed my attention, and have been able to compile two new books for beginners and to revise and make cheap editions of others. I am also compiling other class-books myself, and have engaged competent parties in the same task. I hope that at no distant period the following books would be ready for use :—

Outlines of Geography
Geography of India
Biography
Arithmetic
Elements of Natural Philosophy
Popular treatise on Physiology
do. Astronomy
History of Greece
do. Rome
do. England
do. India
Raselas
Telemaachus
Aesops Fables.

17. I proceed now to offer a few observations on the remarks made by the Inspector in his Quarterly Report, dated 23rd August 1855, and in his letter to the address of the Director dated 13th September following regarding myself. In the former the Inspector states in the 3rd paragraph that I submitted a report at the end of June for the establishment of Model schools, but the scheme being incomplete and information on certain important points wanting, I was requested to forward a revised report after making the necessary enquiries, which I did after visits to the interior by myself and my Sub-Inspectors. In respect to this paragraph, I beg to observe that in my report I merely mentioned the names of the villages I had selected for the Model Schools and solicited sanction to their establishment with permission to use places which the villagers proposed to lend temporarily for our schools before the school-houses would be ready. I proposed no scheme of instruction whatever because I was directed to work out that which was recommended

by His Honour in his Minute and sanctioned by the Government of India. I do not see on what important points information was wanting, because to my understanding all important questions had been settled by His Honour in his Minute. There was one point only on which information was wanting, it is the distance and direction of the villages selected for our schools from the Police Thana. But this point did not strike me as very important. It is true I went to the interior before I submitted my third report, but as I have above explained, I did so in conformity with arrangements made for that purpose with the villages and not to gather information for my report as the Inspector supposes.

13. Again in the 3rd Paragraph of his letter to the Director of the 15th ultimo, the Inspector states that he has taken charge of the indigenous schools himself, because it appeared to him that I preferred that some one else should undertake that duty. I do not remember to have either written or said anything upon this subject, which led the Inspector to the conclusion. All that passed regarding it was that the Inspector in a conversation between us asked me one day whether I had any objection to his visiting the Patshalas under Guru-mahashaya near Gobardanga in Nadia, to which I replied in the negative. As regards my not having directed my attention to the improvement of those schools from the beginning, I beg to refer to the 9th paragraph of my memorandum in which it was proposed that I should commence the inspection of the Patshalas when the Model Schools were in a settled condition. The memorandum was approved of by the Director and my attention was therefore entirely directed to the establishment of Model Schools."

By January 1856 the Pandit was able to provide each of the districts in his charge with its full complement of five schools at a monthly expenditure of Rs. 50 each, and the following is a list of the villages where these schools were located.† :—

The Model Schools at once became popular and a serious inconvenience was soon felt at some of these institutions in dealing with the pupils who now flocked to them in large numbers. Vidyasagar was, therefore, obliged to represent to the Director the absolute necessity for the employment of additional teachers. He wrote :—

"In the narrative of my proceedings for the quarter ending 31st October last, I noticed the serious inconvenience in some of the Model Schools for want of a sufficient number of Teachers. At present there are two teachers in each of those schools and the number of pupils in most of them is above one hundred, in some near two hundred and in one two hundred thirty one. This large number of pupils, most of whom are little children, can never, I beg to submit, be efficiently managed or taught by two individuals.

"I have therefore the honor to solicit your serious attention to the subject, and to request that you will be good enough to authorize me to employ the requisite number of additional teachers to be regulated by the number of pupils in each school. In my humble opinion there should be three teachers when the number of pupils is between one hundred, and one hundred and fifty, and four when it is between one hundred and fifty and two hundred and so on. The salaries of the four teachers at Rs 12 each per month."

The Director at first hesitated to recommend to the Government this proposal as he held that the additional teachers should be paid from the school-fees, and that the schools intended to serve as Models for imitation by the indigenous schools should be made as far as possible self-supporting and should not depend on Government aid for so large a portion of their expenses. The Pandit, however, was opposed to this view, at any rate for the time being, for as he observed :

"Though it is true that the fee system has been introduced in nearly all our schools, the fees now collected in those schools, where additional masters are immediately required cannot by any means meet more than a moiety of the charge on that account. It might be urged that since the schools have become popular the present rates of fee (1 annas for the first and one anna for the lower classes) should be increased. But I cannot yet place such reliance on that popularity as to press a higher rate immediately. I have, however, every reason to hope that in the course of about two years we shall be able to

increase our present rates of fee, so that the whole of the additional expenditure, now submitted for sanction, will be met from that source."

Finally, an additional outlay of Rs. '80 per month, or only one half of the sum applied for by the Pandit, was sanctioned for a period of two years on the understanding that the other half would be met from school-fees *

In November 1856 the official designation of the Pandit, was changed into *Special Inspector of Schools, South Bengal*. This was done at the instance of the Supreme Government with a view to preserving uniformity. †

The vernacular schools established by Sir Henry Hardinge were unsuccessful. But their fate did not discourage Vidyasagar, who worked hard to make the Model Schools a success. The preparation of class-books also received his due attention. Such honest labour could not be fruitless, and the Pandit, some three years after the commencement of his operations, was able to present a very favourable report to the Director, from which we quote the following :—

"It is now about three years since our operations commenced and the Model Vernacular Schools have been established. During this short period, the progress of these institutions has really been very satisfactory. The pupils have gone through all the vernacular books suited to such institutions and may be said to have acquired a thorough knowledge of the language and to have made respectable progress in several branches of useful studies.

At the commencement of our operations, doubts were entertained in several quarters as to whether the Model Schools could be duly appreciated by the people in the interior. These doubts, I am happy to state, have long since been fully removed by the almost complete success of those institutions. The people of the villages in which they are located, as well as those of contiguous places who are also benefited by them, look upon the schools

as great blessings and feel grateful to Government for them. That the institutions are highly prized is evident from the number of pupils attending each of them."

THE ENGLISH SCHOOL HE FOUNDED AT HIS BIRTH PLACE

It was to Vidyasagar's exertions that several institutions owed their origin, such as the Anglo-Sanskrit School at Kandi in Murshidabad, founded at the cost of the Paikpara Rajahs, and of which he was for some time the Hony. Superintendent. The Pandit also established a free school for boys at his own native village. Mr. E. Lodge, the Inspector of Schools, South Bengal, himself inspected the school, and the following extracts from his Annual Report for 1858-59 show how very much the great pandit cared for it —

"*Barsingha School*—This school has been established and entirely supported by the well-known Pandit Ishwarchandra Vidyasagar. In mere justice to that noble philanthropist, I feel it my duty to observe that he has erected a beautiful bungalow for the school in a very convenient locality, pays some six or seven teachers from his own private resources, the boys are educated free and supplied with all sorts of books, and what is still more to be admired, the poorer students about 30 in number, are constantly boarded and lodged in his family mansion and now and then supplied with clothes, etc., when considered necessary. Careful medical attendance is also secured for them, and they are all taken care of as if they were so many members of his family.

Sanskrit is the chief subject of study here. English to the higher and Bengali to the lower classes being taught as supplementary branches. The number of classes in the school is eight, and that of the boys on the list 160, out of which 118 were present, when I visited. In English the first and second classes passed a pretty good examination, but their pronunciation appeared defective.

Bengali is not much attended to. I have recommended the introduction of Bengali books of a scientific character. In Sanskrit they are very clever."

RAMKRISHNA PARAMHANSA

By NAGENDRANATH GUPTA

II

WHAT books could have imparted to him the lore of wisdom that he acquired from the Book of Life? He knew all without the books, and he knew also what no book can teach, the knowledge that comes from within, the lesson which is written on the illuminated scroll of the spirit. The floating wisdom of the scriptures and the saints came to him by the mnemonic method known in India from time immemorial, but he gathered from this commonplace and mercenary world itself his gift of illustration and simile even as the lotus derives its beauty and fragrance and purity from the mud and slime out of which it grows. The figures and comparisons he used were extremely simple but strikingly and profoundly suggestive. For instance, he compared the formless Absolute, the deity detached from any conception of a personality, to water without form and the notion of a Personal God to a block of ice. The parable of the fisherwoman and the florist is a beautiful illustration of the man who cannot turn his thoughts away from the world and the other man who thinks of his God. A fisherwoman who had sold her fish in the market was returning home in the evening with her empty basket when a thunderstorm came on and it grew dark, and she sought shelter in the house of a florist who happened to live on the way. She was received kindly by the flowerwoman, who asked her to put her fish basket in a corner of the yard, gave her food and a place to sleep near a room in which flowers were kept and below which there were plants with flowers in bloom. Although tired the fisherwoman could get no sleep. She remained awake and tossed about on her bed, and felt something was irking her. At length she realised that the unaccustomed scent of flowers was the cause of her uneasiness and prevented sleep coming to her eyes. She got up, brought her basket and set it down near her head, and with the familiar stench of the and putrid fish in her nostrils she off into a happy sleep. Never can the

man of the world be happy if his thoughts are withdrawn from the associations of the world, associations which cling to him as the fisherwoman's sense of : It is haunted by the malodour of fish. The florist is an admirable symbol of the man who turns his thoughts towards God, for in worship there can be no finer offering than flowers. As the worldly man, engrossed in the affairs of the world, derives no benefit in the company of a man of God, so the fisherwoman gained nothing by passing a night under the roof of the dealer in flowers.

And this identical thought will be found in the *Itu-vuttaka*, the Sayings, or Logia, of the Buddha :—

Like unto a man that wrappeth up

A stinking fish in Kusa grass,

And the grass giveth forth a stinking savour,

Like unto him are those that attend on fools.

And like unto a man that wrappeth

A (morsel of the fragrant) Tagara within a petal,

And the leaves give forth a pleasant savour,

Like unto him are those that attend the steadfast.

How can we account for this parallelism of thought and parable, illustration and symbol? Ramkrishna Paramhansa, un instructed even in the speech of gentle folk, spoke often even as the Buddha and the Christ spoke, and again out of the radiance of his own wisdom. It was not a process of cerebration, conscious or unconscious, no mentation or intellection within our very limited knowledge, but a subtle sympathy of a freemasonry of the soul defying time, and beyond our cognition and conception. I shall cite one more instance of coincidence between the sayings of the Buddha and the Paramhansa. Almost word for word the Bengali text of the Paramhansa's saying* is the same as that of the Buddha, the only difference being in the moral drawn from the parable. In the *Kevaddha Sutta* in the Dialogues of the Buddha it is related that

* Sri Sri Ramkrishnakathamrita, by M., Vol. III. p 216.

juggle is a thin one and even indistinguishable to very ignorant people. On the other hand, the mere multiplication of miracles can make no man a prophet, or a teacher holding a commission from on High. As a child Sri Krishna is reputed to have performed many wonderful miracles, but if it had not been for the profound teaching in the Bhagavadgita he would not have taken such high rank as an *avatar*. Wipe out the whole of the miracles that happened at Brindavan and Mathura, and it will make no difference whatsoever to the reverence and the worship of Krishna. But take away the Bhagavadgita and nothing will be left of his divinity and supreme personality. Gotama the Buddha claimed no divine powers, as in fact he taught nothing but self-reliance and self-control for the attainment of Nirvana. The strongest language that he ever used was in condemnation of miracles or mystic wonders. He explained that the unbeliever and the sceptic might attribute these wonders to the possession of some particular charm. Said the Buddha:—"It is because I perceive danger in the practice of mystic wonders, that I loathe, abhor, and am ashamed thereof." In spite of this emphatic expression of detestation legend and tradition have invested the Buddha with more numerous and astonishing miracles than have been ascribed to the founder of any other religion. Is Jesus Christ remembered and revered for his miracles or for the Sermon on the Mount and the beauty and the depth of his teaching? If the Gospels were not burdened with miracles it would take away nothing from the real value of the books. But since *Moses and Aaron worked miracles and Jesus Christ was greater than them his miracles were also greater. The unbelievers of whom the Buddha spoke were not slow to disparage Jesus Christ. When he cast out evil spirits the Pharisees said, "This fellow doth not cast out devils, but by Beelzebub, the prince of the devils."* And Jesus had to expostulate with them and to explain that he derived his power from the Spirit of God. At the very last, even when the great Master was passing through the agony of death on the cross, they mocked him, saying, "He saved others; himself he cannot save", meaning that the miracle that had recalled Lazarus to life after he had lain four days in the grave was unavailing in the case of the Saviour himself. The Pharisees

are to be found everywhere and in every race, and at all times. The Prophet of Arabia is reported to have split the moon in two by pointing at it and water ran through his fingers as he held them out. But did the Pharisees and the unbelievers accept the sign of the miracles? The answer is given in the Koran itself:—"The hour hath approached and the moon hath been cleft: But whenever they see a miracle they turn aside and say, This is well-devised magic. And they have treated the prophets as impostors." Miracles were quite common among Mussalman saints and Sufi mystics, several of whom could restore the dead to life. But it is the message and not the miracle that is the real test, the true symbol of power. It is not by the temporary upsetting of the ordering of nature and dazzling the eyes of men and filling their minds with wonder that the prophet and the teacher are to be recognised, but by their words and the manner of their lives, the errand of mercy and the message of promise. Think of the potency of the word when it is said the sound is Brahman and the word is Brahman (नार ब्रह्म, शब्द ब्रह्म) and again when it is said at the western end of Asia, the word was with God and the word was God (St. John). Of all miracles on record the one that impresses the imagination the most, apart altogether from its credibility or otherwise, is one that relates not to life but to death, to the strength of faith, to the steadfastness of testimony in life and in death. An account of this miracle is to be found in the book known as *Taxharatul Aulia*. The name of Hussein Mansur at Hallaj, the great Persian Sufi and mystic who lived about a thousand years ago, is known throughout Islam. He was a weaver like Kabir, the saint and poet of Benares. He proclaimed *An al-Haq*, meaning I am the Truth, God. This is no more than the *Sohamasmi* (I am that I am) of the Upanishad, *Ahmi yad Ahmi Maxdao* (I am that I am) in the Hormazd Yasht in the Zend Avestha, and 'I am that I am' in the second Book of Moses. Wandering Sadhus in India go about shouting *Soham*. But Mansur was several times tortured and punished for blasphemy, and was finally put to slow death. His hands, his feet and his tongue were cut off and from each dismembered and quivering limb came forth the cry, *An-al-Haq, An-al-Haq*. He was then beheaded and the body was burned to ashes, and, lo! even the ashes

bore triumphant testimony with a disembodied, clear voice. And when the ashes were thrown into the waters of the Tigris they formed into Arabic letters and framed the words *An-al-Haq*.

Ramkrishna Paramhansa characterised the desire to perform even minor miracles (*siddhai* *सिद्धि* *iddhi* in Pali, *ridhhi* in Sanskrit) as evidence of a low mind. Why should any miracles be attributed to him when those who were honoured by a sight of him, and I was among the number, saw the main miracle of his self-luminance and listened to the outflow of the welling spring of wisdom that never ran dry? The lamp that burned within him, steady and unflinching, and diffused light all around was the miracle. It was a miracle when he passed into *samadhi*.

What can be more marvellous than that when at length Ramkrishna Paramhansa drew a few disciples towards himself he selected young lads and men of good families receiving their education in English schools and colleges? It was a sign of which the importance has not yet been sufficiently recognised. He knew nothing of English and he had always consorted with Sadhus and devotees ignorant of English, but he did not seek any disciple from among them. "Why do I love young men so much? Because they are masters of the whole of their minds", said Ramkrishna. The young mind is unsophisticated, impressionable, receptive, responsive. And each one of the disciples was chosen with great care and remained under the closest observation of the Master. With what prophetic penetration he saw the promise in the boy Narendra, now known all the world over as Swami Vivekananda! He crooned over him like a mother, sang to him, wept for him, spoke about him with unbounded praise. What was the secret of this great, unfathomable, inexplicable love? It was the knowledge of the power that lay latent in the young, masterful and independent lad. The Master wanted to win this boy from the world and to set him on the path appointed for him. Vivekananda objected to bow to the image of Kali on the ground that it was a sign of a blind faith. Ramkrishna gently remonstrated with him, saying, Is not faith of every kind blind? Faith is not built on the syllogistic foundations of

reason but on the unseeing rock of intuition, the adamant of the spirit. Samson, blinded, waxed stronger than he was before his eyes had been put out, and the dead which he slew at his death were more than they which he slew in his life. When orphaned by the death of his father Vivekananda was struggling with desperate poverty and rushing hither and thither for employment in order to find a mouthful of food for his widowed mother and brothers, Ramkrishna, while apparently indifferent, was putting forth his will to hold the distracted young man to the rough road of renunciation. When one of his followers asked for leave to bury his dead father, Jesus Christ, the Compassionate One, who healed the sick and promised to give rest to those that labour and are heavy laden, replied in stern accents, "Follow me; and let the dead bury their dead." Let the hungry feed themselves, was the unspoken mandate of Ramkrishna, though at the earnest entreaty of Vivekananda he gave the benediction that those who were left would not lack plain fare. Not many are called to leave the ways of the world, but when the call does come the iron must enter the soul of the man who wrenches himself free from the entangling meshes of the world. Ramkrishna used to say of Vivekananda, "He moves about with a drawn sword in his hand"—the sword of intellect and wisdom, the keen blade that divides the darkness of ignorance and slays the dragon of desire. Some of the young boys used to go and see Ramkrishna Paramhansa by stealth, all of them were rebuked at home and some were even chastised. In the opinion of the people at home these boys were being led astray by the strange talk of the strange Teacher at Dakshineswar. And so once again the words of Jesus of Nazareth were fulfilled:—"Think not that I am come to send peace on earth: I came not to send peace, but a sword. For, I am come to set a man at variance against his father, and the daughter against her mother, and the daughter-in-law against her mother-in-law. And a man's foes shall be they of his own household."

Vivekananda was a brand snatched from the burning, the roaring furnace of the desires and distractions of the world. He and his fellow-disciples never faltered in their loyalty to the memory of the Master, or in following his teachings through life. It is a little over forty years that Ramkrishna

Paramhansa passed from this life and Vivekananda, the greatest among his disciples, followed his Master about twenty-five years ago. This is not a long period for the acceptance of a doctrine and the understanding of a message, but the result so far achieved is by no means insignificant. The gospel of Ramkrishna Paramhansa is not a new creed and it does not seek to set up a new religion. It is a note of peace in the conflict of the many contending religions of the world. It is the living faith of universalism. Is not every religion a path to God, does not every river find its way to the sea? There may be many religions, but there is only one Truth, as there is only one sun in the solar system. To the man of faith there is salvation in every religion. Ramkrishna Paramhansa condemned lachrymose and repeated confessions of sin. If a man constantly thinks and speaks of his sins he tends to become sinful. It is not by professions of repentance but by the strength of a burning faith that a man frees himself from sin. This courageous and heartening doctrine has been carried to many lands and many peoples. The secret of the remarkable success of Vivekananda's mission to the West is to be found in the teaching of the Master. There is no exhortation to prefer one creed to another. There is no suggestion of eclecticism. There must be unquestioning and loving acceptance of all religions as true, every honour is to be shown to every religion. Vivekananda yielded a full measure of gratitude to his Master :—"If in my life I have told one word of truth it was his and his alone." Of the many disciples of Vivekananda in the West the most intellectual and the most gifted was Sister Nivedita, who was formerly known as Margaret Noble. I have seen her kneeling reverently before an image of Kali, and surely she was no idolator. In Bombay I have seen devout and earnest Zoroastrians helping the Ramkrishna Mission liberally with funds. The largest donor, a Parsi friend I have known for thirty years, has refused to disclose even his name, and the story of his attraction to Ramkrishna and Vivekananda would read like a miracle. The Maths at Belur and Mayavati were founded with funds supplied by the English and American disciples of Vivekananda. Those who have understood the message of Ramkrishna Paramhansa, whether monks or householders, recognise that it does not mean the setting up of a new church, religion or

sect. A new sect would be lost in the wilderness of sects in India. Rather should we look upon the doctrine of Ramkrishna as the confluence of all the streams of the various religions of the world, each one retaining its identity and distinctiveness. The Ramkrishna Mission is the assembly room of all religions, the reception hall were the Hindu and the Zoroastrian, the Buddhist and the Christian, the Moslem and the Sikh may meet as friends and brothers, with conviction in their own faiths and respect for the faiths of others. In equal honour are held the Vedas, the Vedanta and the Puranas, the Zend Avasta and the Gathas ; the Tripitaka and the Dhammapada, the Old Testament and the New ; the Koran and the Grantha Sahab. The first great evangelist of the doctrine of the truth in all religions was the Swami Vivekananda and he expounded the Vedanta, the most ancient of all the living religions, while upholding the claim of all other religions to the possession of the Truth. The next great apostle may be a Zoroastrian, a Buddhist, a Christian, or a follower of Islam. Words like *Mlechchha*, *Heretic*, *Unbeliever*, *Heathen*, *Pagan*, *Kafir* and *Musaiik* must cease to be current coin in the treasury of languages and must be decently buried out of sight and out of memory.

Up to the present time the majority of the disciples and followers of Ramkrishna Paramhansa and those who hold his memory in reverence are to be found among the educated classes of India. It has happened just as in the case of the disciples selected by himself. If he did not acquire any learning from books it was of no consequence, for his insight was keener and his outlook and sympathies were broader than is to be found in any book. Men like him have been called incarnations of God, messengers of God, or God-inspired. This is a matter of belief, on which opinions may conflict, since a man who is called an *avatar* by his followers may be called by a less respectful appellation by other people. There is no universal acceptance by all mankind of any prophet or living incarnation of God. But there can be no disagreement as to the peculiar qualities which distinguish them from other men. If Ramkrishna had been content to follow the vocation of a priest who would have heard his name today ? What was it that turned his thoughts away from the world and illuminated him from

within with the light of God? Some people imagined at first that his mind was unhinged and he was suffering from a physical ailment. What made them change their minds? And it is now admitted that he is among the few who, from time to time, bring light into the long night of human ignorance. Men are happy in the bondage of the world even as a prisoner long kept in irons finds music in the clank of his chains. Renunciation of the world is looked upon as an aberration, an act of foolishness, not only by men of the world but sometimes even by men presumed to be unworldly. When the Buddha gave up painful penances and a course of starvation the ascetics with whom he had been undergoing this discipline discussed him, and one of them said, "Have you seen so late that this man acts like a mad man? When he lived in his palace he was revered and powerful; but he was not able to rest in quiet, and so went wandering far off through mountains and woods, giving up the estate of a *Chakravartin* monarch to lead the life of an abject and outcast. What need we think about him more; the mention of his name but adds sorrow to sorrow." * This is the wisdom of the world, but does the world deny today that the teachings of the Buddha have lifted the burden of sorrow from the lives of millions and millions of men and women?

Apparently such men spurn the world with all its fleeting pleasures and fascinations from a feeling of disgust with the ways of the world. But they are neither cynics nor misanthropes. They cast away the world only to save it. It is because they are filled with a boundless love for humanity, because their hearts are moved by an unfathomable pity that they renounce the world. When a man falls into a pit he can be pulled up only by a man who stands outside and not by another who has himself fallen in. The man who holds a torch to guide other people though the darkness must stand clear of the crowd. It is only a man having eyesight that can lead the blind. The tinsel power and pomp of a day dazzles the beholder as a fluttering butterfly attracts a child. But what are kings and emperors and the mighty ones of the earth compared to these humble men who were content to be poor? When the Buddha stood with his begging bowl before the door of a house-

holder, barefooted, silent and with his head bowed upon his breast, did the man or the woman who put a morsel of food in the beggar's bowl, or let him pass with an empty bowl, ever realise that that beggar was among the very greatest ones of the world through all time, before whose image millions would prostrate themselves long after the very names of kings and emperors had been forgotten? When they nailed the bleeding and tortured Christ to the cross did those who mocked him and jeered at him ever think that even the cross itself would become a symbol of blessing and salvation to millions upon earth? The king of the Jews they called him in foolish mockery and he is today the Lord of Christendom, the Redeemer and Saviour all who believe him to be the Son of God. Ramkrishna Paramhansa lived an humble life forty-five years ago. Today he is regarded as an *avatar* by many; who can tell what place will be assigned to him a thousand years hence? A considerable literature has already grown up around his teachings and his memory.

If we say one *avatar* is greater than another, or the founder of one religion is endowed more highly than another, we sow afresh the seed of the disputes that have been the bane of all religions. And how are comparisons between these Teachers to be made? Is it by a comparison of the miracles attributed to each one of them, or by the number of the following of each and the extent of their spiritual dominions? Either of these tests would be misleading. In the first place, the most devout followers of every religion are content to read their own sacred books and do not take any interest in other scriptures. Suppose, in the next place, some one undertook to read all the sacred books of all religions. Would that make him competent to make a comparison between the personalities of the great Teachers of humanity? Did even the disciples of the Buddha and the Christ, men who followed them constantly and listened to their teachings, know all about the Masters? There is no order of precedence in which such names can be placed and we shall be well-advised in being cautioned by the grave rebuke administered by the Buddha to Sariputra, the right-hand disciple, who shared with Mudgaraputra the distinction of being the chief follower of the Blessed One and was the ablest among the disciples.

On one occasion when no one else was present Sariputra told the Master: 'Such a faith have I, O Lord, that methinks there never was and never will be either monk or Brahman greater or wiser than thou.' Note should be taken of the fact that Sariputra did not call the Buddha an incarnation of God, or the embodiment of all divine qualities, because such a doctrine formed no part of the teachings of the Buddha.

The Buddha replied, 'Grand and bold are the words of thy mouth, Sariputra. Behold thou hast burst forth into ecstatic song. Of course, then, thou hast known all the sages that were?'

'No, Master.'

'Of course, then, thou hast perceived all the sages who will appear in the long ages of the future?'

'No, Master.'

'But at least then, Sariputra, thou knowest what I am, comprehending my mind with thy mind, and all about my conduct, wisdom, doctrine and mode of life?'

'Not so, Lord.'

'Lo: here, Sariputra, no knowledge hast thou concerning Awakened Ones, past, future or present. Why then forsooth are thy words so grand and bold? Why hast thou burst forth in ecstatic song?'

This is the admonition to be always borne in mind. How can we call one prophet or Teacher greater than another when we really know nothing of either? But human presumption is equalled by human ignorance, and we solemnly proclaim some one as a

full incarnation and another as a part incarnation of God as if we carry in our poor heads and puny hands an instrument to measure God Himself! It is easy enough to compare kings and emperors, fools and wise men, men of wit and men of wealth, poets and philosophers, but the yard-stick that can measure the Masters of mercy and the Lords of ruth, the guides and teachers of the human race, the pathfinders who point out the ways that lead to salvation, has not been made. There is a legend that a certain Brahman attempted to measure the height of the Buddha with a bamboo, but failed to do so because he could not find any bamboo which was not overtopped by the head of the Buddha. * This must be interpreted in a metaphorical sense, for it is clear that the reference here is not to the physical stature of the Buddha. The wisdom of this Brahman is not yet a thing of the past. In thinking of such Teachers let us at least endeavour to reach a frame of mind in which we may truthfully say, 'Lord, I believe; help thou mine unbelief.' Let us believe in the many paths that lead to the one Truth. And belief comes not in the pride of intellect or the rigidity of dogma, but in the lowliness of the spirit, the receptivity of the soul to light, whencesoever it may come.

To Ramkrishna Paramahansa and the Exalted Ones of the Great White Lodge, homage!

* Hsuen Tsang.

THE FUTURE OF THE INDEPENDENT TRIBES OF THE NORTH-WEST FRONTIER OF INDIA

By PROF. M. TIMUR

I

THE tribesman in the popular imagination is a robber and cut-throat—a savage hardly to be distinguished from the rest of the forest. This opinion is the result of fear and ignorance. The rich

trader living on the Frontier whose whole mind is engrossed with the idea of making money and hoarding it regards him as a fiend who occasionally despoils him of his wealth. The British official whose duty it is to guard the Frontier and to whom an inroad into British territory means a proof

of his own inefficiency and the loss of a possible chance of promotion, considers him an intractable disturber of his peace. They have not the courage or the humanity to abandon their selfish points of view and to look at the tribesman with an unbiassed mind. The Indian politician bases his opinion on the opinions of these two—for he has no personal knowledge of the frontier. Thus the tribesman is condemned throughout the length and breadth of India as a man who robs innocent and peaceful citizens and whose activities cost millions of money every year to the Indian exchequer.

Yet no one can come in contact with him without admiring him, and the British administrators of the Frontier are no exception to this rule. His chief characteristic is the most intense love of independence, from which flow most of his faults and failings. It is his patriotism which makes him a robber and cut-throat in the eyes of the world. He cannot explain his point of view, for he knows no language of the world except his own, which is not a literary language—nor is he a literary man; but he always acts from it, irrespective of what the world may say about him. The freedom he loves is not the one which is dear to peaceful citizens living in an organised state where the interests of the state take precedence of individual interests and where the state has the right to coerce the citizen when the good of the community demands it. The tribesman (we speak especially of the Afridis, Mahsuds, Wazirs and Mohmands) recognises no authority over him. He is not bound even to obey the tribal *jirga* if he is not so inclined. His ideal of political freedom is the anarchist one according to which the state has no authority and no power of coercion over the individual, all things are done by mutual agreement, there is no ruler and no ruled and all have equal freedom. But he does not possess the patience, forbearance and culture of the mind essential for a successful working of this system—and it is doubtful if any people possess them at the present stage of the mental development of the world.

It should not be concluded from what is said above that the tribesmen are a lawless rabble. Whenever there is danger of foreign aggression, they organise themselves into *lashkars* and oppose the invaders to the last man. They have their councils to decide important questions both in times of

peace and war. But the instinct of the tribesman seems to be, that he must have freely agreed to the formulation of a law before he can be called upon to obey it. They have their leaders, but their authority depends on their power to convince their followers of the wisdom and justice of what they do. The most powerful Malik cannot be confident before consulting his people what course of action they would adopt on a certain occasion. He cannot order them as a King orders his subjects or a lord his retainers.

In an uneducated society this law of equal freedom cannot be maintained unless every individual has the highest kind of courage and is physically able to defend his rights. This courage the Afridis, Wazirs, Mahsuds and Mohmands possess in the highest degree. The Marris, Baluchis, Kakars, Swatis and Buneris, too, are highly spoken of by the British military officers, but among them the individual does not seem to possess the same intense desire for his freedom, and so they have submitted more or less completely to the rule of their Khans.

No one who knows the tribesmen intimately or has fought against them can omit to pay tribute to their great courage, physical endurance and faithfulness. There is a notion abroad that the tribesman is treacherous and should not be trusted. This is wrong. He will be as faithful and loyal to a friend as any other man, but no benefits received from a foreigner can make him a traitor to his own country. He will fling his 'loyalty' to the winds when the independence of his own country is at stake. No doubt, there are perfidious men among them as there are in all countries, but their special reputation for treachery is due to their unwillingness to be loyal to foreign governments when the interests of their own country are in danger.

That the tribesman can be loyal even to a foreigner when he believes him to be his sincere friend is shown by the following quotations from Sir Robert Warburton's "Eighteen Years in Khyber". In exceptional circumstances, as mentioned in the quotation, a few individuals may be found who would serve their foreign employers loyally even against their own country; but generally when serving in the armies of foreign governments they would desert *en masse*, taking with them, if possible, their arms when war is declared between their own country

and their employers. The treachery of the tribesman when mentioned by foreigners means nothing but the difficulty they experience in persuading them to betray their country.

We give below the opinion of Sir Robert Warburton than whom no Englishman has ever had a greater opportunity of knowing the tribesmen intimately:—

"From the first week in October 1897 to April 5, 1899, I had with me four Afridi orderlies from the Khyber Rifles who acted also as guides or scouts and were continually being requisitioned for that purpose. All proved faithful and loyal, although working against their own countrymen. One of them broke down from pneumonia, but the others continued to do the trying and perilous duties required of them. They would often go out of their own accord to gather information and frequently returned with clothes riddled with bullet holes, proofs of the wonderful escapes they had had. When it is remembered that they were literally carrying their lives hourly in their hands and knew the cruel certain fate which awaited them if they were taken prisoners, I do not think that I exaggerate in saying that such loyalty to the Sirkar deserved recognition, and that no men better earned the Victoria Cross or the Military Order of Merit than these. But they got nothing". P. 311.

"The germs of confidence once established amidst these people always bear fruit and increase, as I have found out, and the English official is treated with far greater deference and respect than by the British native subject of Peshawar, Rawalpindi or of any other part of India. After 29 years' experience of Peshawar the British native subject would have stolen the last coat off my back if he had seen a chance of doing it with safety. In the Khyber Hills, at Landikotal, Tor Saffar, Shiltan valleys, etc., wherever my camp happened to be, it was a point of honour with the independent hillman that nothing was ever removed from it. And the same security was assured to and secured to every visitor, European or native". P. 332.

"The Afridi laid from his earliest childhood is taught by the circumstances of his existence and life to distrust all mankind, and very often his near relations, heirs to his small plot of land by right of inheritance, are his deadliest enemies. Distrust of all mankind and readiness to strike the first blow for the safety of his own life, have, therefore, become the maxims of the Afridi. If you can overcome this mistrust and be kind in words to him, he will repay you by great devotion, and he will put up with any punishment you like to give him except abuse. It took me years to get through this thick crust of mistrust, but what was the after-result? For upwards of fifteen years I went about unarmed amongst these people. My camp, wherever it happened to be pitched, was always guarded and protected by them. The deadliest enemies of the Khyber range, with a long record of bloodfeuds, dropped these feuds for the time being when in my camp. Property was always safe and the only record of anything being

ever removed was the gear belonging to a trooper of the Khyber Rifles taken away from the Serai at Landi Kotal, which was a case of enmity, but every item was brought back and placed at Malik Wali Muhammad Khan's gateway in the Khyber. The only loss ever incurred by me was that I have already related, when my pony, Colonel Barrow's charger, Captain Swanton's pony and some ten mules were carried off from the camp of the Second Division Tirah Field Force at Suvikot on December 17, 1897. Time after time have the Afridi elders and jirgas supported me even against their own Malik. Lastly, when at Bugh in the Maidan of Tirah during November, December, 1897, with war, and burning houses and desolation surrounding them, when I told the old men of the Afridis in reply to their cry, that it was out of my power to help them then, the jirga with tears in their eyes replied: 'Never mind, Sahib, whatever happens we are earnestly praying that you may not be injured in this campaign'. These old men were witnessing the destruction of everything that was dear and sweet to them in life—the burning of their homes, built up with enormous labour and after several years of work, for, in Tirah, forts are not built by contract. And yet in that supreme hour of their distress they had a thought for the safety of the kafir who had done nothing for them, except to try to be their friend.' P. 344.

II

It would be said that the Afridi or the Wazir may be a fine man in himself, but he is a very troublesome neighbour for India. It is *their* presence which makes life and property unsafe on the Frontier. We must analyse the causes which lead the tribesman to raid British territory before convicting him of this charge. Predatory habits and poverty are generally considered to be the causes of these raids. There are bad characters in every country, even in peaceful India and, no doubt, a few of the minor raids may be attributed to them. *But poverty alone is never the cause of a daring raid.* The leader of a raid must be a man of substance. He must possess good rifles and a sturdy following. The poor among the tribesmen work peacefully in the Frontier towns as coolies. A thief is hated by the tribesmen themselves. Unless an element of daring and romance is found in the performance the raider is not held up to admiration even among his own people. Besides this, the average tribesman is better off than the average man in India. The fact is borne out by the testimony of their own leading Malik. To rob innocent people is not the instinct of the inhabitants of the independent tribes, nor is it a necessity for

them. The chief causes which make life and property so insecure at certain times on the Frontier are the political and personal grievances of the tribesmen. The keynote of their character is love of independence. To maintain their independence against two powerful states, one on the east and the other on the west of their narrow strip of land they must have arms and ammunition. The tribesman, it must be remembered, is not partial even to Afghanistan when a question of his own independence is involved. He manufactures arms in his own country, but for what he cannot manufacture himself, he raids British armories, for he cannot import any arms through India. Most of the raids are made to get arms or to get money in order to purchase them. Every tribesman considers himself a responsible part of his own nation and views every British citizen in the same light. If the tribesman has a grievance against the British Government he avenges himself on the British subjects. The British Government, too, does the same with him. If a raid is committed by a few desperadoes, the whole tribe is taken to task for it and they are heavily fined, military expeditions are sent against them and their villages and crops are burnt down.

The most terrible raids ever experienced by the people of Peshawar were those during the late Afghan War in 1919. Every night the city and the cantonment of Peshawar were raided. Firing began immediately after sunset. When peace was made with Afghanistan the raids ceased of their own accord. This clearly shows that we must solve the political problem before we can have peace on the Frontier. It is generally believed by British politicians that if the lot of the tribesmen could be improved by encouraging the emigration of their surplus population to India where they could be provided with land on the canals, we could have peace on the frontier. It is also sometimes thought that by constructing a few canals in suitable places much land could be brought under cultivation and if this was given to the tribes, they could be made peaceful. No doubt, if the tribesmen had plenty of good land to cultivate, which they have not got at present, they would not have the excuse of poverty to raid British territory. Many petty raids from across the border would also stop. But it is doubtful if the tribesmen would cease to trouble the Indian Government as long as

the latter holds advanced military posts in their territory and they fear that it has designs on their independence. The Indian government cannot make them loyal to itself by giving them land. If, however, such useful works as canals are constructed in their territory merely as acts of magnanimity to help its neighbours without any intention of controlling them and they are not required to barter away their freedom for agricultural land, the Government of India may secure the real friendship of the tribes.

We shall now state the policy of the British Government, which is the source of all its troubles, in the words of the special correspondent of the *Pioneer*, who was sent with the permission of the Government during the third Afghan War (1919) to investigate the actual conditions on the Frontier and report on them:

"For several reasons, therefore, it is desirable that we should have clear ideas on the subject of the frontier. The problem is easy to state though difficult to solve. There are, as every body knows, three policies that may be followed. The first is not likely to commend itself, though its adoption originally would have saved us most of our difficulties. It would fix our frontier at the Indus. This is a natural line and would be easy to hold, but to give up the Trans-Indus country after seventy years of occupation would weaken too much the prestige of the Indian Empire and would, moreover, be grossly unfair to the present inhabitants we could not abandon them to the fury of their hereditary foes: such a refusal of responsibilities incurred would seem but a feeble beginning of responsible government.

The second policy has found many advocates: it is commonly known as the forward policy. It has all the merits of logical consistency and the disadvantages of impracticableness.

According to this we should extend our administrative control from the present line which skirts the hills, to the Afghan boundary, which was defined in part by the pillars set up by the Boundary Commission of the Durand Agreement and completely delimited by the additional pillars on the further side of Landi Khana, erected after the recent campaign. This would entail the exercise of effective control, by occupation and disarmament, over all those wild and difficult tracts of hill territory at present in the possession of the independent tribes.*

The initial undertaking would involve the expenditure of large sums of money either by way of compensation or on military expeditions to compel submission. In order to keep what we had

* The italics are ours. It is the fear of this treatment which makes the tribesman restless and confirms him in his attitude of hostility towards India and its people.

thus bought by blood or money we should have to maintain permanent garrisons in the conquered territory. The resistance would at first be fierce and never entirely die down. The Durand line is not a natural boundary like the Indus, offering physical features of defence; to hold it we should need strong forts at frequent intervals. The tribes on the further side of it cannot be controlled from Kabul, and whatever our relations with the Afghan Government, we should be liable to constant raids and occasional attempts to co-operate with the malcontents on our side of the border. Nor would the expense and harassment of this permanent occupation result in any great security in time of invasion. We should either have to retire to a more defensible front or keep up long lines of communication through country most favourable to snipers and ambushes among a population which would almost certainly rise against us. Previous disarmament would count for little; arms can always be smuggled through a mountainous region. We might, of course, follow Roman example, make a desert of the independent territory and call it peace; but however logical may be the maxim, "Krieg ist Krieg," it does not ultimately pay, and our imperial policy has definitely refused to adopt the methods which the Germans practised in Africa. That is inconceivable, but it is difficult to see how on any other method the Forward policy can be practicable. It may work well on certain parts of the frontier: the Sandeman settlement of Baluchistan has been on the whole a success; but this does not guarantee that similar measures would produce similar results elsewhere. There is an extraordinary diversity of temperament, if one can call it that, on the frontier, and it often happens that an administrator who is popular with one set of tribes will fail completely with another. The policy is in many ways attractive: it seems the strong thing to do; but a consideration of the practical difficulties, in the way of extending our administrative control up to the Durand line, will, I think, diminish the attraction.

There remains the third policy, which has, in fact, governed our relations with the tribes since the time of Lord Curzon. We have endeavoured to limit our interference with them "so as to avoid the extension of administrative control over tribal territory." It may be argued that this policy has not been justified by results and it is true that we have not enjoyed unbroken peace upon our borders; but the trouble has been sporadic and local; we have had no widespread rebellion such as occurred in 1897. The state of the frontier, however, is far from satisfactory, as the inhabitants of Peshawar and other border districts will, I am sure, agree. There would seem to be no practical alternative to the policy, but the methods of giving effect to it need revision. We must stand fast where we are; but we can and must strengthen our position." Indian Frontier Organisation (Pioneer Press, 1920), pp. 71-74.

Colonel Hanna made the following observations on the Forward Policy in his "India's Scientific Frontier", published in 1895. See pp. 90 and 91 :

'The adoption of this course would, however, compel us to add another Army Corps to our Anglo-Indian Army, and so consummate India's financial ruin, or else to denude the country of troops and, in so doing, to risk the loss of the kernel in clinging to its shell. I do not think that the politicians and strategists of the 'forward' school are prepared to accept either alternative, and I do not believe that they are deceived as to the nature of the frontier with which they have so far succeeded in endowing India. They know as well as their opponents that it is hopelessly weak, practically and theoretically unscientific; but its defects are, in their eyes, its merits, since they will furnish them some day with the arguments which they will use to induce the British Government to assent to a still further advance. When the next wave of 'Brevet-Mania' and 'K. O. B.-Mania' coinciding with a fresh Russian scare, sweeps over the Anglo-Indian Army, it will be from their lips that we shall hear the plain, unvarnished truths which I have been labouring to impress upon my readers, but with a different application; for the moral of these truths is, for me, 'backwards' whilst, for them, it would be 'forwards.' Forward into Afghanistan, with her consent if it can be obtained, without it, if it be withheld; forward to Kandhar and Kabul; forward to the Hindukush; forward to the Oxus. Always and everywhere, there will be some obstacle concealing the movements of the enemy that must be swept away, some pass of which both ends must be held, some river of which both banks must be commanded, some nation which must be coerced into friendship; and always and everywhere the "scientific frontier" will elude their grasp and mock their hopes; not that it does not exist, but because that they have turned their backs on it and left it far behind: for what is a scientific frontier? Surely, one which it is easy and cheap to defend and difficult and costly to attack; and no frontier in the world fulfils that definition more thoroughly than the frontier which satisfied Lawrence and Mansfield, Norman and Durand.'

No satisfactory solution of the Frontier problem, as it evident from the above quotations, has been found up to the present time. To bring the Indian Frontier back to the Indus is out of the question now, both for the prestige of the Empire and in the interests of the town population of the Frontier Province. The cost in men and money of carrying out the Forward Policy is prohibitive. The half Forward Policy (the one now in operation) will always be looked upon with suspicion by the tribesmen in times of peace, who may give expression to their resentment from time to time by making raids, and it will be of no service in times of war, as was proved in the Third Afghan War. The establishment of British canton-

ments in the heart of the independent territory, at Razmak and Landi Kotal will always rankle in the hearts of the tribesmen. The foreign policy of India is in a hopeless tangle on this frontier and there seems to be no possible way of unravelling it by political devices. If a bold statesman had given a free hand to Sir Robert Sandeman in the eighties or nineties of the last century, he might possibly have annexed the independent territory and tamed its inhabitants; but now the tribesmen are much stronger than they were then. They have used this time to improve their tactics and armaments. They are better organised and better acquainted with world politics. The use of the modern rifle and the employment of modern tactics which they have learnt by serving in the Indian army, have increased their powers of resistance immensely.

It must, however, be admitted in fairness to British soldiers and statesmen who have so far guided the policy of this frontier that they had no desire of conquest for the sake of conquest. Their only anxiety was the defence of India against Russian encroachment. If they had made the Indus as the boundary line of India and the first line of defence against a foreign army, the moral effect of a war so close to their homes would have been very bad upon the Indian population. They also wanted to avoid the devastation of the country which is a necessary consequence of war. In brief, they wanted to fight all wars intended for the defence of India outside the country itself. The following quotation from a recent book, "The Defence of India" by "Arthur Vincent" (1922), will bear out the above statement.

"It is a cardinal principle of strategy and tactics alike, and perhaps the best recent instance is the commencement of the war in the West in 1914. Germany devoted the whole of her energy to carrying the war out of her own country at the first sweep. She was successful, and although in the end she was vanquished after more than four years of the most terrible war in history, it was France and Belgium who bore the entirety of its devastation. Had she held back to her own frontier, as those who advocate the Indus line would have India do, sooner or later she must have been forced across it even if only for a time, and her own towns, villages and fields would have known the fate of Ypres and of Rheims. It is for India we are to fight, if needs be, in defence, and at all costs India's soil must be kept clear of the war. For this reason alone, if no other were forthcoming, it would be necessary to go across the Indus. By crossing it we choose the ground upon which India's defence shall be fought out, we

meet potential invaders far from the soil of India itself, and we are enabled to deal with them before they can approach it". P. 53.

Indian politicians must be thankful to the British statesmen and soldiers for their anxiety to keep Indian soil clear of war; but can the Frontier men have the same feelings about this policy which has converted their land into the theatre of India's defensive wars? If it is desirable to carry war out of one's own country, is it also justifiable to carry it into another country? How is this other country to be treated? As a friend or as an enemy? Or is it to hold an anomalous and undefined position, which is the best condition for breeding suspicion and creating grievances on both sides. The reason why the Frontier problem has become insoluble is that the interests of the Independent territory and even those of the administered districts of the North-West Frontier Province have always been ignored and subordinated to those of India. The Frontier Province has not been given 're-forms' up to this time in spite of the favourable report of the Enquiry Committee, the resolution of the Legislative Assembly and a strong demand by the people of the Frontier. There is a strong party among Indian politicians, too, whose sole thought is for the safety of India, whatever treatment may be meted out to other nations living on its frontiers. But it must be remembered by them that the greatest safety for any nation lies in its being just and kind to its neighbours. If it is India's desire to win Swaraj for itself, it should not begin by depriving its neighbours of their Swaraj. The Independent Territory is sometimes called 'No man's land.' Perhaps it is implied that the tribesmen are not men and, therefore, do not deserve to be respected as such.

The question is, what part can the Government of India and its people play in improving the lot of the Frontier tribes so that they may become peaceful and prosperous neighbours. There may be three possible ways of achieving this object. The first is by subjugating them and conferring on them all the benefits of a civilised government. This course is impracticable, as we have already shown. There are more than 600,000 fighting men on the Frontier armed with modern rifles, familiar with modern tactics, accurate marksmen and prepared to resist any encroachment on their independence to

the last man. Their subjugation is not an easy task for India to undertake.

The second course is to leave them as they are to enjoy their blood-feuds, but to secure their attachment to the Indian Government by making them economically dependent on India, by giving them pensions and allowances, enlisting them in the Indian Army in order to find an out-let for their superfluous energy and giving those who are educated among them posts in the Civil Department. This policy, though not in the true interests of the tribesmen, may be useful to India if they can be truly attached to its government. But as the experience of the Great War shows, the regiments of the tribesmen did not prove faithful in any theatre of war. Even if they could be loyal, the presence of mercenaries in large numbers in the Indian Army would not be in the interests of the rising democracy. Their presence might introduce complications during the critical periods of its development.

In the civil department also their presence would be anomalous in a country governed on democratic lines. It would, therefore, not be in the true interests of India or the independent tribes to undermine the independence of the latter by economic methods. The greatest difficulty, however, in the way of such a course is that no country has enough treasure to support a foreign population on subsidies and allowances and keep them contented by this means. It is a very dangerous course to take the manhood of a country off their legitimate work of developing the natural resources of their own country and make them parasites on their neighbours.

The third and the only practicable way to civilise the Independent tribes is to give up all ideas of annexing their country, to declare it openly and to assure the tribesmen that the forward policy in all its forms would be abandoned as soon as they have established a civilised government in their country.

Not only this, but the tribesmen must be brought under strong moral and intellectual influences which education on Western lines alone can exercise before they can be able to develop their rude democracy into a civilised republic and dig up the hidden treasures of their country. The Government of India is not in a position to do this. If any government, British or Afghan, tried to educate the tribesmen even with the most philan-

thropic motives, it would be suspected by them of having designs on their independence. They have no book knowledge, and are solely guided by 'rough maxims hewn from life', and in their experience there is no philanthropy in politics. The desire for education and betterment must arise among the people themselves before guidance from outside can be useful. It is a matter for satisfaction that this desire exists in the most unmistakable form.

The tribesmen are not unprogressive savages, as those who only know them by reputation may consider. They are staunch Mussalmans and the civilising influence of a monotheistic religion is not to be underestimated. They are sometimes accused of fanaticism, but it is their intense patriotism which is mistaken by outsiders for fanaticism. They are not impervious to Western influences. Forty years ago they were armed with matchlocks. Then they adopted sniders, which were replaced by Martini Henris, and now they are armed with small bore, high velocity rifles, the same as used in the Indian army. They used to depend for their ammunition on what they could buy or steal from other countries. Now they manufacture rifles and ammunition in their own country. In old days they used to rush openly at British guns in the hope of capturing them and were killed like flies. Now they are considered by the British generals to be the best guerrilla fighters in the world. They use the heliograph, binoculars and hand grenades in their wars. Forty years ago they used to wear heavy turbans, big trousers and unmanageable shirts. They had long hair and shaggy beards. Now if one looks at an Afridi one finds him close-cropped, clean-shaven and wearing the lightest and most convenient form of dress. When fighting they wear khaki or grey. In the homes of the lowest class of the Afridis one would find fine tea sets, tea tables and clean tablecloths. When one talks to an Afridi Malik one cannot but be impressed by his intelligence and keen insight into politics. There is no doubt that the tribesman is on the road to progress. The question is only how to guide and encourage him.

Neither the Afghan nor the British government would be trusted by the tribesmen. Private philanthropic societies of Indian Mussalmans may, however, succeed in gaining their confidence. But they will

be between two fires. If they gain the confidence of the tribesmen they may be mistrusted by the Indian Government, and if they are trusted by the Indian Government, they may be mistrusted by the tribesmen. The tribesmen have to be more careful in admitting foreigners into their country by reason of their small numbers and peculiar geographical position. But the powerful Indian Government can afford to be magnanimous. If the Government of India were not to stand in the way of educational societies which may interest themselves in the work of educating and enlightening the tribesmen they might be educated within a reasonably short time. It is not proposed to throw new responsibilities on the Government in the event of British subjects being maltreated. All who go must go on their own responsibility. What the Government of India is required to do is to adopt a policy of trust towards such societies. In the case of old established societies like the managing bodies of the Muslim University, the Islamia College, Lahore and the Islamia College, Peshwar it would not be difficult for the Government to find out the *bona fides* of their philanthropic efforts. Even where new societies are formed for this purpose a reasonable amount of scrutiny may convince a trusting government with what aims such societies have been formed.

The education which the tribesmen would require need not follow slavishly the curricula of Indian Universities. It is not intended to flood the offices of the Indian Government with Afridi graduates. What they want, at present, is a practical knowledge of modern sciences in order to be able to develop the agricultural and mineral resources of their country and a knowledge of those parts of literature which may mollify their hearts and make them able to manage their affairs in a better way. There are rich mines in their country and once their energies are directed into this channel and their indepen-

dence secured by treaties with their two powerful neighbours, they will prove the most peaceful neighbours.

The establishment of a strong and peaceful republic (the tribesmen would not accept any other form of government) would be the best security for peace on this frontier. It will act as an impenetrable barrier like Switzerland between strong states and prevent them from coming into conflict with each other. If the Government of India desires Afghanistan to be strong and independent so that it may act like a buffer state between India and Russia, there is greater reason for making the narrow strip of land, called the independent territory, an impenetrable wall between India and its Western neighbours, and this can only be done when the tribes are organised into a powerful, independent and friendly state. Their numbers and resources are so small that they can never be dreaded as possible invaders of India. They are powerful only so long as they are in their own hills.

Wider interests of humanity also require that a race with such bodily and mental qualities, with such strong wills and indomitable courage should not be allowed to rot in negligence. The development of the world civilisation requires nothing like strong wills, fresh minds and healthy bodies. An easy life and too much mental strain do not allow any civilised nation to keep up its prominence for an indefinitely long time. The bodies deteriorate first and then the minds. Civilisation always requires an infusion of wild blood to maintain its strength. Such people should be regarded like untapped stores of human energy which should be used to further the ends of civilisation and should not be wasted in wars. They should be liberally and kindly treated by all civilised nations coming in contact with them. An opposite policy, by weakening the stock of the human race, may prove suicidal for civilisation itself.

THE SCHOOL OF VEDIC RESEARCH IN AMERICA

By DR. SUDHINDRA BOSE,

Lecturer in Political Science, State University of Iowa

THE interests which the Oriental scholars of America and Europe have taken in India, until recently, have been in the main philological. Although individuals, here and there, have shown spasmodic concern in Hindu thought, no systematic effort has been made to introduce the study of Hindu culture and philosophy into the universities of the West. The recently organized International School of Vedic and Allied Research in the city of New York is a step in that direction.

The chief purpose of the School is to promote a better understanding and appreciation of the cultures of the East—especially the Vedic culture—and those of the West, as being mutually complementary. Specifically the International School is striving to achieve the following:

I. The establishment of Educational Relations and Exchange Scholarships as between the universities of America, Europe, and the East, especially India.

II. The development of a wider interest in languages and literatures of Vedic origin and affinity as an aid to general culture and, in particular, to humanistic studies.

III. Systematic studies in Vedic, Indo-European (Aryan), Sumerian, Semitic, Hittite and other "West-Asiatic" and allied subjects, in the light of the latest archaeological discoveries.

IV. Continued archaeological research in Armenia and other places where such discoveries have already been made or may be made in the future.

Dr. Charles Rockwell Lanman, Professor Emeritus in Harvard University, is the Honorary President of the International School of Vedic Research. "The whole spiritual and material background of the life of India differs so completely from that of the West that neither can ever understand the other from a mere study of the other's literary monuments", said Dr. Lanman, who is recognized as the dean of Sanskrit scholarship in the United States. "Such a

study is indeed inexorably necessary, and it must be fortified by broad and rigorous training in the many-sided methods of today. But that is not enough. An Occidental who would faithfully interpret India to the West must also know the life of India from actual observation and experience, and must be able to look at it from the Eastern angle of vision. Accordingly, for example, the Sanskrit professor of the next generation must have resided in India, have mixed (so far as possible) with its people and have mastered one or more of the great modern vernaculars, such as Marathi or Bengali. And on the other hand, since the Hindus themselves are already actively engaged in interpreting the East to the West, it is needful also to look at life as we look at it, and thus to find out what things—such, let us say, as repose of spirit or the simple life, the West most needs to learn of the East."

Professor Lanman went to the heart of the subject when he pleaded for sincere co-operation of Indianists of the Occident with those of the Orient. "The business of us Orientalists", remarked Dr. Lanman, "is something that is in vital relation with urgent practical and political needs. The work calls for co-operation, and above all things else, for co-operation in a spirit of mutual sympathy and teachableness. There is much that America may learn from the history of the people of India, and much again that the Hindus may learn from the West. But the lessons will be of no avail, unless the spirit of arrogant self-sufficiency give way to the spirit of docility, and the spirit of unfriendly criticism to that of mutually helpful constructive effort. Both India and the West must be at once both teacher and taught."

This is the first time in America that distinguished educationalists have formally associated themselves with an institution seeking to make the Vedic culture known in the West, and introduce it into the Western universities. Among the active officers of the School I find such well-known names as

Professor Bloomfield of Johns Hopkins University; Dr. Duggan, Director of the Institute of International Education maintained by the Carnegie Foundation; Dr. Paul Monroe, Director of the International Institute of Teachers College, Columbia University. He is the editor of the famous *Encyclopedia of Education*. Both Duggan and Monroe exercise great influence in international educational affairs.

Space does not allow me to tell of the various distinguished scholars connected with the School; but I must mention the name of Pandit Jagadish Chandra Chatterji, who is the real inspiring genius back of the movement. Without his vision, his efforts and his enthusiasm, the International School of Vedic and Allied Research would probably never come into existence.

Pandit J. C. Chatterji was born in the district of Birbhum in Bengal, within a few miles of the Shantiniketan school of Rabindranath Tagore. He received his early training under such men of learning as Pandits Chandra Kanta Tarkalankara and Mahesha Chandra Nyayaratna of the Government Sanskrit College, Calcutta. Later, as a government scholar, he studied at Cambridge University and published his thesis on *Hindu Realism*. Since then, he has written half a dozen other serious books on Indian literature and philosophy. In recognition of his Sanskrit scholarship, the Bharat Dharma Mahamandala, under the Presidency of the Maharajah of Darbhanga, conferred upon him the title of Vidya-varidhi.

Chatterji is a modest man, and is reluctant to speak of his achievements. I managed to learn, however, that he was for many years the Director of Oriental Research in Kashmir, and was for a while the chief of the Department of Religious Administration and Education in Baroda. It augurs well for the future of the International School of Vedic and Allied Research that an accomplished scholar of the calibre of Chatterji has been willing to consecrate his talents for its service.

When asked how the School is going to work out its plans, Chatterji said: "The methods of the School will be strictly scholarly and academic. We are, however, endeavouring to have the intrinsic value of Vedic culture recognized by the scholarly and the thoughtful people of the West who, up-till-now, have studied Indian culture merely as of historic importance, as an in-

teresting relic of the dead past, without any realization of its living significance to our every day life. That is to say, they have studied our culture much in the same way as they study rock fossils or archaeological remains. The International School of Vedic and Allied Research is trying to change all that."

Pandit Jagadish Chandra Chatterji,
Director, International Vedic School

In order to influence the educational centres and universities in America on behalf of Oriental culture, a strong committee of educationalists has been organized. The committee will arrange for lectures at different universities and send out members of the School staff to speak on Indian subjects, especially on Indian philosophy and Vedic culture. Attempt will also be made to persuade these institutions to offer regular courses on Eastern culture. When the plan has developed a little more fully, the School will bring over from India competent scholars and exponents of Hindu thought to the United States, as it will also send out American savants of Oriental thought to India.

The School is already on a sound financial

basis, and additional support has also been assured with the expansion of the institution.

The executive office of the International School of Vedic Research is at present located on the fifteenth floor of the New York Times Building, New York City. The School, however, has secured an extensive real estate property in the village of Nyack, which is only thirty miles from the heart of the great metropolis. This property, beautifully situated on the Hudson River, is valued at fifteen lakhs of rupees. It is here that the future Vedic University of America will some day be erected. At least, that is the dream of Pandit Chatterji.

I had a delightful visit at Nyack. I was particularly pleased with the residential headquarters of the School staff, and its library. From the veranda of one of its School buildings I could see the encircling purple mountains at a short distance, and hear the waves of the lovely Hudson go smiling seawards. Although the house with its spacious garden is amply provided with all the comforts and conveniences of up-to-date American life, its dignity and serenity is a constant reminder of the Hindu *ashramas* we read about in the Vedic literature. What a bliss it must be for a Vedic scholar to live in such a place!

This property at Nyack was donated to the school by Doctor Pierre Arnold Bernard, a charming man to meet. He lived in India for nearly twelve years studying the Tantras and Yoga, especially Ghatastha Yoga. A Hindu at heart, he is ready to do almost anything for the true service of India.

I must not forget to mention that another splendid property, an old mediaeval castle on the Lake Constance at the Swiss-German border, has been offered for the housing of the European section of the International School of Vedic and Allied Research. Arrangements are also being made in Benares and Srinagar (Kashmir), for Western scholars who may wish to visit India for purposes of resident study there in connection with the School. Nor is this all. Non-resident, but affiliated, scholars will be encouraged to carry on their special work wherever they happen to be.

The School is very anxious to make available to the West good Sanskrit texts

and good English translations thereof. Roth and Whitney, Weber, Max Müller, von Schroeder have given the Western world the Vedas; the Hindus themselves, the Epics; Rhys Davids and his collaborators, the texts of Buddhism. The first editions of these pioneers, according to the founders of the School, should now be regarded as only provisional. The coming generation of Indianists must busy themselves to make new editions.

Moreover, the future Indianists should work on some of the subjects which have been studied but slightly, if at all, by the Westerners: they should work, for instance, on Dramatics (*Natyashastra*), political and social Science (*Arthashastra*). In addition to these, they must compile new Sanskrit dictionaries, and create a more intelligent interest in Sanskrit learning.

This is a big task, to be sure: but the School is already engaged in various lines of activity. Dr. K. F. Leidecker, a member of the staff, has written two learned monographs; one on the Greek Stoics as compared with certain schools of Hindu thought, and another on the Upanishads. He is now employed on a work on Vedic philosophy, and an introduction to Vedic studies. He is also planning, in co-operation with others, a Sanskrit lexicon and encyclopædia, and new translations of the Vedas.

Mr. P. Whittlesey, another member of the School staff, is devoting himself to a comparative study of Greek and Hindu thought. Still another piece of research that is being undertaken by the School is the relation between Greek and Hindu medicine.

Further, the School has under consideration archaeological explorations in Armenia and Anatolia, where tablets bearing the names of Vedic deities and other evidences of the presence of Vedic people have already been discovered. Who can estimate the value of such work which will shed authentic light on our past and help arrive at correct appreciation of inter-racial cultures?

The International School of Vedic and Allied Research, which is not yet six months old, has a great future before it. Pandit J. C. Chatterji, who so ably officiated at its birth, and is its godfather, deserves well of all who are proud to be called Hindus.

THE ACTRESS

By PREM CHAND

I

THE curtain fell on the last scene of the play. Tara Devi, acting the part of Sakuntala, had wrought a strange spell over the spectators. While she stood before Raja Dashyant giving utterance to words of pain, remorse and bitter reproach, the huge audience, transgressing the laws of etiquette, rushed toward the stage, applauding her vehemently. Many of them found their way on to the stage and fell at her feet. The whole stage was covered with flowers and jewellery. And if at this critical moment Menaka had not appeared in her aerial chariot and flown away with Sakuntala, a few of the spectators would, without doubt, have lost their lives. The manager of the show at once appeared before the curtain, thanked the audience for their appreciation, and promised to stage the same play the next day. The excited audience was pacified. But a young man still stood on the stage. He was tall, well-built and fair, and his face was filled with a strange spiritual light. He looked like a prince.

"May I see Tara Devi for a moment?" he asked the manager, when the other spectators had left the hall.

"That is against our rules," said the manager indifferently.

"Can you send in my note to her?" asked the young man once again.

The manager replied with the same indifference: "Excuse me, please. No. That, too, is against our rules."

The young man turned away in disappointment, got down from the stage, and was about to leave the hall, when the manager called out—"Wait a minute, please. Your card?"

The young man took out a piece of paper from his pocket, scribbled something upon it, and handed it to the manager.

The manager cast a glance at the paper, and read the following—

Kunwar Nirmal Kant Chowdhary, O. B. E.

The hard expression of the manager's face softened instantaneously. Kunwar Nirmal

Kant, a premier *rais* of the city, an honoured litterateur, and accomplished musician, a great scholar, a taluqdar commanding an income of seven or eight lacs a year, a philanthropist whose liberal purse supported several public associations, was standing before him in the capacity of an ordinary caller. The manager was overwhelmed with shame at his curtness and indifference.

"Pardon me, sir," said he with great humility. "I am so sorry. I will take your card to Tara Devi at once."

Kunwar Sahib motioned him to stay, and said, "Let it be. Please don't trouble her. It is time for her to take rest. I shall call tomorrow evening at five."

"No, I am sure, she won't mind," said the manager. "I'll be back in a minute."

But Nirmal Kant, having betrayed his feeling, was now only too eager to cloak it behind self-denial. So he thanked the manager for his great courtesy, and took leave of him, making a promise to call the next day.

II

In a neat, well-furnished room Tara was sitting at a table, deeply immersed in her thoughts. The entire scene of the preceding night—the scene of her great triumph—was re-enacting itself before her mind's eye. Such days come rarely in one's life. How anxious those men were to catch a glimpse of her and make her acquaintance! How madly they hustled one another! She had spurned away many—yes, spurned them away. But in that vast concourse stood a man unmoved—nay, too moved to allow even a muscle to move. With that imperturbable calm of his he might have belonged to a different region. What serene love was written in his eyes, what resolute determination! She had felt as if the shafts of his eyes were piercing her heart. Would she see that man again or not? Who could tell? But if fortune favoured her, and he came back today, she would not let him go without speaking with him.

Then she turned toward the mirror. Her face was a veritable lotus in full bloom! Who could say that this freshly-blossomed flower had seen thirty-five summers! Her beauty, refinement and vivacity could bring any young maiden to shame. Once again Tara lighted the lamp of love in the shrine of her heart.

Twenty years ago Tara had a sad experience of love. Since then, she had been living a widow's life. Immunerable lovers had come with their addresses to her, but she had repulsed them all. Their love had the air of guile and hypocrisy. But Oh! her hard-earned self-control was lost today. She felt today the same blissful pain in her heart which she had first experienced twenty years ago. Out of that multitude, the image of one solitary figure was now installed in her heart. And it was impossible to forget him. Had she seen him passing in a motor car, perhaps she would never have thought of him. But having found him standing before her with the gift of his love, it was impossible to turn away from him.

Her waiting-woman entered the room and said, "Shall I bring in last night's presents, Baiji?"

"No, thank you," said Tara Devi. "You needn't bring them to me. But wait a moment, what is all that over there?"

"It's a regular pile, Baiji. How many shall I name? There are gold coins, brooches, hair-pins, buttons, lockets, rings, bracelets. There is a small box containing a beautiful necklace. I never saw before such a beautiful necklace. I have arranged them all in a box."

"All right, bring that box to me," The maid went out, reappeared with the box, and placed it on the table. At this moment a call-boy entered the room, and handed her a note. Tara eagerly perused the note. It was signed—Kunwar Nirmal Kant, O. B. E.

"Who gave you this note?" Tara enquired of the boy. "Was the gentleman wearing a silk turban?"

"No, Manager Sahib gave it to me," said the boy, and left the room before Tara could frame a new question.

When Tara opened the box, the first thing that met her eyes was the small case. It disclosed to her a beautiful necklace of costly pearls. In the case was to be seen a card as well. Tara took it out and read—

Nirmal Kant—! The card fell from her. He swiftly left the room, passed

through several rooms, corridors and verandahs and entered the manager's chamber. The manager got up and greeted her—"I congratulate you on your success last night."

"Is Kunwar Nirmal Kant waiting outside?" asked Tara. "The boy gave me his note and disappeared before I could ask him anything."

"I got Kunwar Sahib's note last night itself when you had left the theatre."

"Why didn't you send it then to me?"

"I thought you must be having your rest," rejoined the manager meekly. "So I did not think it proper to disturb you at that late hour. And then to tell you the truth my fear was that I might lose you by introducing you to Kunwar Sahib. Had I been a woman, I would have followed him to any corner of the earth. I never saw before such a god-like person. He is the same man who was wearing a silk turban. You too saw him, I believe?"

"Yes, I saw him," agreed Tara, who looked as if she was in a reverie. "Will he come again?"

"Yes, he has promised to call at five this evening. He is a very learned man, and a premier *rais* of this city."

"I won't attend the rehearsal today," said Tara, as she slowly advanced toward the opened door, fixedly looking in front of her but at nothing in particular.

III

The appointed hour of Kunwar Sahib's promised visit was near at hand. Tara was sitting before her dressing-glass, and her dresser was engaged in adorning her person. The art of the toilet has become almost a science in this age. Formerly the toilet was made according to the common usage of those days. Our ancient poets, painters and lovers of art had, by common agreement, set up certain conventions in this respect. For instance, black paint was necessary for the eyes and red for hands and feet. For every part of the body a certain ornament was designed. These time-honoured conventions have died out to-day. To-day every woman dresses herself according to her taste, her skill, and her sense of the artistic. But how to bring her beauty into prominence and to look attractive is the sole consideration, the sole aim, the sole ideal. Tara was an adept in the art of the toilet.

She had been in the service of this theatrical company for the last fifteen years, and this precious period of her life she had utilised in playing with the hearts of men. Which glance, which smile, which twist of the body, which mode of tossing the tresses proved most effective in bringing the man to his knees,—who could know all this better than she? To-day she selected her best tried weapons, and, when, fully armed, she emerged out of her toilet chamber it appeared as though the entire beauty and tenderness of the world were paying her ungrudging homage.

She was standing by a table in her sitting-room and examining Kunwar Sahib's card, but her ears were eagerly seeking for the sound of his motor. She wanted Nirmal Kant to come that very moment, and to see her in that posture. For that pose alone could reveal to him the beauty of every part of her body. Her art had triumphed over the march of Time. Who could imagine that this pretty young girl had reached that stage of life when the heart craved peace and protection, and the pride of beauty bows before the humility of age?

Tara Devi had not to remain waiting for a long time. For, Kunwar Sahib was still more eager to meet her. Within the space of ten minutes the sound of his car was heard. Tara braced herself up. Within a minute Nirmal Kant was in her presence. Tara forgot herself entirely, forgot even to offer her hand to him. Such is the excitement and forgetfulness of love even in middle age! She stood before him blushing like a shy young girl.

The first object Nirmal Kant's eyes fell upon was her white neck. The pearl necklace, which he had presented to her overnight was adorning her neck. Kunwar Sahib had never experienced such joy and satisfaction in all his life. He felt for a moment as if all his hopes and wishes were achieved and satisfied.

"Excuse me. I am very sorry to have troubled you so early to-day. This is time for your rest, I believe?"

"What better rest could I desire than to have seen you," said Tara, arranging the end of her *sari* which had slipped down her head. "I thank you very much for your present. I hope I shall see you now and then?"

"Oh, daily," rejoined Nirmal Kant, smiling. "Even though you may not like to see me I

shall make it a point to knock at your door once every day."

"Perhaps only till the time when a new object catches your fancy! Isn't it so?"

"This is not a matter of idle amusement to me. This is a problem which involves life and death. Yes, you are at liberty to take it in that light. I do not care. Even though I have to lose my life for your amusement, I'd not mind. And you know this?"

They partook of light refreshments.

Mutual pledges of constancy were exchanged. And then Kunwar Sahib took leave of her after having asked her to dinner the following day.

IV

A month passed away. Kunwar Sahib visited Tara Devi several times a day. Even a moment's separation from her was unbearable to him. Everyday they arranged a new programme. They would go boating on the river, arrange music parties, meet in parks. All over the city people believed that Kunwar Sahib had fallen in Tara's snare, and she was robbing him of his wealth. But to Tara the riches of all the world were nothing in comparison with the wealth of Kunwar Sahib's love. Finding him before her eyes, she would wish for nothing.

But even after a month of her love meetings with him she failed to get the object her soul cried for. Every day she heard Kunwar Sahib speak of his love, his true, incomparable and pure love, but the word 'marriage' never came to his lips. Tara's condition was like that of the thirsty man who finds everything in the bazaar except water. After quenching his thirst the man may turn to other delicacies, but not before that. For him water is the most valuable thing. She knew that Kunwar Sahib could willingly sacrifice his life even, if she so desired. Then why was he silent on the subject of marriage? Could he not express his intention in writing even? Then did he want her to live with him as his paramour? She would not bear such disgrace. She could jump into fire and burn herself alive on the slightest sign from him, but this disgrace she could not tolerate. It is probable some months before she might have flirted with a *rais* and robbed him of a part of his wealth. But love desires love. She

Then all on a sudden the thought struck her that Kunwar Sahib, having failed to trace her out, might be driven to commit some rash act. The very thought of such an event filled her heart with bitter pain. For a moment she stood in helplessness. Then she went over to the table and wrote the following epistle :—

Dearest Darling,

Do pardon me. I am not fit for you. I do not deserve to have you. You have revealed to me that heavenly phase of Love which I had never hoped to see in life. This is enough for me. To my last days I shall be contented with the thought of having been loved by you. It appears to me as though there is more pleasure to be found in the memory of love than in the meeting of the flesh and the satisfaction of animal passion. I shall return back and of course see you, but only when you have married yourself. This is the only condition I lay down for my return. Do not be angry with me, my dearest, do present to your bride, in my behalf, the jewellery which you gave me. I am leaving them here. I am taking away with me only that pearl necklace which is the gift of your love. Do not search for me, I implore you with folded hands. I am yours, and shall ever remain yours.

Your

TARA.

Having finished the missive, she placed it on the table, threw the pearl necklace round her neck, and went out of the room. From the theatre-hall drifted towards her the music of the orchestra. For a moment her feet were arrested. Her relations with that theatre, relations of fifteen years' standing, were to be severed to-day. A profound melancholy seized her. Then

she saw the manager coming toward herself. Her heart began to beat violently. She stole under the obscurity of a wall, and stood still for a few seconds. When the manager was out of her sight she escaped out of the building and, passing through several streets and lanes, finally took the road leading to the Ganges.

Perfect silence reigned on the banks of the Ganges. A few mendicants were to be seen crouched before their fires. And a few pilgrims were lying asleep on their blankets. The Ganges was shimmering and creeping onward like a huge white serpent. A small ferry-boat was lying near the bank. The ferry-man was dozing in the boat.

"Can you manage to take me over to the other bank, boatman", called out Tara.

"No, Madam, not at this late hour of the night," said the ferry-man waking up.

But when Tara offered to pay him double the usual fare, he took up the oar and, unfastening the boat, asked—"What place will you go to, Madam?"

"I have to go to a village on the other bank."

"But I won't get other passengers at this hour?"

"Well, it doesn't matter, my good man, you carry myself alone."

Tara took her seat in the boat. And the ferry-man rowed it on toward the current. And the tiny boat appeared as though it were a spirit wandering in dreamland.

From over the distant tree-tops appeared the eleventh-day moon with its boat of light as it began to cross the endless expanse of the blue.

(Translated from the original Hindi by Rajeshwar Prasad Singh).

DR. J. T. SUNDERLAND HONORED BY HINDUS IN AMERICA

By RAMLAL B. BAJPAI

IN the course of a few weeks Dr. J. T. Sunderland will be the guest of honor at a dinner to be given under the auspices of the India Society in New York City. On this occasion the members of the

Hindustan Association and Friends of Freedom and the Hindu residents of the United States will express to him their deep gratitude for his great devotion to India.

The poet Rabindranath Tagore's message of

"grateful admiration" and his autographed photograph will be presented to Dr. Sunderland, together with the messages and mementos of his admirers in India and elsewhere.

Dr. Sunderland has been widely known in India for many years through his visits to and subsequent activities and writings on behalf of India. Since 1895, when he first visited India, he has identified himself whole-heartedly with India's cause for freedom by writing, lecturing and co-operating with organizations whose efforts were devoted to the emancipation of India.

Dr. Sunderland was born February 11th, 1842 and is now in his eighty-seventh year. He has recently written a book on India, some chapters of which have been published in the *Modern Review*, and is a frequent contributor to periodicals in America and India. This book will be published in the course of a few months.

He is very often called upon to preside at Hindu meetings and to speak at their dinners, and, in spite of his advanced age, he never fails to respond with courageous zeal.

Freedom of India is his one dearest wish, and it is the strength of this great desire which keeps him actively writing about India when others of his age would be peacefully passing their days in retirement.

His recent book on India, to be published in America, would come at an opportune time when such a vicious propagandist as Katherine Mayo is quoted as an authority on India after a possible "four months" tour. Dr. Sunderland's information, on the other hand, was gathered from two extensive investigations in India and a permanent contact with Indian culture and politics for many years. An appendix to his book will contain his brief reply to Miss Mayo.

Something ought to be said here in regard to his qualifications for writing about India. Has he sufficient knowledge of the subject to make his book worthy of the attention of intelligent readers? As a partial answer, I venture to submit the following statements.

He has been deeply interested in India during all his adult life. That interest began in boyhood, as a result of reading and hearing much about Indian Missions and becoming acquainted with two returned missionaries. Early the dream took possession of his mind to become a missionary himself. This dream was constantly with him in college and

theological seminary, and his studies and reading were shaped largely with a view to a life in India. His sister, Mrs. Harriet Sunderland Clough, next in age to himself, went there as a missionary; so did his college mate and dearest friend.

As for himself, his thought changed and he chose a different calling. But his deep interest in India did not wane and has never waned. For more than forty years he has been a constant student of India's great religions, her extensive literature, her philosophies, her remarkable art, her long history and, above all, her pressing and vital present-day social and political problems.

On account of his known long-time interest in Indian matters, in 1895-96 he was sent by the British National Unitarian Association on a special commission to India to study the religious, social, educational and other conditions of the Indian people, and make an extended report upon the same in London on his return. In 1913-14, he was sent again, on a similar commission, by the joint appointment of the British Unitarian Association and the American Unitarian Association.

In prosecuting the inquiries and performing the duties of these two commissions, he travelled in India more than 13,000 miles, visiting missionaries, government officials, English business men and prominent Indians, speaking in nearly all the more important cities, and holding conferences with Indian leaders of all religious and political parties.

Nor were his investigations confined to cities. On the contrary, he took pains to prosecute his inquiries in many smaller towns and villages, spending weeks travelling on horse-back from village to village in remote country places where no American had ever before been seen. By these means he was able, as few foreigners have been, to come into direct contact with all classes and study India's problems from the side of the people themselves, as well as from the side of Great Britain, and thus find out first-hand the actual conditions existing in the land.

He was fortunate in being able to attend two annual sessions of the Indian National Congress, the Indian National Social Conference, and the All-India Theistic Conference, speaking at the first two named, and speaking and presiding at the last; and, what was very important, forming acquaintances at these great gatherings, with poli-

tical leaders, leaders of social reform and the Brahmo and the Arya Samaj and other Theistic leaders, from all parts of India.

While in India, Dr. Sunderland became deeply interested in the important periodical press which he found there—dailies, weeklies, and monthlies—some of which quite surprised him by their great excellence. These periodicals he read extensively during both his visits; and ever since returning home from his first visit in 1896, he has been a regular subscriber to and reader of never fewer than seven of these, published in Calcutta, Bombay, Madras, Poona, Lahore and Allahabad. Thus during all these years he has been able to keep in almost as close touch with the affairs of India as with those of his own country.

Nor has his reading about India been confined to these constantly arriving and important periodicals; there have been few books of importance upon Indian matters (particularly books dealing with political affairs and social questions) published in England, India or America within the past thirty years, that Dr. Sunderland has not imposed upon himself the duty, and given himself the pleasure, of reading.

And possibly what he considers most important of all, during the entire five years of the stay of Mr. Lajpat Rai in America (from 1914 to 1919), he had the "privilege and honor of being intimately associated with that distinguished Indian leader in active work for India," reading the proofs of the three books written and published by him in America, writing the extended "Foreword" of the first, and

assisting him in other ways, and when Mr. Rai returned to India, becoming editor of the monthly, *Young India*, which he had established in New York, and also becoming his successor as President of the India Home Rule League of America, and of the India Information Bureau of New York.

Dr. Sunderland has lectured somewhat extensively in the United States and Canada on India, its Religions, Art, Literature, Social Problems and Struggle for Self-rule. Two books from his pen have been published in India.

"Cause of Famine in India," "India, America and World Brotherhood", and "India in Bondage: Her Right to Freedom" (not yet published) are three of his books with which all educated Indians should be familiar. He has written many other excellent books on other subjects.

William Digby's "Prosperous British India" had its inception at the suggestion of Dr. Sunderland.

Dr. Sunderland's services to India can not fail to excite admiration and the highest respect, especially when one considers that he was not born a Hindu, and espoused India's cause from a pure sense of justice and humanity.

All India will always gratefully remember Dr. Sunderland, and we Hindustanis in America join in paying our debt of gratitude to this grand old man. We hope that he will live to see India free and independent.

[RELIGION AND SCIENCE

By GAGANVIHARI L. MEHTA

RELIGION and Science have been and are the two forces which most powerfully affect men's thoughts, activities and institutions. It is possible to contend that religion exercised more influence in the past and science may do so in the future, but at

present both of them are living forces. Before we pass on to consider their age-long conflict and their relationship, it is necessary to know what precisely we mean by religion. The difficulty of defining religion is patent. Religion stands for no single principle but

is rather a collective idea. It has had so many transient and diverse forms associated with it that its essential element is hard to elucidate. Nor should it be forgotten that religion has both a personal and a social aspect. Organised, it becomes a creed, a tradition, a set of dogmatic beliefs: unorganised, it is little more than a man's conscience or his mystical insight or his outlook upon the mysteries of life and the universe. Edward Caird, for instance, defined religion as "an expression of a man's ultimate attitude to the Universe, the summed-up meaning and purport of his whole consciousness of things." It is true that religion has an institutional side which is concerned with scriptural authority and professional priesthood, with ecclesiastical organisation possessing endowments or other forms of property and with ceremonials, codes and prohibitions. But though religious organisation has undoubtedly an effect on individual behaviour and conduct, there is a deeper personal religion which relates to men's most innermost disposition and which no true definition of religion could ignore. It is not concerned with such things as priests or ceremonies nor is it identical with ethical or mystical outlook. In this vast and mysterious universe, almost every individual has a certain vague feeling of uneasiness and a consequent desire to get rid of it through establishing some sort of harmonious relation or union with the higher and spiritual powers whose existence is felt and believed. It is this 'home-feeling in the universe', this need of feeling, as Bosanquet remarked, that "we are at home in the universe" that is at the core of religious faith and practice. We might then accept for our purpose William James's definition of religion as "the feelings, acts and experiences of individual men in their solitude so far as they apprehend themselves in relation to whatever they consider the divine*." The belief in the existence of a supernatural Power like God or Law or Nature and in the possibility of linking oneself with that Power through salvation or immortality are fundamental to almost all the higher religions.

But it has been argued that religion is a survival of the infancy of human reason, an anachronism, a relapse into a mode of thought which humanity in its enlightened stage of development is rapidly out-growing. Religion

with its faith and dogmatism is contrasted with science with its spirit of free inquiry, and it is suggested that such religion is not only without utility in a scientific age but is a positive menace to free thought. This view sounds plausible, because religion being older than science—unless the rudiments of science in primitive magic are regarded as scientific—does perpetuate to some extent the traditions of primitive thought many of which have been overthrown, in part or in whole, by the advance of science. Let us, however, pause a moment to consider the meaning and significance of science. Science has been well-defined by Prof. J. Arthur Thomson as "all systematised, verifiable and communicable knowledge reached by reflection on the impersonal data of observation and experiment"†. To the man-in-the-street, science connotes an increasing control over the forces of nature and he is impressed by such sensational triumphs as those of wireless telegraphy and telephony and broadcasting, non-stop air-flights and the marvels of medical treatment. But though such conquests have a real effect upon the outlook and temper of men, it is not only this aspect of science we have to consider in discussing the relationship of science with religion. For, what is strictly contrasted with the religious outlook is the scientific spirit. While the material triumphs of science engender a certain intellectual arrogance and a contemptuous denial of the mysteries of the universe, it is the scientific attitude of mind that is presumed to be directly antithetic to the religious spirit. The religious outlook, it is argued, is authoritarian and dogmatic, uncritical and unprogressive, while the scientific spirit is sceptical and tentative, receptive and piecemeal. "The scientific attitude of mind," Mr. Bertrand Russell has aptly observed, "involves a sweeping away of all other desires in the interests of the desire to know"‡. It involves, that is, a refusal to regard our own desires and tastes, interests and ideals as of any consequence in our attempt to obtain knowledge: it implies the suppression of our whole subjective apparatus in the pursuit of truth. All this sounds a trite truism but it is difficult to practise,

* *The Control of Life* by J. A. Thomson.

† *The Place of Science in a Liberal Education*; essay in "Mysticism and Logic" by Bertrand Russell.

* *Varieties of Religious Experiences* by W. James.

since not merely in social affairs but in the sphere of science itself, bias and prepossession are likely to pervert judgment. The scientific spirit demands many intellectual qualities, such as a genuine and ardent desire to know the truth, uncertainty and an open-mind in the initial stages of an inquiry and subsequent decision purely according to evidence, a habit of mind which is critical yet receptive, cautious yet active. Psychologically it implies a suspended judgment and logically a tentative hypothesis. It signifies not intellectual paralysis by denial of knowledge but intellectual integrity through recognition of the difficulty of knowledge and a resolute desire to search for truth, regardless of all passions and interests. To hold prejudices in check, to regard our cherished beliefs as open to doubt, to examine facts dispassionately and systematically, to seek to acquire precise and co-ordinated knowledge—that is the chief merit of the scientific outlook which rather than machinery is the most vital contribution of western civilisation to human evolution. Undoubtedly, much progress, not merely in the realm of human power but of human thought, has been due to science. It is this scientific attitude that is contrasted with the religious outlook and it is argued that while the former is responsible for progress, the latter stands in the way of such advance and is responsible for many evils like superstition and intolerance, bigotry and hypocrisy, tyranny and persecution. Not without reason did Swift in a biting sarcasm speak of men "who have enough religion to hate one another" and satirised their intolerance.* It is thus that religion comes to be pitched against science.

What, then, are the causes of this old conflict? An eminent anthropologist, Sir James Fraser, has held that mankind has passed through three stages of magic, religion and science. The struggle between religion and science, however, is not yet decided or ended. Historical reasons, psychological and moral factors, as well as the tendency and doctrines of science are all responsible for this conflict. To begin with, the

persecution of men of science by religious organisations and the endeavour to bring science under the control of religious authority have not a little to do with this antagonism. From the time of Socrates who represented the spirit of scientific inquiry till the present day, organised religion has tended to obstruct scientific advance. The Tennessee trial in the United States a couple of years ago, the ban on the teaching of evolution in many states of America, the controversy over the Bishop of Birmingham's sermon at St. Paul's last year, the distrust Hindus of science of orthodox except in so far as it becomes a support to their prejudices—all testify to the spirit of corporate dogmatism which inhibits intellectual progress. Psychologically, however, what tends to undermine religious faith is the spirit of self-confidence engendered by scientific achievements. This has a two-fold aspect. In the first place, there is the intellectual certitude which implies that the furthest limits of knowledge are being reached and that soon there will be very little that man will not be able to know or control. He can delay death and it is possible that he may even create life. "Robots" or automata illustrate this tendency, and scientists presume to have devised such mechanical men, though not souls. Moreover, the control of nature by science has made man less and less dependent upon external and mysterious forces like the weather. Thus with a diminution of the dependence on natural forces and the consequent fear, the hold of religion as a faith in the supernatural is also likely to be diminished.* But above all, the trend of science and some of its principal doctrines and theories are responsible for creating an antithesis between religion and science. The theory of evolution, for example, which traces the origin of man not to the angel but to the ape is contrary to the theory of creation of the universe propounded in almost all scriptures. Not less significant is the materialistic trend of science which seems to postulate a mechanistic interpretation of life by reducing the mind and the universe to a play of atoms governed by mechanical laws. In such a background, all mental

* We are the God's Chosen Few.
All others will be damn'd.
There is no place in Heaven for you.
We can't have Heaven crammed.—Swift

* This has been pointed out with his usual subtlety by Mr. Bertrand Russell in his *Perspectives of Industrial Civilisation*

phenomena seem to be bound up with material structure which obeys natural laws and is dissolved at physical death. Moreover, sociological studies like those of anthropology and of historic and comparative criticisms of religions re-inforce, in some degree, the tendency towards scepticism and towards a challenging of religious dogmas. Lastly, a certain distinction between the ends of religion and science have probably something to do with this conflict. Religion, which is fundamentally concerned with individual destiny, is distinctly personal in its aims and outlook, while science, which is concerned with universal and non-individual phenomena, is impersonal. And because it is presumed that the more impersonal we are, the nearer are we to truth, the scientific outlook is supposed to be preferable to the religious spirit.

Nevertheless, in spite of all these points of conflict it is possible to suggest that not only is the antagonism between science and religion not fundamental, but that the two have been approaching each other in various direct and indirect ways. Before we come to the question of harmony, however, let us see how far the various points of conflict enumerated above could be solved. Take, for instance, the persecution of science by religion. It is a fact which it is of little avail to deny. Yet how often has religion become a pretext and an excuse for the pursuit of ends quite secular in character. Just as national feelings are exploited for ulterior ambitions, so are religious feelings. Hatred and greed and the combative impulse may express themselves as religious piety and religious wars and conflicts may be cloaks for objectives and interests quite materialistic in nature. A Pro-Greek policy or an expedition to China may be defended on the plea of defence of Christianity even as "religion in danger" is the cry of ambitious communalists in India. Such religion, however, is radically different from the manifestation of the purely inner life which is a concern of personal religion. However, just as the rulers of men utilised religious emotion in former ages, they utilise the powers given by science now for their own purposes. Nothing, said Kant, is good except goodwill. Science has been prostituted and made to serve base ends like that of destruction of mankind. The respect of men-in-power for science is not seldom due to the fact that it ministers

to homicide and is an efficient ally in war. Many scientific inventions have been of little benefit to humanity as shown by the last war and many of the crimes of modern states both in peace and war are rendered possible by science—from air-bombing of innocent tribes to shooting of unarmed crowds. Because of its material triumphs, science tends to make men averse to spiritual values. Nor is the increasing respect for science always justifiable. As charlatany and quackeries masqueraded in the name of religion in former times, so to-day many credulous people are imposed upon in the name of science. Any theory or doctrine, however extravagant or fantastic, has to assume the title of science in order to pass currency and win recognition from reasonable and intelligent persons. Not merely many avowed quackeries of pseudo-medical treatment but even some forms of psycho-analysis and eugenics come under this category. Mr. Bernard Shaw has with his inimitable sarcasm dwelt on the contemptuous attitude which modern men profess for such things as "voices and visions", while they take in all sorts of nonsense about Oedipus complex and monkey glands*. Science is hence as much liable to be perverted as religion and their perversion is no argument against either just as it is no index of their real nature. Many religious tendencies and facts which were formerly regarded as unscientific are seen to have the germs of truth in them by scientific advance. Such phenomena as miraculous healing or possession are now regarded as due to suggestion or hysteria. Besides, though the scientific spirit is an altogether admirable thing, not all scientists have it, since they are often as orthodox and dogmatic as religious men are presumed to be. That is shown by the reluctance of many scientists to accept Einstein's theory of relativity or Jagadish Chunder Bose's discovery of life in plants, simply because it would be inconsistent with their accepted conception of the scientific

* See Preface to *St. Joan* "It is no longer our Academy pictures that are intolerable but our credulities that have not the excuse of being superstitious, our credulities that have not the excuse of barbarism, our persecutions that have not the excuse of religious faith, our shameless substitution of successful swindlers and scoundrels and quacks for saints as objects of worship and our deafness and blindness to the calls and visions of the inexorable power that made us and will destroy us if we disregard it."

Here, indeed, there is an opportunity for a reconciliation between the East and the West. For, the synthesis between science and religion would absorb all the spiritual gifts of the East and all the physical powers and material conquests of the West. Jaga-

dish Chunder Bose has, for example, shown by the approved scientific methods of the West that the unity of all living beings, the oneness of the whole creation proclaimed by the Hindu *rishis* of old, was no mere spiritual fantasy or mystical vision but a profound scientific truth. In numerous other spheres of science could such genuine reconciliation be effected. Such harmony between science and religion could achieve and could be achieved by a marriage between the East and the West. The scientific powers generated by the West could be harnessed to spiritual purposes proclaimed by the East and the spirituality of the East could be applied to life by a scientific technique. Such reconciliation has not been actually achieved nor is it easy to achieve. But it is at least not impossible of achievement, and the harder the task, the nobler the call. Such a synthesis between science and religion is one of the fundamental tasks of modern civilisation and one of the most hopeful factors for its future.

(From the Bengali of Rabindranath Tagore)
By NAGENDRANATH GUPTA

3
Ah, that day as I saw you,
You touched the woodland as you passed,
And the flowers bent before you.
Methought I heard the gentle tinkling
Of the belled band round your slender waist.

Follow your steps in parans of thunder,
This little lyre, with its feeble string,
Cannot sound that epic measure,
My gift is not worthy of you.

DANCING IN INDIA

A New Era

By KANAIYALAL H. VAKIL

THE programme of the lecture-demonstrations of M. J. Dalcroze, organised last March, London, reached me at the time when we were busy discussing the practical problems associated with the creative thoughts and efforts, like those for the rejuvenescence of dancing in India, inspired

Menaka in Yauvana Nritya

by the manifold, rich and living artistic heritage of the nation. The programme brought back to my mind the picture of the hall in the Institute Dalcroze, Geneva,

where, some years ago, I saw, with the very kind assistance of M. Dalcroze, dancing, reclaimed in Eurhythmics, as an educative power of appeal and vigour grown rare indeed in modern times far away in Paris and Brussels, London and Manchester, "ardent aspirations, unsettlement of mind, discontent with existing conditions and a conflict between different ideas of social organisation" seemed, to Professor M. Sadler, "to show themselves in eager search for educational reform." He saw in the "training of the sense of form and rhythm, the capacity of analysis for musical structure and the power for expressing rhythm through harmonious movement" educational value that was "conclusively proved." In an attic, high above the slime and noisy crowd in Deansgate, Manchester, a group of reformers, characteristically called, I remember, "The Unnamed Society" were, to cite just one example, endeavouring to express in the "Unity of Elements" the unity of arts, painting, sculpture, song and dance. The yearnings of the age distinctly influenced the intellectual currents that travelled to and fro from the Atlantic to the Mediterranean. M. Dalcroze, in Geneva only indicated what Europe and America were searching and, perhaps, beginning to find.

His work, as I saw it, sealed my faith in the indisputable and intrinsic worth of what India had already, ages ago, found and achieved and was now beginning to lose. The way seemed "forsaken, The intellectuals," in India, seemed scarcely stirred for the quest. The visits of Pavlova, Ruth St Denis, Diana Watts, some of the most gifted exponents of dancing, attracted by the immemorial artistic prestige of India, evoked from them, apparently, no response. What was apparent was, however, not real, Mrs. Leila Sokhey and the group of young men and women who a few weeks back, staged their "Song and Dance Recital" at the Excelsior Theatre in Bombay, rescued one from incipient pessimism. They were not merely indignant or

vehement about the general apathy or rather the contempt towards "Nritya" once elevated as a "fifth Veda", an art found and meant to serve the Sudra as well as the Brahmin, the peasant girl as well as the princess. They found the ancient art degraded as "Nautch", as the soulless manipulations of the "Devadasis." They started on the quest. And this brief reference to their courageous, pioneering venture is meant only to seek and offer assistance and assurance for the enlightened comrades on the same quest. For Mrs. Leila Sokhey, known to the world of art as "Menaka", is, she said, eager to enlist for the venture "the assistance and sympathy of the alert intellectuals in the country working for a closer understanding of and response to the cultural demands of the times."

Mrs. Leila Sokhey is an Indian lady, young, energetic and possessed of distinct intellectual and artistic attainments. She has travelled widely in India, Egypt and Europe. Everywhere she has endeavoured to secure information about dancing, which she aspires to develop as, once again, a living art in India. She seeks and interprets an intellectual aim and refinement in Indian dancing which is very frequently degraded as an aimless exhibition of muscular contortions and random sways. She aspires to restore to Indian dancing, as a noble ancient art, intellectual content and artistic interpretation.

Of the three sources, the Hindu concepts embodied in ancient literature, for example in Bharat Natyasastra, Dasarupa of Dhyanajaya or Abhinaya Darpana of Nandikeshwara, secondly, the ancient paintings and sculptures and finally, the current practices manifest in the "nautch" and the conventions of the "Devadasis" or in the folk-festivals, of guidance necessary for the resuscitation of dancing now lost as an art, she is inclined to regard the paintings and sculptures as more authentic and direct and, perhaps, more fruitful evidence and data for its artistic advancement. She believes that the ancient paintings and the sculptures ought to supplement and guide the interpretation of the concepts in the ancient literature and curb the decadence observable in the current practices.

Her selection of "Ajanta Darshan" was guided by that belief. The work of artists who, over a thousand years ago, sought to interpret their religious longings on the walls and columns of the ancient

cave-cathedrals and monasteries of Ajanta is, she is convinced, not merely a record of the dead past. It lives in the figure and features, costumes and gesture of the Indian Woman, alike the source of their inspiration and the triumph of their immortal art. The well-known picture, in Cave II, of the girl leaning against the pillar, the "Queen's Toilette" in Cave XVII, and the punishment of the recalcitrant dancing girl in Cave II were interpreted by a regulated sequence of rhythmic movements, gestures and "mudras" adapted from the paintings and the sculptures at Ajanta. The dance opened with the picture of the girl in Cave II. It concluded with the punishment of the dancing girl shown in the same Cave. "Nritya", so interpreted and so remote from the degenerate craft of the "Nautch" and from the conventions, now routinised as rituals, of the Devadasis, exercised instantly its spell. The whole-hearted response from the audience, mostly representative of the eminent intelligentsia in the city, scattered the natural fears of the young men and women who had, for the first time, courageously endeavoured to reclaim the art now degraded and scorned as a vicious craft. The moment the curtain rose, the magic line, the unperturbed gait, the instinctive rhythm, the colour and costume, the inalienable proud possession of the Indian Woman which constitute the unparalleled artistic magnificence now spelt in glory as Ajanta, were visualised as, perhaps, they have been seldom visualised before on the public stage.

"Naga-Kanya Nritya", adapted from Bhai's "Essence of the Dusk", was a theme generally, and rightly, appreciated as the most dramatic of three dances performed on the occasion. "Menaka", as the "Naga-Kanya" Natabrukuti, worked effectively the distraction and ruin of her rival "Yaswati" and Prince Aj by her serpentine, sinuous, clinging, malicious movements and gestures. She was ably supported both in the "Ajanta Darshan" and "Naga-Kanya Nritya" by "Nilkantha" and her two colleagues "Padma" and "Kokila".

The third theme was "Yauvana Nritya". It translated, by restless vivacity of movement and gestures, the "ecstasy of newly-stirred impulses and dreams of Youth", the ecstasy inherent in folk-festivals, notably, of "Vasant." The dance concluded with the slow movements of the solemnity, the sudden reaction to gaiety characteristic, again, of "Yauvana," of a prayer addressed to Nata-

Raja, Lord of the Dancers, for a happy communion of hearts.

"Menaka" and her colleagues, young enlightened men and women, have started on the lofty and courageous quest. If they expect, as they do that they will be soon joined by other pilgrims on the same quest, their claims and aspirations as well as their

the age. Europe and America are searching the cultural values of the "training of the sense of form and rhythm, the capacity of analysis for musical structure and the power for expressing rhythm through harmonious movement." They are beginning to find them. India had, already, ages ago, found them. And some of the most gifted and

Naga-lanya Nritya

From Left to Right—Padma, Nukantha, Menaka

deeds should win the recognition and assistance of every sane intelligence eager to rescue the noble art from the evil name and days that have degraded it.

The programme of the lecture-demonstration of M. Dalcroze, received at the time when we were discussing these dances, was not, I am inclined to think, a mere accident. It was a coincidence of unquestionable significance to those willing to understand and interpret the yearnings and aspirations of

eminent exponents of creative universal culture have been looking forward to the day when the advanced intellectuals, young men and women of India, could help them by means of the creative thought and efforts inspired by the artistic and cultural achievements which they receive from the nation as their unchallengeable and priceless legacy. Will India now lose what she has preserved through centuries of strife, misery, bloodshed and conquest? India has, from times—

immemorial, stimulated the intelligence and imagination of the world and won their reverence. Will it now lose its ancient leadership? The modern young man or woman has learnt to discount distance. The growth of understanding and comradeship,

of standards and taste in daily life, not less artistic than intellectual, is essential for those who aspire to build anew the world for to-morrow. Shall we, as a nation, lag behind and refuse the privilege of ushering in the new era?

THE GARDENS OF THE INDIAN MUGHAL EMPERORS IN KASHMIR

ARTHUR R. SLATER, F. R. G. S.

THOSE who have visited the beautiful gardens in Kashmir, made by the Moghul Emperors, can never fail to be impressed with the wonderful way in which they have carried out their aim, even though modern changes have somewhat interfered with the design. We look to gardens to provide us with delightful harmonies of colour, and with

choice scents, but in India, where the garden is the refuge from the great heat without, it is to be expected that the leading motive should be a place where restfulness can be obtained, where the atmosphere is cool and pleasant. Shrub and water must therefore play the most important part in the gardens

The Terraces in the Nishat Bagh, Srinagar

Another view of the Shalimar gardens that are made for the joy and comfort of the people. "The long lines of the great water-ways and paths, hedged in by trees, produce a wonderful sense of stately dignity and peace, while the

tranquil breadth of water repeats the flowers, trees, and buildings with a double magic charm, till the whole garden seems full of that mysterious beauty, that comes of the sense of calm continuance. "That one day should be like another, one life the echo of another life", which is the result of quietude, part of that rhythm of harmonious change, through birth to death and death to birth again that special Eastern consciousness of universal life. Keeping in mind this conception that underlies the design of the Indian garden, we can easily understand how well suited were those gardens designed by the Mughals who had left their home in Persia and who desired to create, as far as possible, conditions similar in the land they had conquered and made their home. The later Mughal emperors carried out in Kashmir the same ideas with certain modifications, but with the same spirit.

One cannot easily forget the first impressions received on visiting any of the famous gardens in Kashmir, the Nishat Bagh and the Shalimar Bagh near the Dal Lake, and Aitchibal, and Verinag, some distance from the capital city. See these in their full glory when the channels are filled with water, and the beds are displaying their gorgeous flowers, when the play of the sun

General view of the Flower Terraces in the Nishat Bagh

on the falling waters can be studied, when the lights change on the picturesque mountains that back these gardens, and you will conceive a high respect for those men who planned and executed these gardens in the seventeenth century. True, some of their glory has departed, but the ruling Prince still maintains them in good order.

Visit, first of all, the Nishat Bagh, easily reached by road or water. The approach from the Dal Lake is the most interesting and picturesque. No wonder the maker of the garden called it "The Garden of Gladness", for, seen on a bright day, with the flowers in full bloom, the water flowing over the chutes and along the channels, it does rejoice the heart of man. We are not surprised, even though we appreciate fully the beauties of the Shalimar Gardens, where Shah Jahan lived during his tour in Kashmir, that he cast an envious eye on the Nishat Bagh, which was the property of Asaf Khan his Prime Minister and his father-in-law. In those days the mere expression of a desire by the Emperor meant that the object became his own. On more than one occasion he had pointedly expressed his great appreciation of the garden.

Arriving by boat at the Nishat Bagh

but Asaf had no desire to surrender his pleasure. Angry at the frustration of his wishes Shah Jahan ordered the water supply to be cut off from the Nishat Bagh. The disappointed Asaf used to sit in deep melancholy by the side of the now empty water-course, but one day, he awoke from his sleep to find that once more the fountains were playing merrily, that the water-chutes were again filled with foaming water. What had happened? A faithful servant, overcome by the sorrow that had fallen on his master, had, in spite of the Emperor's order, opened the sluices. Asaf quickly ordered their closure, and the Emperor, hearing of the act of the loyal servant of Asaf, relented, and once more restored to his Minister the water rights he had, in his anger and disappointment, taken away.

The Nishat Bagh is entered through a small doorway and at the entrance to the garden proper, which is nearly six hundred yards long, is a small pavilion. The main garden is built in a series of terraces, each slightly higher than the other. Between the several terraces there are water chutes, made of brick or stone, and in such a way that the water, as it passes over, causes very

On the Dal Sake near the Shalimar Gardens

fascinating ripples. At the head of each waterfall is placed a marble seat, so that it is possible to obtain, from this point, a view of the whole line of channel and fountains. Originally there were many more trees, cypress and fruit of various kinds, but many of these have disappeared. The flowers, however, are to be seen in great profusion during the greater part of the year. On the occasion of the great flower festivals large numbers flock to these gardens, the lake being crowded with gaily decorated boats, while the people themselves wear their brightest coloured dresses. The narcissus and tulip fields are indeed a picture, and

worth going many miles to see. On the third terrace of the Bagh there is a baradari, a small structure which contains a reservoir about fourteen feet square and three feet deep. There are five fountains here, and on a hot day nothing more pleasant than a rest here can be imagined. From this point you get long views of the great lake, while in the distance are the snow-capped mountains known as the Pir Panjal. The modern gardener pays more attention to the care of the lawns than his predecessors did, with the result that the gardens have not the appearance of rich

The Emperor's Garden Seat, Shalimar Gardens

flowering colours, nor so many shrubs and trees.

The Shalimar Bagh has been referred to as the garden made by Shah Jahan, and in which he loved to spend his days while living in this part of his kingdom. There was probably a garden here before Shah Jahan came, but it was he who laid out the present garden. The approach is far from pleasing, for it is by a long narrow canal which is very filthy and shallow. But once inside the garden, you realise the skill with which the work has been planned. In laying out these gardens certain principles are kept in mind. The principal pavilion is usually placed in the centre of the garden, and from this point the channels go at right angles. This central pavilion

From the Doorway of the Palace
Shalimar Gardens

formed "a cool, airy retreat from the rays of the midday sun, where the inmates of the garden might be lulled to sleep by the roar of the cascades, while the misty spray of the fountains, drifting in through the arches of the building, tempered the heat of the burning noontide." In the Shalimar Bagh we find three parts: the outer or public garden which contains the Dewan-in-Am with the small black throne on which the Emperor used to sit when he held his public

audiences with the people; the second part, slightly broader, with the Diwan-i-Khas in the centre (now destroyed); and third, the private garden where the ladies lived. Here in the centre is a beautiful pavilion "surrounded on every side by a series of cascades. At night when the lamps are lighted in the little arched recesses behind the shining waterfalls it is even more fairy-like than by day." As one rambles through these gardens, especially on those festival days when the fountains and channels are filled with water, it is not difficult to picture those scenes Mughal writings describe.

The Verinag Bagh can only be reached by careful planning, but to those who can spare the time, there will be an adequate return. The Atchibal Gardens, however, are easily reached by road, and here you will find what Mrs. Villiers-Stuart considers the site "where the most perfect modern garden, on a medium scale, could be devised." The water comes down from a spring in the side of the cliff, and passes through the garden, leaving it beneath an interesting pavilion in front of which is a tank, surrounded by flower gardens. The old man in charge of the gardens is an interesting character, and for a consideration he will turn on the water so that you can have the joy of seeing the water flow over the fall, and spirt into the air through the fountains. There are many stories told of these gardens and they centre round the history of Jehangir and his wife Nur Jahan. Beautiful though the gardens are today, they cannot compare with the glory of the Mughal period. Many of the old trees have gone, and the flower beds are not so bright and attractive as then. Gone, too, are the old baradaris or pavilions, and their place has been taken by low buildings on the Kashmir plan, buildings that do not help to lend picturesqueness to the whole. But the waterfalls, fountains, tanks, channels remain, and these are very attractive. There are many poplar trees to be seen round the outer walls, while fruit trees are there in abundance, providing visitors with a very welcome lunch through the kindness of the caretaker. The gardens or Baghs of Kashmir cannot fail to be an unending delight to those who find joy in luxuriant Nature brought to serve the deepest needs of mankind.

THE NEW WOMAN'S MOVEMENT IN INDIA

By MRS. ANINDITA CHAKRABARTI

SIGNS are evident in the West of a growing spirit of eagerness to learn and appreciate the ideals that form the true life of the East, interchange of men of culture and scholarship between the two hemispheres being responsible for the rise of this new consciousness. As yet however, the woman of India has hardly found her voice in the world outside. Adequate recognition is lacking about her in the modern movements tending towards the cultural co-operation of the East and the West, and all that the western people may know about her has been mainly from the men who go out from India; and knowledge obtained about her in this way, we need not add, cannot represent truth in its fullness. It is only the patriotic Indian, deeply appreciative of the cultures of the West and the East, who can represent the latter in Europe; so also, it is only an Indian woman thus accomplished who can carry the message of our women to the West. The dearth of Indian women of this type has been the cause of the ignorance still remaining in Europe about us, just as the true intellectual contributions of India remained so long unrecognised by the West for want of the right kind of men in India to carry them to their brothers in Europe.

Recently, however, waves of the New Age have reached the enclosed courtyard of the Indian home and though gifted in many ways, the woman of India has been roused from her comparatively slumbering consciousness, to the message of the Age to which she belongs. Not that many of our women did not receive western education so long, but they had received it through the opinionated agency of their Westernised father and husband, and had to use it mainly as a decorative accomplishment, so that this kind of education did not succeed in revealing their personality through development of their own inherent powers. Thus were found in our land at the beginning of this Era, a mere handful of westernised English-educated women and a vast number of women steeped in the culture of medieval India, living side by side in terms of complete detachment and

misunderstanding. Indications of a great change, however, are now apparent, and this change is coming from the vast unknown depths of the women themselves. Our men, at the first stimulus and attraction of Western education, fell completely under its spell, and then began the gradual process of assimilation, which continues, when they united in the work of synthesising their knowledge on the basis of their indigenous culture; but in all this upheaval and progress the fate of the women remained essentially very much as it was before. Our women keenly felt the anomaly in this state of affairs, they began to observe and understand much, and with the gradual infiltration and absorption of western education into their lives, they have now begun to think and work towards a betterment of their position, and the breaking up of a system which keeps them enmeshed in their present limitations.

Their co-operation in the National Requisition being indispensable, the response of our women to the call of men in the work of nation-building has automatically reacted against the hampering social bondages of our women, and brought them on the road to fresh developments in freedom, so that they already begin to stand on a solidifying basis of self-knowledge. The orthodox and conservative sections of our community, however, as also men drunk with fervid nationalism, take this movement in our women as a sign of mere imitation of the West, and view it with displeasure, forgetting that in the East as well as in the West, all men and women of the present generation have been born in the modern Age, and thus must draw their life-force from a common source of changed conditions, which explains a certain similarity and uniformity in their progressive development. Like the truly cultured men of our land who after receiving all that is best of the European Civilization have learnt to appreciate their distinctive national heritage, our educated woman, too, remaining purely Indian, is getting ready to assimilate first the cultural gifts which the West has to offer to her. Here,

however, the Indian woman suffers under a peculiar disadvantage. For though the condition of our women in the Vedic Age was far superior to what it is now, it is only recently that man's ideas regarding women are approaching the path of rationality. So, apart from the fact that it is not possible to bring back an age that is gone, *however* deep the attachment of our women may be to the long-established rites and customs of our country, they can no longer accept them undiluted and without a thorough process of reformation in the light of modern culture. And it is this that on a superficial understanding, makes our men think of a growing cleavage in our women from the true ideals of India, which they are so eager to revive, so that they suspect us to be merely imitating the West. But this spirit of freedom in our women cannot quite be said to be inspired by the West, for such a spirit did not exist in Europe either, up to this time. It is, however, the urge of the New Age, the light of a new awakening, so inspires and illuminates the modern woman of India that she has to acknowledge and accept it, and this of course does not mean that she wants to reject anything of what truly belongs to her race, or that she severs, in the least, her connection with the ideals that have inspired India in a perpetual cultural inflorescence.

Many of the West, too, do not view favourably this movement amongst our women; they seem to think that this will only make our women lose their distinctiveness and the beauty of our Indian individuality. But, of course, the mere preservation of a distinctiveness, by itself, can possess no intrinsic value; its truth depends on its superiority, genuineness and the sanction of reason. We must, therefore, not only strive to appreciate the distinctiveness of a culture, but try to understand how far this culture is able to assimilate and synthesize the abiding treasures of the world, in the realms of religion, literature, and social economy. The Indian woman cannot reasonably be expected to remain an unchanged living pyramid to satisfy the curiosity of visitors from abroad; being a living person, she must move on with the spirit of the times, along the path to progressive self-realisation. And it is by preserving her own personality, and by not allowing herself to be merely rolled along the drift of passing affairs that she

can thus develop her distinctiveness on the basis of self-knowledge.

The endeavour of our women to incorporate into our social system the cultural gifts of Europe, and our new unfettered movements of freedom will spontaneously bring out a bloom of colour which is sure to impart a touch of distinctiveness to the world-wide women's renaissance, and materially help its growth and unfoldment. It is the duty, therefore, of all people to welcome with reverence and affection this new awakening of womanhood in India, and understand that the apparent signs of westernization or lack of originality about our movement are not fundamental. For centuries on end the Indian woman has kept behind the purdah of specialized Indian womanhood, but what has she gained herself or given to the world thereby? Just as her awakening has roused in her the desire to learn from the West, so the development of her individuality will enable her to deeply appreciate and make living to the world outside, the true cultural gifts of her motherland.

The time has not come for a possible appraisal of the results of this new movement, our women have not yet become fully fitted to offer the matured gifts of their culture to whole human civilization. We are still breaking the shackles of the dead customs that bind us, and eagerly learning the lessons that the modern West has to teach us.

There are those in our country who look upon the women as their pride, yet would keep them immovably chained to the past. They do not understand that the present national degradation of our country is due, in the greatest possible measure, to the state of our womenfolk. So in the new woman's movement in India there is the inner urge to lead our country to its development towards light and freedom through the emancipation of our women from the tyranny of unmeaning social conventions.

And this also we must admit, that though greatly handicapped, Indian women are freer far, in a number of ways, than their western sisters. In Europe, suffering under militant materialism, the emphasis laid upon woman as a charmer, and her social obligation to devote herself to the gaiety and diversion of her menfolk has kept her subjugated to many serious wrongs and insult; in our cultural traditions woman is never looked upon in

that way. We have ever been enjoined to look upon her as the incarnation of divine motherhood, and as the symbol of Blessedness. There has been abuse of this ideal in the past, and then there are those of our men who advocate certain aspects of Western freedom among our women, without the slightest understanding of the true principles of freedom, and cause great damage nowadays to our social improvement. Even then, the Indian woman, when she gets her *Swaraj*, is liable to be better situated in this respect than her western sisters, and shall be spared much of the fruitless expenditure of energy entailed in the West in unmeaning luxuries of dress, and futile social amusements. We do not uphold the present prevalence of drab monotony and joyless isolation in the multi-

tude of our Indian women, which is neither desirable nor health-giving, and so emphasize the need of their joining social functions and festivities more than they have ever done before. Simplification of her life through freedom of initiative, wholesome activities at home and outside, will only leave the Indian woman with a fresher mind for the cultivation of the higher truths of the soul where she has to face her Creator alone. This presupposes a widening of man's horizon with regard to womankind, a gradual weeding out of the unmeaning customs and conventions which hamper the development of her personality; and it is in this way alone that the true Indian ideal of womanhood can gain its fullest expression.

IN THE JHARKAND * FORESTS

(A Tale of Aryan Times)

By Mrs SNEHALATA SEN

BY the side of a roughly made stone castle built on a rocky hill rising from the valley, stood a band of men, black-skinned, short of stature, handsome withal, armed with crude iron and stone weapons, bows, arrows and axes. Proudly they stood in battle array, vigilant, brave and determined. A few ornaments of shell and colored seeds, and a loin cloth of rough woven cotton adorned their well-knit figures. Thus stood the black warriors awaiting a foe.

But what enemy could penetrate the dense forests and hills of Jharkhand, where in some parts the sun's rays even could not pierce? Leaving the banks of the Ganges, fleeing from the invaders, they had wandered into these jungle-covered hills and rugged ravines. Here clear streams flowed over rock and sand, and waterfalls leaped down. Wild and beautiful flowers bloomed, and green groves of the Sal and Palash gave them shade.

They had thought to live free and un-

molested here. Indeed these wild simple freedom-loving black Kols seemed to be a part of the black rocks and dark caves.

Alas! the foe marching along the banks of the rivers and guided by them, had at last reached this spot. The Kol chief Banasur was then away in Shikarbhūm * with his followers, and the remaining few stood prepared to defend themselves.

Soon the enemy appeared, emerging round a bend of the river. The black-skinned warriors gazed fascinated at the wondrous sight. On horse back and on foot, with shining shields and swords, bows, arrows and clubs, slowly advanced men who looked like gods. The Aryan army burst upon their view. In silence they gazed on each other, then suddenly an arrow was shot from the Kols, and the battle began. The river swollen with rains, rushed along between them, while the two bands of men fought valiantly for a time. The hillock was soon dotted with black bodies, while Aryan blood reddened the

river banks. Shouts and groans mingled in the air.

Then, as if springing from the bowels of the hill, a beautiful maiden suddenly appeared on its topmost point. Tall and fair, with raven locks flowing behind, adorned with shells and red flowers, she stood silent a while. A thick coarse cotton cloth draped her shapely limbs. She turned and spoke to the Kols and in an instant they stood motionless and silent with lowered arms. She looked at the Aryan chief, and lifted her hand, but before that they had ceased fighting amazed at sight of her. Then she descended the hills slowly, and standing on the river bank opposite, addressed the Aryan chief in the Aryan language.

"I am of thy race, O chief; What seekest thou here in the heart of these lonely forests? Why dost thou slay the men who people this land?"

In a stern but calm voice the chief replied, "Who art thou, Maiden, to question me thus? Why dost thou meddle in the affairs of men?"

"I was the daughter of an Aryan King but now I am the adopted daughter of Banasur the chief of Jharkand, and am queen over these black men. Simple and harmless are they, hurting none. Go back to thy own land, Oh proud chief. Molest not these men, to whom the great God has given the shelter of these mountains and forests."

"Daughter, step aside," came a voice of thunder, as a tall black warrior, kingly and noble, armed and arrayed, stepped forward from the dense forest on one side of the hillock. He was followed by a band of warriors. Turning to the Aryan chief he demanded in the Aryan language, "What seekest thou?" "I seek a treasure," came the reply. "A treasure? Seek, and welcome to our forests. We bear thee no ill-will, we do thee no harm. Be peaceful and seek."

The Aryan stood amazed and ashamed, he glanced at the dead bodies on both sides, then saluted the forest chief in silence.

Again Banasur asked, "What treasure dost thou seek, O chief?"

"I know not what it is, but the holy Rishi said,

'Follow the course of yon river and thou shalt find a treasure which will bring peace to thy heart, give thee a new kingdom.'

I have obeyed the holy one, but no treasure have I found."

"Rest thee and on the morrow shalt thou seek for it." So saying Banasur, the Kol chief and the maiden, followed by their men, entered the stone stronghold on the hill top.

All was silent and still. The weary soldiers slept, but there was no sleep for the old Aryan chief. The maiden? What memory awoke and stirred his heart?

The fair morn turned the hills to gold, and the river sparkled into light. The castle stood out like a sentinel and the small Aryan camp below stirred into life. The chiefs of the two races met and discussed for a while. For days the Aryan band of men roamed and sought in vain among the forest and hills for the prophesied treasure. At last one day the Aryan chief said to Banasur, "No treasure have I found yet but the Rishi hath said I shall find a new kingdom. This land shall I wrest from thee. So prepare to fight, O chief of the Kols! Might is right and he who wins shall take."

Proudly Banasur replied, "So be it. We shall fight to the death. Driven by your race we came here and thought to live in peace. Thy greed is great, O possessor of many lands. We fear not to fight, nor do we bend to the yoke of the intruder."

The maiden, who always wandered by the side of her foster father, came forward and said in gentle tones, "Why dost thou, O my countryman, molest and desire to drive out these men? Canst thou not live in peace here? The Jharkand forests stretch far and wide. Seek an abode elsewhere."

"No maiden," he replied, "there can be no peace between the Arya and Anarya. We shall subdue these black men, win their lands, teach them our arts, our learning and our religion."

In a voice sweet but stern she replied: "Listen, Oh Arya chief, who seekest to conquer these black men and wrest their freedom. Know that oppression never held a kingdom nor claimed the hearts of a people. Thou mayest wrest their land but can not keep them. Love, sympathy and friendship, these alone can hold them. Know ye that the ancient race of this great land cannot die, for the great God himself peopled it with these black men. Teach them what thou wilt in peace and love." The old chief was silent a while, then said, "Who art thou, maiden, who comes

to me like a dream of some other birth? Whose speech is noble and wise? Where is thy land and who thy father?" In sad tones she replied: "My father was a great King in the country south of the Jamuna and north of the Vindhya hills. I was stolen by black men, enemies of my father, when a child. My old nurse followed me and thus from her I learnt the language of our race. I was brought hither to the forest chief Banasur".

In low trembling accents the old chief asked, "Thy father's name, maiden?" "Darparaj, the chief of Champagarh." "The treasure is found. The Rishi spoke truly, for I am Darparaj and thou my lost and stolen treasure." So exclaiming the Aryan King clasped his daughter to his heart and laid his hand on her head in blessing.

For a while there was deep silence. Then Banasur said: "Darparaj, thy daughter is our queen and as a child to me. Let her abide with us." The old king answered slowly: "We shall abide here together, Banasur, in

this beautiful land of hill and dale and learn much from each other."

Thus in the heart of the Jharkand forests, by the banks of the merry hill stream, lived the chiefs of the races in peace and friendship. Villages sprang up in the valleys. The forest-clad hills and woods gave them game to hunt and roots and fruits for food. Cultivated lands lay below, full of rich gold grain.

We know no more of this olden tale. Sometimes a black Kol herdsman with tall kingly limbs and aristocratic features or a Kol maiden with typical Aryan features arouses our wonder and interest. While gazing at the beautiful scenery of Jharkand at the "bold brow of a hill" or a "soft vale," at the meadow below and the groves beside the hill streams, a vision of turret and tower, temple and palace, of Banasur and his black men, of Darparaj and his fair daughter, of the Aryans and Kols living in friendship together, arises before us from the mists of the past.

BALLAD FOR GLOOM

For God, our God, is a gallant foe
That playeth behind the veil,

I have loved my God as a child at heart
That seeketh deep bosoms for rest,
I have loved my God as maid to man
But lo this thing is best:

To love your God as a gallant foe that plays
behind the veil,
To meet your God as the night winds meet
beyond Arcturus' pale.

I have played with God for a woman
I have staked with my God for truth,
I have lost to my God for a man, clear eyed
His dice be not of ruth,

For I am made as a naked blade
But here ye this thing in sooth:

Who loseth to God as man to man
Shall win at the turn of the game;
I have drawn my blade where the lightnings meet
But the ending is the same;
Who loseth to God as the sword blades lose
Shall win at the end of the game.

For God, our God, is a gallant foe
That playeth behind the veil,
Whom God deigns not to overthrow
Hath need of triple mail.

PSYCHO-ANALYST

I leave the world of happy, growing things.
Of morning mist, of wind, of sunset shy
To tread alone the Land of Haunted Minds
Where no song is, no language but a sigh—

The caverns of the mind in whose dark depths
Are shapes fantastic, terrible and grim,
A labyrinth where no sound breaks the spell
Of eerie beauty, shadowy and dim,

I light the way with feeble candle-beam.
But Science sputters in the wind of doubt.
The shadows leap to meet the flickering light.
The dust of dreams is scattered thick about.

Dead loves and old desires are buried here.
Their ghosts live on to torture and condemn.
O Light from heaven, penetrate this mind.
My ray of Science cannot banish them.

In this sub-world of pain where sleep is cursed
With dreams that are not dreams, but black
night-mare,

I tremble lest my earthiness betray.
No eyes but His should see a soul laid bare.

"The Greatest Birthday"—Mr. F. Loius Mora's Picture of the Madonna

PROTECTION OF OIL INDUSTRIES OF INDIA

By J. M. GANGULI, MSc : LLB.

THE reference of the question of protection to oil industries in India to the Tariff Board for investigation by the Government of India, with instructions to postpone all other work so as to be able to take up this question immediately has given rise to much comment. Though not much surprise is felt at it. With the influence, which like other British Commercial interests, the oil companies, which are almost wholly British, exert with the Government, the mystery of the Government of India's decision, even though after the dissatisfaction given by the Commerce Member to the representatives of the oil concerns in India who interviewed him on the subject, is easy to understand after the evident failure of Sir Henri Deterding, the chief of the Royal Dutch Shell, to come to terms with the Standard Oil Company.

To understand the situation it is to be borne in mind that the world oil market is to-day practically in the hands of three powerful groups which are closely associated with their respective Governments. These are the Standard Oil Company of America, the British Royal Dutch Shell Company and

the Anglo-Persian oil Company; and although they actually own about half of this total world output they as a matter of fact directly or indirectly influence the world market to a much greater extent through banking corporations and otherwise. The complaint which the other groups have against the Standard Company is that the latter has contracted to purchase large quantities of oil from Soviet Russia, which are being dumped on the market, causing a forced decline in the price-curve. This Russian oil has been called 'stolen oil, on account of the fact that the oil industry has been nationalised by the Soviet Government; and one of the peace terms proposed by Sir Henri Deterding to the Standard Company is that the latter should keep apart a sufficient portion of its sale proceeds from the Russian oil to recompense the ex-proprietors who have been dispossessed by the process of nationalisation in Russia. This grandmotherly solicitude of Sir Henri for the ex-proprietors may be amusing, but to go out of one's way to propose and dictate such terms to an absolutely independent concern, whose chief

fault has been that it has contracted by open negotiation to purchase oil from Russia,—which oil is not only purchased and used in large quantities by most of the Governments in Europe but is also sold and consumed to a considerable extent in England itself, in spite of the breaking off of diplomatic relations between England and Russia and in spite of the most vigorous propaganda in England against Russia,—and that it is selling the same in open markets, is simply preposterous. Indeed, while England imported 331,000 tons of Soviet oil in the year 1926-27, the French Navy Board purchased $\frac{3}{4}$ ths of its requirements from Russia, the Italian Navy made 90 per cent of its purchase from that accursed land and Spain has made a long contract to purchase 60 per cent of her needs from the Nefte Syndicate, the Soviet organisation for the control of oil in Russia. But it is only the poor Standard Company which has come in for the wrath of the mammoth British groups for pretty obvious reasons. For, behind Sir Henri's efforts to show that it was really the injustice done to ex-owners of the Russian industry through nationalisation which stung his conscience, the underlying truth is that this ear-marking of a portion of its profits from Russian oil was expected to handicap the Standard Company in price-cutting which might demoralise the market.

It seems, however, that Sir Henri's negotiations from such high moral principles have failed, and it is no wonder, therefore, that the Government has been forced to contemplate the imposition of an import duty in India which would put the Standard Company at a disadvantage, under the very convenient pretext of giving protection to the oil industries in India. The change in the views of the Government on this question has indeed been too abrupt to disguise the above fact. It was not long ago when the representatives of the oil concerns in India interviewed the Commerce Member of the Government of India on the question of protection, but they returned from the interview none too cheerful. At the annual general meeting of the Indo-Burma Petroleum Company held on the 13th April last in Rangoon Mr. Howison, the Chairman, said that though some representatives of oil concerns had personally seen the Commerce Member nobody had any idea of what the Government would do before the sudden announcement of the reference of the question to the Tariff

Board for investigation. Not only has the question been submitted to the Tariff Board but the pressure which has evidently been brought to bear upon the Government is obvious from the fact that the Tariff Board has been unusually hurried to go through this work immediately by putting off all other work for the present; and against this strong direction of the Government the president of the Board even is said to have protested. The rates war which is said to have precipitated the issue was initiated in India as early as the 23rd September last but the danger to the indigenous oil industries in India as a result thereof does not seem to have struck the Government so long. But as soon as Sir Henri failed in his efforts at a compromise in New York, the Government woke up to realize the plight of the Indian oil industries. Not that from the very beginning of the contract between the Standard Company and the Nefte Syndicate pressure was not put on the Imperial Government to safeguard the interests of the British concerns in India, but the possibility of estranging relations with the United States by hurting the interests of the Standard Company was causing hesitation in British diplomatic circles. When, however, the British Royal Dutch Shell finally failed in bringing round the Rockefeller group, the interests of powerful commercial concerns prevailed over the wisdom of the statesmen.

Leaving aside, however, the circumstances which led the Government to its present action, the question of protecting the oil industries in India by the imposition of an import duty involves important considerations which relate as much to questions of policy and principle as to the interests of the consumers.

The so-called indigenous oil industries in India are at present practically entirely in the hands of the British, even though some of the companies are registered in India in rupee capital. How far such companies are eligible for assistance and protection from the Government is a question of vital importance to India, which has been considered and commented on on several occasions, as also by the Fiscal Commission and by the External Capital Committee of 1925.

In his note of dissent appended to the report of the External Capital Committee Pandit Modau Mohan Malaviya has very

correctly and with his characteristic force summed up the Indian point of view :

"We do not ask for the introduction of protective duties in order to benefit foreigners."

The strong minority report attached to that of the Fiscal Commission also contains the sentence.

"No foreign country should be allowed the profits due to the policy of protection in India and at the cost of the Indian consumers."

The views of the Government of India, at least on some aspects of the question, have also been expressed from time to time by its responsible officers. Speaking before the Legislative Assembly on 2nd March 1922 Mr. (now, Sir) A. C. Chatterjee said,

"The settled policy of the Government of India, as I think we have mentioned more than once in this Assembly, is that no concession should be given to any firms in regard to industries in India, unless such firms have a rupee capital, unless such firms have a proportion, at any rate, of Indian directors, and unless such firms allow facilities for Indian apprentices to be trained in their works."

Now so far as the last two conditions are concerned none of the oil companies satisfies them, though some of them have got a rupee capital. But even in that case how many of them are, and to what extent, under the influence direct or indirect, of the Royal Dutch Shell, is important to investigate though very difficult to ascertain. A distinction was, however, drawn between the granting of special concessions and the giving of protection by the imposition of protective duties by the External Capital Committee, which has remarked, "where a bounty or *definite* concession is being granted to a particular company, it is certainly practicable to impose any restrictions desired in return for the concession, but where a general tariff is imposed and any concern operating in the country will derive benefit from it without the necessity of approaching Government for any *special* concession at all", the committee neither thought any discrimination desirable nor could hit upon a practical method of effecting it. It will be noticed, however, that so far as the Government policy is concerned, Mr. A. C. Chatterji simply says "no concession" and does not qualify this concession by either the word "definite" or "special." Besides, the minority in the Fiscal Commission has very ably challenged the reality of any such distinction between the two kinds of concessions:—

"There is really no distinction between Govern-

ment granting subsidies or bounties out of money collected by them by way of taxation and allowing an industry to tax the people directly by means of higher prices resulting from protective duties. In both cases, it is the people of India who have to pay the price either as tax-payers or as consumers. Industrial concerns benefit either directly from Government subsidies or bounties or indirectly by higher prices due to protective duties. If the imposition of conditions is justifiable in one case, it is equally justifiable in the other."

Further, in explaining the idea behind the Indian demand for a policy of protection, Pandit Madan Mohan Malaviya, after approvingly quoting the eminent economist Professor Bastable that 'to understand the position taken up by the modern opponents of free trade, it is above all essential to recognise that the keynote of their system is nationality,' has said in his note of dissent to the report of the External Capital Committee :

"When we Indians asked for protection we did so in order to promote Indian enterprises with Indian capital and under Indian control. The Government of India understood us correctly and agreed with us. Speaking in 1916 on the resolution which led to the appointment of the Industrial Commission, Sir William Clarke, the then Member of Commerce, said : 'The building up of industries where the capital, control and management should be in the hands of Indians is the special object we all have in view.' He deprecated the taking of any steps which might 'merely mean that the manufacturer who now competes with you from a distance would transfer his activities to India, and compete with you within your own boundaries.'"

In this connection the following words of Sir Frederick Nicholson, which were referred to by Pandit Madan Mohan Malaviya in his dissenting note to the Industrial Commission report, and which have also been quoted by the minority in the Fiscal Commission, are also of much relevance and significance :

"I beg to record my strong opinion that in the matter of Indian industries we are bound to consider Indian interests firstly, secondly and thirdly. I mean by 'firstly' that the local raw products should be utilized ; by 'secondly' that industries should be introduced ; and by 'thirdly' that the profits of such industry should remain in the country."

Apart from these vital considerations involving questions of policy and principles the interests of the consumers also should not escape our notice. The magnitude of their interest will be at once seen if it is remembered that according to one estimate the recent rates war, which is not older than a few months, having started on the 23rd September last, has caused a saving of about four crores of rupees to the consumers. In

order to appreciate, however, the position from the consumers' point of view, the demand as well as the existing resources in the country should be carefully considered.

With the development and expansion of industries in India the consumption of oil is steadily on the increase, though the production in the country is not increasing correspondingly. India's present output approximates 08 per cent. of the total output of the world, which was about 150 million tons in 1926. Though in the years 1919 and 1920 India produced as much as over 305 million gallons, that figure seems to have become a record which has not been approached in subsequent years, the output being 289½ million gallons in 1925 and about 280½ million gallons in the year following. It is feared that this decline in output will continue unless and until a new field is spotted and tapped, the chances of which, judging from the repeated failures of geological research, are certainly none too rosy. A feeble ray of hope was discerned when in 1924 the Yenangaung field in Upper Burma gave an increased outturn of 6½ million gallons over that in the preceding years, but this was followed by a decrease of 2½ million gallons in 1925 and of 14½ million gallons in 1926. The excess product of about 483,000 gallons from the Singu field in 1925 could hardly make up for the drop in other areas. Neither the find at Lanywa under the bed of the Irrawaddy, nor the increase of about 1,285,000 gallons from the Minbu area can balance the steady, though it may be gradual, decline which seems to have set in. In Assam as well as in the Punjab, while some fields show a slight increase in product others show a different tendency and thus the position remains practically unaffected. The petroleum resources in India can hardly therefore, meet the increasing demands in the country.

So far as other oils are concerned India is already importing large quantities, and her imports seem to be increasing. The import of fuel oil in 1926 was some 8 million gallons more than that in 1925; while the import of kerosene from the United States was about 12 million gallons more in 1926 than in 1925, though this was partly due to a decrease from other quarters.

These are matters which ought to invite serious consideration free from the influence of the systematic propaganda which the

interested oil concerns are doing. With the acumen of a veteran propagandist Mr. M.A.J. Noble, a Bombay Director of the British Burma Petroleum Company, has sought to explain to a *Statesman* representative that

"Whether the interests are English, American, Chinese or Indian, the petroleum industry in India ought to be saved from ruination.....All mines and minerals primarily belonged to the State and no Government could afford to see any of its industries destroyed, especially petroleum which was of such great importance.....It is unsafe to come to any definite conclusion about the condition of an industry judging from the earnings of a particular company. The Burma Oil Company might be making profits because of its long existence of nearly half a century and its other connections but there were many concerns even with British capital which had gone into liquidation.....The Indian capital involved in the petroleum industry runs into crores. It gives employment to thousands of Indians"—of course, as coolies and clerks—"on the fields, in refineries and in various other spheres. It yields a revenue of Rs. 2½ to 3 crores to the Indian Exchequer in the shape of excise duty, royalty, taxes, rates, license fees etc. ... The price war not only injures the petroleum industry in India, but it also shakes the foundation of the industry throughout the world."

Mr. Howison, the chairman of the Indo-Burma Petroleum Company, after similarly dilating on the income which accrued to the Government from the oil industries, has been clever enough to touch on a very soft point of the Government,—

"Another very important test in the North-Western Frontier of India was allowed to proceed in view of the prime importance of discovery of petroleum in that quarter"—of course from the military point of view—(the italics are curs). "We have seriously considered shutting down there also, however, and may yet do so if no improvement in the outlook is promised."

The propaganda on behalf of the powerful oil concerns thus neither lacks in skill nor in extent. In pointing out the obstacles to legislation for protection the *Statesman* has, however, significantly remarked that the chief one "is their (the companies') own neglect to cultivate the general goodwill when they were in a position to do so by lowering prices to the consumer, or at least equating them to English prices." (The prices in India, it may be noted, have been higher in spite of India producing her own petroleum, than in England which has to import it.)

"Again the tendency among Nationalist politicians and newspapers is to welcome any breach in the oil monopoly which will benefit the consumer even temporarily. It is only human that the consumer should rejoice when would-be monopolists begin to fight among themselves."

Another very significant thing in connection with the reference of the question to the Tariff Board, which throws a flood of light on the attitude and intentions of the Government, is the very remarkable omission, which obviously cannot be accidental, of the question of the cost of production from the terms of reference to the Board by the Government. Neither the oil concerns, nor therefore the Government, relishes the idea of an enquiry into the high cost of production on account of a very expensive management which scrupulously excludes Indians from it. But the absurdity of correctly gauging the effect of the price-war on the financial position of the manufacturers without going into the cost of production seems to have struck the Tariff Board also, which has, therefore, indirectly tried to bring the question within its purview. In its communication the Tariff Board says—

"The effect of the price-war on the financial position of the Indian producer is *inter alia* one of the points to be investigated. That effect cannot be correctly measured without ascertaining in the first instance whether the market-price represents a fair selling to the Indian producer, i.e. a price which after covering all works-costs leaves him a reasonable margin for overhead charges and profit."

The motives and the violent under-currents of intrigue which are behind this reference of the question to the Tariff Board are thus easily apparent, and it will, indeed, be a very costly mistake if the Indian public remains indifferent to the potential danger which seems to be brewing ahead. The Bombay correspondent of *Capital* has with much force complained that

"No other enquiry before the Tariff Board had perhaps so challenged the economic axioms laid down by the majority of the Fiscal Commission or even the minority; nor perhaps, the theories held in acceptance by the Indian and European commercial communities."

But when the magnitude of the British interests involved and the power which they wield are realised and the circumstances of the situation are appreciated no surprise need be felt at the Government's action. What, however, is of immediate importance and urgency is that not only the Indian Chambers of Commerce at Bombay and Calcutta should protest and move in the matter, as they have done, but the public in general and the Indian press and the legislators in particular should be keenly alive to the situation, lest they be found napping as on many occasions in the past.

DREAM OF INDIA

By MEDDIE MAZE LEBOLD

The shepherd by the leafy banyan tree
Is playing flute lays soothing me to dreams.
A dream of ages under mystic sky,
As lull spreads aroma over me.
The tired old peasants come from barley-fields,
As I am dreaming of fair Uma's charms.
The cobra slinks to milk cruse, hooded front,
Of spectacled large dots all shining bright
And orbs that mesmerize. Oh lover, make
Your frog go dance in his wide lethal mouth.
The sun of gold cries out, "Awake and see."
The dew is on the anise, odor floats
Far down from hills. The lamkins are at play.
Like sages meditating higher truth
I strive and long to reach eternal peace.

A BAUL SONG

Thy path, O Lord, is hidden by mosque and temple.
I hear thy call, but the *guru* stops the way.
What gives peace to my mind, sets the world ablaze,—
The cult of the One dies in the conflict of the many,
The door to it is closed by many a lock, of Koran, P'uran and rosary.
Even the way of renunciation is full of tribulation,
Wherefore weeps Madan in despair.—

RABINDRANATH TAGORE
In *The Visva-Bharati Quarterly*

[Books in the following languages will be noticed Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc. according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

KRISHNA OF VRINDAVAN. By Krishnakris

The literature in English on Vaishnava religion is rather scanty; and therefore, we may safely say that very little is known by European readers about the fundamental tenets of the school. Even the book by Bhandarkar is far from being exhaustive. Moreover, Vaishnava religion and philosophy are not so simple as it is generally believed. There are in many points which are not only very complex but also very subtle. And specially in the Gaudiya school some notions about the relation between God and the human soul and the conception of Krishna and Radha have been emphasised, which, if not rightly understood, can give rise to many misconceptions and to those hasty and sweeping generalisations which are likely to lead astray the unwary reader. Another point which must be insisted on is that the word 'Vaishnavism' has a very wide meaning, as many as the schools which claim to be equally special sects of it. Bengal has given birth to a special school which, as it is known, has been started by Chaitanya and which has inspired a very important literature in Sanskrit as well as in Bengalee, which, according to me, deserves a greater attention and cautious study by scholars as well as general readers. In fact, as I said before, very little is known about it, so that we must warmly welcome any attempt intended to give us some idea of the fundamental tenets of the school. The book that we are reviewing does not claim to be either exhaustive nor is it a strictly scholarly research. It is written by a believer with a sincere enthusiasm and with the purpose of elucidating some of the most important aspects of his creed. But at the same time he has a direct access to the sources in Sanskrit as well as in vernacular, the essence of which he has faithfully presented in good idiomatic English.

The book is divided into two parts. The first one contains the life of Krishna chiefly according to the Bhagavata Purana. Those who cannot have access to the Sanskrit text or have not time to read this voluminous work will find here a

very well-written summary of this Vaishnava Bible which gives in small compass the main points of all the story. The second part which does not appear in the title of the book is concerned with the religion of love. The elaboration of the doctrine of Prema—the Spirit of Chandidas, is one of the most important and characteristic features of the Chaitanya school of Vaishnavism. It has been masterly elaborated in such works as the Prasadhartha and the Ujjvala-Nilamant, and it is briefly and clearly referred to, also in that remarkable book in Bengalee—the Chaitanya-Chaitamrita. The present work embodies English translations of the essential portions of those books, elucidating here and there with suggestive quotations from mystics, poets and philosophers of other lands. The theory of the various stages which must be realised by the Bhakta is very clearly dealt with in this book. Everybody must be grateful to the author for having inserted in the work a graphic scheme of this complicated theory as this will be of much use to the ordinary reader as well as to the scholar. Of course as a philologist I could not always quite agree about the renderings of technical terms or the translation of some passages as provided by the author. But this would be utterly out of place, as the book is not meant to be a scientific treatise. No, it is a very excellent summary of the vast literature of a little known school of thought, which I should like were read not only by all cultured people, but also by my colleagues of the West who perhaps do not know about Vaishnavism, its schools, its tenets, its fundamental features, its literature, much more than I knew before I came to India—that is very, very little.

— G. TRILL.

SOME INDIAN DYES: Being information collected and published by C. Butee Rao, M. A., B. L. Compiler. Price, 6 as.

In this pamphlet are given the botanical names, arranged alphabetically, of Indian plants which

yield any kind of dye. The present list commences with *Acacia Arabica* and ends with *Garcinia Xanthochymus*. It is, therefore, obvious that if the compilation be continued, two more lists like the present would be necessary. The compiler might have waited and published in one volume whatever information he could collect. The object is evidently to arouse interest in our indigenous dye-stuffs. But the great point is : Do the plants contain colouring matter in quantity sufficient to repay trouble and expense ? All the plants enumerated do not satisfy this test, and we know that our dyers and people in villages use only those stuffs which involve least trouble and expense. There are many questions which have to be answered before a dye-stuff can form an article of commerce. The technical chemist must tell us the percentage of colouring matter contained in a sample, the trader, the quantity available, the scientific dyer, the possibility of making the dye fast, and lastly the practical dyer, the cost of extracting and fixing the dye in the face of the modern dyes of commerce. The compiler is, however, doing the first spade work for others to take up the questions.

J. C. RAY

SISTER INDIA : A critical examination of and a reasoned reply to Miss. Katherine Mayo's Mother India by 'World Citizen' published from Sister India Office, Church Gate, Bombay, price 2 Rupees 8 annas.

So many books have now been written in reply to 'Mother India,' that it has become difficult to follow them through the Press. There are two standards by which these different books may be judged.

- (i) whether they satisfy Indian readers
- (ii) whether they are likely to convince Western readers :

Mr. K. Natarajan's book, which I have read with great appreciation, seems to satisfy both. Mr. Dhan Gopal Mukerji's book, with its somewhat cumbersome title, 'A Son of India answers Mother India,' while excellent in its tone, and likely to be effective with Western readers, is rather a 'made up' book, too full of extracts from other writers ; nearly twenty pages is taken up, for instance, in reprinting in large letter type, Mahatma Gandhi's 'Drain Inspector's Report' article. Thus for Indian readers, it is somewhat stale. The tone of 'Father India' by C. S. Ranga Aiyar is too slipshod and it suffers from dwelling too much on the nauseating features of the West—a retaliatory argument, which has its place, but does not convince the Western reader that Miss. Mayo's facts about India are wrong.

For readers in the West Father Hull's articles in the Catholic magazine, called the Examiner, are excellent, because they avoid emotion and appeal to statistics and personal knowledge. I would very much like to see them republished in book form.

On the whole, I could not advise this book under review, 'Sister India,' to be republished in its present form outside India. It would need the most careful revision before doing so, and the excision of certain passages of a personal character, about Miss Mayo, and other American

maiden ladies, which should not have been written, even though the provocation to write them was extreme. The passages are too filthy to quote, just as parts of Miss Mayo's own book are horribly filthy and unquotable. In such passages the author has betrayed himself into going beyond the bounds of his own preface, in which he states that as far as is possible he has avoided throwing dirt in return.

Some parts of the book are good, especially those which deal with the evils that have grown up under British rule and the appalling poverty that has resulted. But the book is by no means uniformly good and the argument is at times weak. On the whole, my verdict would certainly be this, that the book should not be republished abroad in its present form.

C. F. A.

SELECTIONS FROM THE WRITINGS AND SPEECHES OF THE LATE RAJA PEARY MOHAN MUKHERJEE : Published by Tarak Nath Mukherjee, B.Sc., M. L. C. Pp. 211.

"The public activities of Raja Peary Mohan," says the author, a grandson of the late Raja, "were many and various and the historian of the most important period in the history of Bengal during the earlier portion of British Rule will find things in this collection, which, it is hoped, will be of great value to him in forming his judgments regarding important topics of public interest." We fully concur in this view of the author. The volume touches on most of the important social, political and economic problems which have agitated Bengal during the last half a century. Though a member of one of the biggest landholding families of Bengal, the Raja was never afraid to identify himself with popular movements and held liberal views on most subjects. As an illustration, we may refer to his speech before the British Indian Association of Calcutta, in 1900, criticising the proposal for the establishment of a Raj Kumar College for Bengal—a speech which might be read with profit by the present day champions of the public School movement, who seem to be so eager to see their sons turn into imitation Englishmen.

That the problem of middle-class unemployment is no new thing in Bengal will be evident from the following extracts from a paper read by the Raja in 1870, i.e. exactly half a century ago. "The desire of every parent, who can afford the cost to give a liberal education to his boy, has called into existence a large number of young men who see before them no way whatever to earn a livelihood... what with anxious inquiries about vacancies in public and mercantile offices, what with banking and solicitations for patronage and recommendations to men in power, what with repeated disappointments and repulses, their life is a life of sore trial and misery... Too late has the conviction gained upon the parents that, if the money which they spent in the education of their boys had been laid by, it might have given them a fair start in life in some industry, trade or occupation, and enabled them to become useful members of their families and of society." These might have been excerpts from almost any daily newspaper of today.

A HISTORY OF VILLAGE COMMUNITIES IN WESTERN INDIA: By A. S. Altekar, M. A., LL. B., Lecturer in Indian History and Culture, Benares Hindu University. Oxford University Press, 1927. Pp. 144; price Rs. 3.

We welcome this scholarly study on the rise, development and decay of village communities in Western India. The books of Maine and Baden-Powell on Indian village communities can no longer be relied on as safe guides on the subject, owing not only to the habit of their authors of generalising from insufficient data but also because they had no access to many sources of information which modern research has brought to light. Sir Charles Metcalfe's oft-quoted statement on Indian village communities may be taken to be typical of the general European and educated Indian attitude on the subject even today. And no statement could be more misleading. Even a superficial study of Mr. Altekar's book will convince the reader that Indian village communities have not "remained the same for ever," but have undergone great changes in the course of centuries and followed different lines of development in different parts of the country. The author has tapped all the available sources of information, including the evidence supplied by the *Smritis*, the *Jatakas*, the Southern India Inscriptions and the documents of the Muhammadan, Mahratta periods; and as a result we have a work, which, in spite of its restricted scope, must be regarded as a noteworthy contribution to our knowledge of a very important institution of our past national life. The author fully realises the difficulties of reviving Indian village communities, but with whole-hearted co-operation between the Government and the people he does not consider the task impossible.

ECONOMICS

THE DIALOGUE DIVINE AND DRAMATIC (BETWEEN LORD SRI KRISHNA AND HEROIC WARRIOR ARJUNA). Chapters first and second (retold and rewritten in the language and expression suitable to modern Aryans): By Gitananda Brahmachari. Published by B. G. Paul and Co., Madras. (With a portrait of the author). Pp. 89. Price one Rupee or 2 Shillings.

Has not been able to maintain the dignity of the original.

AT THE FEET OF GOD: By Swami Rindas, the author of *In Quest of God* with a preface by Elizabeth Sharpe. (With a portrait of the Swami). Pp. 91. Price 12 annas.

Great thoughts. Edifying.

THE PATH TO PERFECTION: A Lecture by Swami Ramkrishnananda. Published by the Ramkrishna Math, Mysore, Madras. Pp. 23. Price 4 annas. Edifying.

KALI CHARAN BANNERJI: By B. R. Barber, Ph. D. Published by the Christian Literature Society for India. Pp. 47. Price 3 annas.

A short biography of an eminent and loving personality. His Christianity did not denationalize him.

H. A. Krishna Pillai: By Amy Carmichael. Published by the Christian Literature Society for India. Pp. 31. Price 2 annas.

A short biography of a Christian teacher and poet of the Deccan.

LIFE BEYOND THE GRAVE: By the alleged spirit of the late Shri Swami Shradhdhananda. Pp. 47.

Professes to be Shradhdhananda's message from the spirit world through a medium.

(1) WAS JESUS CHRIST A VISVAKARMA BRAHMANA? Pp. 17.

(2) WAS JESUS CHRIST A FLESH-EATER OR A VEGETARIAN? By M. S. Ramaswami Aiyar. Pp. 19.

The author says Jesus was a Tamilian—*Visvakarma Brahmana*. His real name was Kesava Krishna. He was a vegetarian.

THE MYSTERIES OF SPIRITUAL LIFE. By Tara Charan Binerji with a foreword by Pandit Gopinath Kavray. Principal, Govt. Sanskrit College, Benares. Pp. 42. Price 12 annas (paper).

Written in the form of a dialogue. Deals with some problems of spiritual life (God and man, Maya, Jnan, Karma and Bhakti, etc).

MAHES CH. GHOSH.

THE CROSS IN THE CRUCIBLE: By S. Haldar. Published by the author (Ranchi, India). Pp. IX+378. Price Rs. 2 (cloth).

It is a worthy sequel to the *Lure of the Cross* by the same author. It deals with Christian Theology, Christian morality and Christian politics. The book is packed with facts drawn mainly from English authors of unquestionable honesty. The facts are astounding and are damaging to the claims of Christianity as a civilizing factor.

Evangelisation has, in almost every country, been followed by annexation, which is, as Herbert Spencer has well put, 'the euphemistic word for land theft by politicians as "convey" was Falstaff's euphemistic word for theft of money.' Enslavement and impoverishment are invariable concomitance of annexation.

As regards Christian morality and theology, the readers are referred to the book itself and to *In Search of Jesus Christ*, where the subjects have been more systematically arranged. Pandit Mahesh Chandra Vedantaratna's contributions to the columns of the *Modern Review* are more known to the readers. Christianity was never a moral force even in its primitive stage, not to speak of its degraded condition in the middle ages. It was throughout a sacramental religion with the Eucharist at the centre, which itself is only a modified form of ancient cannibalism, for which the churches are fighting even to-day.

In a weak moment Mr. Haldar has conceded that "there is no doubt that from the fall of the Roman Empire to the Renaissance the Church of Rome was largely instrumental in promoting civilization in Europe" (p. 145). But he has forthwith unwittingly corrected himself by a quotation

from the Rt. Hon. J. M. Robertson. If Mr. Haldar did not mainly depend on excerpts from the periodicals but referred to original books such as Mr. McCalee's *The Sources of the Morality of the Gospels*, Mr. Draper's *Conflict between Science and Religion* and Mr. Robertson's *A Short History of Christianity* among a host of others he would find that instead of "promoting civilization" the church hampered civilization in those very centuries, yes, in those days, the church remained a "fountain of darkness" as Mr. Robertson has said till Europe was rescued from its slough of degradation by the return of Greco-Roman culture which was driven out of Europe by Christian fanaticism to be sheltered at Cordova, Bagdad, etc., the Islamic seats of cultures.

In another place (p. 355) Mr. Haldar has played into the hands of his opponents where he says that "doctrinal Christianity is altogether different from the real teaching of Jesus of Nazareth." In this connection he has also said that "the cause of truth has often suffered in this world", meaning that the religion of Jesus was a sublime thing but Christianity has degraded it. This is really a great unhistorical canard that has passed muster in this world. What is called the doctrine of Christianity is never a separate thing from the so-called teaching of Jesus. There is nothing to choose between the two. It is exactly the same thing as condemning untouchability but speaking for caste or *varnasrama* as some big people often do in India. The Christian propagandists are not wrong when they support every doctrine of Christianity from the life and teachings of Jesus as found in the Bible. Jesus the teacher, Jesus the Messiah and Jesus the Saviour were all manufactured together and they all stand or fall together as has been shown in *In Search of Jesus Christ*. And this is the true method to combat Christianity. No half-hearted advocacy will serve the purpose. It has been repeatedly shown in the columns of this monthly, as we have already said, Mr. Haldar also knows that there is nothing in the life and teachings of Jesus that can be recommended to the serious student of history or religion as superior to what existed before. Moreover, it has been shown beyond all cavil that the Sermon on the Mount, the bedrock of Christian morality, though not of the highest order in most places, is a compilation from the decidedly pre-Christian literature.

The Cross is a pre-Christian symbol passed over to Christianity from earlier religions. Christianity itself with its central figure is a conglomeration and continuation of older faiths and myths as the higher criticism of the Bible discloses.

X

was a young man, the contents 'show an admirable balance and maturity of judgment in most cases.

The *raison d'être* of British rule in India indicated in the following passage from Major Basu's book continues to be true:—

"There were many 'homeward-bound' passengers in the *Sutlej*. They were principally—as is generally the case with P. and O. passengers—Anglo-Indians going to spend the summer in England. I had not the pleasure of becoming intimate with them. But there was one young man—serving under the Indian Government—who often and often spoke to me. To me his conversations were more repulsive than pleasant, and I would have been glad had this man never spoken to me at all. Any one having the least pretension to good breeding, would not have spoken in 'his tone. He delighted in calling the Indians 'D-d Niggers.' 'In the struggle for existence,' said this Anglo-Indian youngster, 'the weak must suffer. And as we English cannot discover lands every day, and as we have conquered India, we are justified to squeeze it as much as we can.' He said that the English do not hold India in trust, but by the sword and for trade. 'They are in India as long as it supplies them with bread and butter and would leave the country, when they could no longer get anything out of it.'"

That this selfish motive still underlies British rule in India is proved by the following declaration made by Sir William Joynson-Hicks, Home Minister in the Baldwin Government, in one of his speeches some time ago:—

"We did not conquer India for the benefit of the Indians. I know it is said in missionary meetings that we conquered India to raise the level of the Indians. That is cant. We conquered India as the outlet for the goods of Great Britain. We conquered India by the sword and by the sword we should hold it. I am not such a hypocrite as to say we hold India for the Indians. We hold it as the finest outlet for British goods in general, and for the Lancashire cotton goods in particular."

The book contains very interesting reading on many topics, such as the marriage system of the English, the fair sex of England, morality of the natives of England, religion of the English, English views on India, character of the natives of Great Britain, what can England teach us? etc. Or the author's estimate of English morals, *The Sentinel*, a British monthly, wrote in part as follows:—

"In the main, this Indian gentleman takes a fair and unprejudiced view of some of the foulest blots on our national escutcheon. We may well blush that he finds it necessary to place us, a highly-professing Christian people, on a lower level than the natives of Hindoostan. We conquered his country by fraud and force, and we rule it for our own advantage as the first consideration; our second and subordinate concern is for the subject population. We maintain some hundreds of missionaries in India for the purpose of converting the people to our religion—but with our Opium production and traffic—our Cantonments Act—our contempt of and insolence to the Natives, we

'Play such fantastic tricks before high heaven,
As make the angels weep.'

Under the circumstances, the moderation of the writer of these letters is much to be admired."

The chapter, "What can England teach us?" in which the author inculcates the lessons of patriotism minus the robbing instinct, of hero-worship, etc., concludes thus:—

"Englishmen, as Napoleon observed, are a nation of shopkeepers. Is it conceivable that they will cut their own throats by encouraging Indians to manufacture their own cloths and other articles of necessity and luxury? However, Indians should not lose heart. If patriotism means anything, they should try to use country-made articles and boycott foreign goods.

"From a worldly-wise nation like the English, one can no more expect to learn lessons in honesty and veracity than from Bunyan's great hero, the Worldly-wise Man. But of whatever failings the English may be guilty in their dealings with other people, amongst themselves they are angels. Let us try to emulate this trait in their character. Let us stand shoulder to shoulder with our Indian fellow-countrymen, do everything that lies in our power to help the cause of national progress and not cut each other's throats.

'These are some of the lessons which we should try to learn from the English.'

X

FIREFLIES; By Rabindranath Tagore. Decorations by Boris Artyushcheff. New York. The Macmillan Company Cloth back Gilt letters. Artistic cover. Pp. 274. Price Two and a half dollars.

The exquisite little poems, named "Fireflies" had their origin in China and Japan, where thoughts were very often claimed from the Poet in his handwriting on fans and pieces of silk. The decorations are fine and have an oriental look.

On some pages the printer has made the mistake of printing two "fireflies" as one. We have the Poet's authority for stating that this mistake occurs in pages 16, 29, 73, 105 and 170.

The little poems in this book are gems of thought and of phrasing which often show the poet at his best. Take the following, for example:

"Bigotry tries to keep truth safe in its hand
with a grip that kills it."

"Clouds are hills in vapour,
hills are clouds in stone,—
a phantasy in time's dream."

"The spirit of death is one,
the spirit of life is many.
When God is dead religion becomes one."

"The mountain remains unmoved
at its seeming defeat by the mist."

"Wealth is the burden of bigness,
Welfare the fulness of being."

"My soul to-night loses itself
in the silent heart of a tree
standing alone among the whispers
of immensity."

"Life's aspirations come
in the guise of children."

"The fruit that I have gained forever
is that which thou hast accepted."

Some of the tiny poems have a humour of their own. The following, for instance, will be appreciated by book-lovers and book-worms:—

The worm thinks it strange and foolish
that man does not eat his books."

UNHAPPY INDIA, being a reply to Miss Katherine Mayo's 'Mother India'. By Lajpat Rai, Member of the Legislative Assembly of India. Author of 'Young India' etc. Banna Publishing Co., 5-2 Garstin's Place, Calcutta Cloth gilt letters. Pp. LXXII+536. Price not mentioned.

The tone of Mr. Lajpat Rai's reply to "Mother India" is all that can be desired. He is serious throughout, and meets every class of arguments adduced by Miss Katherine Mayo with counter-arguments. He thoroughly exposes the lies and half-truths contained in her book. He has given sufficient facts to prove that Miss Mayo came to India "through some agency of Anglo-Indians, official and non-official, who wanted her to write a book of the kind she had written about the Philippines in 1924." Having been a strenuous worker in the cause of social and religious reform throughout his adult life, he would be the last man to deny the existence of evils in our country. But while admitting them, he weighs his words, and shows how Miss Mayo conveys to her readers a wrong impression of Indian life. Long before Miss Mayo was born Indians themselves had begun their fight with social and other abuses in the country, and on the whole, had done much more to destroy them than the British Government.

It is not with malicious pleasure but as a matter of unpleasant necessity that the author has had to dwell on some of the darkest aspects of social and civic life in the West, particularly in America. His object in doing so is the obvious one of showing that though these evils—far worse than similar ones existing in India—are to be found in occidental society, no Western writer has ever challenged the Westerner's right to political freedom, why then should our right to similar freedom be questioned?

The author's introduction of 58 pages is very valuable. The book is divided into thirty-two chapters. The reader would be able to form some idea of the ground covered by them from the headings of some of them. History of Compulsory Education. 'Why is Light Denied?'. The Hindu Caste System, The Untouchable—His Friends and His Exploiters, Less than the Pariah. Woman in India—A Retrospect. Woman and the New Age, Early to Marry and Early to Die, The Hindu Widow, The Devadasi, Schooling, Free of Charge, The Sex Urge in the West, A Present to Mr. Winston Churchill, Muck-rakers whom we know, The Hygiene of the Hindus, Why the cow starves, India—Home of Plenty, India—Home of Stark Want, Poverty, the Rock Bottom Physical Base of India's Ills, Some Aspects of the Drain To-day, 'Divide et Impera', The Sons of the Prophet, Brutishness on British Rule, The Story of the Reforms, 'Cambrous, Complex, Confused System,' India—a World Menace.

The author has torn to shreds the roseate picture of British rule in India and its effects, drawn by Miss Mayo.

So far as we are in a position to judge, Mr. Lajpat Rai's book is the most effective and the most fully documented answer to Miss Mayo's unsavory production published up-to-date. What the author has given us is quite sufficient for Indian readers. We are glad to learn that there will be foreign editions of the work and that they are to be larger in size and to contain more matter.

We have only three suggestions to make. In the next edition, which is sure to be called for soon, the author may, if he thinks fit, embody the fact mentioned in the *Encyclopædia Britannica* that in addition to a life pension, Abbe Dubois was paid a big sum for his book by the British rulers of India of his day. It would also be better if he could use some materials from Mr. N. C. Mukerji's article in the *Allahabad Holland Hall Magazine* for March 1928, showing, among other things, how Miss Mayo has tampered with the extracts given in her book from the reports of speeches in the Central Legislature. And, if possible, a list with references should be given of the proposals, made by non-officials in the Central and Provincial Legislatures, for the uplift of the depressed classes and for social reform which were thrown out by the votes of the official and nominated members of those bodies.

R. C.

PERPETUAL CALENDAR:—By W. N. Kardale. Dhandara, C. P. 1928.

With the help of this booklet one can easily find out day for date or date for day in any month, in any year, past, present and future. This booklet will be very useful to lawyers, business men and others.

THE COMMISSION AND AFTER: By A Liberal. D. D. Taraporevala, Sons and Co. Bombay. pp. 116, price Rs 3. 1928.

The anonymous writer of this brochure is one of those who hold that Indians should co-operate in the work of the Simon Commission only on a basis of perfect equality. He divides the work into eleven chapters. The first five chapters deal with the events connected with the Announcement in which the appointment of the commission was made, the kind of reception accorded to it by some prominent Indian leaders, a brief report of the Parliamentary Debate on the commission, the resolutions passed by the Indian National Congress and other conferences in connection with the Royal Commission and the Assembly's verdict. In the sixth chapter he attempts to clarify the important issue whether democratic institutions are fit for eastern countries and opines that "our future constitution must be Parliamentary in nature, whether it is dubbed Western or Eastern—it will be a national suicide on the part of India to adopt a village constitution that might have served well some time in the fifth century." Next he deals with the problem of accommodating the Native States within the future Indian constitution.

the place of India in the Empire and advocates the acceptance of social reform as a policy by the rulers of India. In the concluding chapter he points out the lines on which the prospective Indian constitution should be drafted.

Our author—a politician of the liberal school—says: "We have dominion self-government before us as our political goal." We do not think this view will be subscribed to by all. He has, however, stated his case cleverly and we think Indian publicists would do well to go through this brochure. The printing and get-up are good, but the price seems to be rather high.

THE PROGRESS AND PRESENT ADMINISTRATION OF INDIA: By Satyaprasanna Ghose, B. L., Faridpur. Price Twelve Annas.

Our author says in his foreword: "The subject matter of this book finds place in the Matriculation History syllabus of the University of Calcutta. The aim of the author has been to meet the requirements of the students and those who consider it a part of their duty to keep themselves up to date on the subject." (Italics ours). This work is intended to be used as a notebook on N. N. Ghosh's "England's Work in India" but we do not think it would be of any use to "those who consider it a part of their duty to keep themselves up to date in information" on the progress and development of the administration of India. The Indian market is today flooded with valuable, informative and authentic treatises by able writers covering the ground trodden by the present author—thanks to the devoted labours of R. C. Dutt, Major B. D. Basu, P. N. Bose, P. D. Mukherjee, Dr. R. K. Mukherjee, B. G. Sanyal and others—and we doubt whether in the year 1928 A. C. any educated Indian can be led to believe (as our author has tried to do) that:—

1. British Government have done much for enlightening the people of India (p. 9).
2. Before the days of the British rule there were practically no roads worth the name. Hence communication was greatly hampered (p. 23).
3. The standard of the citizens' rights in India is almost as high as in England (p. 26).
4. In pre-British days—India was practically in a state of anarchy. The lives and properties of the people were quite unsafe (p. 33).
5. Multifarious are the activities of the Government in doing good to the people (p. 33).
6. The international status of India has been considerably improved. (p. 37).
7. British rule has awakened a new national life. (p. 37).
8. India is today on the same level with any of the civilised countries of the West so far as her political rights and privileges are concerned (p. 97).

9. It is the fervent hope of the majority of our countrymen that the (Simon) Commission will do full justice to the aims and aspirations of India (p. 102).

Besides these glaringly inaccurate statements (we have pointed out only a few amongst many) the book abounds in printing mistakes and errors of facts.

P. C. SANYAL

MORE GHOSTS AND MARVELS: *A selection of uncanny tales from Sir Walter Scott to Michael Arlen. Made by V. H. Collins. The Worlds Classics Series. Oxford University Press.*

A good selection of weird tales, some of them quite thrilling, from the writings of famous storytellers.

FIVE EIGHTEENTH-CENTURY COMEDIES: *Selected and Edited by Allardyce Nicoll. The Worlds Classics Series. Oxford University Press.*

There is an exotic flavour in this pot-pourri from the past. We get momentary glimpses of the life, manners and customs of the people of England from the aristocrat to the commoner and what these plays lack in the way of incidents and situations, is amply made up by the vivid colourful flashes that these glimpses give. A pleasing selection.

INDIAN SERPENT LORE: *With thirty plates. By J. Ph. Vogel, Ph. D. Price £ 2-2-0. Arthur Probsthain, London.*

Since the days of Burgess's monumental work "Tree and Serpent Worship" the eyes of students—of folklore and Art alike—have been directed on the Naga cult in India. This book in presenting the theme in a compact form supplies a long-felt want. The survey of the subject matter has been done in a very exhaustive and comprehensive fashion, covering as it does the fields of Epic, mythology, folklore, art and archaeology of India, from the ancient times to the present day. The plates are well-selected and excellently reproduced and add to the value of the work.

The book is quite in keeping with the scholarly reputation of Dr. Vogel.

K. N. C.

THE CORRIDORS OF TIME: I APES AND MEN; II HUNTERS AND ARTISTS; III PEASANTS AND POTTERS, IV PRIESTS AND KINGS: *by Harold Peake and Herbert John Fleure. Oxford, 1927. Price 5 S. net each volume.*

An introduction to Anthropology in the English language, covering the entire field of human evolution, has been a long desideratum. The works of Topinard and other continental authors were concerned more with the natural history of man than the growth of civilisation. The recent discoveries in European Prehistory and the proto-history of the Near-East, India, Central Asia and China have revolutionised our ideas, both as to the antiquity and origin of human culture. A popular but up-to-date and authoritative account of what the 'spade' has revealed to us was, therefore, urgently required. The recent publications of Prof. Willis of America and Drs. Schwalbe and Fischer of Germany, though admirable in their own ways, do not fill the want the present volumes do. Peake and Fleure, who are two of the most eminent of living British anthropologists, in the first volume of the series, 'Apes and Men', have traced the geological history of man and given an excellent account of the entire problem of human origin in the light of the latest researches. People who want to know the most advanced scientific opinion on the subject cannot do better than refer to this volume.

In the three subsequent volumes the authors have traced the growth of civilisation from the Neolithic times before the rise of food production to the classical world. They have given a short but very good account of the origin of the domestication of plants and animals and the synthetic view they have furnished of the Copper and Bronze age civilisations of Sumer, Egypt, Elam, Crete and Turkistan, is at once most lucid and accurate. The chronology of these ancient centres of civilisation is still very controversial and the authors have done well to follow Dr. Frankfort in general, one of the profoundest students of Near Eastern archaeology. The interrelations of these cultures towards the development of civilisation have been treated in a masterly fashion but unfortunately the authors have not given due prominence to the recently discovered 'Indus' and 'Yang-shao' cultures, perhaps because no authoritative accounts of these two have yet been published. One feels sure, however, that when the forthcoming volumes (now in the Press) on the Indus civilisation are published, the authors will most gladly contribute an additional chapter to the later editions of their work.

Mr. Peake and Prof. Fleure are to be congratulated on their success in interpreting the vast mass of anthropological data bearing on the origin and growth of civilisation in such a co-ordinated and able manner. As textbooks for our undergraduate students, they cannot be excelled and the get-up and printing of the series are all that one desires.

B. S. GUHA

SIR WILLIAM JONES AND HIS TRANSLATION OF KALIDASA'S SAKUNTALA: *By Duraprasanna Roy Chaudhuri, Ph. D. (Göttingen) Pp. 472 with 3 appendices. Price Rs. 2. To be had of the Asutosh Library, 5 College Square, Calcutta (1928).*

The first oriental masterpiece to travel to the West in the modern age, was Kalidasa's Sakuntala and the first occidental savant to introduce Indian classics to the western world was undoubtedly Sir William Jones. So, Dr Ray Chaudhuri has, with characteristic justice, offered this scholarly tribute to the memory of the pioneer of Sanskrit studies in Europe. Half of his book is devoted to the biographical study of Jones and we congratulate Dr. Ray Chaudhuri on having brought out a vivid and striking portrait. Born in 1746 Jones was barely 48 when he passed away, mastering 28 languages amidst a career of feverish literary and official activities. In 1770 he made a French translation of Nadir Shah's life in Persian, and was made a member of the Royal Society of Copenhagen. The same year he went from Paris to Geneva to meet Voltaire. Born in that Age of Illumination Jones shared some of the noblest sentiments of his illustrious contemporaries like Burke and Sheridan. "He held that in the American war England was in the wrong and this opinion steadily gained on him as the contest got prolonged.... He was also a great enemy of the slave trade and openly maintained that freedom was one of those eternal and elementary rights of a human being which no law on earth could justly take away from him" (p. 31). He was a leading member of the Turks Head Club, originally founded by Burke and Dr. Johnson at the instance

of Sir Joshua Reynolds. In 1772 while Jones was barely 26 he was elected Fellow of the Royal Society and in 1774 appeared his *Commentaries on Asiatic Poetry*. In 1783 Jones was appointed a Judge of the Supreme Court of Bengal and was knighted. He landed in Calcutta (Sep. 1783) and took his seat on the bench in December. Early next year on the 15th of January 1784 he founded the Asiatic Society of Bengal and was elected its first President, holding this post until his death in 1794, and discovering with phenomenal quickness within the short span of ten years, quite a library of Asiatic lore—Persian, Arabic, Indian and Chinese!

Dr. Ray Chaudhury has succeeded in bringing out a highly interesting and instructive book. His deep knowledge of German and his intimate touch with the German orientalist has enabled him to incorporate materials in his book that are of real value. The influence of Indian literature and thought on the master minds and artists of Europe like Goethe, Beethoven, Schopenhauer and others is now a patent fact and Dr. Ray Chaudhury's study on *Sakuntala* has added another series of evidence to prove the same. We recommend his book to all lovers of Indology.

KALIDAS NAG

MALAYALAM

HIMALAYA-JATRA: By K. Kesavanar. Published by the Matrubhumi Press, Calicut. Pp. XVI+188. Price as. 1d.

This is an interesting account of a journey to the Himalayas performed by the author some time back. Having first appeared in the form of a serial in the columns of *The Matrubhumi*, it has now come out in a book-form for better and easy reading. The book gives much information to pilgrims who desire to make a journey to the holy places on the Himalayas, including Badrinath and Hardwar.

VALLUVAKKAMMARAN: By C. Kunjhirama Menon. Published by the Yogakshman Company Ltd., Trichur. Pp. 204. Price Re. 1-4.

This is one of the few interesting historical novels we have in Malayalam literature. The whole plot centres round certain political events that took place in British Malabar during the time of the Mysore invasions, in the second half of the 18th century. Himself a well-known writer and a publicist, Mr. Kunjhirama Menon has now established his name as a novelist by writing *The Valluvakkammaran*.

The book contains 11 illustrations including a map of N. Malabar. These we understand have been prepared by the young artist Mr. G. Krishna Warrior of Trichur.

P. ANUJAN ACHAN.

HINDI

PRATIBIMBA—A volume of poems: By Satya Prakash, M. Sc. Published by the Kala Karyalaya, Allahabad. Pp. 104. Price Re. 1-8.

When this extremely well-got-up book reached

our hands we expected something very remarkable: and we were not disappointed.

The poems are in Hindi but there is a long introduction in very indifferent English attached to them. More remarkable still is the tone of this introduction. It begins very appropriately with the first person singular, for, the whole thing is one continuous study in self-glorification, rendered more offensive by the author's clumsy attempts at modesty.

The author after damning Kabir, Mira, Sur, etc., with faint praise, proceeds to tar all classical Hindi poets with the same brush of ignominy. Even the popularity of the fortunate exceptions was not due to their poetry, 'but it was due to the Bhakti'. One reason for this barrenness was the blighting influence of court patronage (Shades of Augustus, Elizabeth and Louis XIV! listen and perpend).

But "in the modern days of renaissance" this sort of verse will not pass muster. People have now learned the art of sifting the grain from the chaff and it is this grain which our poet indirectly professes to supply to all and sundry.

Then there is an exposition of the peculiar philosophy of life of our poet. It is neomysticism i. e., a combination of दृष्टान्तर and विम्वर (show-downism and reflectionism.) "Both have been adequately and vividly used" by our poet in these poems. Lost we fail to find them he obliges us by referring to particular lines and poems. He effectively silences us by saying that "the subtlety of this type of poems renders it difficult for a man of orthodox school to understand and appreciate it. It requires a regular training of faculty to enjoy the essence of it." But we are still obliged to say that really speaking there is no essential difference between these two *varas* and all poets are more or less दृष्टान्तर and विम्वर.

The poet will leave nothing to the critic. While dealing with his conception of nature he triumphantly declares himself no follower of speculative monism. Had our poet's "poetic mysticism been realised—such fatal philosophies as that of Sankaric *advaitavada* would never have come to existence." Poor Sankara! He has withstood and survived many attacks during the last 1200 years but this is easily the limit. We may, however, remind the poet that his idealism is nothing new. From Ramanuja to Tagore a galaxy of poets and philosophers have made the idea completely familiar to all. Has he not found it in Hindi poets? not even in Mira?

In short, the whole introduction deals in such stuff but then we have been asked to keep the following line in our mind पायलेक दे सव यत्नाप ।

It is a great pity that the poet is so unnecessarily provocative, for in spite of his self-consciousness and insipidity of the resemblance to Tagore, there are occasionally genuine poetic touches in these pieces. This Sahara does contain several green cases.

M. B.

HINDI VAIJYUTA SARDAVALI : By Pt. K. P. Misra, and Mr. R. N. Singh. Published by R. N. Singh, Bhadani, Benares.

In this age of electricity one will welcome this attempt at collecting and coining words in Hindi which are used in connection with its nature and workings. The care and thought given to the subject are quite evident. "The terms have been so coined as to represent phonetically the foreign equivalents, so far as possible, and at the same time the Sanskrit root meanings, on which the words depend, have not been lost sight of". Though some of the terms are a bit pedantic, this pamphlet deserves every consideration from all concerned.

RAJNITI SARDAVALI : Mr. Bhagavandas Kela. Published by the author, Bharatiya Granthamala, Brindavan.

The author, who is well-known as a writer on Indian politics and economics, has collected a bilingual glossary of political terms.

DEVAJAJNA-PRADEHIKA : By Pandit Virabandhu Sastri, M. A., M. O. L. The Executive Committee, D. A. V. College, Lahore.

This book gives ideas of spiritual life according to the Vedas. The learned author quotes elaborately from the scriptures. The special feature of the work is the utilisation of modern scientific thoughts and things in the upbuilding of a life divine.

SANDHYA-PRADEHIKA : By Master Nathaniel. Govt. High School, Simla.

The mantras of the Vedic rite of Sandhya are explained. The author tries to bring out the co-relation between the natural and spiritual laws.

PASCHIMI EUROPE, VOL. I : By Mr. Chhabinath Pandeya, B. A., LL. B. Jnanmandal, Benares.

This book is translated from J. H. Robinson's 'History of Western Europe.' The volume under notice deals with the history from the period of the decline and fall of the Roman-Empire to the 18th century, thus showing the making of modern Europe. There are several maps.

KARMA-JOGA : By Mr. Santaram, B. A. The Ganga-Pustak-mala Office, Lucknow.

Translation of O' Hashnu Hara's Practical Joga.

NIBANDHA-NICHAYA : By Pandit Jogannath Prasad Chaturvedi. Ganga-pustak-mala Office, Lucknow.

Several prose writings of the author, who is a veteran writer in Hindi, are collected in book-form.

TOLSTOY KI ATMAKAHANI : By Mr. Umrao Singh Karunk, B. A. Jnanprakash Mandir, Meerut.

Translation of Tolstoy's My Confessions.

DHARMA-SIKSHA : By Mr. Lalshidhar Bayyeyi. Tarun-Bharat-Granthavali Office, Allahabad.

A book on moral conduct. There is a collection

of Sanskrit aphorisms and maxims with Hindi translation.

RAMES BASU,

GUJARATI

PRATIMA By Dinan Bahadur Keshavlal H. Dhruva, B. A., printed at the Vasant Printing Press, Ahmedabad Paper Cover. Pp. 95. Price Re 1-4 (1928).

One can safely say that latterly the Divan Bahadur has become Bhasa-mad, as his energies have of late been taken up with translating one or the other of the plays of Bhasa, the well-known Sanskrit play-wright. This is the fourth of its kind. Its full name as given by him is Pratima Dasharatha, and it is taken up with the banishment of Rama to the forest. In a scholarly introduction he brings out the good points, and the flaws of Bhasa, showing how he has differed from Valmiki, where he has improved upon him and how he has amended the text, which he prints along with the translation. In noticing his other works, our complaint has always been that his introductions should be written in English, so that they may have a wider reading public: it will also have the advantage of having his conclusions tested by non-Gujarati and European scholars, who may either challenge or confirm them, as the subjects which he discusses are not such as can have their light hidden under a bushel. They merit wider publicity, not merely a provincial one.

SNEHAPATNA By Gokuldas Dwarkadas Ranchura, printed at the Lohana Printing Press, Baroda. Thick Cardboard cover with an attractive picture of a lady. Pp. 354. Price Rs. 3 (1928).

This novel is written in simple language. Its object is the uplift of woman in Gujarat and Kathiawad. The scenes described are so familiar and domestic that very little imagination is required to visualize them. It is bound to fulfil its object.

MEMORIAL VOLUME OF THE SILVER JUBILEE OF THE VASANT : Published by the Memorial Committee and printed at the Aditya Printing Press, Ahmedabad. Cloth bound : Illustrated : Pp 316 (Gujarati) + 14 (Sanskrit) + 95 (English) + 20 (Hindi). Price Rs 4 (1927).

The services rendered to the life and literature of Gujarat by Principal Anand Shankar Dhruva, of the Benares Hindu Central College and University, during the last twenty-five years as the editor of the Vasant are most valuable. As a slight appreciation of those services Gujarat thought it to be the most suitable way to present him with a memorial volume containing articles by the best writers of Gujarat and contributions from writers outside Gujarat, bearing on his activities or subjects dear to him. The result is a substantial volume, unique in character, as it contains contributions in several languages. The collection is a very valuable and interesting addition to Gujarati Literature and, bears an unfailing testimony to the popularity of Principal Dhruva. There is such a wide range of subjects presented

that it is impossible to do justice to them all in a short notice.

ADARSHA DRISHTANT MALA. PART II: By Pandit Shrivaprasad Dalpatram. Published by the Society for the Encouragement of Cheap Literature, Ahmedabad and printed at its own Press. Cloth bound. Pp. 358. Price. Rs. 1-4 (1927.)

There are 405 instances given in this compilation, culled from various literatures and various books, of good conduct, humility and other imitable virtues. They are clothed in simple language and pleasing to read.

K. M. J.

SANSKRIT-ENGLISH

SANKARI-SANGITAM OF JAYANANIAN KAVI: Edited by Mr. Dakshina Charan Bhattacharya. Published by the Sanskrit Sahitya Parishat, Shyambazar, Calcutta.

This small poem, in praise of Sankari, is composed of verses and songs, and is clearly an imitation of Jayadeva's famous poem the *Gita-govindam*. The poem, unique as it is, has considerable merit in itself. Perhaps the most interesting portion of it is the *rasakrida* of Siva and Parvati. This will point to the Vaishnava influence on Sakta literature. This poem conclusively shows that Sanskrit style of Bengal at its best was remarkable for its rich melody.

PAVANADUTAM OF DHOYI: Edited by Mr. Chintaharan Chakravarti, M. A., Kanyapirtha. Published by the Sanskrit Sahitya Parishat, Shyambazar, Calcutta.

The work under notice is one of the brightest gems of Sanskrit literature as practised in Bengal. The poet who won his title of *Kaviraj* for his writings was a court-poet of King Lakshman Sena of Bengal. The general plan of the work is based on the immortal *Meghaduta* of Kalidasa. Our poet, though he followed in the footsteps of the greatest figure in Sanskrit literature, has no doubt a place of honour in the *duitakaya* literature which was so prevalent that our editor enumerates at least 35 different imitations of the brilliant prototype. Of these the present poem seems to be the earliest specimen.

This work was not hitherto available in a book-form. The editor has collated all the available materials including the version published by the late M. M. Chakravarti in the J. A. S. B. and has added his useful introduction discussing all the issues about the poet and his work, and short notes in Sanskrit on difficult words and phrases. The different readings and emendations are generally happy. The collection of the verses of the poet from the anthologies will be found useful.

We congratulate the editor and the Sanskrit Sahitya Parishat on this reliable edition of the poem.

RAMES BASU

SANSKRIT-BENGALI

BRJHADARANYAKA UPANISHAD: By Pandit Maheshchandra Vedantaratra, B.A., B.T. and edited and published by Pandit Sitanath Tattvabhushan (210-3-2 Cornucallis Street, Calcutta). Double Crown Pp. 400+40. Price Rs. 2-8.

It contains (1) Sanskrit text in Bengali character, (2) padapath with the meaning of every word, (3) literal Bengali translation, (4) illuminating grammatical and critical notes, and (5) copious commentaries on important controversial points. Pandit Tattvabhushan has added (1) an analytical table of contents, (2) an introduction, (3) an examination of Yajnavalkya's philosophy and (4) the heading of each chapter.

The author, Pandit Vedantaratra, is well-known to the reading public in different relations. His contributions in connection with the Vedic, Buddhistic and Christian theology and religion are many and varied. His translation of the *Chhandogya-Upanishad* especially has proved his deep insight into the vedic literature and history. And the *Brjhadaranyaka* fully sustains his reputation as a Vedic scholar. His translation is so very literal and at the same time lucid that one without any knowledge of the Sanskrit language will be able to enter into this storehouse of ancient wisdom.

Pandit Vedantaratra's peculiar advantage which is denied to most of our commentators is that he has to make no special pleading for any particular school. When he speaks, he speaks without any apology. He speaks authoritatively and the reader becomes sure that he has got the right view as he gives the thing in its true perspective. How one wishes our commentators possessed this independent view-point about the Sastras that from their discussion, the truth and nothing but the truth would come out.

There are over two hundred notes and comments which throw a flood of light on many important subjects. Take, for example, Ch. III, Br. 7. V.3 "*ya prithivyā tishthan prithivya antarat*." It is translated in two ways: "He who dwelling in the earth is (1) *other than earth* or (2) *within the earth*." Sanakaracharya and those who follow him blindly take the latter view. Their monistic standpoint warps them from the right path. But the context is clear. There are 21 similar passages one following the other continuously of which eleven can bear a construction both in 5th and 6th cases. In ten, only 5th case is possible, giving the meaning *other than*. As all the verses are of the same nature, we are forced to apply the 5th case in all of them. Vedantaratra accepts this view. And all impartial critics must be of the same opinion with him. In spite of the authority of Sanakara to the contrary.

One other passage we cannot resist the temptation to refer to is about beef-eating. There is an historical note on p. 391. In this tropical climate we are not in a mood to prescribe this particular article of food. But the Rishi advocates it. In a certain case he enjoins it. If one wants a particular type of children one is enjoined to boil rice with ghee and meat, preferably beef or veal and eat the preparation with his wife. A hard case for our countrymen who, in season and

out of season, swear by the name of *Sastras* and will have nothing but what is indigenous.

From the *Bṛihadaranyaka* it is clear that any attempt to bring about a reconciliation even between different parts of the same book is futile, not to speak of different *Sastras*. There are evidently two *Yajnavalkas*—one talking with Maitreyi about the soul being immediately merged in Brahman at death, but the other speaking of its continuity, as in the discussion at the court of Janaka.

One peculiar thing one notes in Ch. VI, 5 Br. There is a series of about 35 couples of preceptors and disciples who are all enumerated by the names of their mothers. What is the meaning of this? Was the matriarchal system in vogue then? At least at that time the marriage bond was not as strict as one may desire it.

As for the indecent and indelicate passages, more so, the directly immoral passages (646-8), as discussed in p. 397, one may not agree with Vedatiratna that though there were in those days men and women like *Yajnavalka*, *Maitreyi* and *Gargi* the moral tone of society in general was low. We do not think this fully explains the introduction of these highly objectionable injunctions into the book. They must have been either surreptitiously or otherwise introduced by some positively bad men at the time of compilation or they are relics of old barbarism.

The reader will find the note on the *Gayatri* in p. 394 very interesting. The stroke of the masterhand is here.

It is not necessary to say much about the editor *Pandit Sitānath Tattvabhūshan*. His name as the editor of the *Upanishads* has become too familiar to need any introduction. Practically the reader is indebted to him for the publication of this *Upanishad* and of its predecessor, the *Chhandogya*. But for his noble zeal the manuscripts would have on some future occasion been discovered as worm-eaten. However, we would earnestly draw the attention of the reader to his examination of *Maharshi Yajnavalka's* philosophy in this edition, which will surely introduce even an ordinary man into the inner court of the philosophy of the Absolute. But at the outset he is required to again read the introduction of the *Chhandogya Upanishad*.

With this, as *Pandit Tattvabhūshan* says, his life's task is over. This is, as is his wont, how he sends to the public his book as the last one. But we are prompted to look to-morrow to fresh fields and pastures new.

DHIRENDRANATH CHOWDHURI

ASSAMESE

MAHABHARAT: Edited by *Rai Sahib Durgadhar Bar-Kataki*, Retd. Inspector of Schools, Assam. Published by the Editor from 94-1 Upper Circular Road, Calcutta.

Rai Sahib Durgadhar Bar-Kataki has taken on him the arduous but valuable work of editing the Assamese version of the epic of *Maahabharat*. His task is all the more troublesome because in Assam no single author seems to have treated all the 13 cantos but each gave attention to only one or two. It is for the first time that a systematic attempt is made to publish

those cantos which are available. We are indebted to the editor for the five cantos which have been published by him. These are the (1) *Virat parva* by *Kamsari Kavi*, a contemporary of the great *Sankardev* of Assam, (2) *Udyoga parva* by *Ram Saraswati*, also a contemporary of the Assam apostle, commissioned by *Maharaj Narnarain of Coochbehar* to translate the grand epic, (3) *Santi parva* by *Dr. J. Lakshminath Kavi*, (4) *Salva parva* by *Kavi Damodar Das*, and (5) *Svargarohana parva* by *Kavi Gopinath Pathak*. The texts are printed with care and the edition is likely to be popular with both the scholars and the public. The editor promises an Introduction in a later stage of his work. We hope he will not fail to add notes on old forms and a good index of words.

RAMES BASU

SANSKRIT-GERMAN

KAUTILIYA ARTHASASTRA (2 Vols): A new edition By *J. Jolly Ph. D., D. Litt. Oxon. M. R. A. S. Hon. Punjab Sanskrit Series, Lahore*.

Dr. Jolly's edition of the *Kautiliya Arthasastra* with his brilliant introduction in the first and valuable notes in the second volume is now known all over the world and every serious student of Indian History must have a copy of it at his elbow. A vast literature has grown up on the *Kautiliya Arthasastra*, and already some of the earlier writings on this subject have become out of date; yet it may be said with assurance that Jolly's introduction to his edition of the *Arthasastra* will never fail to interest students of Indian History and Hindu polity, for here he has established the most rational theory about the date of *Kautiliya* and inspite of some dissenting notes it is quite clear that the scholarly world is gradually coming round to his theory. It is but one step from the *Dharmasastra* to the *Arthasastra*—indeed, it is impossible to draw a fine line of demarcation between these two provinces of Brahmanical learning. Dr. Jolly is undoubtedly the highest authority on *Dharmasastra* and it is evident that his edition of the *Kautiliya Arthasastra* would have a special value. Since the publication of Jolly's edition of the *Arthasastra* two important works have appeared in which his theory has been controverted—(1) *Jayaswal's Hindu Polity* and (2) *Meyer's translation of Kautiliya* with a long introduction. *Jayaswal's* is perhaps the most brilliant defence of the fourth century B. C. date of *Kautiliya*.

The value of this edition of *Kautiliya* is further enhanced by the commentary *Nyayacandrika* of *Madhavarajnamisra* edited by *Udayavira Sastri*, which has been appended to the second volume. Unfortunately, the commentary is not complete and we have here only a fragment of it.

BATAKRISHNA GHOSH

BENGALI

DRUP-DHUNA: By *Harendra K. Basu*, Publisher Messrs. *Gurudas Chatterjee and Sons*, Calcutta. Price Re. 1, pp. 40, 1928.

Little pieces of Bengali poems. The printing and get-up are excellent but the price is rather high.

P. C. S.

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, The Modern Review.]

All Parties Conference Committee

I am in receipt of your letter of May 9th and of the copy of the *Modern Review* for May which you have been good enough to send me. I thank you for your courtesy in drawing my attention to your note on the All Parties Conference. I have read this carefully. It appears to me that it is based on a misconception. You will permit me, therefore, to state the facts. There is nothing secret about these facts and I do not know why you should think that the reasons probably will never be known.

The All Parties Conference was convened by the Working Committee of the All-India Congress Committee in accordance with a resolution of the Madras Congress. Individuals as such were not invited but invitations were issued to over 30 organisations all over India and Burma. These organisations represented political, communal, commercial, landlord and labour interests. No attempt was made to have provinces as such represented, although a number of provincial organisations were also invited. Many of the organisations were all-India ones. Thus, apart from the Congress, there were the All-India Liberal Federation, the Hindu Maha Sabha, the All-India Muslim League, the All-India Trade Union Congress, the Home Rule League, the Independent Party of the Assembly, the Nationalist Party of the Assembly, the Central Sikh League, various Parsi and Christian organisations, etc. Neither the Government of India nor the Governments of the Indian States were asked to send representatives. The only feasible method of having the Indian States represented appeared to be to ask some of the important non-official Indian States Subjects organisations to send representatives. Invitations were, therefore, issued to the Indian States Subjects Association, the Indian States Subjects Conference, and the Indian States Peoples Conference. We had several representatives from these organisations.

I might mention that from Bengal were invited the Indian Association and the Bengal Landholders' Association also.

It is quite possible that owing to ignorance or inadvertence some important organisations may have been left out. But an attempt at any rate was made on behalf of the Congress to invite all important interests. In carrying out this attempt

even such organisations were invited as were known to be wholly opposed to the Congress view-point.

To take the case of Bengal. I might mention that Mr. J. M. Sen-Gupta and Mr. Subhas Chandra Bose were ex-officio members of the Conference, the latter being an ex-officio Secretary of the Conference.

Unfortunately, however they were unable to attend the meetings in Delhi. Some representatives from Bengal, however, were present for most of the time. On the 22nd of February there was a deadlock over the communal question. It was decided to postpone consideration of this for a few days. In order to utilise the interval it was decided to form a Committee to consider and report on other matters. This decision was suddenly taken. No previous lists for the Committee had been prepared. There was no time to elect people who were not present in Delhi and whose consent was not assured. The Committee had no special powers given to it. It had merely to make a provisional report. The Committee was thereupon chosen almost entirely from people present in Delhi who were in a position to devote sometime to its work. Names were suggested on the spot and were approved of.

You will observe that there was no desire to exclude any interest from this Committee. It was intended at first to have a much smaller Committee, as the smaller the Committee the easier it is to work. But in the process of election various names were added to it. There was no question in a Committee of this nature of provincial interests being represented. And as it happened most of the people then present in Delhi and taking part in the Conference were elected on the Committee. Mr. J. M. Sen-Gupta and Mr. Subhas Chandra Bose would have been ex-officio members of this Committee had they been present in Delhi.

Mr. Pathick was specially put on this Committee to represent the peoples of the Indian States. He was one of their representatives and his name was approved of by other representatives present.

The Committee met for some days and having prepared a report which has been published, presented it to the Conference and ceased to exist.

You refer in your note to 'constitutional experts and political thinkers'. If you will refer back to the report, you will find that these words are not used in reference to the members of the Conference or the Committee. It is merely stated that constitutional experts generally have differed on such questions. You will also find in the report that considerable stress is laid on the informal character of the report and its recommendations. It is a document meant to provoke thought and invite discussion. It was not meant to be a decision on any important matter.

Will you permit me to express my regret that you should have deemed fit to doubt the bona fides of the members of the Conference? Twice in the course of your note you have stated that the 'reasons are unknown and may never be known'. I do not know what reasons you had for hinting at this mystery. It is possible that the Conference made mistakes and committed sins of commission and omission. But there is absolutely nothing in its record to justify the secret intrigues which you seem to hint at. I regret that you should have given the weight of your authority to a criticism which is entirely without foundation.

May 11, 1923.

Jawaharlal Nehru

Editor's Note. I thank Mr. Jawaharlal Nehru for the information supplied in his long letter. He blames me for thinking that the reasons probably will never be known. It is easy for one who has known the reasons all the while to blame one who had to write in ignorance of them. But may I ask, would the reasons have been made known to the public if I had not written my note in my review and had not, in addition, sent a copy of it to Mr. Nehru? I did so, I may add, because I had been asked in a circular letter to send my criticism and suggestions to the secretaries.

Mr. Nehru expresses his regret that I "should have deemed fit to doubt the bona fides of the members of the Conference." I am unable to plead guilty to this charge. Again, Mr. Nehru thinks that I have hinted at intrigues. To this charge also I cannot plead guilty. But should my note bear the interpretation put on it by him I should indeed deserve condemnation. As regards "mystery," it is not a word used in my note. But one of its meanings is "some thing that has not been explained." In that sense the reasons, now explained by Mr. Nehru, were a mystery.

But all this is really beside the main point of my note, which is that many provinces were not represented in the Committee, which they ought to have been. I gave several conjectural reasons as to how this non-representation might have happened. One of these was that the organisers and directors of the Conference did not intend or think it necessary to make the Committee representative in that way. Mr. Nehru says in his letter that "no attempt was made to have provinces as such represented." Another guess of mine was that probably some leading men from some of the provinces unrepresented in the Committee were not "willing or able to" work in the Committee, though entitled or asked to do so. Here, again, Mr. Nehru's letter shows that I was partly right, for he says that Mr. J. M. Sen-Gupta and Mr. Subhas Ch. Bose, though entitled to be members

of the Committee, were unfortunately unable to attend the meetings.

It should be noted that in my note I said nothing regarding the representative character or otherwise of the Conference; I only pointed out that its Committee did not represent all the provinces. Therefore, it is no answer to my criticism to say that "some representatives from Bengal however were present for most of the time" at the Conference meetings.

Mr. Nehru says: "There was no time to elect people who were not present in Delhi and whose consent was not assured....The committee was thereupon chosen almost entirely from people present in Delhi who were in a position to devote some time to its work."

Mr. Nehru's letter does not supply information on the following points:

1. At the time of the election of the Committee, were members of the Conference belonging to or hailing from Assam, Baluchistan, Bengal, Bihar and Orissa, Burma, Central Provinces and Berar, Coorg, or N.-W. F. Province present in Delhi?

2. If any members from any of these provinces were present who and how many of them were asked to serve on the Committee, and who and how many refused or were unable to do so?

3. As the Committee was "chosen almost entirely from people present in Delhi," how many and who were chosen, though not then present in Delhi? Were any of them chosen from the provinces named above, and, if so chosen, did any such person fail to serve on the Committee? Were any of them chosen from provinces already represented on the Committee by members present in Delhi?

I lay stress on the due representation of all the provinces as I think it necessary as a matter of democratic principle and as in some recent constitution-making (e.g. in "Mrs. Besant's Bill") some provinces have been given excessive representation and some have been given much less than their due, and, speaking generally, those provinces are not likely to have justice which have no able men to stand up for them.

Mr. Nehru says, "the smaller the committee the easier it is to work." True; but a committee of 23 could easily have at least one member from each province.

Mr. Nehru has kindly taken the trouble to inform me that "Neither the Government of India nor the Governments of the Indian States were asked to send representatives." I cannot guess why he has taken this trouble. If he has done so thinking that the antiquated editor of this Review may not know that the All Parties Conference is a people's Conference seeking to frame a constitution independently of governments, I am extremely sorry for this uncalled-for exertion, though I thank him for it all the same. But if he wanted to be humorous, I am glad to have unconsciously stimulated him to such an effort.

Outrages on Women in Bengal.

I have followed the controversy between you and the Editor of the *I. S. Reformer* on the question of whether and how the presence of the

purdah materially affects the risk of outrages on women by *goondas* for which Bengal is said to be notorious. You will remember that the question was raised by you in the course of your comments on Sarda's Bill for fixing the minimum legal age for marriage. You supported the principle of the Bill, but while doing so you feared that if girls came to be married at a later age than now owing to the Bill becoming law, the risk of outrages by *goondas* on women would be greater in a purdah province like Bengal. Now the question that puzzles me is, (1) what have the purdah and *goonda* got to do with the marriage age? (2) Are *goondas* disposed to discriminate between married and unmarried girls, and in favour of the latter, before outraging them? Or, (3) does custom in Bengal require unmarried girls (up to whatever age) to go without purdah? I should think not. I should think, on the contrary, that custom in all purdah lands, whether in or outside India, requires that girls should, after a certain age, whether married or unmarried, hide themselves behind the purdah; and if that is the case in Bengal, then the girls who will have to be left unmarried beyond the age of marriage customary at present, owing to the Sarda Bill becoming law, may be expected to derive from the existing custom of purdah all the protection they might need from the attentions of those wicked men, the *goondas*—not only 'during the transition period,' but till doomsday!

Karwar;

S. D. Nadkarni

EDITOR'S NOTE. I have numbered Mr. Nadkarni's questions for convenience of reference.

(1) The origins of the purdah and of the custom of child-marriage need not be discussed here. But it is believed that in Bengal purdah became stricter and girls began to be married at too early an age partly on account of outrages on women by bad characters. This relates to certain periods in the history of Bengal.

(2) We do not know. Some religious *goondas* may be disposed to discriminate.

(3) Custom in Bengal does not require unmarried girls to go without purdah, but allows them to do so to a greater extent and up to a higher age than married girls. This greater freedom of movement, allowed to unmarried girls, would expose those of higher age among them to greater risk of molestation than married girls of the same age.

In this connection it should also be borne in

mind that in Bengal girls who are unmarried have not to veil their faces or even pull their saris over part of the head, though adults among them may do so. Married girls, of whatever age, have, on the contrary, to wholly or partly veil their faces in the presence of their husbands, husband's relatives, strangers, and in the village or town which is the home of their husband's family.

We are unwilling to try to give more explicit answers.

"Professor Radhakrishnan on Indian Philosophy."

In the last issue of your esteemed Journal (p 598 May, 1928) X.Y.Z. has made certain remarks about Prof. Radhakrishnan which seem to me obviously unjust. A reference shows that Rai Bahadur Srish Chandra Basu's edition of Patanjali does find mention at the end of the chapter on Yoga system. The quotation about "Nitrous Oxide and Alcohol," etc., referred to by X.Y.Z., was taken by Prof. Radhakrishnan with due acknowledgment from William James' well-known book, "The Varieties of Religious Experience." It is difficult to understand why Prof. Radhakrishnan should be blamed for not knowing the history of a particular view. It is also strange to expect him to be familiar with the Bengali works on the Vedanta. On this analogy, the Bengali historians of Indian Philosophy should also be taken to task for their ignorance of, let us say, Tamil publications on the subject. Furthermore, the fact that a particular translation of the Purva Mimamsa Sūtras is not mentioned by Prof. Radhakrishnan does not mean that he did not read it. It simply shows that the bibliography given by him is a selected one and has never been claimed to be complete. Lastly, X.Y.Z.'s remarks that "Prof. Radhakrishnan's work does not reflect credit on the University in which he occupies the Chair of Philosophy" are not only most unfair but unwarranted. Prof. Radhakrishnan is one of the most distinguished students of Philosophy in India and enjoys a world-wide reputation as a thinker.

B. S. Datta

EDITOR'S NOTE. As Prof. Radhakrishnan's book has not been received for review in this Journal, *The Modern Review* is not in a position to form any opinion on it.

SANSKRIT REVIVAL, AND KING BHOJA'S ART CRITICISM OF LYRICAL POETRY

Dr K. P. JAYASWAL

THE publication of rare and hitherto lost Sanskrit works is a feature of the time we are living in. We may call it a period of Sanskrit revival. In the country of the

Aryas it seems that the language of Rama and Krishna will never die. It revived under the Sungas about 180 B.C., when the rival language Pali had covered the whole land with

imperial pressure. It revived under the Guptas when it had ceased to be a spoken language even by the *Sishyas*, the educated few, but was still easily understood. The revival was continued in the 6th and 7th centuries under the leadership of Jayaditya, Yamana, Bhartrihari, Bharavi, Bana and Dandin, when Prakrit had become the language of the learned. It revived once more in the eleventh century when every soldier-king of Hindu India could wield the pen of poetry and the sword of heroism with equal grace—a chapter of brilliant personalities, not known before, not known after, a chapter unparalleled in the history of the world. It revived again in and about the 14th century with Hemadri and Chandesvara, and Madhava-charya and Sayana. It revived in the Moghul times under Madhusudana Sarasvati, Mitra Misra, Jagannatha Panditaraja, and others. In our times it seems to revive again, when Hindu-edited Sanskrit works with introduction and studies mostly Sanskrit, written with ease, elegance and scientific brevity, are streaming in from Mysore, Travancore, Baroda, Benares, and Rajamahendry—works from the Vedic Samhitas down to Hindu conveyancing.* Three Hindu States are engaged in this pious service. And individuals are vying with Governments in this glorious game.

Amongst these individuals there is one at this moment who stands out like a lighthouse. This is Mr. Ramakrishna Kavi, M.A., of Rajamahendry. His resources are not the incomes of a State, but of heart. He is a lord of poverty; a teacher in a secondary school. Silently and modestly, he has led literary pilgrimages into the Hindu homes of Malabar and the neighbourhood, and recovered treasures which have electrified a generation of workers in the South and which have filled Sanskritists with pleasure and pride all over India. He has brought to light and published Kundamala, a lost Bhaṇas, Abhinavagupta's monumental commentary on Bharata's Dramaturgy giving a history of the art hitherto unknown and undreamt of, the Avantisundari Katha and the Avantisundari Katha-sara which disclose the history of Bharavi and Dandin. Even

he has to his credit the discovery of the historical drama *Devichandragupta* of Visakhadatta, and he has drawn attention to a whole class of historical dramas like Tapasa-Vatsaraja, Vikranta Sudraka, etc. Mr. Kavi has found out the greatest Hindu work on music, the Bharata-Bhashya by Nanya Deva, the famous king of Mithila, and the greatest and the finest anthology or rather an art criticism on Sanskrit and Prakrit Poetry—the *Sringara-Prakasa* by King Bhoja of Dhara, about which I shall say something more presently.

Mr. Ramakrishna Kavi is himself a discovery. His knowledge of Sanskrit Sahitya is of the rare traditional type, i.e., unlimited, and at the same time it is critical. His patriotism for that literature has probably no equal.

Individual exertion has not stopped with merely discovering the literary heirlooms of the race. It has been prompt in the work of publication. Mr. Ramakrishna Kavi has started his modest series called the *Dalshina Bharati*. Evidently the series is lacking funds, which is borne out by the struggling appearance of the books.

In the meantime Mr. Kavi's young friend Mr. A. Rangaswami Sarasvati, one of our coming scholars, has had the satisfaction of presenting to the public an edition, carefully prepared by the Yadugiri Yatrija, of a part of the *Sringara-Prakasa* for which the scholars had been waiting with longing eyes since the announcement about its discovery and its description by Mr. Kavi. The work has found a devoted editor in Sri Yatrija Svamin, the present chief of the Yatrija Matha of Mysore, originally founded by Sri Ramañuja. In the holder of the sacred endowment we find a combination of high learning and scholarship which is evinced by every line of his Sanskrit introduction to the *Sringara-Prakasa*. The Yatrija, before his election to his present ecclesiastic position, was a scholar in the archaeological department of the State of Mysore. The whole work is divided into 36 *pralayas* or sections out of which three (22nd to 24th) have been published in a volume of 103 pages of text. Three more *pralayas* are in the press, and the rest of the book is in the course of editing. But the work, as a whole, has been thoroughly studied and the beginning and the end of each section have been noted in the introduction. The 26th section is yet missing, and the 25th, 27th and 29th are available in fragments.

* *Lekhapaddhati*, Baroda. This gives forms, actually in use, of treaties, orders to Viceroy, royal bills of exchange, passports, etc., mortgage deeds, sale deeds, etc., from the 9th century of the Vikrama era down to its 15th century.

Sententious lyric as an art seems to have been cultivated more by Prakrit poets before it came to be specialised by Sanskrit authors. This is indicated by Hala's collection, the *Gatha-saptasati*. By the time of Bhoja (1018—about 1065 A.D.) the lyrical literature had grown so large that a syndicate of poets and poetic critics took stock of the best gems both in Sanskrit and Prakrit and prepared an encyclopædia of such literature, making a classification according to sentiments and moods. It was in the fitness of things that such an undertaking should have been conceived and executed by King Bhoja, who made poetry reside in every home in his capital, who, made everything like his lake covering more than 250 miles, massive yet beautiful, and who surveyed the past to leave something everlasting to the future. That purpose is fully disclosed by his great work, which we are just noticing.

There is no doubt that we have the genuine book of Bhojadeva in the work now being published. The extracts, from the beginning and the end of each *prakasa* or part given in the introduction, afford materials for establishing the identity. For instance, the sixth and the seventh verses of the opening portion of the first *prakasa*—

श्यासीरचरणा etc., and वीराद्भुताधि च येहस्त प्रसिद्धिः

are cited by Dharmasuri in his *Sahitya Ratna-lara* (Bamra ed., pp. 338-339) from the *Sringara*-*prakasa* of Bhojadeva by name. The last verse of the book by which Bhojadeva wishes for his work a permanent place in literature, i.e., यान्मूर्ति is also found as the last verse in Bhoja's well-known treatise on poetics, the *Sarasatikanthabharana* (Kavyamala ed., p. 648). The colophons in the two books are also identical. The theory of *Rasa* which is concisely given in *anushtup* as the first verse of the Skbh., C. 5 (p. 474), is found in verse 8 of the S. *Prakasa*, 1. (अप्राप्ति)

The few original verses which are presented by the author as his own, (the whole work but for quotations and examples being in prose,) appear throughout by the same pen. They show the delicate style characteristic of Bhoja and his time—sense and language equally elegant. The language of the prose portion tallies with the verses, e.g. cf. आन्नासिपुंरुरसान्धुषिदो वरुण श्यामेव रणनादमनमन्यः (P. L G) with वीरादो निष्पातप्रकाराः श्यामोदयश्च पुनः रन्ध्रावेदोत्साहिसाननन्ति (S. P. I Into. p. VII-VIII).

In *Prakasa* I it is stated that the theory that *Sringara* alone is the *rasa* and the true *rasa*, was for the first time being proposed by Bhoja. The theory was known to us from the later *Salitya* literature. But now it is traced to its source.

The very first verse with which the book opens is salutation to the Hindu deification of the ideal married life and wedded love—the God-with-better-half. The *ardha-naristvara* figure of Purari (Siva) in *vipralambha* and unity is painted: not even looking at each other, so close yet so distant, an apparent and assumed aloofness but really eternal unity and complete identity, without caresses, without embraces, separated and joint! —the god of gods, the paragon of husbands, with the holy wife, the goddess of devotion, wife first and goddess afterwards, both in one form—in an artificial misunderstanding of love—too delicate to translate :

अच्छिन्न मेखलमन्त्र इन्द्रोपमूढ-

मप्राप्तनुभवनवीक्षितवक्रकान्ति ।

कान्ताविमिश्रवपुः कृतविप्रलम्भ-

सम्भोगसख्यमिव पातु वपुः पुरोरः ॥

It rightly adorns the top place of a critique dealing with 10,000 choicest verses from the lyrical literature of the country produced up to the date of King Bhoja.

The history of this verse अच्छिन्नमेखल is recorded in Sanskrit literature. The *Sadukti*-by Sridharadasa of Bengal, which is an anthology citing examples from about 500 named poets, gives the name of the author of this verse as *Chhittapa*. (1-28-3 in the MS. owned by Prof. R. Sarma). *Chhittapa* is alternatively spelt as *Chittapa*. That *Chhittapa* (or *Chittapa*) was a contemporary of Bhoja is proved by a verse cited in the *Subhashitaratna Bhandagara* (Nirnaya Sagara Press) :

वल्मीकमवेष्ट रामरूपतिव्यंसेन - मांरमजो

व्याख्यातः किञ्च कालिदासकविना श्रीविश्वामको नृपः ।

भोजरिचरच-भिन्न हृद्यप्रभृतिभिः कर्णोद्विषि विषापतेः

व्याप्तिं याप्ति नरेक्षराः कविरे स्फार्तेन मेरीरैः ॥

It is possible that *Chhittapa* was the chief poet of Bhoja and might have been the right hand of the king in his literary undertakings.

King Bhoja and his colleagues did not limit their survey to Sanskrit only. They

have accorded prominence to Prakrit where rightly they saw poetry of a superior order.

Mr. Ramakrishna Kavi, as he informs me in a private communication, has edited the section on Dramas of this great work. We shall await with interest the publication thereof, for the section contains quotations from some dramas which are now lost. It contains, it is reported, a citation from Bhasa which is found in the published Svapnavasavadatta.

The 8th section of the work gives a dialogue between Vikramaditya (i. e. Chandra Gupta) and Kalidasa on the latter's return from the court of a feudatory king, the king of Kuntala. The emperor enquired; 'What is the lord of Kuntala doing?' Kalidasa, in a beautiful verse which is cited, replied that the king of Kuntala was enjoying the sweet fragrance of the lips of his wives, 'leaving the responsibility of government to you.' The emperor answered by changing only two letters of the verse. विस्तु instead of विस्ति, and नवि instead of तवि, ('Let him enjoy the fragrance ... leaving the responsibility to me').

The unidentified verse अन्तःस्थ S. P. XXII 73, p. 16, is by the poetess Vidya according to the *Sadukti*. The editors will be well-advised to use the *Sadukti* which is under publication by the eminent scholar of Sahitya, Prof. Ramavatara Sarma.

Prof Sarma has also prepared a new anthology of about 20 thousand verses. Every two hundred or three hundred years, anthologies, since the days of Bhoja, have been revised and brought up to date. Sanskrit poets of Bengal of the period of Chaitanya and later will afford a fruitful field for selection. Similarly some poets of Mathura like Hita Harivamsa, medical authors like Lohmbaraja, inscriptions of the mediaeval and earlier times, and poetry of the time of Pratapa Rudra, and some of the many compositions of the Madras Presidency of recent times have to be brought under survey. Let us hope that Prof Sarma will fulfil for the present generation the periodic duty of executing and producing a new anthology through his work.

Their hope is full of Immortality.—WISDOM iii. 4.

It singeth low in every heart,
We hear it each and all,—
A song of those who answer not,
However we may call.

They throng the silence of the breast,
We see them as of yore,—
The kind, the brave, the true, the sweet,
Who walk with us no more.

'Tis hard to take the burden up,
When these have laid it down;
They brightened all the joy of life,
They softened every frown,

But oh, 'tis good to think of them,
When we are troubled sore!
Thanks be to God that such have been,
Although they are no more!

More homelike seems the vast unknown,
Since they have entered there;
To follow them were not so hard,
Wherever thy way fare.

They cannot be where God is not,
On any sea or shore;
Whate'er betides, thy love abides,
Our God, for evermore.

John White Chadwick.

The truth shall make you free.—JOHN viii. 32.

When courage fails, and faith burns low,
And men are timid grown,
Hold fast thy loyalty, and know
That Truth still moveth on.

For unseen messengers she hath
To work her will and ways,
And even human scorn and wrath
God turneth to her praise.

She can both meek and lordly be,
In heavenly might secure;
With her is pledge of victory,
And patience to endure.

The race is not unto the swift,
The battle to the strong,
When dawn her judgment-days that sift
The claims of right and wrong.

And more than thou canst do for Truth
Can she on thee confer,
If thou, O heart, but give thy youth
And manhood unto her.

For she can make thee inly bright,
Thy self-love purge away,
And lead thee in the path whose light
Shines to the perfect day.

Frederick L. Hosmer.

Bali

Rabindranath Tagore gives an illuminating description of the island of Bali and its people in the *Visha-Bharati Quarterly* for April, from which we take the following passages :

The island of Bali is so well-ordered in its completeness, because it is small. It is one with its woods and hills and water-falls, its temples and sculptures, its cottages, cornfields and market places. Nothing strikes the eye as out of place. The Dutch Government does not allow factory-makers from outside to come in, nor is it a resort of missionaries. The acquisition of land by foreigners is not easy, even for agriculture. The trade is in the hands of Arabians, Guzrathi Musulmans and Chinese, who are not conspicuously out of harmony with the surroundings, as are the Jute Mills that painfully burden the fair breast of Bengal, driving her temples from the banks of the holy Ganges for very shame. The villages are administered by the villagers themselves. The methods of cultivation and irrigation are excellent. The outturn of crops is said to be comparatively much larger than elsewhere.

Their woven stuffs are gaily coloured and elaborately ornamented, showing that they are not disposed to insult their bodies with any and every covering of discoloured rags. So that the place where a crowd assembles becomes a pleasing sight. The women leave the upper part of the body bare. If asked about it they say : Are we fallen women that we should cover up our breasts ? On the whole, the features and figures, both of the men and the women, are well-favoured. I have not come across a single individual who is disproportionately fat or lean. The strong and healthy bodies, the contented, cheerful countenances of the human folk fit in with the sleek, well-fed cattle and the lush vegetation.

There are but few places in the world that can beat Bali from the pictorial point of view. I feel so sorry that Nandalal was unable to come with us this time,—he will hardly get another such opportunity. On every side lie scenes worthy of an artist's gaze. It is because food is plentiful, that the people have been able to gratify their desire to make their cottages, their furniture, their rites and customs so artistic. We have not yet encountered a beggar ; nowhere have we seen any sign of slovenliness ; everywhere music and dance and theatrical performances are going on,—the subjects being taken from the Mahabharata. Along the road-sides there are all kinds of temples and images. They have indeed no lack of food, for body or spirit. It is a true picture of Sriniketan,—of complete well-being.

The chief feature of their life of festivity is the dance. Just as their coconut leaves wave to the constant sea-breezes, so do the limbs of

their men and women sway to the frequent call of the dance.

Looking to the West for Guidance

The *Ravenshawian* (the magazine of the Ravenshaw College, Cuttack) for April 1928 reproduces the full text of Prof. Dr. S. N. Das Gupta's speech delivered on the Commemoration Day of the institution organised under the auspices of the Old Boys' Association. About the practical side of the Association he observed :

I very much appreciated Mr. Whitlock's (the principal of the College) impressive lecture when, he said that the practical side of the Old Boys' Association consisted in their trying to contribute materially to the well-being of this College.

Mr. Whitlock in trying to enlist the sympathies of the old boys suggested that in the meeting of old boys in British institutions also, the old boys volunteered to make gifts to their old College for specific purposes. There is no doubt that apart from the social facilities obtained in such annual intercourse between old pupils and the newer ones the other important side of it was that of getting the old pupils interested in the affairs of the College and of gaining their material support in the development of the many-sided activities of a growing College like this.

But Professor Das Gupta strongly criticised the attitude of those who have always to look to the West for their guidance.

But this affair takes me to other bigger and broader problems of the developments of educational life in this country. Why should it be necessary for us to be told that old boys of a College ought to meet together because they did so in England or that they ought to help their mother institution because old boys in England on such occasions helped their old College ? Why should it be necessary that in all times to awake our own consciousness in favour of our past things we should always have to turn to the West to find out if we were proceeding on right lines or not ? Yet it has been so, and shamefully so in almost every line of our contemporaneous development of thoughts and activities. If we have a right to live as a self-determining people, proud of a great country and of a great religion, why should we have always to look to the West for every kind of inspiration ? Why should it be necessary that in recognising our own men and their work, we should always demand certificates

of fitness from the West? Are we so incapable of judging things by ourselves and do we lack the power of understanding our own good to such an extent, that in most cases for each step that we take, we should have to look to the West for our guidance? English education has been introduced in this country for about a century but even now we all feel that it has not yet been able to fit itself to the national temperament and genius of the race. The learning that is acquired in the colleges, it is often said, is not true learning; it is often mere cramming, some collection of facts and dates which lack the self-determining activity of a living whole.

Next he explained the true meaning of the term Education.

We are unable to realise that neither the leaves nor the branches nor the trunks nor the roots make up a tree but they all go together to take their share when the vital principle of the tree is budding forth and shooting forward in newer and newer creations. Education, if it has any meaning, means the growth of this creative power by which the mind by assimilating the known facts and digesting them into its vital life shoots forward as a creative unity, a creative power that creates new facts, makes new conquests, lives a new life and breathes new beauties. The spiritual nature of this growth may have its racial, temporal and spatial peculiarities but the principle that lives through the spread of education is the gradual rebuilding up of a vigorous intellectual and spiritual creative unity of thought and action.

Scouting in India

The Volunteer for March-April complains that the scout movement as practised in India at present does not touch our national aspirations. Says the journal:

Our whole quarrel is with the scout movement as practised in India under official wings—and its by-products—the scouters. We have nothing to say against scouting as an idea, as it is practised in the independent countries, where—like a variant of Pelmanism in the physical plane—it is designed to train a boy to be alert and adventurous and enjoy his youth thoroughly.

In India, however, the movement is barren and is bound to the barren on the whole, because it does not touch national aspirations. It is the outlook and the temperament that scouting engenders which calls for our comment; not the details of its training, of its dress, or its paraphernalia which are commendable from the point of view of youth organisation. Our questions are:

1. Do scouters and scout organisers hesitate, or do they not, to present before the minds of young scouts unequivocally that we have to train ourselves for Swaraj?

2. Do they or do they not ape and adopt songs, stories, fun and frolic at camp fire rallies, which are of foreign origin without any conscious attempt being made to explore the rich field of Indian culture and tradition and imbibing a fervent love

and devotion for Indian languages, history and tradition?

3. Due to the fact that the heads and superior officers hold honorary ranks in the scout movement, is it or is it not a fact that very often the only sign of the movement in a town is the occasion of a supernational or other visit? How often are such shows trumped up? How often do scouters and scout-masters who are after all human beings and who are many of them subordinate government officials succumb to the temptation of showing themselves off on such occasions with motives other than those of merely training Indian Youth? As a consequence is not the movement worked, like Government Departments, to produce the impression of work, in the shape of diaries and reports, rather than the ever present purpose to train Indian Youth into self-respecting patriotic Indian citizens.

Ruin of Indian Villages

Mr. Huson Olcott in an interesting survey of Indian rural condition in the April issue of the *Mysore Economic Journal* describes how poverty, ignorance, disease and death have been causing havoc to the villagers who continued their quiet life close to God's fragrant earth until two or three centuries ago.

Disease and death are terrible drains on the villager. He likes personal cleanliness and bathes frequently but lives in filthy surroundings. He is devoted to his family but tolerates the piles of dust and rubbish near his house which bring them disease. Fortunately, for our brother the villager, the sun of India kills germs more effectively than the sun in countries where his rays are less direct and more blocked by clouds. Were it not for the sun, the death rate would be even higher than it now is, nearly 90 per 1,000. On the whole, the villages are slightly more healthy than the towns. Plague and cholera make terrible ravages in the country but they cause even more deaths in towns, where the people are crowded together in unsanitary dwellings. However, the influenza scourge which destroyed twelve million lives in 1918 and 1919, made even more dreadful havoc in rural than urban areas. Many villages had not one survivor. When an epidemic threatens, the villager frantically sacrifices a cock or a goat to the village demones. In addition to such appalling pestilences are the grim spectres of famine waiting on the threshold of many rural homes ready to pay an accustomed visit. Less feared are the insidious diseases that day after day, year after year, undermine the vitality of India's peasants and unfit them for working or thinking. Malaria and kala-azar fever and hook-worm do untold damage of this kind. Being less noticeable than a violent epidemic, they are harder to control and probably do more harm. Fevers alone account for four million deaths a year.

Poverty and ignorance bring about insufficiency of food, contaminated water and dirty housing conditions. These together with gross superstition

and early marriage, bring about illness and death. A large part of the deaths are preventable but adequate medical treatment is scarcely known in the villages. In addition to medical service, a broad programme of rural reconstruction must be put into effect before the villagers can have abundant lives free from the constant dread of disease.

Causes of Prostitution

J. F. Mistri writes in the *Social Service Quarterly* for April :

It is healthy sign of the times that the subject of prostitution, which until a decade or so ago was surrounded with a veil of mystery and about which not only was it considered improper to speak but even to think, has been openly viewed in its true perspective not only by the social workers and reformers but by the thoughtful and intelligent public. This changed attitude is due to the fact that people are realising the havoc it is playing with the physical, moral, mental and economic well-being of the present as well as of the future generation. What is a matter of greater satisfaction and importance is that women, who up to now had remained the silent and distant spectators, are also beginning to realise that their self-interest, self-respect and honour are involved in it and are awakening to the need for action in the matter. This is a problem that does not affect only a particular class or individuals but the whole nation are large. People need not imagine that they are safe because they themselves and their children are good and have nothing to do with the evil. One of the consequences of this evil is venereal disease, and there is the risk of their children or themselves being infected indirectly or their children marrying diseased persons. The problem is two-sided and must be dealt with accordingly. It is a question of demand and supply, but hitherto it has been looked at from one point of view only, and the world has exercised enough cruelty upon these poor unfortunate, friendless, and helpless women. In India, at any rate, many of these women are victims of circumstances, more sinned against than the sinner. At times, everyone's hand is against them, that of society and the police. Even the State derives revenue in the shape of income-tax from the shame and misery of these women. The problem cannot be solved by focussing on women alone. "Cut off the demand for prostitution and the brothels will naturally starve." The causes of prostitution are many and deep-rooted in our social system. Sometimes there is a very narrow margin between the economic and basic ones.

Stri-Dharma

We are very glad to find that *Stri-Dharma* (official organ of the Women's Indian Association) has been reconstructed in an

enlarged and improved form with the addition of a Hindi section.

Education for Muslim Girls and Parda

It is a happy sign that Muslim women should demand the establishment of more High Schools for girls belonging to that community. We read in the same journal :

The Madras Muslim Ladies Association held a meeting to pass two resolutions to the effect that the Government should start more High Schools for Muslim girls and to urge the corporation to open Parda Parks in congested city areas.

It is excellent that the Muslim women should demand these things for themselves. The more universal education we have in all communities the better.

Commenting on the Parda the writer observes :

We, however, wish that in the second resolution the Muslim women had also demanded the abolition of the Parda which is one of the root evils, rather than demand facilities to patch up old customs to suit modern ideas. Is it not far better to do away with the evil of Parda which one will admit is most unhealthy and cramping to the physical as well as the moral welfare of a woman?

The Health Officer of the Calcutta Corporation writes that :—

"Between the ages of 15 and 20 years, for every boy that dies of tuberculosis, six girls die."

"I am convinced that it is the retention of the Parda system in the densely populated gullies of a congested city that counts so many young girls to an early death from tuberculosis. In less densely populated areas, where detached houses with compounds are possible, the Parda system could be adhered to without seriously affecting the health of the inmates of the zenana."

"In a great city, it is difficult to secure absolute privacy without shutting out light and air, as houses in narrow lanes and gullies are almost certain to be overlooked, consequently, the zenana is usually situated in the inner portion of the house, ill-lighted and ill-ventilated, but effectually screened from observation."

Indian Youth Movement

The *Young Men of India Burma and Ceylon* in its May issue reproduces the illuminating address delivered by Mr. C. F. Andrews at Ahmedabad on the occasion of the inauguration of "Youth Week" in the course of which he traced the development of the Youth Movement in many lands. He advised the organizers of Indian Youth League as follows :

India needs her own return to Nature. The

all-obsessing miseries of modern life have gone deep down into the heart of Indian society. The gulf is tending to become wider between the village and the city. If only, through the Youth Movement in India, this division could be bridged over, if only, this almost universal depression of misery could be banished, it would indeed bring in a brighter day, not only for India herself, but for all mankind. There should be no great difficulty in organizing walking parties in this country. Rest-houses can be found here and there in the villages. Daarmasalas are also not uncommon. Owing to the glorious Indian climate, where, for a great part of the year, the air is dry and the sunshine is ever present, camping out on long walking-tours is an easy business, which adds to the zest of living. Physical drill and gymnastics have, of course, their place in any scheme for youth training in great cities; but the energy that comes through walking and singing and taking delight in the country, with all its beauty, is a form of happy exercise that can never be acquired in a gymnasium. Surely, also, the time has arrived when the incessant criticism should be removed, that 'educated India cares little for the poor people in the villages'. This criticism was always more than half untrue; but the modicum of truth that still remains could be dispelled, if only the Youth Leagues of India led the way.

Shama'a on the Development of the Indian Theatre

We read in *Shama'a* for January-April :

For some time past we have been considering some of the practical ways of developing the Indian Theatre. Obviously nothing improves staging better than a demonstration of how best to do it. Under the guidance of our Editor a small group of enthusiastic men and women have gathered as the nucleus of a group who in course of time, it is hoped, will be able to interpret on the stage the real spirit of the finer forms of histrionic art. A very successful beginning was made in this direction in October last year when Tagore's *Dancing Girl's Worship* was staged at the Excelsior Theatre in Bombay. In many respects this drama is unique. It is written only for a cast of women. It shows the conflict between Buddhism and Brahminism and how the stern worship of even a dancing girl could profoundly stir our emotions and play so considerable a part in the life of the Royal Court. The ladies who took part in the play in October came from various different communities, including even the Anglo-Indian, who are supposed to be not quite interested in purely Indian drama. The play was no doubt in English (the Vyavaharati version) but the setting and background were entirely Indian and the touch of Bengali music by Mrs. Sunahni Rajam (who took the part of the dancing-girl) gave completeness to the general atmosphere. Mrs. Rajam gave a masterly and beautiful rendering of the dancing-girl's part. Our Editor had herself to set the example by taking the very difficult part of the queen. We are glad that the play was received with great delight by the Bombay public and that many of the ladies who took part were highly spoken of by the Press. This is

perhaps not to be wondered at. There is such talent in the country that the wonder is why only so little of it is liberated for refined and graceful expression. A great and purified stage will be one of the best medium of instructive enjoyment. But—let us not forget—it means resources which few people can afford.

Mrs. Sunahni Rajam and the Editor of *Shama'a* are daughters of the late Dr. Aghornath Chattopadhyaya.

Universities and Politics

At a time when the question whether students ought to participate in active politics has been agitating the public mind, the address delivered by Sir Michael Sadler at the annual meeting of the Indian Students' Union and Hostel, London, and published in the May issue of *The Calcutta Review* may be read with interest. Says he in part :

Except in periods of unusual quietude or in the torpor of decay, universities are not, as we sometimes think them to be, haunts of ancient peace. If we look back upon their history we see them tossed at their moorings by great waves of controversy in religion or in politics, and the storms have been worst when religion and politics have been in explosive combination. In our time, indeed, most universities are remote from political or religious controversy. Their chief intellectual activity now lies in the domains of history, of the comparative investigation of custom and belief, and in the physical and biological sciences. But what lies ahead? Before our eyes, applied science is causing economic change. Economic problems loom larger in politics. But they touch at many sensitive points the lives of men. They involve ethical questions, questions of responsibility in employment, new contacts between races, our assessment of the value of what we may enjoy in life. There are signs that these questions may touch the quiet of universities. By the law of their being, universities have one foot in the past and one foot in the future. Within their walls meet minds which are mature and minds which are promising and eager but still immature. To blend these two is to help in stabilizing society. But at times of rapid change in social or intellectual outlook, courses of academic training are in danger of getting out of date. Old ways of thought may become obsolete, not by reason of inherent defects but through subtle changes in the mental appetite of the young. At these times conservatism which is rightly cautious may be over-tenacious of tradition. Into this mistake fell the English universities at the Renaissance, the University of Paris in the time of Descartes, some of the German universities after the Thirty Years' War. Again, it is a perilous time when a new culture and power of large-scale industry impinge upon the venerable studies of an antique civilization. And whenever the spirit of Nationalism has gripped the imagination of the most eager-minded part of the community, universities, because one of their functions is to stabilize society, are wise,

I think, in not withholding sympathy with what is fair and feasible in national aspirations.

To sum up: Politics play so great a part in life that places of education which prepare young men and women for life cannot be isolated from politics. Every university has always been the scene of political discussion. The hardest questions of belief and duty both in religion and in politics cannot be evaded by old or young in any centre of sound learning. Political philosophy and its applications have been inseparable from university training from the days of Isocrates, Plato and Aristotle to those of Treitschke, Henry Sidgwick, and Woodrow Wilson. To think and talk about politics during undergraduate days has for centuries been part of the training of those destined to lead in the public affairs of their country. [The words italicised by us show that Dr. Sadler does not advocate the active participation of students in current political affairs.—Ed., M. R.]

But the first duty of a university and of all those who work in it is to get at the truth. To hear both sides, to be candid and fair-minded, to shun (except in debate) the spirit of party, are primary obligations on those who teach and learn in it. But if the conditions of life in a country are unhealthy, political talk may become feverish and unbalanced. In such circumstances, university teachers and students are under especial obligation to set an example of steadiness in judgment and, if after patient thought conscience constrains them, of courage in standing up for what at the moment may be the unpopular side.

Governments' Tactics of Shelving Popular Measures

Mr. Doongersee Dharamse in the course of an article in *Welfare* for May narrates how the Indian Merchant Marine after a long and brilliant history covering a period of more than twenty centuries has been brought to its present low level by a foreign Government for "Selfish Motives." Incidentally he points out how the recommendations of the Indian Merchant Marine Committee which fell far short of Indian expectations have been shelved by Government like all other beneficial matters of vital national importance.

In an article on "Indian Shipping and Mercantile Marine" in *Welfare* of July, 1923, the great difficulties under which this industry was suffering were shown. After that much water has run under the bridge. Many eventful things have happened in five years which have brought this question prominently before the nation. The Indian Merchant Marine Committee has issued its report which though falling far short of the aspirations and expectations of the nation is, however, something in the nature of half a loaf is better than no loaf. Our benign Government is pleased to turn down the main recommendation of the Committee. As usual our Indian Government is an expert in the tactics of shelving most beneficial matters of national importance. If there is a great popular clamour for undertaking any step or legislation

which is directly or indirectly against the vested interests of the Europeans, our Indian Government in order to gun time appoints a commission to investigate and take evidence. Two to three years naturally pass in the appointment of the Commission, taking evidence from the witnesses in the different parts of India and then deliberating and issuing a report. Then this report is subjected to a long delay in the hands of Government of India and the Secretary of State in London. The Secretary of State is the guardian angel of European interests who would not tolerate a single suggestion or recommendation which even slightly affects the vested interests of the Europeans. The Government of India is ordered from home to strike off those recommendations which are not liked by the home people. Legislation on these lines is introduced in the Legislative Assembly. Where popular leaders try their utmost to introduce amendments to bring it in line with national requirements, Government is obdurate and with the help of the Council of State successfully pilots the bill or gets it 'certified' through. Thus, many a popular measure meets the inevitable fate and the great national question of merchant marine is not an exception.

Monograph on the Mohenjo-daro Excavations

Sir John Marshall writes in *The Benares Hindu University Magazine* for April:

A three-volume monograph on the excavations at Mohenjo-daro will be going to press in a few weeks' time and may be expected to be issued to the public in the early part of next summer.

Since this site was discovered by Mr. Banerji six years ago, the task of excavating it has been carried forward by a succession of different officers belonging to my Department: first by Messrs. Vats and Dikshit; then by the writer himself; and latterly by Rai Bahadur Daya Ram Sahni and Mr. Mackay, whom the Government of India has recently been fortunate in attracting from Mesopotamia.

With the work of all these officers, the forthcoming volumes will deal in extension; at the same time, it will aim at surveying generally the whole field of pre-historic culture now opened up in Sind, and the Punjab and Baluchistan, and, besides special chapters by other experts, will include an analysis of all the pictographic records from Mohenjo-daro and Harappa by Prof. Lagdon of Oxford and Messrs. Sydney Smith and Gadd of the British Museum.

Bolshevik Air-Power

Mr. V. B. Mehta writes in the *Indian Review* for April:

How few people know of the attempts that Russia is making to dominate the air. It was not till 1922 that Soviet Russia made up her mind to become a great air-power; and to realize her ambitions she has since then bought a large number of machines or parts for them from

Germany, Holland, Austria, and Italy. She has also extended her commercial air-routes, trained pilots, and equipped aerodromes. About the middle of 1925 she possessed on her active list 937 aeroplanes and seaplanes, which included observation-machines, fighting-machines, and heavy bombers.

The Soviet Government contributes a certain sum of money for the buying or building of the new Air-Force, while the rest of the money is given by the people. A society called "The Society of Friends of the Air Fleet" has been formed under the chairmanship of M. Rykoff. Its members, who are the joint owners of the Air Fleet, contribute 60 kopeks each annually. At the end of last year, the members of the Society numbered 3,000,000. The Society has branches all over what was formerly called the Russian Empire. The membership of the Society is increasing rapidly on account of the propaganda which is carried on by means of circulars, lectures, and cinemas. Joy-rides are also given free to the people. People are made to feel their proprietary rights in the Air Fleet, and so they have willingly paid their contributions which amount to over 12,000,000 Rupees.

The aeroplanes bought or built by this Society are for civil and military purposes.

Practically the whole aerial system from London through Amsterdam, Berlin, Moscow, Kiev, Odessa, and thence into the Caucasus is under Russo-German control. The Dobrolet is a Soviet Society managed by the Junkers Company and operates between Leningrad and Rostov to Batum, and through Tiflis traversing the Caucasus to Baku. A recent extension of the line now joins Baku to Teheran via Pahlavi (formerly Enzeli). The Persian Parliament ratified in February 1926 the concession to the Junkers Company to carry their air mail for five years. The Society has also started another route in Turkestan from Tashkent to Vyernyi on the Chinese frontier, and runs a regular service between Bokhara and Khiva. The Ukrvozdukhput is operated in the Ukraine, and its Moscow agency is taken over by the Deutscher Aero-Lloyd. The Zakavia operates in Trans-Caucasian States with its headquarters at Tiflis. It has recently run a feeder line to its Trans-Caucasian route to Erivan, the capital of Soviet Armenia. The 1924 reports show that these four Companies flew 1,000 flights over 287,000 miles carrying 25,000 passengers and 100,000 lbs. of weight.

The Turkestan Soviet Air Force has faster planes than any the British have in India. Russia has also given a gift of 12 aeroplanes to the Afghan Government. The personnel of these aeroplanes is mainly Russian and German, and its aerodromes at Shermur near Kabul, Jelalabad, Kandahar, Hatbak, and Chankar were laid out under Russian and German directions. The British Government is therefore feeling very anxious about the safety of India.

We are also told that Soviet Russia is beginning to stretch an air-arm towards the Far East.

Last year, the Society of Friends of the Air Fleet organised an air-flight from Moscow to Peking. The Soviet Government declared at the

time that the objects of the flight were three, namely, (1) The exploration of an air-route to the Far East; (2) The cementing of relations between the Soviet Government and the friendly peoples of Mongolia and China; (3) The training of pilots. It is probable that airways will soon be constructed across Siberia into Mongolia, Manchuria and China.

It will be remembered that there was also a Japanese flight from Tokyo to Moscow last year. Did that flight signify that in the not distant future Russia, Germany, Japan, and perhaps Nationalist China which is so much under "Red" influence—will form an air alliance? Eastern Europe, the Near and Middle East, and the Far East are already under the control of these nations. What more they might do after their alliance is cemented, we must wait and see.

Indians Abroad

The following figures of population of Indians abroad according to the latest returns are reproduced from the same journal.

Name of country. Indian population. Date of census

| <i>British Empire</i> | | |
|--|------------------|------------|
| Ceylon | 820,000 | 1926. |
| British Malaya | 660,000 | |
| Hong Kong | 255 | 1911 |
| Mauritius | 264,527 | 1921 |
| Seychelles | 332 | 1911 |
| Gibraltar | 50 | 1920 |
| Nigeria | 100 | 1920 |
| Kenya | 26,759 | 1926 |
| Uganda | 5,604 | 1921 |
| Nyasaland | 515 | 1921 |
| Zanzibar | 12,841 | 1921 |
| Tanganyika Territory | 9,411 | 1921 |
| Jamaica | 18,401 | 1922 |
| Trinidad | 121,420 | 1921 |
| British Guiana | 124,938 | 1921 |
| Fiji Islands | 60,634 | 1921 |
| Basutaland | 179 | 1911 |
| Swaziland | 7 | 1911 |
| Northern Rhodesia | 56 (Asiatics) | 1921 |
| Southern Rhodesia | 1,250 (") | 1921 |
| Canada | 1,200 | 1920 |
| Australia | 2,000 | 1922 |
| New Zealand | 606 | 1921 |
| Natal | 141,336 | 1921 |
| Transvaal | 13,405 | 1921 |
| Cape Colony | 6,498 | 1921 |
| Orange Free State | 100 | 1921 |
| <i>Total for British Empire.</i> | | 2,294,724 |
| <i>Foreign countries.</i> | | |
| United States of America | 3,175 (Asiatics) | 1910 |
| Madagascar | 5,272 (") | 1917 |
| Reunion | 2,194 | 1921 |
| Dutch East Indies (Say) | 50,000 | |
| Indians | | |
| Surinam | 34,957 | 1920 |
| Mozambique | 1,100 (Asiatics) | Not known |
| | and half-castes | known |
| Persia | 3,827 | 1922 |
| <i>Total for Foreign countries.</i> | | 100,325 |
| <i>Grand total of Indians overseas</i> | | 2,395,219. |

Achievements of Ancient India

Khalilur Rahaman writes in *Patna College Magazine* :

To Europeans, Greece is the home of Philosophy, Science, Art and every intellectual creation ; and there are the best reasons for this opinion too. Yet, there are Asiatic lands which, in the history of culture deserve a place besides Greece, as sources of light and spiritual help. These are India and China. We find a systematic growth of culture and intellect in the three countries almost about the same time quite independent of one another.

From a very early date Music has been studied and cultivated in India.

Linguistic science was known to the Indians from a very early date.

India bears the palm in the matter of Linguistic science,

Our setting of Greece, India and China together is further justified by the fact that these three lands each independently invented coins : China about 1,000 B.C., Greece about 700 B.C. and India about 400 B.C., and from these three beginnings all other coinage of modern times has developed.

As regards strong rule, good government, and wealth, India was unquestionably great.

There were many republics existing in north India in 6th and 5th Century B.C. They were aristocratic, and not democratic, in outlook and in government, and were thus not unlike the early Roman republic. During the youth of the great Buddha, his father Siddhodhan was the head of the republic of the Sakya clan.

Remarkable it is to note that philosophy sprang up spontaneously and independently in these three far-sundered lands—Greece, India and China.

Another link which unites Greece, India and China is the search for a trustworthy Logic—the Science of Reasoning.

In every land of the East where Buddhism or Hinduism went in the middle ages, the knowing traveller recognises to-day in the architecture and sculpture before him many characteristics of Indian religion and art. The architectural styles of China and Japan, Cambodia, Java and other Eastern countries are characterized by Indian ideals.

Special schools were created in those days to train students in law, government, war, medicine, rhetoric, poetics and mathematics. In the 4th Century B.C. a great university had grown up at Taxila, and thither from every quarter of India, the finest young men went for education. Then after the Christian era two Buddhist universities grew up farther to the south, at Nalanda in Bihar and at Vikramasila, on the Ganges. Down to 1200 A.D. these universities were to Asia what Bologna, Paris and Oxford were to Europe in the middle ages.

Like Greece, India had its dramatic art distinguished from other national styles by notable differences.

The drama arose in North India in the First Century B.C. and has a history of a thousand years, reaching the height of its glories in the plays of Kalidasa in the 4th Century A.D. His

Shakuntala is a master-piece of dramatic and poetic work. These developments which India attained were in no way inferior to those of Greece or China.

Calcutta Corporation Councillors Responsible for Cholera Epidemic

The Calcutta Medical Journal, edited by distinguished physicians, blames the Councillors of the Calcutta Corporation for having unwittingly caused the death of hundreds of citizens from cholera and typhoid fever.

The Health Officer of the Calcutta Corporation has done his best to check the spread of cholera in Calcutta. The latest remedy has been widely advertised and freely circulated. But no special attempts were made to supply sufficient quantities of pure drinking water. The Councillors of Calcutta have after a great deal of deliberation negated the proposal of providing the town with tube-wells. The supply of unfiltered water has failed miserably in some wards. The commencement of the epidemic coincided with a strike of the sweepers.

We should like to impress upon the Councillors of the town that they are responsible for this epidemic and for the deaths caused by it. The Councillors have not been negligent, however, in so far that they have made provisions for a large project for the supply of filtered water, but they have failed to see the project carried through quickly, and they even, much less the citizens of Calcutta, hardly know when the grand project will be completed.

We believe that this epidemic has partly at all events been spread by the remissness of the Corporation in supplying filtered water in sufficient quantities in a year when there has been no rains for some time, and the heat has been excessive and consequently the people requiring larger quantities of water.

Ideals of Gurukula

Principal T. L. Vaswani's convocation address at the Gurukula University, published in the *Vedic Magazine* for April was an excellent vindication of the Gurukula ideals. He characterised the current system of education in India as a bad "imitation" which leads to "emasculatation."

Current education in this country is a transplanted system. It is an imitation,—a bad imitation. And imitation is emasculatation. In a period of India's low vitality was the current system imposed upon her. It had its origin in France in the days of Napoleon ; it was imposed on India by England. It was essentially bureaucratic, aiming at 'efficiency' of a foreign Government, not setting free the powers of the people. The object was to "train" cheap clerks and little officials to help the British administration. Here then is the tragedy of the present system, it is not organic. It is cut off from the soul of the people. It is

distinguishing; it separates the mind from race-memories. Truly has Sri-Krishna declared in the Gita: "From the breaking of memory results wreck of understanding, and from wreck of understanding a man is lost."

This Gurukula stands as a shining witness to some of the great race-memories of this ancient gifted land. Therefore, is this Gurukula destined, I believe, to play a significant part in the evolution of a new Indian Renaissance which is essential to the rebuilding of a new Indian nation. For, never let it be forgotten that a nation is a psychic entity and is brought into being by ideas and ideals transmitted by the race-consciousness and the environment. They are true architects of a nation.

How to avoid Infection

The Oriental Watchman and Herald of Health for May says:

The diseases transmitted by food and drink may be avoided if one will refuse to drink any unboiled water, to eat any uncooked food, and to eat with unwashed hands. The dishes should not be washed in cold water, which may contain parasites, but should be scalded.

In order to avoid skin infections, insist on having the laundry work boiled, for ringworm and other skin diseases are known to be transmitted through the laundry. In bathing, use rain water of known purity. The water from a pond may contain parasites.

Lastly, while one should know the different sources of danger, and should form the habit of doing everything in such a way as to avoid infection and to preserve the health, the matter should then be dismissed from the mind. Nothing is so deleterious to a person as to be constantly fearing some disaster. To live healthfully, one should early form correct health habits, and as soon as the practice of hygiene becomes habitual, forget it.

Some Defects of our Educational System

Mahatma Hans Raj draws attention to some glaring defects in our educational system in the March number of the *D.-A.-V. College Magazine*, one of which is:

It is often complained that our students suffer under a rather heavy burden of too many subjects. There are some who hold that certain subjects should always form a part of a boy's education—in fact most experts would suggest that their own particular subject must form a part of a boy's necessary equipment whatever might happen to other subjects. There are others who suggest that the burden on the shoulders of our boys is becoming increasingly heavy. Cannot a compromise between these two views be possible? If we would make a distinction between the subjects that are to be taught and those wherein a student is to be examined by the University, a way would be found out of this difficulty. The headmaster's certificate of adequate knowledge in former subjects may be considered necessary as has been suggested by the Calcutta University in the

case of manual training. This would equip the students with the necessary knowledge of these subjects while saving them from the heavy burden of preparing them for the University examination and prevent cramming.

Racial Relations in the U. S. A.

The National Christian Council Review, in reviewing the activities of the Commission on inter-racial co-operation" for 1927, observes.

One of the disquieting features of the year has been the high school strike at Gary, Indiana, where white pupils refused to allow negroes in the school. To quote the report, a significant feature was the fact that a large percentage of the strikers were young people whose parents were born in European countries, indicating the presence of new elements in American race prejudice due to economic fear and industrial competition. Other discouraging elements of the situation are the great disparity in the quality of educational opportunities provided for children of the two races, and the entire lack of proper provision for defective and delinquent negro children, this very lack increasing the prevalence of such crimes of violence as are particularly associated with the feeble-minded of all races. Conditions in the 'Black Belt'—the area of rural counties containing more than forty per cent. of negro population—show the fewest signs of progress. The most discouraging feature is the apathy of large sections of the Christian Church, who fail to grasp the peculiar responsibility of Christ's followers or the implications of their Christian faith as it applies to race relations.

But in India communal dissension is regarded as the chief reason of her subjugation and backwardness.

The Commission has been rendering useful service in other ways as would be evident from the following remarks:

There is, however, another and brighter side. Lynchings have decreased from thirty in 1926 to sixteen in 1927. A county in Texas has just opened a new hospital with the same facilities for patients of both races, and with equal opportunities for negro and white physicians. In many places the schemes for community welfare are managed on an inter-racial basis, both as to contributions received and as to the expenditure of the funds. Perhaps the greatest encouragement comes from the new attitude of students and of educational institutions. About a hundred such institutions are offering courses in race relations; students, negro and white, are holding joint 'forums' in a number of centres; essays and these are being written on the subject; and research projects are under way. In many cases this new interest leads not only to theoretical study, but to the formation of personal contacts and of co-operative work between members of the two races.

Foreign Periodicals

India and the Simon Commission

Die Rote Fahne, the official Communist daily of Berlin, makes the following remarks on the demonstrations that signalled the arrival of the Royal Commission in February last:

The English press has vainly tried to avoid discussing the significance of recent events in India. Although the English censor still prevents our getting a clear picture of what is going on, it is at least clear that anti-imperialist strikes and demonstrations are taking place in all parts of the country. The first clear evidences of a growing national revolutionary movement date back to 1931. The big cities of India are now in a state of siege. English armored automobiles circulate through the streets, and English police fire at parading demonstrators who have here and there embarked upon a barricaded warfare with the armed powers of English imperialism.

The cause of this movement is the arrival of the English Royal Commission whose appointment was promised in 1919 and whose present duty is to investigate how much the Indian people are fitted for further self-government within the British Empire. No Indians are represented on the Commission, which in point of fact merely symbolizes the common imperialist front of all English parties against the Indian people. At the head of the Commission stands Sir John Simon, a Liberal M. P. and therefore a member of the Opposition. The Commission also includes Mr. Walsh, the Minister of War in MacDonald's Cabinet, and Major Atlee, an undersecretary in the War Department of the same cabinet. Both these men represent the forces of English social imperialism.

The December session of the Indian National Congress in Madras made it clear that the arrival of this Commission would arouse widespread opposition. The National Congress, which includes all elements of the Indian National movement, from the most reactionary of the big Indian capitalists to the most radical members of the Workers' and Peasants' Party, adopted a resolution of decidedly Left Wing tendencies. For the first time in its history the National Congress officially demanded the complete independence of India—a programme that Gandhi had refused two years ago.

The Indian people are now living under the dictatorship of English imperialism, which has been further intensified by the so-called Bengal Governors of the Marikata Government. The democrats in Bombay, Madras, and Calcutta insistively and rightly attacked, not only the

Conservative Government, but His English Majesty's Liberal and Labor Opposition as well.

The Uprising in Canton

In the course of an account in *Humanite* regarding the three days' revolution at Canton last December, an "Eye witness" gives a picture of the affairs and shows how revolutionists go about their jobs:

The Canton Commune committed no great political error. Its policy was in reality extremely just. Its decrees assured the co-operation of the working masses, the peasants, the petty bourgeoisie and the soldiers. It addressed appeals to the workers and peasants of all China, and to the international proletariat. Its decrees will be read, spread, and commented upon by peasants and workers throughout all China and throughout all other colonial countries. The latest Chinese exploit will be compared with the fruits of a year of Kuomintang government.

Canton has proved that the Chinese working class can take and exercise power. The correction of certain faults and omissions that led to the defeat of the labor government will permit it in the near future to maintain itself in power once power has been seized. Canton has shown the masses their one and real leader—the Chinese Communist Party.

India in the Eyes of Continental Europe

We read in *The Hindustance Student* excerpts from Dr. Taraknath Das's lecture on the attitude of Continental European powers towards India. Although the Anglo-Saxon world is primarily interested in India, the view of the Latin world, Teutonic world, Slavic world, Scandinavian world and the League of Nations regarding India, as pointed out by Dr. Das, may be read with considerable interest.

FRANCE AND INDIA

The trend of French thought on India can be fairly understood from the study made by various French savants. In his book "America and Race for World Domination," Prof. Albert Demangeon of the Sorbonne writes:

India is the typical colony for exploitation.

Immense, rich and thickly populated she represents for her masters at once a fortune and a defence. It is through India that the British Empire assures its destiny. India is the halting place of British commerce to the Far East. India gives the fleet places of support for the sea routes. India recruits for the army legions of high-spirited soldiers; native contingents fight for Great Britain in China and South Africa.

From the standpoint of World Politics, French statesmen are interested in India. They realize that the center of gravity of World Politics has shifted to the Far East and to the Mediterranean; and no practical statesman can ignore the value of India's man-power, economic strength and strategic position, in the equation of future balance of power.

ITALY AND INDIA

New Italy appreciates India's struggle for nationhood. I have come to the conclusion that Fascist Italy has great interest in establishing closer cultural, economic and political connection with India. However, it was in the International Philosophical Congress held in Italy that Indian philosophers such as Professor Das Gupta and others were given recognition on equal footing. It was Italy which took the initiative of sending a cultural mission to "Indian India," by sending the foremost Italian scholars to the Viswa Bharati. The Italian universities presented a library of Italian literature to the same institution. Dr. Tagore's reception in Italy by Premier Mussolini is of great international significance. I was in Como, at the Volta Exposition, held in memory of the great Italian scientist where India was represented by two Indian physicists of repute—Professors Bose and Saha. Indian students are welcome to Italian Universities. Rome is the home of the International Agricultural Institute where practically all nations of the world are represented.

The progress of Italian shipping and industry makes it imperative for Italy to seek new markets for finished products. It will depend upon the far-sighted Indian patriots to promote cultural, economic and political co-operation with Italy in terms of reciprocity.

GERMANY AND INDIA

It is universally recognized that of all the Western nations, German people have been deeply interested in Indian thought. During the last twenty-five years more books on Sanskrit literature and various schools of Hindu philosophy have been published in Germany than in India. Indian scientists, poets, and scholars are given the heartiest hospitality by the cultured Germans.

German industrialists realize the importance of India better than any other people. Before the World War, Germany was on the road to commercial ascendancy in India. It caused real rivalry between Great Britain and Germany.

At the present time Germany has no political ambition in Asia; she knows that she can never secure a foothold in Asia, without creating certain conditions which would be dangerous to her own real interests. It is generally recognized in Germany that politically free India will be an asset to Germany from the commercial point of view; and from the standpoint of international relations freedom

of India will increase Germany's power and influence in World politics, whereas it will decrease the power of the present colonial powers of the West.

German educational institutions are welcoming foreign students. Japan of all nations, has fully realized the significance of it and the German-Japanese Institute has been established in Berlin.

RUSSIA AND INDIA

Even during the regime of the Tsars, Russian universities carried on Oriental studies on an elaborate scale. This has not been given up; on the contrary, it has now been intensified in every sense of the word. The Soviet Government is not satisfied to confine the work of Oriental studies carried on by eminent Russian scholars, but they have made special arrangements for Oriental students to study Russian history and literature.

Soviet Russia, having all forms of civilization within her borders, and the Russian people being less prone to exclusiveness on racial grounds is sympathetically inclined to Asian culture and institutions.

Russian interest to attract the intelligentsia of India, is seen in the invitation extended to the Indian leaders, journalists and educators to participate in the celebration of the Tenth Anniversary of establishment of the Soviet Government. Men like Pandit Moti Lal Nehru, Ramananda Chatterjee, Prof. K. T. Shah and others are certainly not communists, but they were invited. Russia wants to remain on friendly terms with India.

SCANDINAVIAN COUNTRIES AND INDIA

It is sufficient to mention that the interest of the Scandinavian countries in Indian thought and aspirations is genuine. They have shown their friendly attitude on every suitable occasion, by according proper recognition to Indian scholars such as conferring the Nobel Prize on Dr. Rabindranath Tagore. The Scandinavian countries are not imperialistic and they want to remain neutral in all international conflicts. Thus the public opinion of the Scandinavian people is a very valuable asset.

INDIA AND THE LEAGUE OF NATIONS

No nation, which wishes to cultivate world public opinion, can ignore the institution of the League of Nations. India, as a member of the League, should utilize it to the fullest extent. But it is not being done by the Indian people. On the contrary India is in many ways being misrepresented in the League of Nations, because, under the existing system, persons sent to the League to represent India usually do not represent the people and their aspirations. They should insist that none should be sent to the League to represent India who does not enjoy confidence of the Indian Legislative Assembly.

There should be established at Geneva an India Information Bureau, free from British Government or League control, and under the guidance of an able and recognized Indian leader, familiar with world politics.

Newspapers and the Advertiser

The World Tomorrow explains how far the public belief that "the Press is in a large measure dominated by the advertiser" is true.

How does the daily of today stand in relation to the advertiser? That is one of the first questions that is asked me whenever I speak on journalism, and from the character of the questions asked it is plain that the public believes that the press is in a large measure dominated by the advertiser. It is my belief that in this respect, too, we can record a great improvement in journalism. There are prostitutes in every profession and plenty of them among the 1,950-odd dailies published in this country. Weak newspapers are often likely to yield to the temptation to let the large advertiser take charge of their editorial columns: the strong ones are freer from temptation to yield and freer from danger of boycott, because groups of advertisers realize that the enormously increased volume of advertising in the successful newspaper has relatively decreased their individual value to the newspaper manager. Strong newspapers are indifferent to threats of boycott. I have before this recorded the courage of the *New York World* when a department store manager demanded that it should make no mention whatever of a serious elevator accident in the store. The answer of the *World* was to put the news of the accident at the top of its first page, under a conspicuous headline.

We are further told:

As for the character of the advertising, here, too, we can record a great improvement, at least in the dailies in the big cities. The old patent medicine has been driven to the columns of the weeklies of the rural districts and the weak small-town newspapers in order to call its wares to the attention of the gullible. Laws against get-rich-quick advertising in the financial field have helped newspaper owners to a better morality.

Other factors which have helped newspaper editors to purify their advertising columns have been frequent successful suits against them—not, however, reported in their news columns—because of losses sustained through improper advertising or because of misstatements in the advertisements themselves.

Still, another abuse which is yielding to the progress of time is that of political advertising.

The "Magazine King" of Japan

Isoh Yamagata tells us in *The Young East* the life-story of Mr. Seiji Noma, who is popularly known in Japan as the "Magazine King." The article reveals the extraordinary achievements of the man and incidentally gives some idea of journalism and the reading public in Japan.

Twenty years ago Mr. Seiji Noma was nobody

having been then no more than a poorly paid teacher in a provincial school. To-day, besides being a millionaire, he is the greatest publisher east of the Suez. The figures mentioned of his various publications appear fabulous. In addition to being the publisher of numerous books, he is the proprietor of nine big monthlies. One of these *King*, has a guaranteed circulation of one and half a million copies and none of his other magazines has less than 100,000 readers. It is estimated that the total number of his readers is more than 10,000,000. In other words, one out of every five Japanese is a reader of his magazines. From Hokkaido to Kyushu, in Manchuria, Korea, Formosa, Saghalien, and in that part of the United States, where Japanese colonies are found in appreciable numbers the magazines of the Kodan Sha occupy by far the largest bulk of the stock on display.

What accounts for such an astonishing success as he has achieved? Was it due to a large amount of capital having been placed at his disposal? No, for, as a matter of fact Mr. Noma started with little or no capital. Was it then owing to exceptional cleverness in seizing and making the most of opportunities to meet and please the popular whim?

No, he is possessed of no such talent. The fact is that ever since he started in business as a publisher he has consistently worked hard with sincerity and enthusiasm. This, and nothing else, was the foundation on which he has built up his great business. Mr. Noma now occupies an enviable position, being the proprietor of nine successful magazines. But he never passes a single day in idleness. Like Mr. Curtis, owner of the *Saturday Evening Post*, he continues to work from early morning till late in the evening with super-human energy. In his daily programme there is no time set aside for enjoyment and recreation. The one problem which claims his whole attention at all times is how to make each issue of his magazines a better one than its predecessor. Sometimes he is an able editor, sometimes a good writer, sometimes a shrewd businessman and sometimes an expert advertiser. He gets through as much work daily as five or ten men would accomplish, and stimulated by his example the men under him work cheerfully with might and main as one man.

Every page of his nine magazines reveals his personality, his ideas, his views. He never forgets that he started life as an educator and it is his desire to serve society as an educator throughout his life. It is no exaggeration to say that to-day he is one of the greatest popular educators and spiritual leaders of Japan.

Among the magazines he publishes including one for women, another for boys and girls, another for little children and yet another which is intended for entertainment pure and simple, there is one which is quite unique in character and of which Mr. Noma is particularly proud. This is *Nuben* (Eloquence). There are many books dealing with oratory, but in no other country than Japan is a magazine published which is devoted entirely to the subject of speech-making. It is Mr. Noma's pet magazine not only because it is peerless in character, but because it was this

magazine that gave him a secure foothold as a magazine publisher.

The Imperial New Year Poetry Party

We read in *The Japan Magazine* for March :

The annual poetry party at the Imperial Palace which was cancelled last year on account of the national mourning, was held this year in the Phoenix Hall in the Palace on the morning of January 23.

As he was long indisposed the late Emperor Taisho failed to personally attend the party in the latter part of his reign, to the regret of the nation. Now that the Era of Showa has been inaugurated under the reign of the new Emperor the people's pleasure at the holding of the first poetry party in the presence of the young Sovereign was great. His Majesty made his appearance in ordinary military dress, accompanied by Her Majesty the Empress.

One of the Court Poets made an announcement that in accordance with His Majesty's command 'Freshness of the Mountain View' was taken as the subject of the New Year poem. Then the selected poems were read in the order of from the lower grade to the upper, which was followed by the reading of odes composed by the Princes and Princesses of the Blood. After that those of the Empress and Empress-Dowager were read three times each. Finally the first verse of the Emperor's poem was loudly read by Count Ohara, Hasei (chief court poet), and the second verse by the other court poets, repeatedly five times each. The ceremony was followed by a banquet in the South Hall.

This New Year Poetry Party at the Imperial Palace has been a custom for five hundred years. Anybody, even of the commoners' class, is entitled to present a poem to the Court on this occasion. Those selected as worthy are presented to Their Majesties and the princes and princesses. The gathering is a function reflecting the harmony existing between the Imperial Household and the nation at large.

The odes composed by Their Majesties, the princes and princesses, and those selected from among the many presented by the people have been published in the *Japan Magazine*.

The Emperor's poem :-

Yama-yama no Iro wa Arata ni
Miyure domo,

Waga Matsurigoto ika ni ka

Aruran,

(Meaning). At the beginning of the year the mountains look refreshed, but what of the state of the nation over which I newly reign?

Universal Suffrage in Japan

The April issue of the same magazine gives an account of Japan's first General Election under universal suffrage :

The sanction of universal suffrage, the Japanese people's enthusiastic desire for many years, yet

pending so long, having encountered deadlocks in successive sessions of the Diet, at length passed both Houses in the 50th session on March 20, 1925, to go into operation from the following general election.

The ordinary general election was to take place in May, four years after the last election, but the new law's enforcement was in fact earlier, that is on February 20, as a result of the dissolution of the House of Representatives on January 20 this year.

In consequence of universal suffrage, the number of voters was increased by 9,001,000. While they numbered 3,000,000 under the limited election law they have now increased to 12,000,000.

The candidates reached the large number of 968 compared with the number of members of the Lower House, 466.

As the door-to-door visits to electors which had formerly been made by candidates under the old law is now strictly prohibited the weapons of the candidates were public speeches, the distribution of literature, and propaganda by means of posters, etc. This was one of the features of the election campaign. Verbal battles were most frequent. For instance, the eighty-eight candidates in the seven constituencies in Tokyo Prefecture held 4,008 political meetings. Individually, one man had one hundred and six of such meetings, heading the record being followed by ninety-four and eighty-three of other candidates.

The number of those who waived their right of voting was relatively low, much lower than had been anticipated. The highest percentage of abstainers was shown by Yokohama : 35.5 p. c. then Osaka 28 p. c. and Kyoto 29 p. c. In Tokyo, it was a little over 24 p. c. When compared with the 34.6 p. c. of abstainers in the last election for the Prefectural Assembly the general election showed a satisfactory result. These figures in Japan compare favorably with those of the general election in England, with abstainers, coming to 42 p. c. in 1918, 43 p. c. in the United States in 1920; 38 p. c. in France in 1919.

Eight candidates from these proletarian parties were returned to the Diet, thus establishing their solid foundation in the Lower House. This fact is considered quite a blow to the old-fashioned parliamentarism which threatened the free operation of the Constitution.

Total Ballots, the percentage of abstainers and Valid votes :-

| | |
|--------------------------------------|-----------|
| Ballots, total .. | 9,972,201 |
| Percentage of abstainers, average .. | 19.9 p.c. |
| Valid votes... | 9,821,479 |

Economic Re-construction of China

Chien-Tseng Mai in the course of an informative article in *The Chinese Students' Monthly* surveys the present economic position of China. China, according to him, now suffers from chronic poverty and foreign exploitation, although she has a vast fertile soil, innumerable industrial labourers and abundant natural resources. He examines

the different economic problems of the country and suggest the lines on which the economic re-construction of China should be conducted.

Plainly China's pressing need is industrialization and enhancement of productivity. In other words, increase of production is the primary problem in China though fair distribution should also be duly considered.

Therefore, to decide which system is most desirable is to see which system guarantees the greatest amount of production on the one hand, and fair distribution on the other. As we all know, the total production of a nation depends on the number of productive establishments it has, and the degree of productivity of these establishments. And in turn, the establishing of productive organizations depends greatly on the initiative and the enterprising spirit of the people. This spirit might direct all sorts of forces to all lines of productive activities, and build up economic enterprises everywhere with magical rapidity. As demonstrated by British and American experiences, the system of private capitalism permits the fullest play of this spirit and arouses it most strongly through appealing to the self-interest of the people. But, unfortunately, it has its dark side. A true system of private capitalism necessarily results in heartless exploitation of laborers by the capitalists, ushering in a wide difference of wealth between the rich and the poor, and establishing an idle or leisured class. China should benefit by the bitter experiences of the European and American nations to avoid these evils of private capitalism. Shifting our glance to the other extreme of the picture, we perceive communism promises to guarantee justice in distribution. Again, to the despair of all, this kind of economic system also has its inherent shortcoming. It chokes the operation of the initiative of the people, and deprives the people of enthusiasm for energetic production. The possibility of such a situation was demonstrated in Russia before the introduction of the New Economic Policy. Since what we want is an increase of production with fair distribution of wealth, these two extreme systems should be avoided. Thus our task is to follow a system which maintains the initiative and enterprising spirit of the people in economic undertakings on the one hand, and preserves fair distribution of wealth on the other.

The course of our economic reconstruction should follow the following lines:

1. Judicious Socialization of Industries With Appropriate Encouragement of Private Enterprises.
2. Promotion of Laborers' and Employers' Organizations with State Regulation of their Activities.
3. Participation of Economic Groups in National Economic Affairs.
4. Equalization of Social Wealth Through Socio-Political Taxation.

Mrs. Josephine Butler's Life and Work

E. M. Turner contributes the following to the *Inquirer* of London:

This generation in which the centenary of Josephine Butler is being celebrated, while still appreciating her as a great woman, yet through ignorance rather fails, perhaps, to realize the magnitude of the work she undertook, and the apparently unconquerable difficulties with which she had to contend.

We must realize that in Mrs. Butler's day a woman was without education, without a vote, and her property passed automatically to her husband. She might, indeed, lead a useful life at home, but her usefulness was never allowed to extend beyond the domestic sphere. The professions were barred to her—indeed, she was not regarded as having the mental capabilities to train for them. Josephine Butler was always an ardent supporter of the movement for the higher education of women. She was always troubled and angered by the social injustice which drove many women to prostitution as a means of livelihood; she was bitterly indignant that women of the better social classes were kept as far as possible in ignorance of that underworld where such suffering was inevitably inflicted on women. For many years she did private rescue work, taking into her own home and treating as daughters the women who met elsewhere with so little true sympathy and love. In this, it should be mentioned, she had the warm-hearted support of her husband, who always welcomed her proteges with kindness and sympathy.

It was the Contagious Diseases Act passed in 1864, 1866 and 1868 that drew Josephine Butler from her home life to challenge tradition and public opinion. These Acts, applied to certain Naval and Military centres for the purpose of checking venereal disease, provided for the registration and police supervision of prostitutes, their periodical medical examination for the detection of venereal disease, and their compulsory detention in special hospitals if found to be infected. It is obvious that the Acts struck at the constitutional rights of the prostitute, they deprived her of all legal safeguards and of every guarantee of personal security. A protest against them from a certain small body of men was disregarded, these men appealed to Mrs. Butler for her help in the work of rousing public opinion and getting the Acts repealed, and in December, 1869, she started her campaign.

Consider the courage of this sensitive woman who knowingly offered herself to public scorn and contempt, who was willing to leave a home, husband, children, and assured social position, to fight for the rights of the social outcast. At a time when no woman ever addressed a public meeting, consider how she would be regarded, speaking openly on a subject which no woman should even know of, certainly not mention. She knew, too, that organized religion and the medical profession were against her. Yet from her very first meetings her eloquence, enthusiasm, and vivid personality won supporters. An ever increasing band of workers studied, spoke, wrote, meeting insult with indifference, apathy with fire. The struggle continued for seventeen years: the end came in 1886 when the Acts were finally repealed, and it was a victory for the principle of justice.

Even then Josephine Butler did not leave public life. She went on working till 1900, in

spite of her husband's ill-health and subsequent death in 1890; she lived a tranquil life among her children for six years and died in December 1906, quietly, while sleeping.

Such was the life of this woman who fought for justice in the face of the opposing tradition of centuries, whose work is still leavening the world, who has been called "the most distinguished English woman of the nineteenth century."

Singapore

Dr. Wolfgang Von Weisel in the course of an illuminating article on Singapore in the *Vossische Zeitung* of Berlin gives a graphic description of British Malaya (particularly Singapore), its inhabitants, its government, its strategic position and incidentally refers to Rabindranath Tagore's visit to that place. About British Malaya he says

British Malaya embraces the English Crown Colony of the Straits Settlements, together with Singapore, the English protectorate of the Federated Malay States, and the unfederated Malay States. It contains 150,000 square kilometres of land, and in 1921 its 3,400,000 inhabitants included 1,200,000 Chinese, and since that time immigration has increased the Chinese percentage still further. In the year 1926 no less than 358,000 Chinese entered Singapore, and during the same period only 120,000 left it. This makes an excess immigration of 240,000 Chinese a year, or 20,000 a month.

But the Chinese are not the only ones who migrate to the Malay States. An ever-growing stream of another people is pouring into Penang the second largest British port in the Malay Peninsula. They are Indians seeking their fortunes in a land that contains everything to make men happy—gold, and tin and coal, and rubber, and rice, and pineapples, and coconut, palms and wood, and bananas, and coffee, and tapioca.

In 1921, 48,000 Indians entered the country. Four years later, in 1925, the number of Indian immigrants had increased to 91,000, and only 43,000 left the country in that year. In 1926, almost 175,000 immigrants came from the South of India, nearly 150,000 of them with the assistance of the Malay Government and under the control of the Indian Immigration Bureau. In the same year 66,000 Indian immigrants departed. At the end of 1927 British Malaya contained at least 550,000 Indians.

The little peninsula that extends from Siam to the equator and separates the China Sea from the Bay of Bengal has become the boundary between China and India. In Singapore the world of 400 million Chinese meets the world of 320 million Indians. Great Britain's new naval base is situated on the spot where the British Empire stops being brown and begins to turn yellow.

No one could say that the English are displeased by this development, although they are taking pains to prevent the Chinese from growing too rapidly at the expense of the Malayan population. Just as the Britisher acts the part of arbiter

between the Jews and Arabs in Palestine so in Singapore he metes out justice to the different nations. He favors the Malayan and gives him the more important government positions, most of the police being Mohammedan Malaysans, or, better still, members of the Indian elite—the dependable Sikhs. But whereas the Jews are not granted free entry in Palestine, the doors of Singapore are open to an uncontrolled flood of Chinese immigration.

Proceeding the writer tells us:

The richest of the many rich Chinese in Singapore is Mr. Tan Ka-kee, the rubber king. His concern buys native rubber from the inhabitants of Sumatra, and his planters in the Malay States supply the rest of his needs. His factories, which turn out fifteen thousand shippers, and so-and-so many shoes and hats a day, employ ten thousand workers.

Mr. Tan Ka-kee came to Singapore thirty years ago as a poor, penniless immigrant. He has made money like an American millionaire, and he spends it like an American. He leads a simple solitary life. His offices are shabby, but he has spent four million dollars establishing the Nationalist University of Amoy, where the Chinese are educated according to real Chinese principles. He also gives five hundred thousand dollars a year to the head of the University, Dr. Lim Boon-keng, an extreme Nationalist leader.

Lim Boon-keng, himself a Straits Chinese, has made many speeches in the past year urging the unification of the brown and yellow races. He also teaches this message in his university, which is supported by money that Tan Ka-kee has made in an English colony.

Lim Boon-keng's teachings fall into two divisions. China is deeply in India's debt, for from India she learned the lesson of Buddhism, the highest spiritual message ever given to humanity. Through Buddhism, also, India gave Christianity and culture to Europe. This cultural connection between China and India should lead to active association between the yellow and brown races. To this end the Indians must organize societies just as the yellow race has done. These secret societies must then organize further cells to work in behalf of their race. The cells will then appoint a common executive committee representing both the yellow and the brown races, with headquarters in Singapore, the natural capital of the yellow and brown world.

The first attempt at co-operation was carried out this year when Tan Ka-kee, Lim Boon-keng, and Rabindranath Tagore met in Singapore—to the great disgust of the Chinese, who have no use for the Indian poet. Nevertheless, the hopes of the South Chinese leader, whose honest idealism even the English admit, are not broken. At a breakfast given in his honor by European consuls, Lim made this impolite reply to a toast of "A united China and a united Europe": "Just let China unite, and Europe will have to unite or perish."

The English are opposing the speeches of Tagore and Lim Boon-keng with European technique. These speeches they take much less seriously than they do Mr. Tan Ka-kee's money, which really irritates them. In short, they are building their great naval base between the island of Singapore and the southern end of Johore. The base is

protected to the north by the jungle of Eastern Malaya, and to the east by the shallow waters; and a big aviation station is being prepared to meet any aerial attacks.

Farming with Elephants

Tracy Philpotts writes in the *Times* :

Although the African elephant is still commonly believed to be untamable, its domestication has for several years been an accomplished fact. Both the original attempt and ultimate success—the reward of admirable persistence through many years—lie to the credit of the Belgians.

The value of the experiment, of course, apart from its interest, lies in the possibilities of the African elephant as a useful servant. The southern provinces of the Anglo-Egyptian Sudan, the Ubangi Shari Colony of French Equatoria, and the greater part of the two Uele districts of the Belgian Congo, adjoin each other. These territories form a very large tract of fertile, open, undulating country, well watered, with only a relatively sparse and stunted bush. In this area the tsetse fly abounds, and horses and cattle cannot, therefore, live. Yet for colonists, missions, cotton and coffee planters and agricultural tribes there is a growing need for the plough. It would decrease the menace of famine, increase both quality and quantity of foodstuffs, and release native labor. It is one of the objects of the twenty-five years of experiment to place at the disposal of tropical agriculture a valuable economic auxiliary. Ploughing by elephant, in local conditions, has proved to be fourteen times less costly than the same work done by tractor.

Working on an average from 5 A.M. to 11 A.M., one elephant ploughs two and one-half acres of land in two days. The elephant, furthermore, can be, and is, used for other farm work, such as stumping, and for the collecting and piling of timber, as well as for transport in open country, as a feeder to or before construction of roads. Two of the elephants at the farm draw a cart carrying five tons of material. Elephants trained at the two farms are already in use by planters who are working on their own resources and by religious missions. Neither of these can afford to make costly experiments or to employ wasteful methods.

Four elephants are employed on the mission cultivations at Buta, two by Mr. de Steenhault de Waerbeke, a planter at Dembea, and others on a cotton farm at Bambessa.

The cost of maintenance is low. The food of the elephant consists almost entirely of twigs, leaves, and roots. Maintenance, including the pay of two men for each elephant, harness and chains, food "extras," ointments, and depreciation, works out at an approximate total of ten francs, or slightly over a shilling, a day for each elephant.

documented articles in *The Political Science Quarterly*. He concludes with the following observations:

It seems necessary to revise our idea of a "government of laws" as contrasted with a "government of men." It cannot mean a government where disembodied rules inexorably control by their automatic operation the determinations of the human sovereign: for laws require to be formulated and interpreted and administered by human agencies, and the agencies charged with these tasks have the laws in their power to bend or mold or break them. It can only mean a government where the sovereign is imbued with what we may describe as habits of constitutional morality and of self-imposed respect for self-imposed rules. Only in this sense and subject to these limitations is the idea freed from misleading and mischievous implications.

From the point of view of political science the doctrine of sovereignty therefore means in the last place as in the first that law is and must ever be at the mercy of human agencies; that good government cannot rest on the futile attempt to set up automatic barriers of abstract law to limit the action of the human sovereign, but that it requires a careful attention to the organization of governmental agencies into a system responsive to those forces whose influence in the community it is desirable and practicable to promote; and that its effective functioning will always depend not merely on machinery but on the existence within the organs of government as well as within the community at large of certain habits and states of mind which will make for restraint on the part of the one, and for obedience on the part of the other.

Science and Literature

Arthur De C. Sowerby writes in *The China Journal* for April :

It is sometimes a matter of surprise that literature and science so seldom go together. By this we mean that amongst scientists, all of whom have a fund of information to impart to their fellow beings, there are few that are able to couch that information in language of a good literary style or even sufficiently simple for the layman to understand, and that amongst men of letters there are few that have a sufficiently good grasp of science and scientific methods to be able to interpret accurately to the reading public that which the scientist would have made known.

He next asks why litterateurs are consistently unscientific, and scientists poor in good literary style.

In the first place let us consider men of letters. Why are they so consistently unscientific? Is it because the particular kind of genius that makes a man write well and in a good literary style does not sort with the kind of genius that makes him a good scientist? Some may hold this to be the case; but we are inclined to disagree with them, for the simple reason that there are not

The Doctrine of Sovereignty of Laws

Prof. John Dickinson of the Princeton University examines the doctrine of sovereignty in the course of a series of well-

lacking examples where high literary ability and advanced scientific attainment are combined in a single individual. There is no need specifically to mention any names; we can all call many such cases to mind. We are inclined to lay the blame on our systems of education, wherein it generally happens that a boy or young man is given a one-sided training. If he shows an aptitude for classics, in nine cases out of ten his training in science is either neglected or dispensed with altogether. The result is that, as he develops those literary gifts that some day will make him famous, he fails to develop along with them that preciseness and exactness in definition that is essential in science. He becomes inclined to sacrifice truth to literary effect, exactly as many artists, even great ones, will sacrifice the exact form and true colour of a thing in order to help out creative ideas of their own. Both the writer and the artist may be striving to produce something new, remoulding and bending to their use such materials as come to their hands and we, therefore, must allow them some latitude in this respect. But this can be carried to absurd extremes, as for instance, in the cubist and futurist schools of art and the distortion of facts to make a good story in a newspaper.

Now, with regard to the poor literary ability of the scientist, it is equally true that it does not follow that because a man is a good scientist he cannot express himself in good literary style. There are good scientists who can lay claim to considerable literary ability. There should be many more.

And in conclusion the writer blames the present system of education

Again, we are inclined to blame our systems of education. If only the youths in our schools were drilled into expressing themselves in good simple language and were taught something of the beauties of good literature at the same time that they are being inculcated with the facts and accuracies of science, we might find our scientists a somewhat less inarticulate body of men; a body that could make science known to the world at large in the way it should be made known, instead of having to depend upon the inaccurate expressions of effect-seeking men of letters.

Korean Independence

In *The Asiatic Review* for April, Dr. Thomas Baty, LL. D., states the circumstances under which Korea came under the subjugation of the Japanese rule and examines

whether she can achieve self-government. Incidentally he observes:

The present writer would be the last to say that a physically weak kingdom can justly be oppressed by one strong kingdom lest it should be absorbed by another. But there is a difference between weakness and rottenness. An honest, enlightened, and sensible Government—like that of Denmark—need not be afraid of its weakness. But disease in the brain of the body politic, incurable locomotor ataxia in the executive, make a state a danger to the world. Such a state is in the position of an international person who is feeble-minded, and who must be taken care of lest she should set fire to the town or make over her property to a designing usurer. Such international abnormality has been little discussed by theorists. The old publicists were content to dismiss non-Christian lands as *capita lupina*, countries with no rights at all. Modern theory has tended to regard them all as normal international persons, a theory sadly derogated from in practice. The status and rights of countries which are afflicted with governments so incapable that they cannot steer the ship of state have never been considered. Mere selfish extravagance, such as Ismail's in Egypt, mere savage cruelty, such as Lope's in Patagonia, do not render a state abnormal, any more than they show an individual to be a lunatic. It is when the administration is incapable of fixity of purpose or independence in action, and when it falls helplessly or venally under the control of one foreign influence after another, wallowing in the trough of world-politics, rudderless and pounded by the seas, that an honest savior may step in.

About Korea he says:

There is no doubt that the Koreans will obtain political rights in time, and may be before very long. All the best elements in Japanese politics concur in condemning the policy of Japonizing, which was the first inspiration of Japan in Korea. Events have shown them that the way to hold an empire together is to humour local predilections and ideas. But so long as there is a possibility that Korean autonomy would be turned into a lever for Korean independence Japan can never feel safe in making the concession of autonomy. A contented and Korean Korea within the Japanese Empire is the ideal of most reflective Japanese. But the possibility of being again confronted with a Korea, independent in name alone, and the prey of unscrupulous imperialists and adventurers in reality, is more than she can be asked to tolerate.

We must keep our judgment in suspense until we have heard what the Koreans have got to say.

INDIAN Womanhood

B.

Our readers will be glad to learn that in the final M. Sc. examination of the Allahabad University in Chemistry Miss SHEILA RAY has secured the first place amongst the successful candidates. Miss RAY, whose academic distinction we referred to in the *Modern Review* for September, 1927, obtained a first class standing first in order of merit. In this examination she submitted a thesis on the influence of light on colloids which was highly spoken of by competent authorities. We are informed that Miss RAY is anxious to join the D. Sc. class of the Allahabad University and continue her researches.

Miss FURRUKH SULTAN SAKINA BEGUM, the second daughter of Mr. Moid-ul Islam of Calcutta has just passed the Inter-

mediate, Examination in Law of the Calcutta University having come out second in order

Mrs. Kamalalaya Kakoti

Mrs. Kanaklata Chaliha

was awarded a Gold Medal. We learn that she still observes the Purdah and has to study law at home. She is an ardent social worker and is the Honorary Principal of the Shamseah Zeeada Madrassa.

IN ASSAM MRS KAMALAYAA KAKOTI and Mrs. KANAKIATA CHALHA (wife of Mr. T. P. Chaliha, M L C Bar-at-Law) have been jointly editing a monthly periodical in Assamese called the

Prof. D. K. Karve, Founder, Indian Women's University, Poona.

"Ghar-Jeuti" with conspicuous ability. This is the first journal in Assamese conducted by ladies, and the few issues that have been published contain matters both interesting and instructive,—a fact which reflects great credit on the joint-editors. Besides editing the "Ghar-Jeuti," Mrs. KAKOTI takes an ardent interest in the cause of social welfare among the Assamese women, she being the Secretary of the *Mahila Samiti* at Sibsagar. She took an active part in organising the *Jyomoti* festival at Sibsagar this year,—a festival in honour of

a great Assamese woman the story of whose self-immolation for the sake of her husband *Godapani* is chronicled in history and cherished in tradition.

Dr. Vithal Raghoba Lande Building attached to the S. N. D. T. Kanyashala

The Hut where Prof. Karve first Commenced his Work

On the occasion of his 71st birthday the Poona City Municipality presented an address to Prof. D. K. Karve whose devotion and sacrifice in the cause of women's education have been most exemplary. With characteristic zeal and enthusiasm he founded twelve years ago a "Home for Hindu Widows" in a small hut, which institution gradually developed into SHREEMATI NATHIBAI DAMODHAR THACKERSAY INDIAN WOMEN'S UNIVERSITY. Through the liberality of the late Sir Vithaldas Thackersay, who contributed Rs. 15 lakhs, Dr. V. R. Lande and other donors, Prof. Karve has acquired funds yielding an annual interest of Rs. 70,000.

By BENARSI DAS CHATURVEDI

Forthare College in South Africa

In view of the controversy that is being carried on among our people in South Africa whether Indian students should study at Fort-hare or not, the following account of the institution given by Mr. C. F. Andrews specially for the Hindi magazine *Vishal Bharat* will be of interest to our readers.

Love-dale with its University at Fort-hare is likely to become the Tuskegee of Africa. Just as Booker T. Washington founded the magnificent institution in America which has done more than

any thing else to encourage the education of the African people in America, so Love-dale and Fort-hare are proving to be the salvation of the African race in South Africa itself. The whole

Mr. Gopendra Narayan

Mr. and Mrs. Badri Maharaj

conception was due to a great man of prayer called Doctor Stewart, who was a Highlander from the extreme north of Scotland with pure Celtic blood running in his veins. He had the mystical devotion which is often to be found in the Celtic race. He was a splendid specimen of humanity, standing well over 6 ft. in height, but in temperament he was as gentle as a child. From the very first he became like one of the Africans themselves and was entirely devoted to them. His institution, which he called Love-dale or the

valley of Love, is situated between the great hills close to the borders of Basutoland. There he lived and worked for nearly fifty years and died in extreme old age. A 'cairn' of stones has been placed on the top of one of the mountains overlooking Love-dale and it is called Stewart mountain as a memory of the great Highlander, who often walked up and down its sides and thought of the Highlands of Scotland where he had spent his childhood often tending the sheep and goats. Stewart of Love-dale has become in Africa a figure only second to the great Livingston himself.

In this institution a few of the greatest and noblest Europeans in South Africa have been educated side by side with the Africans themselves. Sir James Roos Innes was proud of the fact that he sat side by side with the Africans through all his school days. The present Chief Justice of South Africa, Sir William Solomon, had, I believe, the same happy experience. Those of other races have also been educated there. The two daughters of Mrs. Gool of Capetown, a Malaya Mohamadan lady (whom I loved to call by the name of Mother on account of her goodness to me), were both educated at Forthare. It was delightful to me to see their passionate enthusiasm for the institution.

An old saintly Bishop, called Bishop Smyth, had given up the last years of his life to Forthare. He was deeply loved by all the students. Once

he came down to Capetown and all his students gathered to welcome him. I was invited to the party. There were Indians, Malayas, Africans and English, all students of Forthare and pupils of the Bishop. It would have been impossible to have had such a happy gathering unless Forthare had stood for perfect racial equality. Those Indians who have gone to Forthare love it with a deep devotion. In some ways they are outstanding men and women in South Africa. The Africans love these Indians, because they have been educated side by side with their own people. The week that I passed at Forthare was one of the happiest I ever had in South Africa. It was like paradise after the racial prejudice and colour bar outside. Perhaps the most charming thing of all was to live in the house where the old Bishop had made his home. When I asked, on entering, for the Bishop's room (he was not himself at Forthare at that time), I was told:—"Oh the Bishop hasn't got a room of his own. He has a corner of the Verandah out here along with the students." When I realised that he was much over seventy, it made me thoroughly ashamed of myself and my own comforts. To think of the way in which the simple old man lived, I must tell one amusing story in conclusion which will show what I mean by paradise.

There was there in the same hostel an old

Prof. D. K.

"Ghar-Jeuti" was the first journal published by ladies, and the published contained and instructive, a credit on the joint—"Ghar-Jeuti," Mrs. interest in the cause of the Assamese women, she of the Mahila Samiti at a active part in organising at Sibsagar this year, a fo

lady, who was housekeeper; and though everybody loved her, she was known to be very strict with the students. The two Mohammedan daughters of Mrs. Gool used to tell me with great glee how when they had disobeyed some rule and the housekeeper had scolded them they would run away to the old Bishop and he always took their side and excused them for any breach of discipline. I could picture very easily to myself the Bishop being won over to act as peace-maker in such domestic scenes as these. If the saying is true, which Tolstoy places at the head of his most beautiful story "Where Love is, God is" then I am sure God's presence was found in that house where no racial or colour feeling could ever possibly have any entrance.

The Late Honourable Mr. P. K. Nambyar

The *Tamil Nesan* of Kuala Lumpur (F. M. S.) has brought the sad news of the sudden death of Mr. P. K. Nambyar, who represented the Indians in the Council at Straits Settlement. He was born in Malabar on 20th April 1869 and was educated at the Zamorin College, Calicut and the St John's College at Cambridge from where he passed his B. A.

with honours in 1893. He was called to the Bar in 1891. In 1904, he went to the F. M. S. and practised there as a barrister. At Penang, where he had made his home, he was doing a good deal of social service to our people there. He was the founder of the Indian Unemployed Home, president of the Indian Association, the Hindu Sabha, and a member of the Penang municipality. He was closely connected with the Hindu Charitable Dispensary also. For some years he was a member of the Indian immigration committee. His death will be felt as a great loss by the Indian community in the F. M. S. We offer our condolence to his son Dr N. K. Menon and hope that he will follow in the footsteps of his worthy father.

The Work of Kunwar Maharaj Singh and Mr. R. B. Ewbank in East Africa

In my notes for the month of March I had strongly criticised the action of our leaders in Kenya for their fatal mistake in demanding 'due share' in the trusteeship of the Natives and for their 'nomination along

Fiji students at D. A. College, Canowpore

Mr. R. B. Ewbank

Kunwar Maharaj Singh

with Europeans to represent Native interests'. In this connection I wrote:—"We are anxious to know how much Kunwar Maharaj Singh and Mr. Ewbank, the representatives of the 'Government of India, had to do with this discreditable affair." From further information that has now been received by me I am convinced that the above-named gentlemen cannot be held responsible for this policy of joint imperialism, so aptly called by Mr. Andrews as the 'Jackal policy.'

In fairness to these gentlemen I must also write here that they did their work in the East African territories—Kenya, Uganda, Tanganyika and Zanzibar—to the entire satisfaction of our people there and the united front that they have shown is to a certain extent due to the efforts, tactfulness and perseverance of these gentlemen. Kunwar Maharaj Singh and Mr. Ewbank deserve the gratefulness of the Indian public at home and abroad for doing their duty so remarkably well.

The Indian Trade Mission to East Africa

The Indian Government has sent a Trade Commission of Dr. Meek, Mr.

Maloney and Mr. Dutia to Africa to investigate the Trade possibilities which may justify the creation of Trade Commissionerships at Mombasa and other places.

They have already visited Iraq, Palestine, Egypt and East African territories. From an article published in the Indian Daily Mail of Mombasa, which is owned by Mr. J. B. Pandya, a prominent merchant in Kenya, it appears that the mission has been doing its work very unsatisfactorily.

Here is an extract from this article:—

The Mission arrived at Mombasa by the S.S. Matiana on April 14 after visiting Iraq, Palestine and Egypt. No statement of their terms of reference was made; the general impression was that they desired and were commissioned to deal especially with cotton, though statements by Dr. Meek in Nairobi appear to suggest a much wider scope. It is not known to what extent the Mission were able in Mombasa to collect useful information as to any part of their enquiry, though the ignorance of the public as to what precisely was their object naturally handicapped any assistance they could offer.

But the greatest difficulty, I think, arose from the manner in which the Mission conducted its enquiries in Mombasa; a radio message of welcome to the Mission on board the liner was sent by the Indian Merchants' Chamber; but this evoked no reply, and on their being met by representatives of that body on board, the Chairman of the

The Rev. Dr. J. T. SUNDERLAND, M A., D D.

The Rev. Dr. J. T. SUNDERLAND, M. A., D. D.

Mission only vouchsafed meagre comments on their purpose. The impression created subsequently, particularly among the Indian community, was not helpful....

The Mission appears to be partial in its investigations also; not only have they been unable to visit Uganda, that great Market, but they do not propose, it is understood, to break their journey southward to Durban in order to examine Tanganyika conditions longer than the call of the boat at Dar-es-Salaam. As a Mission to East Africa to encourage trade with India, and particularly on cotton questions, it can have secured extremely little data of vital value, and hardly any that could not have been as easily secured by correspondence.

Why the Government of India should have sent such Commissioners, who lack in imagination, if not in manners also, we absolutely fail to understand. We shall not now be surprised if the report of their investigations proves to be of little use to our Indian merchants in Africa and the blame of it will lie on the Government of India, which sent such half-hearted unimaginative people on such an important mission.

Back to the Motherland

Honourable Badri Maharaj, the Indian member of the Legislative Council in Fiji, has returned to India after thirty-eight years. He was sent away as an indentured labourer in the year 1890, worked there as a coolie for five years and by dint of his labour and perseverance he has raised himself to a position of considerable influence in the colony. I had a good long interview with Mr. Badri Maharaj. He is of opinion that Fiji wants at least two Indian barristers, three or four doctors and a few capitalists to do business there. At present Badri Maharaj is the only Indian member of the Council—a nominated one—but they will soon have three Indians in the Council. He is not satisfied with this arrangement, according to which more than sixty-five thousand Indians will get only three seats while six seats are to be given to less than five thousand Europeans. Mr. Badri Maharaj praised the Arya Samaj in Fiji for its educational work. He expects that under the sympathetic guidance of the present Director of Education, Indian education in Fiji will make great progress in future. Mr. Badri Maharaj will spend some months at his home in Bamola, District Garhwal. We wish him a happy time there.

Arya Samaj in Fiji and the Education of Indian Children

By the same steamer S.S. Sutlej has returned Mr. Gopendra Narayan, formerly of the Gurukula Brindawan, who went to Fiji in the year 1925 and with him have come twenty students, eleven boys and nine girls, to receive their education in the Aryasamajic institutions in India. Mahatma Shri Ram of Gurukula Brindawan came to receive them. During the last three years not less than fifty students have come from Fiji and this is all due to the efforts of Mr. Gopendra Narayan, who

Dr. Stewart
[The founder of 'Love-dale']

was in charge of the Gurukula at Lautoka in Fiji and Mahatma Shri Ram who has taken considerable pains to make the stay of these Fiji children as useful and comfortable in India as possible. It is to be noted that the Gurukula in Fiji has been recognised as a branch of the Gurukula at Brindawan. This movement is really of great significance to our people in Fiji and we hope that it will continue to grow under the guidance of Mahatma Shri Ram and will spread in

The Rev. Dr. J. T. SUNDERLAND, M. A., D. D.

NOTES

Dominion Status Promised by British Labour Party

According to a special telegram to *New India*, Mr. Ramsay MacDonald, writing in the Glasgow "Forward," says that if the Labor party comes to power, it has been decided to put India on a footing of Dominion Status, and asks Indians to help the Party.

It is not clear from this brief message in what way Mr. MacDonald wants India to help the Labour party. Past experience would not justify India's helping any British party, or the British nation, or the British Crown, on the expectation of any promise made by any of them being fulfilled. There should be a time limit to India's playing the part of "a dupe of to-morrow". What is India's duty India should and must do, but not because anything has been promised to her. The *Gita* teaches *nishkama karma* or the doing of one's duty irrespective of what the result may be. That should be India's ideal. Political freedom is the birth-right of all Indians, as of all other men. It cannot be a matter of bargaining. But if it were, surely India has already done more than enough for the British Empire to be entitled to freedom without any additional price having to be paid.

It would be pessimism to say dogmatically that the British Labor Party would be incapable of keeping its word. On the other hand, it would be unwarranted optimism to believe that Mr. MacDonald's promise would certainly be kept. It would be good for the Labor Party if it were really able to keep its promise; for that party would then be taken to consist of a good number of truthful men. It would also to some extent weaken the grounds of the French attribution of perfidy to the British nation. As for India, a Dominion constitution would give her a better political status than her

present one, though not the best that can be thought of or that she is entitled to.

Famine in Bankura

Mr J. Coatman, Director of Public Information, Government of India, writes in "India in 1926-27"

"Fortunately, one of the grimmest of the spectres which formerly dogged the Indian agriculturist's footsteps, has now been laid. Famine is no longer the dread menace which it used to be—the railways, canals, and the greater ubiquity and resources generally of the Indian Government have seen to that. A hundred years ago, in one place famine conditions could prevail, whilst in another, which is now only a few hours' journey away by rail, food might be plentiful and cheap

Famine-stricken inhabitants of Dhalui (Sonamukhi), Bankura
[Photo taken by Bankura Sammilani

But though food may be more easily transported now than formerly, what would happen if the people of some areas have no money to buy any kind of food? This is actually the case in many parts of

Mauritius, British Guiana and other colonies also.

Returned Emigrants

The other day a large number of the returned emigrants—men, women and children who are stranded at Matiaburz, created a scene at the *Modern Review* office. They besieged my room and said that they wouldn't go until and unless they were assured of a speedy departure to some colony. I used all my arguments to convince them that I had neither the power nor the means to ship them back to any colony, but they were determined not to hear any arguments. They wanted 'clear assurance' that they would be sent to Malaya or some other colony in a few days. It was a pathetic sight to see these people, the moral responsibility of whose degradation rests mainly on the Government of India. Wasn't it the Indian Government that continued to send these 'people under five years' indenture in the proportion of three women to ten men for at least 80 years? And what was the result? The people having lost all sense of moral discipline became demoralised and dehumanised and were afterwards thrown away like sucked oranges by the planters who had fattened themselves by the labour of these people. Some hundreds of these wretched specimen of humanity are living at Matiaburz, having returned from the West Indies and other colonies. What is to be done for these people? It is a difficult social problem and it cannot be solved by any individual efforts. If it were possible to get the help of the Indian Government, something might be done; but the Government will not do anything till strong pressure is brought to bear upon them by influential leaders. It is a pity that the department of emigration, which is more Indianised than other department, con-

sisting as it does of Sir Habibullah, Mr. Hullah and Mr. Bajpeyi should be so unsympathetic towards our own people.

One of these returned emigrants, a woman, stood up and harangued us for some minutes thus:—

“कहाँ है वह सरकार जिसने हमको पांच बरसके लिये बेच दिया था ? हमारा इज्जत गया, धरम गया, अब जात पात सब चला गया, हम किसी कामका नहीं रहा । अब हमें कोई नहीं पूछता”

“Where is that Government which sold us away for five years ? We lost our *izzat*, our Dharma. We lost our caste also. We are useless now and nobody takes care of us.”

There was righteous indignation in her speech, and how we wished the Government officials were present to get an idea of the estimate in which they are held by these returned emigrants.

It was very difficult to pacify these people. The situation was growing dangerous and some of the office servants were badly handled. Then I thought out a solution. I wrote out a letter to Mr. G. S. Bajpeyi ICS, Under-Secretary for the Land, Education, Health and Emigration Department of the Indian Government, and handed it over to one of the leaders of these returned emigrants to be sent immediately by registered post to Simla. In that letter I asked the Government to make arrangements for sending these people to Malaya—that is the only solution for this difficult problem, and Mr. Andrews and myself are both agreed on this point—as early as possible. That pacified the mob and they went away with a threat, that they would return—six hundred of them, if no reply is received from the Government. Mr. Bajpeyi hasn't sent a reply and I don't expect one from him. Meanwhile the problem remains where it was.

FIRE-FLIES

By RABINDRANATH TAGORE

The shore whispers to the sea:
“Write to me what thy waves struggle to say.”
The sea writes in foam again and again
Its waves cull the lines in a
leisterous despair.

Child, thou, bringest to my heart
the bubble of the wind and the water,
the flowers' speechless secrets, the
clouds' dreams,
the mute gaze of wonder of the
morning sky.

NOTES

Dominion Status Promised by British Labour Party

According to a special telegram to *New India*, Mr. Ramsay MacDonald, writing in the Glasgow "Forward," says that if the Labor party comes to power, it has been decided to put India on a footing of Dominion Status, and asks Indians to help the Party.

It is not clear from this brief message in what way Mr. MacDonald wants India to help the Labour party. Past experience would not justify India's helping any British party, or the British nation, or the British Crown, on the expectation of any promise made by any of them being fulfilled. There should be a time limit to India's playing the part of "a dupe of to-morrow". What is India's duty India should and must do, but not because anything has been promised to her. The *Gita* teaches *nishkama karma* or the doing of one's duty irrespective of what the result may be. That should be India's ideal. Political freedom is the birth-right of all Indians, as of all other men. It cannot be a matter of bargaining. But if it were, surely India has already done more than enough for the British Empire to be entitled to freedom without any additional price having to be paid.

It would be pessimism to say dogmatically that the British Labor Party would be incapable of keeping its word. On the other hand, it would be unwarranted optimism to believe that Mr. MacDonald's promise would certainly be kept. It would be good for the Labor Party if it were really able to keep its promise; for that party would then be taken to consist of a good number of truthful men. It would also to some extent weaken the grounds of the French attribution of perfidy to the British nation. As for India, a Dominion constitution would give her a better political status than her

present one, though not the best that can be thought of or that she is entitled to.

Famine in Bankura

Mr J Coatman, Director of Public Information, Government of India, writes in "India in 1926-27"

"Fortunately, one of the grimmest of the spectres which formerly dogged the Indian agriculturist's footsteps, has now been laid. Famine is no longer the dread menace which it used to be—the railways, canals, and the greater ubiquity and resources generally of the Indian Government have seen to that. A hundred years ago, in one place famine conditions could prevail, whilst in another, which is now only a few hours' journey away by rail, food might be plentiful and cheap

Famine-stricken inhabitants of Dhului (Sonamukhi), Bankura
[Photo taken by Bankura Sammilani

But though food may be more easily transported now than formerly, what would happen if the people of some areas have no money to buy any kind of food? This is actually the case in many parts of

A Group of Famine-stricken People of Pakhanna-Palasdanga, Bankura
[Photo taken by Bankura Sammilani]

the district of Bankura in Bengal, where famine conditions prevail, though food stuffs are not selling at famine prices.

Mr. Coatsman adds:

"Even the well marked areas of constant drought are now secure against famine by reason of the extension of well and canal irrigation and facilities for the use of river bed moisture."

It cannot be said that Bankura is an area of constant drought. Yet it is not secure against famine. It has periodical visitations of famine—it is in the grip of that grim spectre now, as the statements of the District Magistrate quoted in this Review last month show. The ample means of irrigation which the district possessed in pre-British days, it does not at present possess. In fact this is more or less true of the whole of West Bengal, about which Sir W. Wilcocks wrote some time ago.

Several agencies are now at work to give relief to the famine-stricken people of Bankura, one of which is the Bankura Sammilani, the district association for social service and welfare work which did similar work on previous occasions and

has established a medical school and a hospital for the relief of poor people. The editor of this Review has been elected chairman of its famine relief committee.

It is unnecessary to harrow the feelings of our readers with details of the sufferings of the starving labouring and middle class people. The photographs reproduced here will give them some idea of the condition of the people in distress. All sums of money, large or small, sent for their relief will be gratefully accepted by Babu Ramabanda Chatterjee, 91, Upper Circular Road, Calcutta.

If mill-owners kindly send bales of dhotis and saris, such gifts will be highly appreciated.

Famine Elsewhere in Bengal

There is famine in some other districts of Bengal also, such as Birbhum, Dinajpur, Murshidabad, Burdwan, etc. Several philanthropic agencies are also at work there. The appeals of these relieving bodies for help are published regularly in many of the Calcutta dailies. On the principle of

Ram Mohun Roy Memorial at His Birth-place

The place of Ram Mohun Roy in the history of modern India is unique. In modern times he was the pioneer in the fields of religious, social, political and educational reform. It was for this reason that the late Mr G. K. Gokhale and others have called him the maker of modern India. In his book "Young India," pp. 118-9, Mr Lajpat Rai says, "Ram Mohun Roy, the founder of the Brahmo Samaj, was the first nation-builder of Modern India." It has been a national reproach that no memorial of him has hitherto existed at his birth place Radha-

nagar in the Hughli district. A few years ago a movement was set on foot to erect a memorial worthy of him. The memorial committee wanted to construct an up-to-date hall in oriental style as the principal part of the programme. Other items were a full-size marble statue of the Raja to be placed outside the memorial grounds laid out as a

Outlines of Ram Mohun Roy Memorial Hall at Radhanagar

park, a guest-house for pilgrims, a tank named "Ram Mohun Sarobar" for the supply of good drinking water, a chair named after him for the study of comparative religion and philosophy, and a museum for the preservation of relics.

The memorial hall is now almost complete at a cost of about Rs. 75,000. But for this Mr. D. N. Pal, the honorary secretary, has already had to advance loans to the extent of Rs. 28,050. To repay this loan and to carry out the programme in full a large sum of money would be still required. An appeal for contributions has been issued signed by S R Das, the president of the committee, Rabindranath Tagore, C. E. Andrews, A. H. Ghaznavi, and others.

All contributions and donations will be thankfully received by the Hony. Treasurer, Mr. Jatindra Nath Busu, M. A. c/o B. N. Basu and Co. Solicitors, Temple Chambers, No. 6, Old Post Office Street, Calcutta, or Allahabad Bank Ltd, Calcutta, or Mr. D. N. Pal, Hony. Jt. Secy 14, Vidyasagar Street, Calcutta.

Police Surveillance over Members of the British Parliament Visiting India

If anybody ever entertained any doubt about the British Indian Government's policy of using police surveillance over distinguished foreign sympathisers of India, the following report of the questions and answers on this subject in the British Parliament on April 2nd, 1928, published in the *London Times* next day, will dispel it once for all:—

Mr. THURTELL (Shoreditch, Lab.) asked the Under-Secretary for India in a private notice question if it was in accordance with the advice of his Department that Opposition members of Parliament, when visiting India, were kept under police surveillance during the period of their stay in that country, and that reports of their speeches were taken by the police.

EARL WINTERTON (Horsbarnham).—No, Sir. Mr. THURTELL asked whether the noble lord would use his influence with the India Office to get this very disagreeable practice stopped.

EARL WINTERTON replied that the Secretary for India would not feel entitled to interfere with the Government of India in this matter. The Government of India were responsible for law and order in that country; and if, in the exercise of that discretion, they felt it necessary to take action with regard to any particular person, they were fully entitled to do so.

We know that sometime ago an American University Professor wanted to go to India and spend a year in studying Indian conditions and Comparative Religion. The American government issued him a regular passport, but when he went to the British Consulate to secure a visa, it was refused. This gentleman comes from the State of

Massachusetts, the native State of Miss Mayo. Because this American professor is internationally known to be an authority on "Christian Ethics" and an advocate of non-violence, and upholder of justice to all, and is opposed to Imperialism, he was refused permission to go to India; but Miss Mayo has been aided by the India Office and Indian official circles in India.

Any enemy of Indian freedom is welcomed and aided by the British authorities in India. In fact they are sometimes invited (as was the case with Prof. Van Tyne's visit to India) on the tacit or express understanding that they should carry on anti-Indian propaganda abroad. Mr. Thurtle may object to the practice of the British Indian Government shadowing opposition members of the British Parliament. But the Government of India, under the premiership of the Rt. Hon. Ramsay MacDonald, passed the "lawless law" which is known as "The Bengal Ordinance" by which many innocent Indian patriots have been sent to jail without any trial. It is safe to assert that until the people of India succeed in securing "self-rule", police surveillance over friends of Indian freedom, foreign or native, will be the existing British standard of justice and freedom.

T. D.

League of Nations' Health Section and India

The *London Times* of April 4, 1928, publishes the following interesting news about the activities of the Health Section of the League of Nations:—

'Special study courses in malaria, arranged by the Health Section of the League of Nations for the benefit of medical men who have specialized, or desire to specialize, in malariology, are being held during the spring and summer in London, Hamburg, Paris and Rome.'

There is no country in the world more malaria-ridden than India. In Bengal alone several millions of people fall victims to malaria every year. We understand the League of Nations' Health Section regards India as the breeding place of malaria and other preventible diseases. If any country needs opportunity for its medical men to specialize in malariology, it is India. But we find that London, Paris, Hamburg and Rome have been chosen to be the centres of activity of the Health Section to combat malaria. Of

course, this fact again confirms the impression that the League of Nations' machinery (various departments) are being used to promote the interests of various European Powers. India is a member of the League of Nations, and India's Delegation to the League should demand that the Health Section of the League should make arrangements to offer courses on malarology in India, preferably at Calcutta because Bengal is its most malaria-ridden province, so that Indian medical men may have the opportunity to specialise in the subject and thus aid in stamping out malaria from India.

All Indian medical associations should take necessary steps to make their influence felt in the Health Section of the League of Nations.

T. D.

We have long noted, and written more than once, that Imperialism is of various kinds. It is not only political and economic, but relates also to knowledge, both general and technical. The dominant European powers want not only to keep down the unorganised non-European races politically and exploit them and their countries economically, but they also want, as far as they can, to have a monopoly of all higher general and technical knowledge.—Editor, *The Modern Review*.

Inter-Parliamentary Union and India

The London *Times* of April 3rd publishes the following despatch regarding the new session of the Inter-Parliamentary Union.—

PRAGUE, APRIL 2.

The Council of the Inter-Parliamentary Union assembled to-day in Prague, with Baron Theodor Adelsward, the Swedish delegate, in the chair.

Eighteen European Parliaments are represented at the meeting, which has for its object the preparation of the programme for the Inter-Parliamentary Conference to be held in Berlin next summer. The main questions coming up for discussion are (1) the development of the Parliamentary system; (2) the rights and duties of individual States, with special reference to sociology; and (3) emigration and immigration.

The delegates were received yesterday by President Masaryk at Lana, his country-seat near Prague.

It is a matter of regret that India is not a member of the Inter-Parliamentary Union, altho many smaller nations of Europe, Asia and America are its members. We have repeatedly pointed out that India should be

a member of this international organization, so that Indian statesmen—members of the Legislative Assembly, may be able to participate in its annual sessions and come in personal touch with statesmen of other nations. Statesmen from other nations want to meet Indian leaders, but it is a fact that even those British statesmen who sympathise with Indian aspirations become victims of British-Indian spies and secret police during their visit to India, and hence they do not want to go to India. Indian statesmen can meet on an equal footing with statesmen of other nations during the sessions of the Inter-Parliamentary Union. The next session of the Inter-Parliamentary Union will be held in Berlin, during the month of August. It is understood that Pandit Moti Lal Nehru, Mr. T. C. Goswami and Dewan Chaman Lal, will attend the British Empire Parliamentary Union which will hold its sessions in Canada in September. We hope these members of the Indian Legislative Assembly and others who will visit European capitals, during this summer, will attend the Berlin session of the Inter-Parliamentary Union, at least as visitors.

The Inter Parliamentary Union maintains its permanent headquarters at Geneva, Switzerland, and those Indian statesmen who have world vision should take steps to secure membership of India in this organization.

T. D.

Anglo-American Intellectual Co operation

A London despatch informed us some time ago that a party of twelve Cambridge undergraduates, some of whom are bearers of historic titles, left Southampton to get a first hand view as to just how New York's "400" function. They were to be guests of some of the best known hostesses of New York and also planned to visit Washington.

The party includes Count Serge Orloff Davidoff, of Winchester School and Trinity College; the Hon. John Davies, of Trinity College, a member of the Cambridgeshire Hunt and a whip of the Cambridgeshire Beagles; Duncan Whittaker, of Clitheroe, Lancashire, and St. John's College, an enthusiastic hunter and marksman, and D. Foster Smart, of London and St. John's College, an active cricketer and football player.

It is also possible Lord Bughley, son of the Marquis of Exeter, of Magdalene College, internationally famous as a runner, and Sir Williams Bait of St. John's College, will join the party.

At the same time we learned that the

tees of the Rhodes foundation selected for the year 1927 thirty-two American scholars from thirty-two States of the United States of America. These scholars are chosen on the threefold basis of intellectual ability and attainments, qualities of character, including public spirit and leadership, and interest in many outdoor sports. A Rhodes scholar receives a stipend of £100 a year for three years for study at the University of Oxford. No restriction is placed on a Rhodes scholar's choice of studies.

These two news-items show that the future leaders of Great Britain are to come in closer social and intellectual contact with the American aristocracy which rules the Republic, and at the same time no less than the sum £12,800 or about 192,000 rupees annually is to be spent by the Rhodes trust to train Americans in the atmosphere of the University of Oxford and to inculcate in them certain ideas which will promote Anglo-American friendship.

Great Britain's economic and industrial prosperity in the past largely depended upon India and literally billions of pounds sterling have been drained from India to enrich the British people, and this process of enriching British peoples by the exploitation of India is still going on. And yet neither the British capitalists, nor the Britishers who live upon their pensions from India, nor the British Government are anxious to give fellowships to Indian scholars in large numbers, to study in British Universities as a means of promoting Indo-British friendship. It seems to us that the existing race prejudice and the desire to keep India under subjection prevents any generous act on the part of Britishers and the British Government towards the people of India.

To promote solidarity among various peoples or different sections of the same people intimate social contact and intellectual co-operation are essential. Those in India who have ideas about Greater India and Asian solidarity, will have to devise means to receive Indians from other parts of the world and Asian scholars in large numbers in Indian Universities; and at the same time first-rate Indian scholars must be sent abroad to bring India closer to other nations which are interested in bringing about friendly understanding with the people of India.

There can never be genuine Indo-British co-operation unless Great Britain changes her attitude towards India. At the same time it is evident that the leaders of India

will have to put forward supreme and sincere efforts to promote Indian interests on a world wide scale. India needs a Cecil Rhodes who will endow a foundation to enable first-rate Indian scholars to go abroad and to found Chairs on International Relations in Indian Universities and to bestow scholarships on worthy Indians from abroad and Asian scholars to study in Indian Universities. The systematic British efforts to promote Anglo-American co-operation affords valuable lessons.

T. D.

Schemes To Encourage Japanese Industry

The Japanese National Products Encouragement Association has selected ten industries which are to be recommended for Government aid. These are iron and steel, dye-stuffs, soda ash, shipbuilding, woollen textiles, automobiles, aluminium, artificial fertilizers, machinery, and silk and silk textiles. The purpose of the proposed Government aid is to increase domestic production and reduce imports of these commodities. Japanese producers of acid Bessemer steel are now agitating for even higher duties.

The above news-item will be of some interest to Indian industrialists, business men and political leaders. Indian industries must be protected and promoted; and for this purpose Indian business men should organize on *All-India National Chamber of Commerce*, which should co-operate with the Indian National Congress, to secure passage of such measures as are necessary for the protection of Indian commercial interests. Indian business men, for their own interest and for the benefit of the nation, should follow the foot steps of the late J. N. Tata and endow Indian Universities for scientific researches which will aid development of Indian industries.

T. D.

Research and Industries

In the modern world science and industry are moving hand-in-hand. Great industrial concerns of various countries are deliberately patronising scientific research, with the express purpose of utilising the result for the progress of industry. The General Electric Company in America maintains one of the best equipped research departments in the world, conducted by the foremost scientists. A recent statement issued to the share-holders of the General Electric Co.

makes the following announcement of the achievements of the research department :—

The development of the cathode ray vacuum tube by Dr. W. D. Coolidge was signalized by the award to him of the Howard N. Potts medal of the Franklin Institute on October 20th. Numerous experiments are being carried on to determine the effect of cathode rays upon inert matter and living tissues so that commercial and therapeutic applications may be developed.

Dr. Irving Langmuir, in the laboratory at Schenectady, N. Y., developed a method of using atomic hydrogen in connection with an electric arc for welding metals, and, almost simultaneously Mr. Peter Alexander, in the laboratory at Lynn, Mass., developed a method for using hydrogen gas as a shield around the arc in electric welding. Both of these methods fuse the parts so perfectly that the joint is as strong and ductile as the original metal. Commercial applications of these methods are now being developed and new fields are being sought for their further application.

Indian industrialists are lagging behind in their duty of patronising scientific research. They should aid scientific and engineering schools and send promising Indian scholars abroad to acquire the best scientific education, to be applied to the development of Indian industries.

T D,

The Old Order and the New

The failure of the wheat crop in certain localities of the Punjab has created a situation which sets one to think historically. The zamindars whose holdings have suffered most made an organised march on Lahore, in order to show the condition of the crop, samples of which they carried with themselves, to the authorities and press them for remission of the Land Revenue. Congress workers have also been doing excellent work in the way of impressing upon the suffering zamindars the justice of and necessity for such remission, as well as the non-criminal nature of any agitation carried on peacefully for non payment of taxes. For, taxes are paid out of the annual produce of the soil, and if there be no produce or little produce, taxes should also accordingly cease altogether or be reduced proportionately.

The principle of remission of taxes was widely accepted by all rulers in pre-British India. The taxes that they collected in a good year were never spent altogether, as is generally done by modern Budget makers. Something was always carried over for evil

days. It is no doubt true that in those days taxation was not such a large scale and centralised affair as it is to-day and therefore it was easy for the many lords of taxation to assess taxes more carefully than now and with an eye to the circumstances of each particular assessee. It is not possible to-day to revert to the old system, but the same end could be achieved, perhaps better achieved, by having recourse to modern methods of elaborate crops insurance. Instead of spending the whole of the taxes received from the half-starved populace on the extravagant institutions which Government are in the habit of calling "essential", it would perhaps yield far more social good if a portion of it were set aside every year to subsidise a scheme of crop insurance to which the landholders would also contribute. Such an arrangement would be of immense benefit to the people as well as to the Government, which would thus be assured of a more uniform yield in taxes.

As to the movement for remission of taxes in the Punjab, we believe it is a good sign. For nearly all social or political reform comes of peaceful or violent coercion. Among the two kinds of coercion we advocate the peaceful variety; for the other one often yields more evil than good and as such can not be supported. We hope thoughtful Indians everywhere would take up the cause of the Punjab zamindars, not so much on account of sympathy for the particular persons concerned this time, as for the principle which underlies the movement. The principle is one on the establishment of which depends much of the future well-being of the Indian peasantry.

A. C.

Indian Hockey Team in Amsterdam

The Indian team is doing exceedingly well in the Olympic Hockey Tournament. They may have done even better by the time this issue comes out of the press. Dhyani Chand, the Indian Centre Forward, has been dubbed the world's greatest centre forward, and well may he deserve such a name.

The success of the Olympic team sent over by India has done much to elevate India in the eyes of the sporting nations; for in their opinion a nation which can turn out good sportsmen can also provide good workers in —

any other field of life—soldiers, politicians, teachers, industrialists and what not. For just as the Waterloo of a century ago was won on the play-ground of Eton, the Waterloo of to-day, that which it is being fought internationally against man's lower nature, the cause of imperialism, economic exploitation and moral degradation, will also be won on the play-grounds of the numberless schools that are growing up everywhere to educate young humanity.

We must not, however, forget the average low standard of sports in India, in the excitement of seeing our best men wrest sporting honours from other nations. First of all, by far the largest number of Indian youngmen are no sportsmen at all. Secondly, those few who are sportsmen are mostly so in spite of circumstances. They get no facilities in the way of training, playgrounds, apparatus, etc., and it is a wonder that we still produce a few Dhyan Chands here and there. While other nations look into every nook and corner of their lands to discover prospective champions, we do nothing of the kind; rather in many cases, would-be champions are treated by their parents and teachers like would-be criminals, and every effort is made to squeeze all sport out of them. Let us all who are feeling a sort of pride in the exploits of the Indian team abroad ask ourselves if we are doing our best to foster the growth of sports, athletics and physical culture in India. If we are not, have we a right to feel proud?

A. C.

Municipal Administration in Calcutta

We do not know if municipal administration in Indian cities and towns other than "the second city in the British Empire" is any better than it is in the last-named place—it would be no consolation to think that most likely it was more or less the same everywhere; but we are perfectly sure that the Corporation of Calcutta will be hard to beat for callous inefficiency and aloofness from popular sufferings and complaints. Corruption would have been a better description, had we been sure that all this indifference and mismanagement was due to abuse of powers, misappropriation of public funds and bribery indulged in by some or most of the corporation's officers. But in the absence of proper

grounds to charge the corporation officials with corrupt practices, we shall limit our comments to the effects of the unknown cause, which, in our inability to call it corruption, we may perhaps call criminal neglect or inefficiency.

First of all, the city's water supply is hopelessly faulty. Filtered water is obtained by the citizens with great difficulty and even then during only a limited number of hours. Although most householders are forced by the Corporation to instal elaborate plumbing work in their houses, these are for all practical purposes often mere ornaments; for sanitary flushing attachments almost never get any water in them and taps situated above the ground floor are dry as the Sahara. The whole system of water supply, if we may call it a system, is so exasperating that not a day passes without a million voices loudly wishing a sad and painful end for those who are at the root of all their suffering. Due to lack of sufficient filtered water the poorer sections of the population often have to draw upon contaminated sources of water supply, *eg.* filthy tanks, ponds, etc. This is sending up Calcutta's cholera mortality fearfully; but nothing can be done to fight the situation with the existing supply of pure water. The mortality from typhoid and allied diseases is surely due very largely to the lack of proper flushing arrangements in the city. In this case, the conditions are far worse, for unfiltered water is nearly as rare in Calcutta houses as the Okapi. As an irate correspondent pointed out in the local Press:

Under Section 223 of the Calcutta Municipal Act, the occupier of any premises connected with the municipal water supply shall be entitled to have, free of charge, 1500 gallons of filtered water for every rupee paid to the corporation as the consolidated rate on account of such premises, together with a sufficient supply of unfiltered water for flushing privies, urinals and drains, and cleansing stables, cattle-sheds and cow houses within the premises. Under section 218 of the said Act the pressure of the supply of filtered water in the municipal mains in Calcutta shall continuously be not less than 10 ft. and the pressure of the supply of unfiltered water shall likewise be not less than 10 ft.

In actual fact the pressure in the case of unfiltered and filtered water is probably more than 4 ft.; but it is nowhere near being "continuously" 40 ft. We do not know whether a householder paying twenty rupees a month as consolidated rate can get through his own house pipes 30,000 gallons of

filtered water during the hours that water flows in the pipes. It is very likely that one would require to instal a hundred taps with separate connecting pipes to get this supply to flow into his buckets : such is the pressure under which water is supplied in Calcutta. As to unfiltered water, a man is lucky if he gets 30,000 drops after being forced to pay twenty rupees a month for it.

Secondly, the way that many roads are watered in many parts of the City should be a revelation to those who practise the art of make-believe. What with leaky hoses and low pressure the water scarcely spouts a few feet with the result that the roads present a dusty and dry surface with occasional patches of mud. This, combined with the filth that is left in many places unremoved for hours by the scavengers, provides a dust for the citizens' homes, food and nostrils which is truly rich in its bacilli content. During the scavengers' strike in Calcutta it was rumoured that the corporation had many thousand scavengers and watering coolies in their service. These men even received remuneration for working extra time. The number given out was something like 14000. Judging by results one doubts whether half that number actually work to clean and water the city thoroughfares. And even that number perhaps does not work full time, let alone over time. Of course one would be mistaken to hold such views seriously and to think that the fourteen thousand workers are not all of them real men but only book entries drawing real salaries. However that may be, there is no doubt that the work is done with great slovenliness.

Thirdly, the Municipal Court often gets hold of respectable citizens and fines them for such offences as committing nuisance by allowing garage water to flow on to the paved footpaths outside. When one sees how most or many garages are allowed by the Corporation to be erected without underground drain connections, when one sees that numerous cars are washed every day everywhere allowing water to flow on footpaths as well as on the roads themselves, and when one sees even dhobies beating other people's shirts to tatters on the same sacred footpaths, one naturally doubts whether such cases are the results of any real offence or of the offence of not paying some municipal underling his due two annas. Judging by the amount of filthy food stuff, adulterated ghee, oil, milk and what not

that is being daily allowed by the municipality to be sold to the citizens ; also judging by the way that hair-cutters are allowed to use the same towel, unwashed brush, unsterilised razor, comb, brush, etc. and even the same soap lather on thirty different men ; and by the way that a tub of stagnant liquid is allowed to serve in hundreds of restaurants for the "washing" of twenty dozen cups in one morning ; and by many other things, the municipal lords of Calcutta must truly be overworked to attend to their real duties properly. They have hardly time enough to harass the respectable citizens, then why expect them to punish the *pucca* criminals ?

The question naturally arises, who is to blame and how are we to remedy things ? The blame should mainly fall on the evil traditions along which municipal administration has been carried on in Calcutta for years and then on those pseudo-patriots who, in the name of patriotism, never hesitated to keep up the evil and perhaps even consoled their conscience that it was after all a means to an end. As to the remedy, it lies in the hands of the citizens, who should wake up and work hard to uproot the vile system of inefficiency and spineless acquiescence in evil traditions. We must have real citizens and honest hard workers to manage the city's affairs, not fire-eating heroes who allow thousands of their fellow-citizens to die like fleas before their eyes.

A C.

The Renaissance of Indian Dancing.

The Indian National Herald of Bombay has devoted an article to the revival of the ancient Indian art of dancing attempted to be brought about by Mrs. Leila Sokhey, whose endeavour is described elsewhere in the present issue of this Review. Says the "Herald" :—

Probably the most exquisite as also the most universal form of art is dancing. The high perfection achieved by ancient India in this art is now a matter of history.

Dancing in India is, at the present time, unfortunately associated with what is called the "social evil." This is the result of an uncongenial atmosphere of our degenerate society, an atmosphere that suppresses all healthy expression of the natural instincts. It is, therefore, devoid of all intellectual purpose and artistic sense. The task for those who decide to resuscitate this

ancient art as a power for cultural advancement is, therefore, obviously not an easy one.

A COURAGEOUS EFFORT

It is gratifying that a courageous effort to uplift the lost art of old Indian dancing is being made by Mrs. Leila Sokhey, well-known by the stage name of 'Menaka,' a highly cultured Bengali lady who comes of a high-caste Brahmin family. Having been educated in England from her early age she has mastered the technique of Western dancing. After her return to India she realised with rare artistic instinct, the immense possibilities of reviving the old Indian dancing with its wonderful beauty and spiritual significance, some idea of which may be obtained from the ancient paintings and sculptures that have survived from the past, like those of the Ajanta Caves and other similar monuments of the ancient civilisation of India.

The "Herald" adds that "Mrs. Sokhey is the only Indian lady to make pioneer efforts in this direction." If it be meant by this that she is the first respectable Indian lady to adopt dancing as a profession, that is probably true. But more than two years ago, dancing of a highly artistic character, free from sensual or even sensuous suggestion, and having "spiritual significance", was shown by some girls and young ladies at Santiniketan, particularly as part of the acting of Rabindranath Tagore's "Dancing Girl's Worship" in Bengali. The performance of this play has been repeated by them several times.

In the opinion of Mrs. Sokhey, "dancing is a form of spontaneous self-expression."

What are the sources at present available for the guidance of those who aspire to resuscitate the art of Indian dancing from its degenerate position? I enquired.

Mrs. Sokhey enumerated three main sources, namely, the Hindu concepts of the art embodied in the surviving though scattered literature on the subject, the old paintings and sculptures, and finally, the current practices and conventions of dancing now prevalent in the northern and southern parts of the country.

"We also cannot neglect," she added, "the forms now left lingering in the folk dancing in the different parts of the country."

J. T. Sunderland

The Reverend Dr. J. T. Sunderland of America completed the 86th year of his age in February last. Though so old, he continues to work as indefatigably for the good of India as when he was younger. It is more than 32 years ago that the present writer had the honour and privilege of making the acquaintance of

this great friend of India and humanity in Allahabad, where he delivered lectures in the Kayastha Pathshala and other institutions. During his second visit to India also, when he was the guest of Sir J. C. Bose in Calcutta, we had the privilege of meeting and holding conversations with him.

We cannot say how grateful we are for the generous help which he has always given us in unstinted measure in conducting the Modern Review.

May he live long to see India free and to give us wise counsel for years after we have attained freedom!

Professor D. K. Karve

There have been rejoicings in Poona and elsewhere on the occasion of the 71st birthday of Professor D. K. Karve, the founder of the Indian Women's University. Ever since the idea of a woman's university took hold of his mind, he has promoted its cause with unsurpassed devotion, perseverance and industry. He has passed the biblical limit of three score years and ten. But our ancient Hindu prayer for longevity is "*shatam jiva*," "live a hundred years." The prayers of all those who love and respect the professor will be that he may live to be a centenarian and be in possession of his powers to the last.

Ram Mohun Roy Tomb Repairs Fund

The following donations to the above fund are acknowledged with thanks: Mr. S. N. Mallik, Rs 100, paid; donation on the occasion of the *shraddha* ceremony of the late Mr. G. N. Ray, I.C.S., by his brothers, Rs. 500, out of which Rs. 250 has been received; Mr. Subodh Chandra Banerji, Rs. 1.

Principalship of Calcutta Presidency College

When Mr. Stapleton was promoted and made director of public instruction in Bengal, Prof. Sir Jehangir Coyajee was appointed to act in his place as principal of the Calcutta Presidency College. But though Prof. Coyajee possesses sufficient ability and loyalty to be considered fit for a knighthood, imperial British blood does not flow in his veins. The post of principal of the premier Government College in Bengal is a

political appointment. To win it, scholarship is not enough; loyalty, even loyalism, is not enough; the power to command the respect and co-operation of the students and staff is not enough. One must be a *trusted* British imperialist, and that no Indian can be. So the British Principal of Hughli College has been drafted from his quiet field of work to preside over the stormy destinies of Presidency College.

If Sir Coyajee had been made pucca principal and had succeeded in maintaining discipline among his students, which it may be taken for granted he would have succeeded in doing, it would have proved that where a British officer had been a failure, an Indian had proved a success. That would have been intolerable.

There is another point to be taken into consideration. It is getting to be a tradition that, to be made the Director of Public Instruction in Bengal, a British professor or principal (of course, no Indian need aspire to the job) of the Presidency College should kick up a row with the students and get thrashed—at least there should be a report that he was thrashed. Mr. Oaten qualified himself in that way and became Director, and his successor, Mr. Stapleton, followed suit. If Mr. Stapleton's successor in the principalship has the ambition of being some day the educational director of the province, he has only to avail himself of the tip, which is meant only for Europeans. This gives an indication of a further reason why Sir Jehangir Coyajee has lost the job. He cannot have the consolation that he may have saved his skin thereby: for it was out of the question for an Indian like him to qualify himself for the directorship in the approved traditional style.

Reorganisation of the Medical Service

The recommendations of the Lee Commission were unfair and unjust from the Indian point of view—and in India Indian interests alone ought to be consulted. But the Government of India has outdone even the Lee recommendations in injustice in its *communiqué* regarding the reorganisation of the Indian Medical Service. That Service is henceforth to consist of 302 officers, of whom 212 must be Europeans and 90 may be either European or Indians. To provide employ-

ment for these 302 officers, 237 posts are required. 143 of these posts are reserved for Europeans, and 94 are meant for either Europeans or Indians. So the majority of the posts are reserved for Europeans. But the remaining posts are not reserved for Indians. There is no legal bar to Europeans holding any or all of them. And this is the arrangement made for India, a country which Indians call their own. It is quite in keeping with the brand of justice yeclapt British. Some of the reasons for this characteristically British arrangement will be understood from the following paragraph of the *communiqué* :—

The Indian Medical Service constituted on the same broad lines as at present will be retained primarily to meet the needs of the Indian Army. In order to maintain the necessary minimum war reserve of Military Medical Officers, and to provide European medical attendance for European Officers of the Superior Civil Services and their families, Local Governments will be required to employ a stated number of Indian Medical Service Officers. The Government of India will draw on the same service to meet the requirements of the Civil administration, for which they are responsible.

The majority of superior medical posts must be reserved for providing European medical attendance for European Officers of the Superior Civil Services and their families, who are only a few thousand all told. These men and their families should remain in Great Britain and have British medical attendance to their heart's content. We do not want them, they are thrust upon us. But it is no use arguing. British rule in India rests on force, not on justice or logic, and we cannot resort to force.

An Agent Provocateur in the Punjab

The *Tribune* of Lahore has rendered signal service to the public by bringing to light the doings and intentions of one K. C. Banerji, who was sentenced in Lahore to five years' rigorous imprisonment by Mr. Magistrate Paulhus for being in possession of an unlicensed revolver and cartridges, but was subsequently released under orders of the local government, as he was a police informer. The *Tribune* has proved by the publication of *fac similes* of Banerji's letters (whose authenticity Panjab Government officials have not denied) and other proofs that he went from the U. P. to the Panjab to get up a revolutionary or terrorist move-

ment. While in jail, he used to receive communications and money from the police, which was illegal.

It has long been suspected and believed that agents provocateurs have been all along doing their nefarious work in many provinces of India. Some or all of the approvers in political dacoity and revolutionary trials may have been agents provocateurs. Long ago, *Forward* and other papers published a representation made to the authorities by some political prisoners, containing definite allegations against some agents provocateurs named therein. But no official reply to it has yet appeared.

Credit for the Discoveries in Mohen-jo-daro

Sir Arthur Keith writes in the *New York Times Magazine* :—

Until now only two lands could rightly claim to represent the cradle of civilization; one is Egypt, in the valley of the Nile; the other is Mesopotamia, watered by the Tigris and the Euphrates. But now there enters a third and serious claimant—the valley of the Indus, in the north-west corner of India. The ancient cities which have been laid bare in the arid plains of the Indus by Sir John Marshall, Director General of the Archaeological Survey of India, and the preliminary account he has published concerning them must transform the outlook of every one who is seeking to find out when, where and how modern man came by his civilization.

In accordance with the approved imperialistic principle, Sir Arthur Keith gives all the credit to Sir John Marshall for the discoveries made in the valley of the Indus, the Indian archaeologists who actually did the work not being even mentioned. Sir John himself, however, has given their names in the article he has contributed to the *Hindu University Magazine*, from which an extract has been made in our Indian Periodicals section. But Sir John's article will have a limited circulation, Sir Arthur's a much wider one. Blessed be imperialism in everything!

Educational Reform Needed in Bengal

In a lecture delivered before the Calcutta Rotary Club, Dr. W. A. Jenkins made out a good case for educational reform in Bengal. He quoted some teachers' and pupils'

howlers, gave a graphic description of the bamboo and mud hovels in which many high schools are located, said that even the miserable pittance shown in the school accounts as teachers' salaries were not in many cases received by the teachers, and gave an idea of the poor intellectual equipment and resources; for intellectual life possessed by the teachers in the small Bengal village schools. Said he :—

The conditions under which the teachers worked almost condoned their great deficiencies, and their economic position necessitated their undertaking a considerable amount of work out of school hours. In fact they began their school duties tired and disheartened.

Bengal had two-thirds of the number of High Schools in England, and yet they received in Government assistance only one one hundred and sixtieth of the amount granted at Home. The Government was contributing 12½ lakhs per annum towards the upkeep of the aided High Schools. An additional 12½ lakhs would suffice to guarantee reasonable minimum salaries to all teachers and to grant aid to all efficient High Schools, provided the system was overhauled and reorganized.

What Government does for education in Bengal will be better understood from the following comparative table of Government educational allotments in 1921-25, compiled from the *Statistical Abstract for British India*, fourth issue :

| Province | Population | Educational Expenditure from Govt. Funds |
|----------|------------|--|
| Bengal | 46,695,536 | Rs. 1,33,82,963 |
| U. P. | 45,375,767 | " 1,72,28,490 |
| Madras | 42,318,985 | " 1,71,38,548 |
| Panjab | 20,685,024 | " 1,18,34,364 |
| Bombay | 19,348,219 | " 1,84,47,165 |

100 Persian Students to Europe

The Persian Parliament has passed a bill in favour of sending every year for six successive years a hundred students to Europe to study different sciences. The population of Persia is estimated at 12 millions, that of the British-ruled provinces in India 246,960,200. Therefore, on the Persian scale, the British Government in India ought to send at least 2,000 students every year to Europe for scientific training.

Child Marriage Banned in Kashmir

It is reported that, before leaving for Europe, for which there is no sufficient

reason, the Maharaja of Kashmir has sanctioned an enactment prohibiting child marriage and making it punishable under law.

Very recently some Calcutta Indian dailies conducted in English have been publishing long contributions in support of child marriage.

—

Bamungachi Shooting

Mr. G. S. Dutt, Magistrate of Howrah, has incurred the wrath of Anglo-Indian editors and the European Association, because he has criticised the conduct of Mr. Sturgis, Superintendent of Police, and of Captain Christie of the Frontier Rifles in connection with the shooting of some railway strikers at Bamungachi. That when the district magistrate is quite at hand his help should be asked for in an emergency, that there should be no shooting without due previous warning, that there should be no shooting except when a crowd actually assumes a threatening attitude, that there should be no shooting if the crowd is not advancing but rather retreating, that the objects of shooting should be to stop an advance and to disperse the crowd and that therefore the shooters should aim low, that there should be no picking out and shooting of individuals for punishment, are such obvious rules for dealing with unruly crowds that it is surprising that Mr. Dutt has been condemned for judging of the conduct of the two European officers according to those rules. But we are mistaken in using the word 'surprising.' In the opinion of Mr. Dutt's critics, whatever any European officers do is right, and no Indian must sit in judgment over them even if his official and legal duty requires him to do so.

Mr. Dutt's critics blame him for not being on the spot when the shooting had to be done. But a Magistrate cannot be ubiquitous; he has various duties to discharge. It was the duty of his subordinate, the Police Superintendent, to inform him that an emergency had arisen. It is greatly to his credit that in spite of exasperating circumstances Howrah has been so quiet. Most probably there would have been no shooting at all if he had been asked by the police to come and handle the situation.

Mr. Dutt's critics have gravely assumed the incapacity not only of himself but of

all Indian district officers to maintain law and order, because he has criticised those who resorted to shooting! Will these sapient men draw up a list of all the bloody riots which have taken place in the various districts of India, giving in each case the name of the officer responsible for the peace of the district?

The railway authorities will not budge an inch from the position they have taken up even to meet the needs of the most poorly paid of their employees;—they are determined to starve the men into surrender. As magistrate Mr Dutt can do nothing to ameliorate the condition of the strikers. Yet he must be held responsible for whatever may happen! This is fine justice.

—

India Wins Olympic Hockey Honour

A Reuter's telegram has been received announcing that the Indian hockey team has won the Olympic hockey final, defeating Holland by three goals to nil. The hockey team from India went through the Olympic series without allowing any of their antagonists to score a single goal against them. In the Olympic games India defeated

| | |
|-------------|--------------------|
| Austria | by 6 goals to nil, |
| Belgium | by 9 goals to nil, |
| Denmark | by 5 goals to nil, |
| Switzerland | by 6 goals to nil, |
| Holland | by 3 goals to nil. |

India has scored more than thrice the number of goals obtained by any other country competing in the tournament.

—

China and Japan

China has been suffering from civil war for a number of years. On the top of these miseries have come the military operations conducted against her on her own soil by Japan. Whatever excuses or reasons Japan may bring forward in justification of her action, the invasion of an unaggressive country by a foreign nation cannot be considered legitimate. The allegation of some Chinese soldiers' hostile action against some Japanese in China, even if true, cannot be a sufficient ground for the invasion of China. Japan and China are both members of the League of Nations. But just as China's

membership did not avail to prevent British aggression against her, so has it not availed to prevent Japan's aggressive conduct. Technical explanations may, of course, be given as to why the League cannot intervene. But cannot the articles of the covenant of the League be so changed as to obviate the technical objections which can at present be discerned?

The best thing that can happen in the present situation is the unification of all parties in China for defending the country against Japan, their common enemy. The cause of freedom would gain immensely by the defeat of Japan by a united Chinese nation.

Japan has incurred odium in Asia by her conquest and enslavement of Korea. Her action in China has turned Asiatic feeling against her still more. It was at first hoped that she would take a leading part in the emancipation of Asia. But, whatever her real intention may be, actual events appear to show that she wants herself to bestride as much of Asia as she can in the place of the European powers.

All Parties Constituent Conference

We are not in the secrets of the All Parties Leaders as to the reasons why they have undertaken to draft a constitution for India acceptable to and accepted by all parties. If, as has been suggested in some papers, it is a tacit and indirect acceptance of Lord Birkenhead's challenge to Indians to produce an agreed constitution, we are afraid the move has not been a prudent one. For, considering the various direct and indirect means at the disposal of Government to produce disunion, it would not be practicable to draft a constitution acceptable to all parties, particularly as any number of parties may arise mushroom-like all of a sudden and obtain Government recognition. We would rather have challenged Lord Birkenhead to produce a constitution acceptable to all Indian parties without the help of Indians. He would have been sure to fail.

Let us hope, however, that the All Parties Leader's attempt is not an answer to Lord Birkenhead's challenge. We shall be sincerely pleased if the Conference succeed in producing a good constitution for India. It will have a theoretical value, and be a proof of our capacity to agree on

essential points. It may also have a practical value, if on Labour coming to power, that party can be induced to adopt it in their Bill to give India self-rule. We say this, because at present India does not appear to possess the actual (as opposed to the potential) strength to independently bring any constitution into force. Such strength may be either the cause or the effect of a revolution, though it may be a peaceful one.

If we were asked to draft a constitution, we might prefer to acquire the strength to give independent effect to it before undertaking the task. But, may be, labouring at the task is a means of acquiring that sort of strength.

"Tainted Money."

Mr. N. M. Joshi having received some money from Russia for the relief of the mill workers on strike in Bombay, opinions have been expressed against the acceptance of such money. Of course, it would not be right to accept money from anybody for any anarchical or revolutionary purpose. But when money is given for the relief of distress, it may be accepted. The Russian proletarian party in power may be rightly held to have been guilty of bloodshed. But how many of the present-day great nations of the world are free from that taint? The Third International may be desirous of producing bloody revolutions in many countries; so there ought not to be any political dealings with it. But several imperialistic powers are believed to be responsible, in part at least, for the bloody civil war in China. Should or should not charity be accepted from the nationals of those countries?

Bardoli Satyagraha.

The people of Bardoli continue to offer stout non-violent resistance to the efforts of the Bombay Government to make them accept the unreasonably enhanced land revenue settlement. Government officials are going on relentlessly with their task of attaching and selling the property of the tenants. But the spirit of the people has not been crushed by cruel persecution. All honour to them. It is a struggle in which victory or defeat will be equally inglorious for the Bombay Government. About a dozen members of council have resigned their seats in protest against the iniquitous and cruel action of the Bombay

Government. It is to be hoped they will offer themselves for re-election and be returned unopposed.

"Brahman-Controlled Autocracy."

Sir Michael O'Dwyer writes in the *Times* of London that "the [Simon] Commission is now master of the situation; it has realized that the Swarajists do not speak for the diverse Indian peoples, but only for a small minority, whose real aim is to restore a Brahman-controlled autocracy of the higher Hindu castes, under a camouflage of democratic form with which they hope to delude the British public." Either Sir Michael does not know what he is talking about, or is deliberately trying to deceive the British public. The Swarajya party was founded by Mr. C. R. Das, who was not a Brahman. It still owes moral allegiance to Mahatma Gandhi, who is not a Brahman. Not being Swarajists (or any other ists,) we do not know all the Swarajya leaders of the other provinces of India and their caste, but in Bengal, some of the most prominent Swarajists may be named. Mr. J. M. Sen Gupta, Mr. Subhas Chandra Bose, Mr. Sarat Chandra Bose, Mr. Nirmal Chandra Chandra, Dr. B. C. Roy, Mr. Nalin Ranjan Sarker, Mr. Lalit Mohan Das, Mr. Abhil Chandra Datta are not Brahmans. Mr. T. C. Goswami is a Brahman. The allegation that the Swarajists want to establish a Brahman-controlled autocracy is absolutely false. But supposing they did want to establish such an autocracy, is an indigenous autocracy controlled by an indigenous class of people inherently worse than the alien autocracy controlled by foreign die-hards represented by Sydenham, O'Dwyer, Craddock & Co.? Would not the former be considered far preferable to the latter by all except interested hypocrites?

Rats and Plague

Everybody, from the schoolboy upwards, knows that plague is a disease of rats carried to humans by the rat flea and that the rat as the primary cause of plague is a pest which should be destroyed wherever found. Professor Gabriel Pett recently delivered a speech at the Sorbonne, Paris, before an international gathering, in which he dwelt upon the menace of the rat with

great ability and emphasis. We are not in a position as yet to discuss the merits of his discourse, as it has not yet been reported in full in any available paper. But some comment is necessary on an interview granted to the correspondent of an Anglo-Indian daily by "a health authority," which that paper has published in connection with Professor Gabriel Pett's lecture. This "health authority" observes that (a) plague is a disease primarily of rats, that (b) in India houses are constructed of material and in a way favouring the growth of rat holes, that (c) the habit of throwing kitchen refuse everywhere and storing grain in places open to rats are favourable to the increase of those creatures, and that (d) the disappearance of plague from Europe is due to better house construction, drainage and conservancy and to better habits of disposing of kitchen refuse and storage of grain.

Coming to plague in India the "health authority" reiterates that the prevalence of that disease in India during such long years is due to the following causes—(a) In India the people have not yet learned to protect themselves from rats; (b) their houses are badly constructed; (c) many of them are opposed to the destruction of rats; and (d) most parts of India are dry and as such suitable for rats to increase and multiply. He also points out that the relative absence of plague in Bengal is due to the fact that the country is often flooded and is not suited to the growth of rats. Calcutta especially is immune to plague because its streets are often flooded. As preventive measures he advocates press and educational propaganda and better building regulations. The aforesaid health authority, however, makes no mention of the poverty factor in the spread of plague, neither as lowering the resistance of the people nor as a cause of the mean dwellings which we find everywhere in India. It may be argued that the people of India do not keep themselves, their clothing and dwellings even as clean as is possible in their circumstances; but we must not forget that poverty, dire poverty is a great killer of effort and ideals. While one may expect a well-fed man to do his best for every little good thing, a starving person will not move a muscle to attain to the greatest of ideals. This may be deplorable, but there is no helping it with human nature as it is. So the poverty factor is much more at the

root of India's evils, plague as well as all else, than may appear at first sight to persons attempting sub-consciously to side step realities. It is all very well to talk serenely of badly built houses, open stores of grain and kitchen refuse, but these alone do not explain away plague; for there are hundreds of Euro-American towns and cities, where rats abound no less than in Bombay or Allahabad, which do not show any mortality from plague. Why? because the people are better fed and clothed there and although there are rats in the houses they live in, they do not have to share their bed (the floor?) with the rats. The rats have separate quarters, so to say. In India, on the other hand, the poverty is so great that often a hundred rats and ten men have to live in the same pit. It is not a fact that in Europe they have succeeded in destroying all rats and that plague has disappeared on that account. The real cause is the elevation of the standard of dietary and dwellings of the people of Europe. In India, too, unless the people get better and more food and ampler living room, there would be no effective control of plague and other diseases.

When we discuss India's ignorance and talk grandiloquently of press and educational propaganda, we forget to ask ourselves, how many adults per mille can read, and why India is so ignorant and uneducated. If we did ask those questions as well as enquire into the causes of India's dire poverty, what answer should we get? There would hardly be space here to give the answer in full: for would it not involve a recapitulation of the whole history of the British occupation and administration of India?

A. C.

Causes of Plague

No attempt to make the rat solely or chiefly responsible for plague can be considered honestly scientific.

Dr. W. G. Simpson was a well-known health officer of Calcutta. There is *A Treatise on Plague* written by him which was published in 1905. On page 142 of that authoritative work we find the following passage relating to the causes of plague:—

"All that is definitely known is that pandemics and epidemics are generally associated with unusual seasons which bring distress and misery, with war and famine and their attendant ills, with

political, social or economic conditions which are the reverse of prosperous, and which produce general depression in the community, and also with a laxity or absence of sanitary administration which prevents or hinders prompt dealing with the earlier causes."

The opinion of this well-known authority must be held to outweigh the opinion of an unnamed "health authority" recorded by the Anglo-Indian daily.

An American Lady on Miss Mayo's Book

An American lady has written the following in a letter to the poet, Rabindranath Tagore, concerning Miss Mayo's book:—

"I have just read your letter in the New York 'Nation' and I realise more than ever what a crime has been committed by an American citizen against your country and against each and every citizen of it.

"If one wanted to retaliate—if some Hindu had spite and venom enough,—there is matter enough reeking with scandal and crime to fill I do not know how many volumes entitled 'Uncle Sam' or 'Miss Columbia'. Naturally, we feel the libel most keenly, because of our Hindustani friends and because of what India has come to mean to be to us. I realise deeply the thought expressed in one of your poems, that it is better to be the offended than the offender. For this one person, America has offered insult to India, and we do not know—indeed there is no means to overthrow the offender and redeem the wrong.

"This country feeds on sensation and scandal—our daily papers prove it: the ease with which they accept a libel of another country is a sad indictment of their own moral condition. Christian living and thinking are a far away ideal. We must ask our Eastern friends to bear with us patiently, or rather to practise the Christian charity which should be invoked before any mortal speaks of another. Christian charity aside, I am amazed how quickly supposedly educated people swallow wholesale items of scandal and disrepute. With all our big system of education, our people are not even instructed, much less educated. There is a little prodding of the mind with facts but no co-ordination of heart and mind and soul, which is the basis of genuine culture."

A "World-Wide" Treaty against War

Mr. Kellogg's proposal on behalf of the American nation to the "powers" to form a world-wide alliance against war and Sir Austen Chamberlain's answering note to Mr Kellogg have been the cause of both alarm and amusement to Indians. Alarm, because all victims fear the strengthening of honor among thieves, and amusement, because few things are more provocative of mirth than transparent hypocrisy. Both aspects of the proposed "world-wide" treaty are clearly seen in Sir A. Chamberlain's note to secretary Kellogg. The ideal pretended by the makers of the treaty is the "renunciation of war as an instrument of national policy." Let us study in the light of this ideal the following paragraphs in Sir A. Chamberlain's note:

After studying the wording of Article 1 of the the United States draft, His Majesty's Government do not think its terms exclude action which a State may be forced to take in self-defence. Mr. Kellogg has made it clear in the speech referred to that he regards the right of self-defence as inalienable, and His Majesty's Government are disposed to think that on this question no addition to the text is necessary.

So that, even after outlawing war, nations would be justified to fight in self-defence. Self-defence is a remarkably flexible concept, and we all know that wars have *never* (yes, n-e-v-e-r) been fought in modern times excepting in self-defence. In the last big war, for example, England, France, Germany, Austria, Italy, Russia, America, Bulgaria, Serbia, Turkey, Montenegro, Japan and all else who fought, took up the sword for the sacred cause of national self-defence, while others thought that, whereas some particular nation might in the course of time present to them a national danger, they were entitled, for the purpose of self-defence, to fight that nation in anticipation. Others yet had an expansive idea of self, and to them the defence of any corner of the globe provided an opportunity for self-defence; the more so when such self-defence led to economic gain. From this clause in the proposed war-proof international treaty, therefore, we may expect as many wars to take place as are necessary to wreck the entire structure of human civilization. It may, no doubt, provide ample and as much scope after such wars, to lawyers and logicians as that imbecile War Guilt question gave to post-war Europe. But as an effective

preventive of war a treaty with such a super-size loophole in it would be totally useless.

The next item of importance is the way that existing treaties will be treated under this new proposed arrangement by its signatories. Sir Austen Chamberlain is conscious that there is a chance that the new proposal, if carried out in all its details, may go against the existing treaty obligations of the powers. He is, of course, primarily concerned with the League covenant and the Locarno treaty, and says accordingly in his note:—

A clash might (thus) conceivably arise between existing Treaties and the proposed pact *unless it is understood that the obligations of the new engagement will cease to operate in respect of the party which breaks its pledges and adopts hostile measures against one of its co-contractants*,

The attitude of the British towards the League Covenant and the Locarno Treaty is clearly stated in the following terms:

His Majesty's Government could not agree to any new treaty which would weaken or undermine these engagements on which the peace of Europe rests.

As these existing treaties are by no means solidly and entirely based on justice, morality and the free choice of the peoples which are affected by them, much future trouble can be expected from them. And where the British Government (also the French) are determined, even at the cost of fresh wars, to uphold "these engagements", what hopes are there for a warless world?

Last and most pregnant with an evil meaning are the following paragraphs in Sir A. Chamberlain's note:

The language of article I as to the renunciation of war as an instrument of national policy renders it desirable that I should remind your Excellency that there are certain regions of the world, the welfare and integrity of which constitute a special and vital interest for our peace and safety.

His Majesty's Government have been at pains to make it clear in the past that interference with these regions can not be suffered. Their protection against attack is to the British Empire a measure of self-defence. It must be clearly understood that His Majesty's Government in Great Britain accept the new treaty upon the distinct understanding that it does not prejudice their freedom of action in this respect. The Government of the United States have comparable interests, any disregard of which by foreign powers they have declared they would regard as an unfriendly act. His Majesty's Government believe, therefore, that in defining their position they are expressing the intentions and meaning of the United States Government.

It is, of course, clear to what regions of

the world Sir Austen Chamberlain is referring. Similarly it is also clear what "comparable interests" the United States (also France, Holland, Italy, Spain, Japan, Portugal, etc.) have. (In passing it may be mentioned that when a Labour member recently questioned Sir Austen in the House of Commons regarding the exact location of these vital regions Sir Austen very mysteriously refused to share his secret with others and said he would let everybody know it when and if the new treaty really came into being.) However, these words of Sir Austen clearly demonstrate the hollowness and hypocritical nature of these "anti-war" proposals. We all know that the British and other varieties of Imperialism have the world to-day in their grip and everywhere tormented and exploited humanity is attempting to rise, breaking away from this stranglehold. If at such a time some Imperialists conspire to strengthen their hold on the world by means of a treaty to uphold the *status quo* in the name of peace, brotherhood and universal love, would anybody be deceived by their piety? We knew in our young days a fellow at school whose constant joke it was to kick other boys hard on their shin, then generously offer to be friends with them again. The Imperialists' love of peace and goodwill is well comparable to that boy's friendliness. They would roam the world over and torture it with heartless exploitation and persecution, then talk glibly of allowing things to remain as they were in the name of *Ahimsa*. For is not *Himsa* a great sin? That is why Sir Austen Chamberlain writes to Mr. Kellogg that his Government will gladly cooperate in the conclusion of such a Pact as is proposed and are ready to engage with interested governments in the negotiations which are necessary for the purpose. These "interested Governments" are no doubt the fellow imperialists of the British. Sir Austen says in his note that he has also consulted the Dominions and the Government of India as to their opinion of the new treaty and has received answers to the effect that the Dominions and the Government of India are all in cordial agreement with the general principle of the proposed Treaty and on the receipt of an invitation would doubtless be prepared to participate in its conclusions.

It only remains to select an Indian with

sufficient lack of self-respect and of sense of patriotism to go over and sign the new Treaty as the representative of the Indian Nation.

A. C.

Vice-Chancellorship of the Calcutta University

As the term of Professor Jadunath Sarkar's Vice-chancellorship of the Calcutta University will soon expire, speculation is rife as to who is to become the next Vice-chancellor. As Professor Sarkar has worked with great devotion in spite of much inconvenience and persecution, and as his self-sacrificing labours have already resulted in reform in various directions, we are clearly of the opinion that he should be asked to hold office for at least another term. This will, no doubt, mean additional self-sacrifice for him. But when he has begun the work of reform, he should see things through.

There is a strong rumour that, taking advantage of the factious opposition to Professor Sarkar, an attempt will be made to instal a Scottish missionary professor in the Vice-chancellor's chair. There cannot but be strong opposition to such a sinister move. For that gentleman's attitude towards the post-graduate departments is well-known. One of Sir Asutosh Mukherji's achievements was the practical Indianization of the University. The process of de-Indianization ought not to be allowed to begin. We have already said that Prof. Sarkar should be asked to continue in office for at least another two years. But should the authorities want a change, surely there are Indians like Sir J. C. Bose, Sir P. C. Ray, Sir B. N. Seal, etc., to choose from. Of course, such men cannot be expected to seek office.

About the Prabasi Press

Those who have dealings with the Prabasi Press are hereby informed that Babu Abinash Chandra Sarkar's connection with it has ceased.

THE PATRIOT

By RABINDRANATH TAGORE

(Translated by the author)

I am sure that Chitragnpta, who keeps strict record at the gate of Death, must have noted down in big letters accusations against me, which had escaped my attention altogether. On the other hand, many of my sins, that have passed unnoticed by others, loom large in my own memory. The story of my transgression, that I am going to relate, belongs to the latter kind, and I hope that a frank confession of it, before it is finally entered in the Book of Doom, may lessen its culpability.

It all happened yesterday afternoon, on a day of festival for the Jains in our neighbourhood. I was going out with my wife, Kalika, to tea at the house of my friend Nayanmohan.

My wife's name means literally a 'bud.' It was given by my father-in-law, who is thus solely responsible for any discrepancy between its implication and the reality to which it is attached. There is not the least tremor of hesitancy in my wife's nature; her opinions on most subjects have reached their terminus. Once, when she had been vigorously engaged in picketing against British cloth in Burrabazar, the awe-struck members of her party in a fit of excessive admiration gave her the name, Dhruva-vrata, the woman of unwavering vows.

My name is Girindra, the Lord of the Rocks, so common among my countrymen, whose character generally fails to act up to it. Kalika's admirers simply know me as the husband of my wife and pay no heed

to my name. By good luck inherited from my ancestors I have, however, some kind of significance, which is considered to be convenient by her followers at the time of collecting subscriptions.

There is a greater chance of harmony between husband and wife, when they are different in character, like the shower of rain and the dry earth, than when they are of a uniform constitution. I am somewhat slipshod by nature, having no grip over things, while my wife has a tenacity of mind which never allows her to let go the thing which it has in its clutches. This very dissimilarity helps to preserve peace in our household.

But there is one point of difference between us, regarding which no adjustment has yet become possible. Kalika believes that I am unpatriotic.

This is very disconcerting, because according to her, truth is what she proclaims to be true. She has numerous internal evidences of my love for my country; but as it disdains to don the livery of the brand of nationalism, professed by her own party, she fiercely refuses to acknowledge it.

From my younger days, I have continued to be a confirmed book-lover: indeed, I am hopelessly addicted to buying books. Even my enemies would not dare to deny that I read them; and my friends know only too well how fond I am of discussing their contents. This had the effect of eliminating most of my friends, till I have left to me Banbhari, the sole companion of my lonely

debates. We have just passed through a period, when our police authorities, on the one hand, have associated the worst form of sedition with the presence of the Gita in our possession; and our patriots, on their side, have found it impossible to reconcile appreciation of foreign literature with devotion to one's Mother-land. Our traditional Goddess of culture, Saraswati, because of her white complexion, has come to be regarded with suspicion by our young nationalists. It was openly declared, when the students shunned their College lectures, that the water of the divine lake, on which Saraswati had her white lotus seat, had no efficacy in extinguishing the fire of ill-fortune that has been raging for centuries round the throne of our Mother, Bharat-Lakshmi. In any case, intellectual culture was considered to be a superfluity in the proper growth of our political life.

In spite of my wife's excellent example and powerful urgings I do not wear Khaddar, —not because there is anything wrong in it, nor because I am too fastidious in the choice of my wardrobe. On the contrary, among those of my traits, which are not in perfect consonance with our own national habits, I cannot include a scrupulous care as to how I dress. Once upon a time, before Kalika had her modern transformation, I used to wear broad-toed shoes from Chinese shops and forgot to have them polished. I had a dread of putting on socks: I preferred 'Punjabis' to English shirts, and overlooked their accidental deficiency in buttons. These habits of mine constantly produced domestic cataclysms, threatening our permanent separation. Kalika declared that she felt ashamed to appear before the public in my company. I readily absolved her from the wifely duty of accompanying me to those parties where my presence would be discordant.

The times have changed, but my evil fortune persists. Kalika still has the habit of repeating: "I am ashamed to go out with you." Formerly, I hesitated to adopt the uniform of her set, when she belonged to the pre-nationalist age; and I still feel reluctant to adopt the uniform of the present regime, to which she owes her allegiance.

The fault lies deep in my own nature. I shrink from all conscious display of sectarian marks about my person. This shyness on my part leads to incessant verbal explosions in our domestic world, because of the inherent incapacity of Kalika to accept

as final any natural difference, which her partner in life may possess. Her mind is like a mountain stream, that boisterously goes round and round a rock, pushing against it in a vain effort to make it flow with its own current. Her contact with a different point of view from her own seems to excite an irresistible reflex action upon her nerves, throwing her into involuntary convulsions.

While getting ready to go out yesterday, the tone with which Kalika protested against my non-Khaddar dress was anything but sweet. Unfortunately, I had my inveterate pride of intellect, that forced me into a discussion with my wife. It was unpleasant, and what more, futile.

"Women find it convenient," I said to her, "to veil their eyes and walk tied to the leading strings of authority. They feel safe when they deprive their thoughts of all freedom, and confine them in the strict Zaana of conformity. Our ladies today have easily developed their devotion to Khaddar, because it has added to the overburdened list of our outward criterions of propriety, which seem to comfort them."

Kalika replied with almost fanatical fury: "It will be a great day for my country, when the sanctity of wearing Khaddar is as blindly believed in as a dip in the holy water of the Ganges. Reason crystallised becomes custom. Free thoughts are like ghosts, which find their bodies in convention. Then alone they have their solid work, and no longer float about in a thin atmosphere of vacillation."

I could see that these were the wise sayings of Nayanmohan, with the quotation marks worn out; Kalika found no difficulty in imagining that they were her own.

The man who invented the proverb, 'The silent silence all antagonist', must have been unmarried. It made my wife all the more furious, when I offered her no answer. "Your protest against caste", she explained, "is only confined to your mouth. We, on the contrary, carry it out in practice by imposing a uniformly white cover over all colour distinctions."

I was about to reply, that my protest against caste did truly have its origin in my mouth, whenever I accepted with relish the excellent food cooked by a Muhammadan. It was certainly oral, but not verbal; and its movements were truly inward. An external cover hides distinctions, but does not remove them.

I am sure my argument deserved utterance, but being a helpless male, I timidly sought safety in a speechless neutrality; for, I knew, from repeated experience, that such discussions, started in our domestic seclusion, are invariably carried by my wife, like soiled linen, to her friendly circle to be ruthlessly beaten and mangled. She has the unpleasant habit of collecting counter-arguments from the mouth of Professor Nayanmohan, exultantly flinging them in my face, and then rushing away from the arena without waiting for my answer.

I was perfectly certain about what was in store for me at the Professor's tea-table. There would be some abstruse dissertation on the relative position in Hindu culture of tradition and free thought, the inherited experience of ages and reason which is volatile, inconclusive, and colourlessly universal. In the meanwhile, the vision floated before my mind's eye of the newly-brought books, redolent of Morocco leather, mysteriously veiled in a brown paper cover, waiting for me by my cushions, with their shy virginity of uncut pages. All the same, I was compelled to keep my engagement by the dread of words, uttered and unuttered, and gestures suggestive of trouble.

We had travelled only a short distance from our house. Passing by the street-hydrant, we had reached the tiled hut occupied by an up-country shopkeeper, who was giving various forms to indigestibility in his cauldron of boiling mustard oil, when we were obstructed by a fearful uproar.

The Marwaris, proceeding to their temple, carrying their costly paraphernalia of worship, had suddenly stopped at this place. There were angry shouts, mingled with the sound of thrashing, and I thought that the crowd were dealing with some pickpocket, enjoying the vigour of their own indignation, which gave them the 'delightful freedom to be merciless towards one of their own fellow beings. When, by dint of impatient tooting of horn, our motor car reached the centre of the excited crowd, we found that the old municipal sweeper of our district was being beaten. He had just taken his afternoon bath and was carrying a bucket of

clean water in his right hand with a broom under his arm. Dressed in a check-patterned vest, with carefully combed hair still wet, he was walking home, holding his seven-year-old grandson by his left hand, when accidentally he came in contact with somebody, or something, which gave rise to this violent outburst. The boy was piteously imploring everybody not to hurt his grandfather; and the old man himself with joined hands uplifted, was asking forgiveness for his unintentional offence. Tears were streaming from his frightened eyes, and blood was smeared across his grey beard.

The sight was intolerable to me. I decided at once to take up the sweeper into my car and thereby demonstrate to the pious party, that I was not of their cult.

Noticing my restlessness, Kalika guessed what was in my mind. Gripping my arm, she whispered "What are you doing? Don't you see he is a sweeper?"

"He may be a sweeper," said I, "but those people have no right to beat him in this brutal manner."

"It's his own fault," Kalika answered, "Would it have hurt his dignity, if he had avoided the middle of the road?"

"I don't know", I said impatiently, "Anyhow, I am going to take him into my car."

"Then I leave your car this moment," said Kalika angrily. "I refuse to travel with a sweeper."

"Can't you see," I argued, "that he was just bathed, and his clothes are clean,—in fact, much cleaner than those of the people who are beating him?"

"He's a sweeper!" She said decisively. Then she called to the chauffeur, "Gangadin, drive on".

I was defeated. It was my cowardice.

Nayanmohan, I am told, brought out some very profound sociological arguments, at the tea-table, specially dealing with the inevitable inequality imposed upon men by their profession and the natural humiliation which is inherent in the scheme of things. But his words did not reach my ears, and I sat silent all through the evening.

1928—Madras.

THE KIND OF "PEACE" BRITAIN HAS GIVEN INDIA

(India's Pax-Britannica)

By J. T. SUNDERLAND

THERE lies before me as I write an old number of *The Atlantic Monthly*, dated June, 1908, containing an article, by Mr. J. M. Hubbard, on British Rule in India, in which I find, among much else of similar nature, the following statement regarding the great blessing of peace which the Indian people were alleged to enjoy as the result of the conquest and government of their country by Great Britain. Says Mr. Hubbard:

India is enjoying peace which has not been disturbed for 50 years; a peace which is not that maintained by force of arms, but which arises from pure contentment. Nowhere else in the world is there such contentment by people under a foreign yoke."

At the very time this article appeared, India was seething with discontent; all Bengal was boiling with excitement and indignation over Lord Curzon's Partition of the province; bombs were being thrown; there were arrests without warrant and imprisonments on every hand, and Lajpat Rai, because he had presumed to plead for a place for India in the Empire like that of Canada, had been seized and hurried away to imprisonment in Burma.

I call attention to these statements of Mr. Hubbard because similar utterances have been coming to us in great numbers for fifty years, all praising Great Britain's so-called Pax-Britannica in India. Indeed, nothing is urged oftener to day in justification of British rule there than the claim that that rule has rescued the Indian people from perpetual wars and bloodshed, and given them the great blessing of peace, such peace as they had not known for centuries, if ever.

Is the claim true? Was India a scene of perpetual conflict before the British came? Did Britain come bringing peace—such peace, such rescue from war and bloodshed, such security, and therefore, such contentment, as has justified her in the past and as justifies her to-day in robbing the Indian people of their freedom and holding them in forced bondage?

If Britain brought peace to India, was it peace only after forcing on her long and terrible wars, wars of conquest, wars bloodier than any she had ever known?

And if the British gave India *internal* peace, did they give her also *external* peace? Or did they force upon her participation in foreign wars, almost without number, which cost her the blood of hundreds of thousands of her sons?

Still farther. What was the *nature* of the internal peace, such as it was, which they gave India? was it of a kind which meant happiness, health, strength, sanitation of the country, freedom of the people, prosperity of the people? Or was it a peace which meant foreign exploitation of the country, neglect of education, neglect of sanitation, impoverishment and starvation of the people, loss of national freedom, enslavement and degradation of the nation?

Not all kinds of peace are better than war. Has the so-called peace which Britain has given India been better than war? Or has it been, as many Indians and not a few Englishmen believe, worse than any wars that India had ever known before the British came?

Let us see just what are the facts?

First, as to the condition of India before the British made their advent. Was that condition one of such war and bloodshed as the British represent?

So far as we can learn from the best historical records we possess, India, during most of its history before the British came, was more peaceful than Europe. For more than twelve hundred years—from the third or fourth century B. C. to the tenth A. D.—its leading religion was Buddhism, and, as is well-known, Buddhism has taught peace more strongly and secured it among its followers more effectively, during all its history, than has any other great religious faith known to the world.

At the time the British made their appearance in India there was unusual

tumult. The great Mogul Empire which had been the ruling power for several centuries was just breaking up. That, of course, caused, for a period, much conflict and bloodshed. The British took advantage of that, and by taking the part of one native state or one warring faction against another state or faction, secured such a foothold in the land as otherwise they could not have obtained. From this beginning they pushed on their conquests, by the use of much the same arts, until they had obtained supremacy everywhere. But it cannot be too strongly affirmed that much of the time before the British came, India was better fitted to teach peace to Europe than any European nation was to teach peace to her.

It is true that from time to time in its past history India had had wars on a more or less extensive scale between states or provinces or cities or native princes, much like the wars during the Middle Ages between the states and dukedoms and princes of Germany and France and Italy and England, and occasionally she had suffered more or less serious raids from outside like the cruel border raids of Scotland, with at long intervals a temporary great and devastating raid such as that of Nadir Shah. But never, in all her history, had she experienced any wars involving such vast destruction of life and property as the Thirty Years War of Germany, or the wars of Napoleon, or even the Civil War in the United States: and as to the Great War in Europe of 1914 to 1918, she had never known anything in any way to be compared with that.

Indeed, the bloodiest wars India has experienced in modern times, if not in all her history, have been those which the British themselves forced upon her, first those fought to conquer the country, lasting almost a century, and then, later,—that connected with what the British call the "mutiny" or "Sepoy Rebellion" but which the Indians call a "War for Independence." Said the London *Spectator* of April 27, 1910: "We took at least 100,000 Indian lives in the Mutiny." But that was only one war and a very short one; the number of Indian lives taken in the wars, and wars following wars, of conquest, was many times greater, reaching into the millions.

The world has little conception of the amount of Indian bloodshed in the long succession of wars waged by the British

to subdue all the different Indian peoples and states,—wars continuing on for nearly a hundred years, from Clive's battle of Arcot in the south in 1751, to General Gough's battle of Gujrat in the North-west in which the brave Sikhs were finally crushed in 1849. And it should not for a moment be forgotten that on the part of the British these wars were pure aggression—fought to gain forcible possession of a country to which they had no right; whereas on the part of the Indians, they were all patriotic wars, fought against invaders, fought to retain control of their own land.

British historians of India, desiring to justify their country before the world for conquering a great civilized nation and holding it in subjection, are wont to pass lightly over the terribly sanguinary character of these wars. Says Dickinson:

"We (the British) are accustomed to consider the battle of Waterloo one of the most sanguinary ever fought: yet the losses in some of our Indian battles of conquest were about double the loss at Waterloo. The loss in our Sutlej battles in 1816 was much more severe than that of Waterloo."

Does it become a nation, which, on coming to India, proceeded for a hundred years to pour out India's blood in such torrents, to boast of bringing her peace?

But not only did Great Britain shed rivers of Indian blood in conquering the country and later in putting down the so-called "Mutiny" of 1858, but from the very first until the present time she has all the while compelled (virtually compelled) Indians in large numbers to serve in her armies, in carrying on wars largely of aggression and conquest, many of them on borders of India, against neighboring peoples, to gain possession of their territory, and others in distant lands to enlarge or strengthen the British Empire there.

Notice first the almost continuous nearer wars which the British have fought (or forced their Indian soldiers to fight) along the borders of India to conquer contiguous peoples so as to annex their lands.

I wonder if my readers are acquainted with John Morley's description of the way which Great Britain, during all her history in India, has been constantly encroaching on her neighbors. Not only is it very illuminating, but it is especially interesting as coming from one who for some years was the Secretary of State for India in the British Cabinet. He calls it "The Rake's Progress."

Writes Morley :

"First, you push on into territories where you have no business to be, and where you had promised not to go; secondly, your intrusion provokes resentment, and resentment means resistance; thirdly, you instantly cry out that the people are rebellious and that their act is rebellion (this in spite of your own assurance that you have no intention of setting up a permanent sovereignty over them); fourthly, you send a force to stamp out the rebellion; and fifthly, having spread bloodshed, confusion and anarchy, you declare, with hands uplifted to the heavens, that moral reasons force you to stay, for if you were to leave, this territory would be left in a condition which no civilized power could contemplate with equanimity or with composure. These are the five stages of the Rake's Progress."

In other words, these are the steps by which Great Britain has insidiously and persistently extended the bounds of her Indian Empire.

A lurid light is thrown upon all this (that is, on the way Britain has given India "peace") by a Parliamentary Report made in 1899 in the British House of Commons, on the demand of John Morley, showing just how many of those border wars there have been, in what localities and their exact nature. The Parliamentary Report revealed the amazing fact that during the 19th century Great Britain actually carried on, in connection with India, mainly on its borders, not fewer than one hundred and eleven (111) wars, raids, military expeditions and military campaigns. Think of this almost unbelievable number—nearly all, as Morley makes clear, wars and raids of pure aggression. Of course, more or less plausible excuses or pretexts were always found to justify them, a "quarrelsome neighbor," "a dangerous neighbor" a neighbour that had encroached upon India in some way and needed to be "punished," the necessity for a "better" or "more natural" or "scientific" "boundary" or "frontier" for India, etc., etc. But with scarcely an exception, their real object was to grab new territory.

Upon whom did Britain put the burden of carrying on these wars and campaigns—the burden of fighting those battles and shedding this blood? Mainly the Indians. And, why not? For was not Indian blood cheaper than that of Englishmen? But was it a great Benefit to India, a great improvement over former conditions, for the Indian people to be thus saved from local conflicts such as they had formerly known—from local wars, longer or shorter, of Indian States against Indian States and Indian

Princes against Indian Princes,—and instead to be compelled to lose their lives in these British wars after wars, and campaigns after campaigns, almost without ceasing, against neighboring peoples and nations, and all for the purpose of increasing the territory and augmenting the power of their foreign conquerors and masters?

It will be illuminating if I give a list of the wars and campaigns, most of them on the borders of India but some of them far away, carried on by Great Britain during the last half of the nineteenth century (from 1859 to 1900), campaigns and wars in which Indian troops were compelled to fight, in many cases to do the main fighting. The list, not quite complete, is as follows:

Two wars in distant China, in 1860 and 1900; the Bhutan War of 1864-65; the distant Abyssinian War of 1868; the Afghan War of 1878-79; after the massacre of the Kabul Mission, the second Afghan War of 1879-80; the distant Egyptian War of 1882; the Burmese War of 1885, ending in the annexation of Upper Burma in 1886; the military expedition to Sitana, 1858, on a small scale and on a large scale (the Sitana Campaign) in 1863; to Nepal and Sikkim in 1859; to Sikkim in 1864; a serious struggle in the North-west Frontier in 1868; military expeditions against the Lushais in 1871-72; against the Nagas in 1875; against the Afridis in 1877; against the Rampu Hill tribes in 1879; against the Wuziriz and Nagas in 1881; against the Akhas in 1884; a military expedition to the Zhob valley in 1884; a second to the same valley in 1884; military expeditions against Sikkim against the Akazais (the Black Mountain expedition), and against the Hill Tribes of the Northeast in 1888-89; another Black Mountain military expedition in 1890; a third in 1892; a military expedition to Manipur in 1890; another military expedition against the Lushais in 1891; one into the Miratzen Valley in 1891; the serious Tirah Campaign in which 40,000 men were engaged, in 1897-98; the military expedition against the Mashuds in 1901; that against the Kabalta in 1902; the invasion of Tibet in 1901. To these should be added the sending of Indian troops to distant Malta and Cyprus in 1878, and the expenditure of some \$10,000,000 in military operations to face what was described as the "Russian Menace" in 1884.

Let it be noted that this list, almost

unbelievably long as it is, includes none of Britain's wars or military expeditions, some of them of large magnitude and importance in which Indian soldiers had part, occurring in the nineteenth century *Previous to the year 1859*, nor, of course, does it include any of the wars fought by Great Britain (largely with the aid of Indian troops) in the *twentieth century*, culminating in the Great War of 1914 to 1918, in which the soldiers of India did remarkably effective (and sanguinary) fighting in France, Palestine, Syria and Mesopotamia. But the list is sufficiently full to show how almost constantly Great Britain has been carrying on wars during all her Indian history—some of them to enlarge the boundaries of India and some in distant parts of the earth all of them fought purely *in the interest of the British Empire* not one of them fought *in the interest of the Indian people*, yet *India's sons compelled to do a large part of the fighting, suffering and dying!**

1. Buddhist and Jaina cave-temples and those of other sects. The earliest Jaina caves are those on the Khandagiri and Udayagiri hills near Bhubaneswar in the Puri District of Orissa. Here there are two classes of caves: (a) Temples or shrines and (b) dormitories. The dormitories are exactly similar in arrangement to the great Buddhist dormitories at Karla and Bhaja in the Poona district, Pandulena in the Naxik district, Kanheri in the Thana district of the Bombay Presidency and those at Ellora and Ajanta in the Nizam's dominions. In the dormitories of the Khandagiri and Udayagiri caves there is a stone bench running along the back and the side walls of the verandah, benches for sleeping with one end raised in the cells and arrangements for other creature comforts. It is the absence of such arrangements in certain caves which enable us to recognise

So much then for *one side* of the *Pax-Britannica* which Great Britain has given India, a side which Britain persists in calling "peace," but which India calls very bloody and terrible wars.

There is *another side*. Is it any better? Has it brought any more good, any less

suffering, or any less loss of life to the Indian people, than the cruel *war side* has done?

We have already said, there are kinds of peace that are worse than war. Has Britain given India such peace?

Practically all Indian authorities and also many eminent Englishmen deny that India's *Pax-Britannica* has been on the whole in the sum total of its effects any more a benefit to the Indian people than was the old *Pax-Romana* a benefit to the nations of the ancient Mediterranean world. Why was not that Roman peace a good? Because it was created by force. And therefore, as is now recognized, it was really a peace of helplessness, of emasculation, a peace of nations reduced to such weakness, exhaustion and poverty, such loss of men and resources, such destruction of courage and hope, such physical, intellectual and moral decadence, that it was simply impossible to them to fight longer, and they were, therefore, compelled to submit and become subjects and political slaves of Rome. Looked at superficially and as to its immediate and temporary effects, the *pax Romana* may have seemed a good. But looked at deeply, as we look at it to-day in the light of history, it is seen to have been a terrible calamity. Instead of advancing the progress of the nations concerned, it arrested their progress, probably for several centuries.

Peace caused by intelligence, justice and goodwill is always a good. It always tends to produce progress and civilization. But peace caused by force by war, by destroying the ability of nations to fight, by reducing nations and peoples to such a degree of poverty, helplessness, emasculation and despair that they cannot fight,—such a peace in the very nature of things is an evil—an evil far outweighing any seeming or superficial good that men may associate with it.

It is *in this light* that intelligent students are more and more judging, and that future generations will *wholly* judge, the lauded *Pax-Britannica* which by blood and slaughter, by all the horrors, ravages and destructions of war Great Britain has forced upon the Indian people.

Just what kind of an India has Britain's lauded "peace" produced? The answer is seen in India's lack of enough schools and education, in her want of sufficient sanitation, in her unparalleled poverty (according to British high authorities one-third of her

* In the light of such revelations as these, one can hardly wonder at the words of Richard Cadden: "We British have been the most aggressive, quarrelsome, warlike, bloody nation under the sun."

† Sarojini Naidu.

population never knowing what a full meal is), in the untold millions of Indian men, women and children who have died from famines, from plague, cholera, fevers, influenza, malaria and other preventable diseases, who need not have died if the enormous sums of money spent by the government for militaristic and imperialistic ends and needlessly paid to foreigners in the form of fat salaries and pensions, had been expended for India's good for her prosperity, intelligence and health.

Says the *Modern Review* of Calcutta (December, 1920, p. 675):

"England claims to have given India the benefits of 'undisturbed peace.' Our reply is: 'What kind of peace has it been? What has it brought to India? Not only has India's blood been poured out in rivers at home and abroad, but India to-day is poorer, more illiterate, more famine-stricken, more disease-ridden, and inhabited by a worse fed and physically weaker population than any civilized country in these continents. During the many decades of this 'undisturbed peace' which England has blessed us with, India has lost more of her population by death than any other equally populous area on the earth even where peace has been most disturbed and wars worst."

Let me give some terrible facts about the single matter of birth and death-rates in India as compared with other lands. The average annual death-rate in England is only 13 per 1,000 of the population, and in the United States only 12 per 1,000. But in India, it is from 24 to 25 per 1,000, or fully twice as great. The average expectation of life (length of life) in England is 48 years, and in the United States 56 years. In impoverished India, it is only about one half as long.

Who can estimate how many millions of unnecessary deaths this means annually? And to this loss should be added, as a British writer has pointed out, "the incidental suffering of those who die, the widows and orphans and other dependent ones left to suffer as the result of the death of heads of families. Also the loss of productive energy, to the country."*

The high death rate in India is sometimes attributed to climate and sometimes to malaria. But Lt. Col. Dunn, of the Indian Medical Service, says this is incorrect. He declares that if the laws of health were regarded in India to the same extent as in England, and if the same proportion of public money was spent on sanitation, the

death-rate in India would be no larger than in England. He avers that one-half of the death-rate is preventable, being due to the want of public health provisions, and the poverty and starvation of the people.

Consider malaria, which causes more suffering and larger numbers of deaths in India than anything else except poverty and famine. Arnold Lupton, an Englishman who speaks with authority, says in his recent book, "Happy India:—"

"What a magnificent country India would be if only its malaria were abolished! And I am quite certain of this, that if instructions were given to the engineers in the employ of the British government in India to abolish malaria, and if they were allowed the requisite sums of money, they would soon make a great change. The banks of the Panama Canal were made into a place that could be visited as a sanatorium in consequence of the successful effort of the American engineers in charge to abolish malaria; and the malaria of the Panama Canal was the deadliest kind the world has ever known. If only the rulers of India could give their minds to those questions which concern the lives and health, and well-being of the people, the Burmese War of 1885, ending in the annexation of Upper Burma in 1886; the military expedition to Sitana, 1858, on a small scale and on a large scale (the Sitana Campaign) in 1863; to Nepal and Sikkim in 1859; to Sikkim in 1864; a serious struggle in the North-west Frontier in 1863; military expeditions against the Lushais in 1871-72; against the Nagas in 1875; against the Afridis in 1877; against the Rampu Hill tribes in 1879; against the Wuziriz and Nagas in 1881; against the Akhas in 1884; a military expedition to the Zhob valley in 1884; a second to the same valley in 1884; military expeditions against Sikkim, against the Akazais (the Black Mountain expedition), and against the Hill Tribes of the Northeast in 1888-89; another Black Mountain military expedition in 1890; a third in 1892; a military expedition to Manipur, are honest and fair-minded, how can we avoid asking the questions: How great a boon to India has Britain's boasted 'pax-Britannica' been? Even if Britain has saved India from the loss of some thousands or tens of thousands of lives in internal wars, does that atone for or should it hide from our view, the vastly greater number of Indian lives she has destroyed in her border and foreign wars, and, above all the uncounted millions who have perished at home for starvation and disease, for whose deaths she is largely responsible?

Some years before his death, William

* *Indian Journal of Economics*, January, 1924.

Jennings Bryan made a visit to India to study conditions there. After his return, he wrote and published a pamphlet on British Rule and Its Results, in which he said: "The British have conferred some benefits on India, but they have extorted an enormous price for them. While they have boasted of bringing peace to the living, they have led millions to the peace of the grave."

Says Mahatma Gandhi, and no man weighs his words more carefully than he.

"The kind of peace which British rule has brought to India, has been worse than war."

As has already been said, Rome had her *Pax Romana*. It was the prototype of England's "*Par Britannica*" in India. The historian Tacitus in describing that of Rome wrote the grim sentence, *Solitudinem faciunt pacem appellant*. Indian scholars employ this sentence of Tacitus to describe the work of the British in India, translating it, "They have made a grave-yard, and they call it peace."

NON-BUDDHISTIC CAVE-TEMPLES

By R. D. BANERJI

THERE is a big interval between the early Buddhist and Jaina cave-temples and those of other sects. The earliest Jaina caves are those on the Khandagiri and Udayagiri hills near Bhubaneswar in the Puri District of Orissa. Here there are two classes of caves; (a) Temples or shrines and (b) dormitories. The dormitories are exactly similar in arrangement to the great Buddhist dormitories at Karla and Bhaja in the Poona district, Pandulena in the Nasik district, Kanheri in the Thana district of the Bombay Presidency and those at Ellora and Ajanta in the Nizam's dominions. In the dormitories of the Khandagiri and Udayagiri caves there is a stone bench running along the back and the side walls of the verandah, benches for sleeping with one end raised in the cells and arrangements for other creature comforts. It is the absence of such arrangements in certain caves which enable us to recognise the shrines.

The cave-temples excavated by the great Maurya Emperor Asoka and his grandson Dasaratha on the Barabar and Nagarjuni hills in the Gaya district were intended for the occupation of monks of the Ajivika sect. The Ajivikas were a sect which flourished in the 5th or the 4th century B.C. They are known to us from the inscriptions in these caves and Jain and Buddhist literature. We do not know for what reasons cave-temples were dedicated for their use by the Maurya Emperors, because some of these caves in

the Gaya district are really shrines, consisting of a round hut shaped chamber with another, perhaps a verandah, in front. Their sole decoration consisted of the brilliant polish of the severely chaste walls. From the point of view of architecture they are interesting because they have recorded in stone the primitive type of the Ajivika or the Non-Buddhist temple. In Buddhism the *Stupa* or the *Chatya* is round and any structure intended to contain a *stupa* at one end must necessarily be with a rounded end. But we cannot understand, after the lapse of 22 centuries, what was the necessity of perpetuating the overhauling roof of the Bengali or Bihari straw-thatched round hut. The cave-temples of the Gaya district excavated by Asoka possess narrow and plain entrances but those excavated in the first year of the reign of Dasaratha show a very narrow porch in front of the door. The only cave in the Barabar and Nagarjuni group which bears any kind of ornamentation is the Lomas Rishi cave, but unfortunately it bears no inscription and consequently it can not be dated as precisely as the six remaining ones of this group. The interior was only partly finished and the slightly inclined vertical section of the walls with their brilliant polish in patches prove that its date cannot be far distant from the Sudama or other caves. The most important part of this cave is its facade. On it is an elaborate bas-relief representing one end of

Facade of Cave No. IV (Vaishnava cave) at Badami, Bijapur Dist., Bombay Presidency

a long wooden hut with a thatched roof. Like the facades of the great Chaitya-halls of Karla or Kanheri it is an exact reproduction of wooden architecture in stone, down to the very nails. We see a hut on a double row of massive square wooden posts, with wooden rafters in the ceiling, the ends of which are so heavy as to hang low on the sides. The opening at the end of this hut is filled up with three semi-circular wooden beams, the interspaces between the first pair of which are filled up with *jali* or *jafri* work and the second with a bas relief, a procession of elephants. The plain entrance of the cave was excavated under this triple *torana*.

There is no such continuity in Jain caves which we find in the case of Buddhist caves. There are Jain caves at Badami in the Bijapur district, at Maungya Tungya in the Nasik district and at Ellora in the Nizam's dominions, but they are eight or more centuries later than the earliest Jain caves on the Khandagiri and Udayagiri hills of Orissa. Even the later group of Jain caves on the Khandagiri are at least eleven hundred years later in date than the great Rani Nur Gumpha excavated

by Kharavela, king of Kalinga. All later Jain caves are shrines and not dormitories and therefore one may be allowed to state that the custom of living in caves appears to have fallen into desuetude after the birth of Christ. Portuguese writers have recorded that Buddhist monks were living in the Koureri caves even towards the end of the sixteenth century.

Like Hindu temples Hindu caves are much later in date than Buddhist ones. The oldest Hindu cave is cave No. I at Elephanta. There may be older Hindu caves in existence but either we have no data to identify them as such or to date them as precisely as we can date the Kailasa cave at Ellora or Mangalesa's cave No. IV at Badami. It is only recently that the chance discovery of a stray inscription on a metal vase in the pool of water in the right wing of the great cave or cave No. I at Elephanta which enables us to fix its locality and date precisely. The great Trimurti, the principal bas-relief, in this cave, has long been recognised as the most expressive stone carving in India, but before the date of cave No. I was precisely known, it could not be classed as one of the earliest types of the

Facade of Cave No. I, (Saiva cave) at Badami, Bijapur Dist. Bombay Pre-idency

Hindu cave-temple proper. Cave No I at Elephanta is a large open hall, decorated with a number of huge bas-reliefs. There are two wings on two sides, of which the right one was left incomplete. But in the main hall and the left wing the object of worship was not the great Trimurti or other bas-reliefs but a stone *linga* in a plain square shrine. In the main hall of cave No. I this shrine was not placed in the centre but slightly to the right, because the architect found that if it were placed in the centre then it would obstruct the view of the magnificent central bas-relief from the entrance. We may ask why the great Trimurti was not regarded as the presiding deity of this cave-temple? The answer is only partially ready. Hindu worship requires *pradakshina* or circum-ambulation. All the bassi-reliefs being carved out of rock walls circum-ambulation was impossible in their case. So the Trimurti, the marriage of Siva, the attempt of Ravana to carry away Kailasa and other magnificent bas-reliefs of this cave are simply decorative features. The sanctum was the simple square cell slightly to the right, open on all sides, undecorated save for the

magnificent figures of the great Dvarapalas containing the symbol of virility. In the left wing also there are bas-reliefs but the sanctum is a square plain cell provided with a path of circum-ambulation. When we come to consider the plan of the earliest structural Hindu temples of Northern India then we shall be able to understand why the architect of this great cave-temple was forced to leave this passage and for what reasons the sanctum in the main hall of this cave is not exactly in the centre of the hall or of the rear wall. Later on, in the 6th century it became the fashion to have a second image for circum-ambulation in front of the sanctum in Hindu cave-temples. Therefore in the period of the Early great Chalukyas of Badami, the sanctum remained a mean insignificant dark chamber behind the rear wall in front of which were excavated a large open hall with the path of circum-ambulation separated from its centre by rows of pillars. This is the plan of the two Vaishnava-caves at Badami the cave-temple at Athole, later cave-temples on Elephanta island and the Saiva cave at Badami. The same plan has been followed

to a very great extent in the solitary Jaina cave at Badami. I could not understand the cause of the peculiar position of the sanctum in the main hall of cave No. 1 at Elephanta before the discovery of the early Gupta temples of Bhumra * and Nachna Kuthara † and the excavations of caves II-V on Elephanta island ‡. The same idea prevails in the

ted. It is now known to be a monument of the time of the early Rashtrakuta king Krishna I and therefore belongs to the last decades of the eighth century A.D. In plan it is an excavation open towards the sky, consisting of a temple surrounded by an open courtyard on all sides. The fourth side has been enclosed with a porch constructed afterwards.

The main-shrine in Cave No. I, right side of the pillared hall, Elephanta near Bombay

Monolithic temples at Mamallapuram in the Chingleput district of Madras as well as in the earlier group of structural Chalukya temples at Aihole and Pattadakal, to which reference will be made subsequently. In the case of the later Hindu caves of Western India, we find that the same idea led to the evolution of the plan of the great Kailasa temples at Ellora. The Kailasa is partly constructed but for the greater part excava-

Surrounding the courtyard, on three sides, there are galleries along the rock surface, partly single storied, and partly double storied. The rear or side walls of these galleries are covered with bas-reliefs. The main temple, though excavated out of the rock, rises free in the centre of the courtyard in the same fashion as any other mediæval temple. In this particular respect the Kailasa is different from all other Hindu cave-temples except the cave-temple of Dharmaratha at Dhamnar in the Rampura-Bhaupura district of Indore State and the Kholvi temple in the Jhalawar State. The only difference between the Kailasa temple and that of Lingaraja at Bhuvaneswar is that while the former is carved out of the

rock the later is constructed of stone masonry. At Kailasa the sanctum or the main shrine is not on the ground level but at the height of the second story. It follows the general principle laid down by early Chalukyan architects in having a central *mandapa* where the *Chala murti* or movable-image could be placed. On three sides of the central *mandapa* there are three open porches or *Ardha-mandapas*, the fourth being occupied by the sanctum. In another respect the Kailasa differs from most of the Hindu cave-temples of Northern and Southern India; it possesses a spire of the South-western or Chalukyan type, but of this also we shall have to speak at a later stage. In the Kailasa therefore we see the termination of the evolution of a rock-cut Hindu temple the first stage of which we can see in the Central Hall and the left wing of cave No. 1 at Elephanta.

From the point of view of the architect mediaeval cave-temples are less interesting than the earlier ones. There are very large Hindu and Jain cave-temples at Ellora and in fact they occupy more than two-thirds or the entire rock-surface but with the exception of the Kailasa very few of them are of

any interest except to the artist. We have seen that the Kailasa is a cave-temple but of quite a different type from cave No. 1 of Elephanta or caves I IV at Badami, because it is a copy of the stone built early Chalukyan temples, examples of which are still to be found on the top of Badami fort. The remaining Hindu and Jain temples at Ellora are also copies of stone built temples. There are large and elaborate excavations like the Rameswara or the Dasavatara cave at Ellora and there are large and iconographically important bas-reliefs in them, but a close observation will show that in plan and elevation they are merely copies of regularly built temples. Just as the architect, who designed the Karla or the Kanheri Buddhist cathedrals copied wooden architecture, so the ninth century architects of Ellora copied stone-built temples in designing rock excavations on a large scale like the Dhumar Lena or the Indrasabha. The only part of a Mediaeval temple which one misses is the beginning of the Sikhara or the spire. Except in free standing excavations like the Kailasa or the great Dharmanatha at Dhamnar the Sikhara is omitted from the designs of later mediaeval architects. In Hindu caves as well

rock the later is constructed of stone masonry. At Kailasa the sanctum or the main shrine is not on the ground level but at the height of the second story. It follows the general principle laid down by early Chalukyan architects in having a central *mandapa* where the *Chala murti* or movable image could be placed. On three sides of the central *mandapa* there are three open porches or *Ardha-mandapas*, the fourth being occupied by the sanctum. In another respect the Kailasa differs from most of the Hindu cave-temples of Northern and Southern India; it possesses a spire of the South-western or Chalukyan type, but of this also we shall have to speak at a later stage. In the Kailasa therefore we see the termination of the evolution of a rock-cut Hindu temple the first stage of which we can see in the Central Hall and the left wing of cave No. 1 at Elephanta.

From the point of view of the architect mediaeval cave-temples are less interesting than the earlier ones. There are very large Hindu and Jain cave-temples at Ellora and in fact they occupy more than two-thirds of the entire rock-surface but with the exception of the Kailasa very few of them are of

any interest except to the artist. We have seen that the Kailasa is a cave-temple but of quite a different type from cave No. 1 of Elephanta or caves I IV at Badami, because it is a copy of the stone built early Chalukyan temples, examples of which are still to be found on the top of Badami fort. The remaining Hindu and Jain temples at Ellora are also copies of stone built temples. There are large and elaborate excavations like the Rameswara or the Disavatara cave at Ellora and there are large and iconographically important bas-reliefs in them, but a close observation will show that in plan and elevation they are merely copies of regularly built temples. Just as the architect, who designed the Karla or the Kanheri Buddhist cathedrals copied wooden architecture, so the ninth century architects of Ellora copied stone-built temples in designing rock excavations on a large scale like the Dhumar Lena or the Indrasabha. The only part of a Mediaeval temple which one misses is the beginning of the Sikhara or the spire. Except in free standing excavations like the Kailasa or the great Dharmagatha at Dhamnar the Sikhara is omitted from the designs of later mediaeval architects. In Hindu caves as well

as the great Jain caves at Ellora one sees *mandapas* or pillared halls along the sides of which run great stone benches, very often in two different stories, which remind one of the benches in the *mandapas* temples of Khajuraho and Sohagpur in Central India. Another feature of these later mediaeval Hindu and Jain cave-temples is the attempt to decorate the surfaces of facades of these great excavations.

This feature is altogether absent at Elephanta, Badami, Aihole or Mandapesvara. A word about Mandapesvara would not be out of place here. Mandapesvara of Montpezir is the name of a small village in the Thana district of the Bombay Presidency. Originally there was a *Saiva cave-temple* at this place. After the Portuguese conquest of Salsette this temple was converted into a Roman Catholic shrine. There are magnificent bas-reliefs in the Montpezir caves which prove that a portion of it must be of the same date as the great cave No. I of Elephanta and cave Nos. II and IV of Badami. Unfortunately the village *Cure* used this cave as his stable and therefore photographs were not possible, but the descriptions of other visitors prove that Mandapesvara was an important Hindu establishment before its forced conversion to the Roman Catholic faith. Very few visitors to Bombay, who undergo enormous trouble to visit the Kanheri caves from Borivli on the B. B. C. I. Ry., even know that there are wonderful rock carvings at Montpezir and those that actually go to the place are diverted by the guides to the hideous whitewashed Portuguese monstrosities on the hill just above the old cave.

At another place close to Bombay there is another mediaeval Hindu cave-temple which proves that later mediaeval architects copied constructed temples in designing rock excavations. This is the big cave at Jogesvari near Andheri on the B. B. C. I. Ry. In it we see the mediaeval temple shorn of all its dignity and a mere copy of a stone built temple with a *Mandapa* and *Archa-mandapas*. There are no bas-reliefs, no ornamentations and no attempt to relieve the dull monotony of the exteriors of mediaeval shrines. Here one may imagine that he is inside the temple of Gondarara at Sinnar in the Nasik district or the Western Chalukyan temples at Gadag or Halebidu in the Dharwar district. In such temples exterior ornamentations are possible only in the facade but in this cave the

triple storied facade is dull and undecorated. The plain surface of the left wing as well as the front is very slightly relieved by the introduction of plain pillars and pilasters. These are not the only instance of undecorated hideous exteriors. The Jain caves of Western India, later in date than the latest Jain cave at Ellora are typical examples of copies of stone-built temples. These Jain caves extend from the Satpuras to the Anaimalai hills in the extreme South, and all of them belong to the Digambara sect of the Jainas. The twelfth and thirteenth century caves on Maungya and Tungiya peaks in the North Western part of the Nasik district serve as typical examples. My attention was drawn to the Maungya Tungiya caves by Mr. A. H. A. Simcox, I. C. S., (ret'd.), at one time Collector of Nasik, immediately after the Malegaon riots. These two peaks are very close to the hill forts of Sulher and Mulher now belonging to the Baroda State and celebrated in Maratha history. The caves were excavated near the top of these two peaks and are almost inaccessible. The nearest Railway stations are Manmad on the G. I. P. and Nandurbar on the B. B. C. I. Ry. All of these caves are simple square excavations on the hill side. There are no pillared halls and *mandapas*, no attempts at decoration or dignity. There are images of Tirthankaras on the walls but nobody would venture to call them objects of art. Yet the Jain pilgrim marches along the long road from Manmad to Satana and climbs the dangerous steps for nearly 2000 feet to see these caves. All Jain caves in the Belgaum, Dharwar, North Kanara, Hassan and Bellary districts are of this severe and unpretentious type, which differ from cave No. V or the Jain cave at Badami by being most conspicuously hideous and without any settled plan or design. In fact the best Jain caves in the whole of Western India are those at Badami and Ellora.

We can deduce a principle on the basis of which our later mediaeval Hindu temples were evolved. The oldest Hindu cave temples are those at Elephanta and Badami. In Northern India the Chandragupta cave and the great Varaha cave near Bhilsa in the dominions of the Maharaja Scindia of Gwalior must also be included in this group. Analysis proves that there are two divisions among these cave-temples. In the first division must be placed the central hall of cave No. I at Elephanta and its left wing.

Cave-temple of Virasena of Pataliputra, minister of the Emperor Chandragupta II at Udayagiri near Bhilsa, Gwalior State

The remainder, e. g. caves I-IV at Badami, caves II-VI at Elephanta, the caves at Mandapavara or Montpezir, and most of the Hindu rock-cut temples at or near Bhilsa must be placed in the second division. The characteristic, common to both groups, is the decoration of the interiors by means of bas-reliefs and the absence of surface or facade decoration. Cave No. I at Elephanta and its left wing are slightly earlier in date than the right wing at the same place and caves II-VI. In this cave and in its left wing we see the provision of a path for circum-ambulation round the sanctum. In the main cave the indetermination of the architect is proved by the irregular position of the sanctum. The same architect or his successor remedied the defect in the left wing where the great bas-reliefs are given comparatively inconspicuous positions. In the second group of Hindu cave-temples the architect gets over the difficulty of providing a path of circum-ambulation by designing a verandah in front with an open but much larger pillared hall behind it for circum-ambulation around a moveable image to be placed on a slight eminence in the

centre of the hall. He provided for the non-moveable image (*Achala sthapanā*) by excavating a small dark plain cell behind the pillared hall. The architect thus obtained full scope for the display of the decorative motifs and the great bas-reliefs in this fashion at Badami, Aihole and Udayagiri near Bhilsa. But this design was rejected by Rastrakuta architects towards the close of the eighth century. They kept the bas-reliefs and the double path of circum-ambulation, but introduced a copy of a structurally built temple by imitating the spire. The pillared hall is not decorated with great bas-reliefs, which are placed around the base of the sanctum on the ground floor or at a distance, in the rock surfaces of the galleries. Art is still in the forefront and there exists, perhaps except for the great Trimurti at Elephanta, no finer *chef d'oeuvre* than the *Ravanavagraha* bas-relief of Kailasa, in which the depiction of terror on the face of Parvati, the benign indifference of Siva and the Herculean toil of Ravana betrays the work of a great master and makes the total effect unsurpassed in the history of Indian sculpture. The bas-reliefs continue

to be used for decorative purposes in later Rastrakuta specimens of Hindu cave-temples but the sense of propriety in display seems to have become gradually blunted in the

architects as they receded in date from the model of the Kailasa.*

INTERNATIONAL RELATIONS IN CONTEMPORARY EUROPE

BY PROF. SAILENDRANATH DHAR, M. A.

SOVEREIGN states, in their relations with one another, are not dependent on any code of laws and do not necessarily bind themselves by ethical or moral rules. International relations, therefore, very seldom present themselves as a uniform, consistent and coherent march of events, and thus do not admit of easy and methodical treatment by the political annalist. States, however, like organic lives, have a few simple cardinal instincts, and it is possible to interpret their whole history as a development of the imperative necessities of self-preservation, self-perpetuation and self-aggrandisement, which are the motive forces of evolution. On the other hand, as man is a compound of both body and mind, so states have sometimes attempted to transcend their natural and traditional limitations and guide their conduct in the interests of international welfare and cosmopolitan brotherhood. As yet, however, internationalism and cosmopolitanism have but little influence on the course of human history and the elemental and primitive forces have their full sway.

The first imperious necessity is existence, which involves defence against actual and potential enemies by all means possible, doing too much rather than too little. "Safety first" is a recognised principle in international politics, on which the last word has not yet been said after the greatest war in history. The bloody record of national and racial self-consciousness reflects the instinct for self-preservation. The other two instincts, viz., self-perpetuation and self-aggrandisement have their full play in human history and have produced generals and warriors, armies and slaves, empires and protectorates, civilisations and wars. In our study of the European history of the last few years, we

shall examine numerous illustrations of these processes. In many cases these imperative needs and requirements have been frankly proclaimed and have been clearly and broadly set forth; in many more cases, however, they have been confused with each other and have been sought to be hidden under a cloud of pious impulses, shibboleths and idealism. The last great war, for example, arose in a frank spirit of economic imperialism. German violation of Belgian neutrality enabled England to claim that she entered the war for the preservation of the sanctity of international obligations and the rights of minor nations. America entered the war for the principle of self-determination and the war finally ended, on the dissolution of the empires of Russia, Austria, and Germany, on the note of making the world safe for democracy. Even within the last few years enough has happened to enable us to test the genuineness of these pretensions.

The active principles of international politics are those that reflect man's desire to better himself, to add to his possessions, to develop his personality. All this the West has sought to achieve by methods which involve the use of force; hence, the history of European progress has been full of wars. I do not say that in this respect there is any practical distinction between the East and the West; but the East has at least cherished the ideal of progress through service and self-effacement, which the West derides too hastily as synonymous with passivity and weakness. The history of modern Europe, says Lord Acton, is the development of revolution. Scarcely any modern state but has a long record of war and revolution. The Middle Ages practised private war. Economic war has existed for

centuries, definitely, it is believed, since the Peace of Westphalia (1648). Social war, with class arrayed against class, poverty against wealth, inferiority against privilege, was known to Greece and Rome, and to Europe in the Middle Ages, besides the recent examples of the French Revolution and the Russian Revolution. Religious war is a category of its own and one of the most horrible pages in history.

The capitalistic organisation of the social system of Europe, like its political counterpart, is based on force and is the manifestation of the human instincts of self-aggrandisement and domination, which are the motive forces of human history. The constant struggle for control of markets and trade, the occasional collisions of rival nations competing for raw materials are but the political corollaries of the capitalistic organisation of the nations of Europe. The great phenomenon of modern history, viz, the expansion of Europe, whereby the nations of the West are spreading their economic and political grip over the world is but the logical outcome of the Industrial Revolution which is but the expansion with the aid of science and human ingenuity of the primitive systems of production and distribution. The allied interventions in Russia after the last great war, the Japanese warfare in Siberia in 1918-22, the struggles of 1926 for the mining resources of the Rif, the oil of Mosul, the cotton of Syria, the trade and concessions of China, and many other struggles which are happening before our own eyes simply bear witness to the fact that the cardinal needs of man are the main springs of his political actions and are the governing forces in international relations though these may be clothed in suitable diplomatic language and represented as noble idealisms, such as "the white man's burden", "the sacred trusts of civilisation" etc.

The foreign policies of the leading states of Europe bear upon them the stamp of the economic and material needs of their peoples, and the influence of the needs of various nations upon one another. The foreign policy of Great Britain, for example, is governed by the following simple propositions: (1) that she is an island, (2) that she is a highly industrialised nation constantly in need of markets, (3) that there is only six weeks food for the people in the British Isles, and (4) that she has to depend upon foreign and overseas markets not only for

the food she eats but in many cases for raw material. The paramount interests of her trade are secured by the acquisition of strategic positions, such as Gibraltar, Bermuda, Singapore, etc., and the ever-vigilant policy of the British Foreign Office.

France, which unlike Great Britain, is a peninsula bulging out from the mainland of Europe and is nearly a self-contained economic unit has not had the same urgency as also the same opportunity for colonial and maritime expansion, though her position on the Mediterranean has enabled her to dominate Northern Africa and Syria, and her navy was not an inconsiderable enemy of England's in the eighteenth century. Her strategic position on land has given her more than once the hegemony of Western and Central Europe. Possessing, however, a stable population of forty millions and faced by Germany's constantly growing population of over sixty millions, her foreign policy is dominated by the note of security. Her victory in the last great war has not dissipated any of her fears on the subject.

Standing almost midway in the Mediterranean with her toe thrust insistently towards the east of North Africa, Italy has a vital interest in the Mediterranean. That interest was imperilled whilst for various reasons Italy was impotent to safeguard it, during the years which followed the Franco-German war. It was with ill-concealed anger that she saw the French occupation of Tunis and the creation of a strong naval base at Bizerta, an enterprise carefully fostered by Bismarck in order to detach Italy from France, which had won her unity—at a price—on the fields of Magneta and Solferino. Bismarck's policy was crowned with success when Italy, not out of any love of Germany and Austria but out of hostility against France, joined the Triple Alliance. That hostility was gradually diminished by the pacific policy of the French statesman Declasse; and Italy's acquisition of a foothold on the North African littoral by the seizure of Tripoli was regarded as a compensation for the loss of Tunis. This improved situation explains Italy's joining the Allies during the last great war. The emergence of a Mussolini and a fiery Fascism has, however, once more altered the situation. Italy is determined to have her place in the Mediterranean. The place she demands is, however, inconsistent with the vital interests of France. Hence the strained relations

between Italy and France, which constitute the gravest menace to peace at the present day.

Russia under the Bolshevik regime, is a standing danger to world peace. She has not given up any of the lines of aggressive foreign policy pursued by the Czars, viz. mastery of the Baltic coast, dominance of the Balkans, peaceful penetration of Mongolia, a cautious policy in Manchuria and Persia, intrigue in Afghanistan, and the threat of an invasion of India. She cannot have forgotten the policy of the Czars: Trotsky* said,

"The question of Constantinople and the Straits was one of those rare questions on which the Czarist regime was not deceived".

Her recovery of the ground lost at Brest Litovsk is only a question of time. Her armed doctrine of proletarchy, furthermore, is a standing challenge to the capitalistic powers of the world. The Bolshevik leaders are believed to be actively pushing forward their scheme of a world revolution. The methods adopted by them are two-fold.†

The first is the steady infiltration into all the workers' organisations of the world, with the object of capturing them and re-organising them along revolutionary lines. This is called the 'cell system' and the process is called 'bori-g from within'. A cell is a small group of Communist comrades which enters any labour unit which would tolerate them. Their duty is to gain converts for their ideas. In times of crisis these cells find fertile ground for their propaganda, and with 'gold from Moscow' have some times been able to create much trouble. They are believed to be pursuing this 'slow and heavy' method to the bitter end with the conviction that one day the sum of their exerted pressure will bring about a World Revolution, in which they cannot fail to share. The second method of the Bolsheviks may be termed 'direct action'. This is to foster political revolts in every country and against every government and to try to link them up with one another in order to produce one great World Revolution. Zinoviev said, S

"The revolutionary movement in the Orient is a mighty river, which is ploughing its way through every obstruction. This is China, Japan, India. We have already scored some successes in China, and Canton reminds one very much of Moscow. Other important centres will probably follow".

The remaining states of Europe may be grouped* under two classes, the war-guilty states, such as Germany, Austria, Hungary, and Bulgaria, and the peace-guilty states, such as Poland, Czecho-Slovakia, Yugo-Slavia, Greece, etc. The political status of the former group of states was dictated by the 'victorious' allies in the treaties of Versailles, Trianon, St. Germain, and Neuilles. Germany has had to submit to staggering reparations and the loss of rich territories. She has been deprived of Alsace and Lorraine, and the Rhineland at the behest of France. She has actually been robbed of Upper Silesia. The Poles have secured a corridor to Danzig running through East Prussia, the heart of Protestant Germany. On the top of this have come the loss of her colonies, her navy and merchant marine, her air force, and the reduction of her army to a mere skeleton. Her humiliation is indeed without parallel in history. Similar punishments have been meted out to the other vanquished nations.

The peace-guilty states are those who have made large acquisitions of territory by the treaties of 1918-19-20, and, conscious of the harm they have done to their neighbours, betray their uneasy sense in an apprehensive belligerency. Latvia, Lithuania, Esthonia and Finland feel bound to fear Russia. Poland, which is the most guilty of the peace-guilty states, is afraid of all her neighbours. The price she has to pay is the military dictatorship of Pilsudski and the conclusion of military pacts, such as those she has made with France and Roumania.

Czecho-Slovakia, which was created bodily out of the Austro-Hungarian empire, is consequently in league with the other despoilers of the Central Powers. She has organised a Little Entente with Yugo-Slavia and Roumania, which is affiliated with France by a number of military engagements. Roumania faces a bad conscience on three fronts. After the war with Austro-Hungary she seized the Austrian Crownland in Bukowina, which had been Hungarian for centuries. On the south-west she faces Bulgaria, whom her treachery in 1913 despoiled of the Dobrudja. In 1919 she seized Bessarabia from Russia. She is linked to the Little Entente against Hungary, but has only been able to secure a Polish alliance against Russia, her most deeply wronged enemy.

Yugo-Slavia ranks with Poland in war-guilt. As the official Fascist Gazette* pointed out.

"Yugo-Slavia is suffering from territorial elephantiasis, for she includes within her borders Serbs, Croats, Slovenes, Germans, Hungarians, Rumanians, Bulgarians, Italians, Albanians, Montenegrins, and Gipsies—Yugo-Slavia is only an Austria of the Hapsburg era."

She has standing quarrels with Bulgaria over Macedonia, with Greece over the port of Salonica, with Italy over the Fiume, with Albania over the Drina valley, and with Hungary over the Banat, which she has divided with Roumania. In firm alliance with Czecho-Slovakia and Roumania against Hungary, she is also united to France against Italy. She has an army of fine fighting qualities, the remnants of the Austro-Hungarian navy, and, according to the latest reports, is pushing forward strategic and commercial railways to the Adriatic.

From the fore-going account of the political relations of the principal states of Europe it would appear that the last war has left national animosities and national ambitions much as they were before and has even brought in new complications. Indeed, there is more talk of war and rumour of war now than at any time since the Armistice. In an Anti-War Conference held in London last year, Signor Nititi, Ex-Prime Minister of Italy observed that in spite of the disarmament of the four defeated countries of Germany, Hungary, Austria and Bulgaria, there is actually a million more men under arms in Europe now than in 1914 and that Europe is spending exactly the same sum on military armaments as she was doing in 1913, the year in which military preparations reached their maximum. The reason for this deplorable condition, according to him, is the presence of dictators such as Mussolini, who, for their own selfish ends, are rousing the bellicose feelings of their peoples. Even without the much-maligned dictators, however, there is much inflammable material in Europe, as the following narrative will show. The dominant note of French foreign policy after the Great War, as has been previously observed, was security against Germany. The unparalleled national humiliation of Germany and the Allied occupation of the Rhineland did not produce any sense of security in France, who set about encircling Germany

by encouraging the formation of a Little Entente among the other spoilers of the Central Powers, viz., Czecho-Slavia, Yugo-Slavia, and Roumania; and while protesting her inability to pay her debts to Great Britain and to the United States she began to send money to Poland for the purpose of arming the Poles. In the sacred name of security, says Mr. George Glasgow,* she undermined the whole security of Europe. The climax was reached when the French occupied the Ruhr in 1923. In 1924, however, Mr. Macdonald succeeded in bringing France, Germany and England together by launching out the famous Geneva Protocol for the settlement of international disputes. On the fall of his government, however, the Conservative Foreign Secretary lost no time in informing the world that England could not accept the obligations under the Protocol. Western Europe slipped back into a condition of confusion and insecurity, but in 1925 Sir Austen Chamberlain obtained a great triumph at Locarno, where France, England and Germany entered into engagements not to make war upon each other and to respect the inviolability of the frontiers of Germany, France and Belgium. While the Locarno Treaty is a conspicuous milestone in the history of European re-construction, it is to be regretted that no further advance has yet been made in the direction of peace in Europe. Locarno has stabilised Western Europe and tended to the formation of neighbourly relations between France and Germany. It is in a sense better and in another sense worse than Mr. Macdonald's Protocol—better because it is more definite and worse because it has not yet been followed up by other definite engagements, which together with itself would have secured the 'general outlawry of war' which Mr. Macdonald contemplated.

In the mean time the efforts of France to play politics in the Balkans in order to secure her own safety against Germany have landed her in trouble from the side of Italy. I have discussed previously the historical causes of controversy between France and Italy. These have been accentuated in the last few years on account of the clash of their interests in the Balkans. The Italian Government's view of the Balkan problem is a simple one. It is, in the words of a Fascist

* Otto Rothfeld : *The Franco-Serbian Pact*.

* George Glasgow : *From Dawes to Locarno*.

newspaper*, that "the way of Balkan and Danubian peace passes and will pass through Rome: whoever tries to ignore this reality will be frequently and profoundly deluded." In other words Signor Mussolini is determined that Italy must in future exercise a dominating influence throughout the whole of the Balkans, and any nation which tries to prevent this consummation is regarded as being actuated by unfriendly feelings towards Italy. France naturally refuses to subscribe to the view that her influence must disappear from the Balkans at the behest of the new will of Rome. The clash of interests which has taken place during the past few years must be counted as one of the principal reasons of the present ill-feeling between the two great latin countries.

There are unmistakable evidences that both France and Italy are using the states of the Balkan peninsula as political pawns in their own games. On November 14, 1927 Italy obtained a firm foothold over Albania by signing with that small state the Treaty of Tirana, whereby they have guaranteed to each other mutual support and collaboration. This treaty has given the greatest offence to Yugo-Slavia, the one nation in the Balkans who is the most determined opponent of Italian expansion, in the peninsula. This heterogeneous kingdom of the Serbs, Croats, Slovenes has many internal dissensions but one powerful factor uniting it, viz. the fear that Italy intends to make the Adriatic a closed Italian sea. The most suitable reply that France could give to the treaty of Tirana was, therefore, to conclude a pact with Yugo-Slavia, which has given grave displeasure to Italy, where demonstrations are reported to have been held protesting against French and Yugo-Slav provocations.† It is further reported that Mussolini has made another compact of a more binding nature with Albania.† These events have naturally produced a wide-spread impression that the actual outbreak of hostilities in Southern Europe is only a question of time. War, certainly, is against the vital interests of both France and Italy. After un-paralleled financial crisis both have now seen better days. It is difficult to believe that they are going to throw away the results of years of careful administration by a war, which, when it breaks out, must be on a gigantic scale.

While these arguments on the side of peace are obvious, it is certainly disconcerting to hear from day to day of frontier incidents, which are calculated to bring about a rupture sooner or later. The Fascist press is indulging in a violent campaign against France, which is replying by giving asylum to refugees from Fascist vengeance, even, it is said, would-be assassins of Mussolini.

The pact between Yugo-Slavia and France affects not only Italy but also Hungary, between whom and Yugo-Slavia, as I have already pointed out, there is a standing quarrel. The pact ranks France on the side of the spoilers of Hungary.* It ranks her with Yugo-Slavia against rectification of the frontiers imposed by the Peace treaties. In this respect, the Pact occurs at a particularly ill-chosen moment if public opinion has any value. British opinion, expressed in the House of Lords by public men of the political sanity of Lords Buckmaster, Carson and Newton, is coming round to the view that the Treaty of Trianon has left Hungary in a position that is intolerable and unsustainable. Sooner or later the question might be taken up in right earnest. In this case France would have to set her face against it. This will lead France still further from England and this accentuated divergence might range the two great powers in hostile camps and coalitions, in the same manner as before the war Germany and England stood at the head respectively of the Triple Alliance and the Triple Entente, which dashed themselves to pieces in the Great War.

A conspicuous and, according to many, sinister development † of modern international relations is the gradual rapprochement between Fascist Italy and the Conservative Government in England. On the 29th December 1925 Sir Austen Chamberlain met Signor Mussolini at Rapallo, presumably to secure Italian support in the event of trouble with Turkey over Mosul, which at that time was coming to a head. A fortnight later the question of the Italian debt to Britain was settled on terms which were exceedingly favourable to Italy; and Sir Austen, in a telegram to Signor Volpi the Italian Finance Minister, stated that this settlement would "facilitate the intimate co-operation in the field of politics between the two countries". The Rapallo

* Quoted by the Times of India, dated 26-11-27.

† Seymour Cocks: *The War Danger*.

conversations caused much uneasiness in Paris and in the following month (February) a Treaty of Mutual Assistance in case of War was concluded between France and Turkey. While the mis-understanding between France and Italy over Albania, Tangier, Morocco, etc., went on multiplying Sir Austen again met Signor Mussolini at Leghorn on Sept. 30, 1926, when they confirmed the intimacy of Anglo-Italian relations. The next significant event was the appearance of Mr. Winstone Churchill in the Mediterranean. After visiting Malta and Athens, Mr. Churchill came to Rome and had many interviews with Mussolini. All that he heard and saw in Italy perfectly enamoured him of Fascism and in his enthusiasm he is reported to have said, "If I had been an Italian I should have been whole-heartedly with you." No doubt he immensely increased the popularity of his government with the ruling classes in Italy.

The rapprochement between the British and Italian governments has unfortunately synchronised with the initiation by England of a new policy towards Russia. Liberal and labour leaders in England are desirous of promoting better understanding between the two countries, and Mr. Macdonald's government drafted two treaties with Soviet Russia in 1924. The Labour premier was fully alive to the situation caused by Russia's anti-British propaganda, and he was closely pursuing the subject, when his government fell, and the Conservatives came into office. His policy was at once reversed and the two draft treaties were not ratified. The belief is strong on the continent that Sir Austen's policy of intimate co-operation with the Italian government is actuated by hostility towards Russia, against which, it is said, the Conservative Government is organising a huge coalition consisting of Italy, the Baltic States, Poland and Roumania. This is forcibly expressed by a Roumanian newspaper, viz., the *Argos* of Bucharest, from which the following quotation was made in the *Manchester Guardian* on the 11th March, 1927:—

"British policy with regard to Russia is now directed towards strengthening the position of the Border States, particularly Poland and Roumania, with the co-operation of Italy, which presupposes that Britain is prepared to support Italian ambitions in the Mediterranean and the Near East."

If there is any truth in this belief about Sir Austen's foreign policy there is real cause for alarm. If the Franco-Italian pro-

blem is linked up with the Anglo-Russian, there is evidently the possibility of a great war. Many people firmly believe that a big war is soon coming, specially in view of the fact that all practical proposals on the subject of disarmament have failed. A closer analysis of the European situation, however, dispels any such fear. France and Italy will not soon come to blows. Reuter sent a message (which was published on the 11th December, 1927) that the two governments are shortly appointing commissioners who are to examine all problems which stand in the way of a cordial understanding between the two countries. Again, the policy of boycotting Russia is certain to be reversed sooner or later. It is against the economic interests of the British people: hence it cannot stand for long. Mr. Ramsay Macdonald believes that the British public is coming round to this view. "The conviction," says he, "has come slowly but surely, that the more recent policy of Great Britain to Russia has contributed to our industrial distress, has lost us profitable trade, and has been no insignificant factor in the mischief which the Third International is doing in the world." The ex-premier believes that Russia in Revolution is ceasing to exist, that her hands are too full with her own internal questions to permit her to play a dangerous game in international politics, and that her participation in the Disarmament Conference in Geneva shows that Russia herself is prepared to revise her policy. It is difficult to say how far these arguments weigh with the present Government in England: the King's Speech and the Foreign Secretary's own statement on Foreign Policy are ominously silent on Russia. But there is no doubt that the present situation cannot last long for the further reason that Disarmament in Europe is impossible without Russia, and Disarmament is the most vital need of Europe.

The problem of disarmament, which is associated with two other problems, viz., those of arbitration and security, has presented numerous difficulties and no satisfactory solution has yet been reached. The famous Washington Conference of 1909 resulted in an agreement being reached between England, America, and Japan as regards their battleship strength; but the Geneva Conference which was held last year resulted in a fiasco when America proposed that the Washington naval ratio should be applied to cruisers.

England refused to accept this limitation of her cruiser strength, because she said she needed a large cruiser service to patrol the empire's far-flung lines of communication. Since then, Americans and Englishmen are blaming each other for the failure. It has also enabled the Big Navy Group to raise the cry of "America in Danger" and it is partly responsible for the huge naval estimates submitted for approval of Congress. It is however fortunate that America has cut short her original estimates and that England has refused to enter into a race of naval armaments with America.

On the subject of the reduction of military armaments there seem to be two schools of thought in Europe. The first would have disarmament by an open and full use of the League of Nations. Their idea is to declare aggressive war as an international offence, the same to be defined as the refusal to submit one's dispute to arbitration by the League of Nations. In case of any nations or nations trying to do so, other nations are to use all means in their power, including in the last instance also war, to bring the offenders to book. This was the idea behind Mr. Macdonald's famous Geneva Protocol for the settlement of international disputes. Its fate was sealed by the refusal of the Conservative government to accept it, though it found support from France and some small nations. The other school would have security by particularising causes of dispute and have regional understandings and bi-

lateral agreements on arbitration and security. Sir Austen is strongly in favour of this method. His objections to the Protocol are that it would make Great Britain the unpaid police force in Europe. He says that those states which fail to find security within the framework of the Covenant should conclude security pacts with other states in the same geographical area. His first (perhaps the only) triumph was secured at Locarno where a Treaty of Mutual Guarantee was drawn up between Germany, France, Belgium, Great Britain and Italy, and Arbitration treaties were concluded between (1) Germany and Poland, (2) Germany and France, (3) Germany and Belgium, and (4) Germany and Czecho-Slovakia. This great Treaty is spoken of as introducing a new epoch in the international relations of Western Europe, but it is regretted that it has not been followed up by other engagements of equal value and import. Nevertheless, it seems Europe is showing signs of stabilisation; and if Russia's participation last year in the Disarmament Conference at Geneva really means, as many people hope, that she is coming back to Europe, it may actually be that we are on the threshold of a new era in Europe. In this new era certainly, disarmament should be a feature. On the note of Hope and Expectancy, then, one can now bring this review of European politics to an end. (27-2-1928).

(Read at a meeting of the Graduates' Association, Indore)

THE FOSTER-MOTHER

By SITA DEVI

BINODINI had lived in Rangoon for about three or four years. But her face expressed anything but regret, when she heard from her husband, that perhaps they would have to leave it for good.

"Don't you feel sorry at all?" asked her husband Nripesh. "You have lived here a pretty long time."

Binodini frowned as she replied, "Not a bit. What is there to feel sorry for?" After a while, she added, "The only thing that

troubles me is anxiety for Khoka (baby boy)."

"Why trouble about Khoka?", asked her husband, "he is going with you."

"He is", his wife said, "but his 'Amma' is not. If she is not with him, he will neither eat nor sleep. He will pester me to death within two days. He is old enough, too, to have a memory and won't easily forget. No other servant would do for him."

Khoka was the only child of Nripesh and

Binodini. He was fortunate enough to possess a personal attendant, viz., an Ayah. Everybody in the house called her Ayah, but Khoka for reasons known only to himself, called her 'Aamma' (mother). The Ayah hailed from Madras, was about forty years of age, of a very dark complexion, and possessed of a very hot temper. She must have possessed some sort of a name among her relatives and friends, but none in this house knew of it. She was just Ayah and Aamma here. She came at the time when Khoka came and all knew that she had come to stay. She knew it, too.

But trouble arose with this question of leaving Burma. The Ayah won't leave the land of her adoption and Khoka won't leave the Ayah. What was to be done?

"Nothing can be done", said Nripesh to his wife. "Be prepared to listen to his howls for a few days at least. She might love him like her own child, but she won't be willing to leave her land, her friends and relatives for his sake."

"But what's the harm in asking her?" Binodini asked. "We are not compelling her to go. After all, she is a woman, and women are accustomed to leave everything—home, friends and relatives, for the sake of love."

"Very well", said Nripesh, "do as you please."

Just at this moment Khoka came back from his morning walk, with his Ayah. Binodini hesitated a bit, then laid her proposal before the Ayah.

The woman remained silent for a few minutes. Probably she was weighing the pros and cons in her mind. Then a sigh escaped her. "I will go, madam", she said.

Binodini was astonished. She had never thought that the Ayah would agree and agree so quickly. "I shall increase your pay", she said.

"I don't want it, madam", the woman answered. "Give me twenty rupees, as usual. I am not going for the money." Saying this she took up her small charge, and started out for a walk again. Binodini did not prevent her, though the sun was quite hot. A great load seemed to be off her mind, now that the Ayah had consented to go. Her boy was too turbulent to be managed by any other person. During the day time, his mother could suffer him somehow, but at night he was insufferable, because he did not believe in letting anybody rest. Some nights, he would go on shouting for eight or

ten hours with undiminished vigour. Neither scolding nor spanking could stop him. He insisted on being carried about. He failed to understand, that night was scarcely the proper time for such exercise. Nripesh lost his temper completely one night, and gave him a hearty slap on the check. Needless to say, it did not have the desired effect, but quite the contrary. Binodini's up-braidings, mixed with the howls of her offspring, finished whatever hope he had of getting any sleep.

Morning came, and Nripesh found to his dismay, that there were much more in store for him. The nocturnal lectures of his wife were barely the preliminary. When the Ayah heard, on her arrival, that Khoka had been beaten at night for howling, she forgot time, place and person and began to give her opinion of such conduct. In this line, even Rangoon possessed no rival to Khoka's Aamma. So Nripesh swallowed his morning cup of tea in a hurry and went out, while Binodini devoted her entire attention to a piece of long-forgotten embroidery. Only the cook, Haranath, turned up his nose and made some remarks about spoiling servants with too much indulgence.

That evening, as usual, Binodini hurried Haranath to get dinner ready for Khoka and herself. The Ayah used to leave at half past seven in the evening and Binodini had to finish her dinner before that; otherwise she had to go without it, owing to the pranks of of her son Khoka was given his dinner by the Ayah, then she took him away to put him to bed.

The Ayah would leave as soon as the boy fell asleep. But this evening, Binodini found her still in the house, as she came in, after finishing her dinner. She was sleeping on a torn mat, by the side of Khoka's cot. Binodini was astonished and, after standing silent for a few minutes, she shook the Ayah up. "Won't you go home?" she asked.

The woman yawned and sat up. She was going to stay on, she said. She would not let Khoka be beaten for crying at night. Let master and madam sleep, she would carry the child about. If madam would kindly give her four pice, she would buy some bread for supper.

Binodini was so overjoyed at the prospect of a peaceful night, that she gave the woman four annas instead of the four pice, she asked for.

This arrangement became permanent.

Nripesh and Binodini were dismissed from the service of their young hopeful at night. The Ayah took their place. She would walk about the greater part of the night, with the boy in her arms, but she did not seem at all exhausted at the break of day. She would work as hard as ever. Binodini felt a bit ashamed about it, and proposed an increase in wages. But the Ayah refused. She was alone in the world, she said. What would she do with more money?

Thus a few months passed by, then came this plan of leaving Burma. Even this failed to make the Ayah give up. Binodini was really surprised and ran to Nripesh with the news as soon he came in. "Look here," she said, "Khoka is right in calling her Amma. She must have been his own mother in some previous birth, otherwise she would never make such a sacrifice for him."

Nripesh diverted the conversation into another channel, with a timely joke.

The day fixed for their departure soon arrived. Binodini finished her packing with great difficulty. The pile of luggage was a sight! The Ayah did not take long to pack, as her luggage consisted of a single basket. She walked about the lane furiously with Khoka in her arms. She had a life-long acquaintance with this soil. She was leaving it now, perhaps for ever. God alone knew whether she would ever return.

When actually in the steamer she became extremely uncomfortable. This was her first voyage. She became sea-sick almost at once. But Khoka was a hard taskmaster. He howled as usual to be carried about. His mother tried to soothe him and bribed him profusely with oranges, biscuits and sweets, but Khoka refused to be quiet. Then Nripesh came and pulled the boy by the arm. This cured the Ayah. She sat up and, taking the child from his father, staggered away to the deck with him.

The three days in the steamer passed by in this fashion. Landing in Calcutta, Binodini sighed with relief. Nripesh, too, looked forward to meeting his old friends and relatives. Only Khoka and his Ayah remained with clouded faces.

But one gets accustomed to every condition in life. Gradually the streets and lanes became familiar, she got acquainted with the shopmen and could tell you where they sold cheap and where they sold dear. The neighbours, too, became friendly, though she could not speak Bengali, and understood it

but little. She had accepted her fate. There was not going to be any more trouble on her account.

But trouble was brewing in another quarter, behind the curtain which separates things seen from things unseen. Fate was preparing to strike a blow. Suddenly, an illness of a few days carried off Binodini, leaving her well-ordered home devastated and her husband and child desolate. Nripesh got such a shock that for a week or two, he could not even look at the face of the world.

He was in business. The loss of his dearly beloved wife made him neglect it too much. The consequence was that it was ruined, leaving him in debt up to his neck.

But however heart-broken a man might be, he has to go out in search of food. If he is alone in the world, he gets leave to mourn, for a few days. But one, who has got other mouths to fill, does not get even that much consolation. So Nripesh did not get leave to weep for his wife. He had to go out in search of work, because he had a son. Jobs are not to be had for the asking in Calcutta, and only candidates know how hard it is to secure one. But Dame Fate had got tired of Nripesh for a moment after having shown such a good deal of attention to him. So he found a job of a kind. It was none too good, but good enough for him in his present position. He left his old house and rented a small one in a dark dingy lane of the metropolis.

Then trouble began about the servants. It was impossible to keep both now. He could not afford such a luxury on his present salary. But one servant could hardly do the work of both. Even when his wife was living, they needed two servants. So it was out of the question now, to try to do with one. But one must consider one's financial condition, too.

Nripesh decided to send the cook Haranath away. The Ayah would have to manage the cooking somehow. He knew, she would not be much of a success in that line, at first, but they would have to bear it. But he could not think of sending the Ayah away. She was a woman and she had been brought away from her home and relatives, and so had a special claim on them. Then nobody else could manage the child. His mother had left him and now if the Ayah left, too, it would be a hard job to keep the child from pining away. So Haranath left. Nripesh secured a post for him in a friend's

house and sent him there. The Ayah went to cook, with Khoka in her arms. She used tamarind and pepper with a free hand and served breakfast to Nripesh. But the poor gentleman choked on the first mouthful. He was afraid of hurting the Ayah's feeling, and so tried to go on bravely. But she did not lack in intelligence. She understood, and tears of shame started to her eyes.

Next day, Nripesh went and fetched back Haranath. This time the Ayah left of herself. She knew very well that the Babu could not afford to keep two servants. As she could not manage alone, she went. She fled, leaving Khoka, in the dark. Nripesh asked where she was going. She replied that a fellow-countrywoman of hers lived close by. She would put up with her for a day or two, then she would look for another job.

Nripesh was at his wit's end. He did not know what to do. He could have done without eating, but how to manage his work, with Khoka thrown completely in his hands, and how to find time for eating, bathing and sleeping?

The meals were all right that day, thanks to Haranath, but troubles were in store for him at night. He worked up to twelve, leaving Khoka in the charge of Haranath. The poor man ran about like one demented, with the howling child in his arms. After finishing his work, Nripesh went to sleep. Haranath came and deposited Khoka by his side with a sigh of relief. After shrieking continually for three or four hours, the child had fallen asleep, exhausted. So a faint hope began to glimmer in his father's mind, that perhaps the night might pass off in peace.

But it proved to be completely futile. Khoka was punctual as an alarm clock, and his howls broke the stillness of the night just at the usual time. Haranath deserted his master most treacherously. Nripesh called him again and again, but his sleep was too deep to be disturbed. So he carried about his son in a rage with the whole creation. Khoka would have received the spanking of his life, but the memory of his dead mother, paralysed his father's arm. Khoka was motherless and on the highway to becoming fatherless as well, if he went on at this rate. He wanted to throttle the Ayah in his rage. She need not have made such a show of self-respect. Nobody had asked her to go.

That day, while in the office, he confided his troubles to many of his friends. He was

too anxious to work properly. He wondered what the boy was doing. He had lost much of his faith in Haranath. He knew now that the man would not go much out of his way, in order to take proper care of Khoka.

The friends gave him proper advice. "How long will you continue in this state? they asked. "Marry a grown-up girl, and she will take care of the child, as well as of you. Servants will never look after children properly." Nripesh felt so disgusted that he could barely answer them civilly.

Returning home, he was presented with a long list of the misdeeds of his son, by Haranath. He could find no solution to this problem. He told Haranath he did not want any dinner, and sat down in his room to think. He could hear plainly Khoka's violent protests against being fed by Haranath. He was kicking the plates and glasses, biting and scratching Haranath, and generally making himself as troublesome as he possibly could.

Nripesh sat down to work, ordering Haranath to put the child to sleep as quickly as possible.

Haranath had no objection. He ran about with Khoka, swung him in his arms, danced him up and down, sung to him in his harsh cracked voice and thus managed to put him to sleep finally. Nripesh looked at his watch and found it was nearly half past nine. He was feeling utterly exhausted for many reasons, and so did not feel like working up to twelve at night. He laid himself down by the sleeping Khoka, hoping to snatch a bit of sleep. That Khoka would not allow a long respite, he knew very well.

But when finally he woke up, the sun was quite high up in the heavens. He was amazed and looked at his watch. It indicated a quarter to nine. He looked beside him, where Khoka had been sleeping. He shouted for his servant and asked him when he came, where the child had gone.

Haranath had entered with a face as clouded as the July sky. With the same expression on his face, he replied, "He has gone out for a walk with his Amma."

Nripesh could hardly believe his ears. "With his Amma?" He asked again, "When did she come?"

"She came back last evening and was hiding in that small room," the servant replied. "I did not see her then. But as Khoka got up, crying, in the night, she came out. She carried him about till five in the morning. Just half an hour ago, she got up

Nripesh and Binodini were dismissed from the service of their young hopeful at night. The Ayah took their place. The three days in the steamer passed by in this fashion. Landing in Calcutta, Binodini sighed with relief. Nripesh, too, looked forward to meeting his old friends and relatives. Only Khoka and his Ayah remained with clouded faces.

But one gets accustomed to every condition in life. Gradually the streets and lanes became familiar, she got acquainted with the shopmen and could tell you where they sold cheap and where they sold dear. The neighbours, too, became friendly, though she could not speak Bengali, and understood it

but little. She had accepted her fate. There was not going to be any more trouble on her account.

But trouble was brewing in another quarter, behind the curtain which separates things seen from things unseen. Fate was preparing to strike a blow. Suddenly, an illness of a few days carried off Binodini, leaving her well-ordered home devastated and her husband and child desolate. Nripesh got such a shock that for a week or two, he could not even look at the face of the world.

He was in business. The loss of his dearly beloved wife made him neglect it too much. The consequence was that it was ruined, leaving him in debt up to his neck.

But however heart-broken a man might be, he has to go out in search of food. If he is alone in the world, he gets leave to mourn, for a few days. But one, who has got other mouths to fill, does not get even that much consolation. So Nripesh did not get leave to weep for his wife. He had to go out in search of work, because he had a son. Jobs are not to be had for the asking in Calcutta, and only candidates know how hard it is to secure one. But Dame Fate had got tired of Nripesh for a moment after having shown such a good deal of attention to him. So he found a job of a kind. It was none too good, but good enough for him in his present position. He left his old house and rented a small one in a dark dingy lane of the metropolis.

Then trouble began about the servants. It was impossible to keep both now. He could not afford such a luxury on his present salary. But one servant could hardly do the work of both. Even when his wife was living, they needed two servants. So it was out of the question now, to try to do with one. But one must consider one's financial condition, too.

Nripesh decided to send the cook Haranath away. The Ayah would have to manage the cooking somehow. He knew, she would not be much of a success in that line, at first, but they would have to bear it. But he could not think of sending the Ayah away. She was a woman and she had been brought away from her home and relatives, and so had a special claim on them. Then nobody else could manage the child. His mother had left him and now if the Ayah left, too, it would be a hard job to keep the child from pining away. So Haranath left. Nripesh secured a post for him in a friend's

But Khoka was too eager to secure the tricycle, and did not let him off so easily. "When will you bring it?", he asked; "in the evening?"

Nripesh had to get rid of him at any cost. "I shall bring it to-morrow morning," he said. This mention of a definite time, satisfied his son, who now left hold of his father and went away.

Nripesh forgot all about it, the minute he left his house, but his son's memory proved to be very much stronger. Next morning, Nripesh got up and found trouble ready for him. Khoka was refusing to wash his face, take his breakfast, or to go out. He had been promised a tricycle, and he was waiting for it.

Nripesh was at his wit's end. How could he purchase anything so costly? It was as much as he could do to make two ends meet. Why was he fool enough to make such a promise? He could have bought it, had he been able to borrow some money. But his friends were not fools. They were ready enough to borrow, but seldom to lend.

But he must pacify the aggrieved motherless child. So he covered one mistake by making another mistake. "Go darling and play," he comforted his son, "I shall bring it certainly to-morrow, I promise you." Khoka was satisfied for the time being and he went to have his milk.

After finishing his office work Nripesh tried everywhere to purchase a tricycle on credit, or on the instalment payment system. But nobody agreed to give him credit. Next he tried to borrow money, but was unsuccessful. Late in the evening he returned home beaten and hopeless, and fell down on his bed, exhausted. The servant tried to persuade him to have dinner, but he refused.

Next morning, he felt too sick at heart, to wish to get up. How was he going to show his face to Khoka? He covered himself up to his head in his blanket, and remained lying on his bed. But Khoka was not to be fooled so easily. He came up and began to try to pull off the blanket, crying, "Get up father, it is late. Won't you bring me my tricycle now?"

Nripesh's heart seemed about to burst. Oh, shame on his life and love! He had not power enough to satisfy his child's smallest demand. What answer could he give his son?

Khoka finally succeeded in pulling off his

blanket. "Where is my tricycle?" he asked. "When are you going to bring it?"

Nripesh pushed away his son in desperation. "Go away", he said; "you are a naughty child. You tease me very much."

Khoka had never been so treated in his small life. He threw himself down on the floor, and began to scream as loud as he could. The Ayah was busy in the next room. Hearing him cry, she rushed in, and picked him up. She looked at Nripesh, intending to give him a piece of her mind, but found that he had covered his face with both hands and tears were trickling from between the fingers.

She went out of the room, carrying Khoka. She brought him a large quantity of sweets, which made him forget his woes for the time being. Then she asked, "Why did you hurt father? You are very naughty."

Khoka was surprised at the charge. He had not hurt father, he replied. On the other hand, his father had pushed him away. The Ayah told him not to pester his father for the tricycle any more and then she would give him a very good present. Father would cry, if he asked for it again. Good children should not make their father cry.

It was too great a sacrifice to ask of Khoka. But he had received a great shock, on seeing his father cry. It had rendered him speechless temporarily. So looking at the Ayah, with sad eyes, he agreed to her terms.

When the Ayah came back with Khoka, she found that Nripesh had neither taken his tea, nor gone out. He was sitting in the same place, like one petrified. She put down the child. He went and stood by his father and said, "Father, take your tea, I won't ask you for the tricycle again."

Nripesh rushed into the next room, to hide his tears. Khoka looked at Ayah, and found her in tears, too. This was too much and he cried out aloud. He could not understand why everybody should cry at the mention of the tricycle. The Ayah quieted him with great difficulty.

After finishing her breakfast, in the afternoon, she put the child to sleep, and prepared to go out. She never spoke to Haranath, if she could avoid it. But to-day she went to him of her own accord and spoke to him very civilly. She was going out on urgent business, she said. Would Haranath kindly look after the child for a bit and give him his milk after he got up? She would be sure to return before four in the evening.

from her sleep and took Khoka out for a walk."

A load seemed to be lifted from Nripesh's mind. He could have done without his meals, but he could not brook the howls of his son day and night. Besides the child was suffering from extreme neglect. He saw that he could not afford to be economical at his son's expense. He must either earn more, or cut down expenses elsewhere.

Haranath had been standing before him up to this. He wanted to know what the master decided. Upon seeing that he kept silent, he muttered, "Taen dismiss ma, sir."

"Who will cook then?" Nripesh asked.

Haranath cheered up, "Then shall the Ayah go?" he asked.

"Who will look after the boy?" the master asked.

"You said you would not keep two", Haranath said, a bit surprised.

"That's none of your concern," Nripesh said. "Go and attend to your kitchen". Haranath went away, disgusted.

The Ayah came back at this moment, with her little charge. She saluted Nripesh silently, and went in. Nripesh called her back.

The Ayah surmised that there was going to be some discussion about her pay. So before Nripesh could say anything, she began on her own side of the case. She could not live without the child, she said. She had left country and kin for him. So how could she give him up now? She knew that the master was hard up. Very well, she did not want wages. She would be content to work for board and lodging. She would keep an account and take all the money due to her from Khoka, when he grew up and became a judge. Khoka's mother left the child in her care, at the time of her death. So she was determined to stay.

The matter dropped there, for the time being. Nripesh thought that he was at the end of his troubles. Everything went on all right, except for the perpetual warfare between the cook and the Ayah. In a few days Nripesh understood that this thing was not as negligible as it appeared. Haranath was an old servant and the Ayah was a woman who had sacrificed much for him. He did not know whose side to take. So he went on perpetually postponing the settlement of their disputes. The result was not very satisfactory. An open quarrel would have cleared the atmosphere, but

now it went on boiling like subterranean lava and threatened dire happenings. These two became sworn enemies. There was no doubt that they would at once fly at each other's throat, if opportunity occurred.

Suddenly, trouble appeared from another point of the compass. Nripesh had a neighbour of the goldsmith caste. Whatever these people might lack, they did not lack money. Money shrieked aloud from everything they said, did and wore.

One fine morning, a very small child of this house was found riding on a tricycle. The whole neighbourhood looked on agape. The child's small legs could hardly reach the pedals, but somehow it had got into the heads of their relatives that rich peoples' children rode on tricycles. So a tricycle had been procured and a servant was dragging it about, with its small rider, from one end of the lane to the other.

As soon as Khoka saw the thing, he jumped down from Ayah's arms and ran towards it. The Ayah picked him up again, asking, "Where are you going?"

Khoka struggled frantically, saying he would not be carried about, he wanted a tricycle too. The Oriya servant, in charge of the other small boy, grinned from ear to ear at this demand of Khoka. He was immensely pleased at the affluence of his own master and at the poverty of the Ayah's. The Ayah called him every sort of name, she could remember, and, taking Khoka forcibly up, came back home, still shouting vituperations. Haranath poked his head out of the kitchen and asked what the matter was.

In reply, the Ayah made sweeping generalisations about the Oriya people, which had they heard it, would have been far from pleasing to them. Khoka's shrieks of rage continued unabated.

Nripesh came back at this time from his morning walk and told Haranath to hurry with his breakfast: otherwise he would be late for office. Khoka ran to his father and pulled him by the sleeve of his coat. Nripesh passed his hand over his son's curly hair, asking, "What's it Khoka?"

"Will you buy me a tricycle, father?" asked Khoka.

Nripesh could never refuse anything to anybody. He did not know how to do it. So without stopping to think for a moment, he replied at once, "Yes, I shall. But let me go to my office now, or the Sahib will beat me."

passed the afternoon somehow, and towards evening, prepared to take out the child for a walk.

But as soon as she had finished dressing him, he began to cry for the tricycle. The Ayah got fed up and threatened to throw the thing into the river, if he howled for it day and night. If she had known that he would be so naughty, she would not have got it for him.

Khoka struggled out of her arms and ran to Haranath. "Come out, Haranath," he called. "I shall play with you. Amma is wicked, I won't go to her."

Haranath put his head out of the kitchen-door and said, "No darling, go to your Amma. I cannot fight with her all the time for you."

His tone was sarcastic, and it made the Ayah's bones burn with anger. But she was afraid of the child falling down the stairs. So she had to go and pick him up again.

The child held to its purpose. He wanted the tricycle. The Ayah felt inclined to tear her own hair in anger. Why on earth did she go and get the hateful thing? The child was getting estranged from her.

She held out many lovely promises to the child, and for the time being he gave up the project of riding on the tricycle. They were to go by tram to the zoological gardens, the Ayah said, and look at huge tigers and elephants. But when after an hour's walking about, they neither got into a tram nor reached the zoological gardens, Khoka became furious with his Amma. Reaching home, he ran to his father first with this tale of the Ayah's faithlessness, then to Haranath. When she came to give him his milk, he bit with all his might into her hand.

The Ayah was fed up with his temper. So giving him a small slap on the back, she cried out, "You are a most naughty boy. Look, how my hand is bleeding."

As Khoka let out a howl of rage, at this treatment, Haranath ran to him and picked him up. He passed his hand over and over the child's body, saying, "It's true what people say;—one who shows more affection, than a mother, must be a witch." As soon as the child's father turns his back, the child gets it all right, though in his father's presence, he is nearly choked with caresses. But who shall tell him? We are mere servants who work for money."

Though the Ayah did not know much Bengali, she could gather the gist of Haranath's barangue. Any other time, this would have led to a miniature civil war. She would have made short work of him. But she had lost heart at the child's faithlessness. So she remained silent, only her eyes glared like those of a tigress, bereft of her cubs.

Next morning, the tricycle had disappeared. Khoka howled loud enough to bring down the skies. Nripesh began to rebuke the servant for leaving the front door open at all times. Haranath went on retorting with innuendoes. There might be thieves inside, he hinted. The Ayah alone remained silent.

After the storm had blown over, the house became unnaturally silent. Nripesh sat down to his work, Haranath went to the bazaar. Khoka cried himself to sleep, leaving half his milk untasted. The Ayah sat silent on the verandah.

Suddenly Haranath rushed in, very much excited. "Sir," he cried, 'the tricycle has been traced.'

The figure of the woman on the verandah became tense with some feeling. "Where is it?" asked Nripesh.

"There is a shop in the street corner, run by a Madrasi," Haranath said. "They repair and sell old cycles there. The Ayah had taken the cycle there early in the morning. She has told them to sell it."

Nripesh could hardly believe his ears. Why should the Ayah behave like this? She had never misappropriated a penny worth of thing ever since she came to work. As long as she had worked for pay, she had spent most of her earnings on the child. And now that she worked without pay, she took even greater care of the child. Why did she do it? But Haranath would never dare to bring such a charge against her, unless he was positively certain. He had too much respect for his skin. Nripesh did not know what to do.

"Are you quite certain?" he asked Haranath.

"Should I speak if I was not certain?" he replied. "She is not my enemy, that I should bring false charges against her. We have worked together for many years."

Nripesh called the Ayah. She came in and stood waiting. Nripesh asked her whether she had removed the tricycle. She confessed she had done so.

Nripesh found himself in a greater fix

Haranath had not the slightest intention of doing anything for her. But he had to agree, as he did not know how to refuse.

Khoka got up at the usual time, and began to shout when he found that the Ayah was absent. When Haranath went to give him his milk, he kicked the cup of milk out of his hand. Fortunately, the Ayah returned within a few minutes, otherwise things would have gone badly with Khoka and Haranath.

At the sight of the Ayah, Khoka was about to begin his howls again, when he was picked up suddenly and carried to the bedroom. Next moment, he found himself seated on a tricycle, and being dragged from this side of the room to that. Khoka's joy knew no bounds. Haranath rushed in to find out the cause of the sudden silence, and upon finding it, went away, very much dissatisfied. Haranath took money from his master, whereas the Ayah worked without any remuneration, whatever. So Haranath felt himself a bit inferior to the Ayah. Now that the Madras woman had got this tricycle, she would go higher up in the master's estimation. But where did she get the money?

As soon as Nripesh returned, Haranath rushed to him with the news. He was surprised and sent for the Ayah at once. When she came, he asked her where she got the money from, to buy the tricycle. The Ayah answered that Khoka's mother had left a certain sum of money with her, at the time of her death. It was to be used for the child, in case of urgent necessity. She had bought the tricycle with that money.

The thing seemed credible enough. Nripesh felt a little hurt at the thought that Binodini had not done justice to him. She could not believe that he would look after the child carefully enough. She need not have left money for her son. That money, too, she had not left with him, but with the Ayah. Was she afraid that he would steal it?

But the next moment he felt ashamed of his thoughts. Had not his treatment of their son justified Binodini's actions? He could not fulfill the slightest wish of the boy. It was because Khoka's mother knew his worthlessness, that she had acted like that.

Khoka was about to give up food and drink at the joy of possessing the tricycle. He would have remained on it day and night, had he been given his own way. Haranath

could run faster, dragging the tricycle. So Khoka wanted him all the time and had no use for the Ayah. In the morning, even before she had got up, Haranath and Khoka were out in the lane with the tricycle. Even the Oriya servant of the other house looked on amazed at their romplings and joyous shouts.

A fierce look came into the woman's eyes. She went down into the lane and called, "Come darling, have your milk."

The child shook its head violently, saying, "Shan't. Don't want milk. Faster, Haranath!"

The Ayah picked him up bodily from the tricycle. Addressing Haranath, she delivered a very sharp speech. Those servants she said, who were most eager for money, were the least eager for doing their work properly. He had not yet lighted the kitchen fire, was the Babu's breakfast going to be cooked on air? Who asked him to take out Khoka? There were other persons to take care of him.

Khoka protested violently against this forcible removal from the tricycle. He bit and kicked the Ayah, and tore out her hair by the handful. But she did not let go. She brought him upstairs and made him take his milk, bread and eggs. As soon as she released him, he ran straight to the kitchen. "Come out, Haranath," he called; "let's run a race again."

Haranath had not courage enough to declare open warfare against the Ayah, though he was ready enough to backbite and slander. He knew very well that he would be no match for her in warfare. He would have to acknowledge defeat within five minutes and an appeal to the master would bring no satisfactory results. So he refused Khoka's invitation very promptly. He went on putting coal in the oven, saying, "No, little master, you go to your Ayah. If I take you out again, she will swallow me up alive. I don't want to butt in. I have enough work of my own."

So Khoka had to return to his Ayah. But her heart seemed to have become paralysed. It did not seem to fill to overflowing with joy, when she clasped Khoka in her arms. The child seemed different somehow. It was not the same Khoka, who preferred Amma oven to his own mother. Even such an utter good-for-nothing as Haranath could entice him away. She went on with her daily routine of washing, feeding and putting the child to sleep, but the joy seemed to have gone out of all these. She

THE NIRVANA STATUE OF BUDDHA

BY THE LATE SATYENDRA MOHUN KUNDA

Research Scholar, National Council of Education Jadabpur.

THIS colossal statue, of which a photograph is being published for the first time, was discovered by Mr. Carlleyle, in the Nirvana temple at Kasia in the seventies of the last century. Both the temple and the statue were found in a damaged condition. Carlleyle restored the temple, and the Statue was also repaired by him with its fragments found buried within and below the pedestal. It is said in the texts that at the time of the Great Decease, the Buddha had lain upon his right side with his head to the north and legs one upon the other. Accordingly, the image depicts him reclining on his right side, the head resting on a cushion pointing to the north and the face turned to the west.

The right hand is folded and placed under the right cheek, while the left is stretched along the body. The hair is represented in curls and there is the prominent "ushnisha." The body is covered with drapery characterized by folds. In front of the pedestal there are three figures in mourning attitude, one of which, Subhadra, the last convert of Buddha, sits with his back turned towards the visitor. The statue is made of reddish sandstone. It is 20 ft long and 3 ft high. The length of the pedestal is 23 ft 9 in the breadth 5 ft 6 in. the height varying from 1 ft 3 in. to 2 ft 6 in. The Buddhists, who now worship in the temple, have painted the sculpture in gold dust and covered it with silken robes which hide

the limbs and the sculptured drapery from view

Below the central figure of the pedestal there is an inscription which has been deciphered by Dr Fleet as follows

(1) D-gadharmanā-van mahāvihārasvaminō Haribalsasya

The Nirvana Statue of Buddha

(2) Pratimā ch-eyani Ghatitā Rone -- Ma (?) Svarena¹²

Dr. Vogel supplies "na" for the missing syllable and reads 'mathurena' for 'masvarena' so that the translation runs as follows.

"This is the gift of Haribala, master of the great Vibara. And this image was fashioned by Dina, an inhabitant of Mathura."

From the characters of the inscription the date of the sculpture has been assigned to the 5th cent. A.D. i.e. to the Gupta period. If Dr. Vogel's reading be accepted, then its sculptor must have hailed from Mathura.

* Corpus Inscriptionum Indicarum, Vol III No. 69 p 272.
† A S L 1906-07, pp. 49.-50.

than ever. What was he to do with her? He could not think of handing her over to the police. The amount of money, he owed her, for her services, would have easily fetched half a dozen tricycles. She must have done it because she was in want. Nripih had never given her anything, even for necessary expenses. He was more to blame because he had driven her to theft, with his want of consideration. He did not even want to dismiss her, because then there would be nobody to take care of the child. But he must reprimand her, otherwise the other servants would begin to follow her.

But even this was very hard to do. Nobody had ever rebuked her. All seemed to have forgotten that she was a paid servant. She had lived like one of the family. So Nripih did not know how to begin. After much deliberation, he said, "But never do it again. If you want money, ask me for it."

Haranath had been waiting outside, with his shopping basket in hand, eager to hear the sentence passed on the Ayah. But when he heard it, a burning wave of anger swept over him. Why did not the master offer the hateful woman ten rupees as a reward? Had not she done a very noble deed? He went off muttering to herself.

As soon as Haranath had gone, the Ayah seemed to wake up from a trance. "I shall go, Babu," she said. "I won't work here any more. I shall send back the tricycle."

Leaving Nripih speechless with perplexity, and never casting a look at Khoka, the woman passed out of the house. When Nripih sent Haranath after her, to bring her back, she was no longer to be seen.

They looked after the child somehow between them. Nripih had given up all hopes of going to his office, when the unexpected re-appearance of the tricycle facilitated matters for him. A young Madras boy brought it over, but he could give them very little information. He could only say that a woman had placed it with them early in the morning, and had just a while ago asked him to bring it over here. He knew her but very slightly and could not say where she had gone.

The days passed on, one by one. Khoka gave his father no end of trouble, but as

nothing was heard of the Ayah, he had no option but to bear it. Haranath could not cope with all the work, single-handed, so a part-time maid-servant also made her appearance. The work was done no better, but the silence of the house was shattered with interminable quarrels between the two servants.

Nearly a month had gone by. One morning, Nripih was trying vainly to work with Khoka seated on his lap. Haranath came in and informed him that a man was asking to see him.

Nripih told him to bring the man inside. A minute later, an old Chinese, followed Haranath into the room. Nripih stared at the man, in amazement. He wondered what the fellow wanted with him.

Upon being questioned, the man answered in broken English that he had a pawnshop near-by. A woman who gave this address as that of her own, had pawned a gold necklace with him some time ago. But he was being called home, on very urgent business. So he was informing all his clients. If they paid back the money within twenty days he would give up the interest and return them their things. Else he would have to sell up and go away.

Nripih asked on what date the woman had borrowed money. The Chinese gave the exact date.

Nripih saw everything clearly now. It was not Khoka's dead mother, but the living foster-mother, who had given up her all to bring a smile to the baby face. He knew the gold necklace. When Binodini was alive, the Ayah would sometimes put it round her white neck, to see how it suited her. She always used to say that she was keeping it for a present to Khoka's bride.

Nripih dismissed the Chinese, saying that the woman did not work there any longer.

Days passed on again. But the atmosphere of the house grew darker and darker. The fountain of love had dried up. Of the two who were the personification of love in this home, one had been taken away by God. Another disappeared behind the mysterious veil of destiny, and Nripih never knew anything more about her.

THE NIRVANA STATUE OF BUDDHA¹

By THE LATE SATYENDRA MOHUN KUNDA

Research Scholar, National Council of Education, Jalapuri

THIS colossal statue, of which a photograph is being published for the first time, was discovered by Mr. Carlleylo, in the Nirvana temple at Kasia in the seventies of the last century. Both the temple and the statue were found in a damaged condition. Carlleylo restored the temple, and the Statue was also repaired by him with its fragments found buried within and below the pedestal. It is said in the texts that at the time of the Great Decease, the Buddha had lain upon his right side with his head to the north and legs one upon the other. Accordingly, the image depicts him reclining on his right side, the head resting on a cushion pointing to the north and the face turned to the west.

The right hand is folded and placed under the right cheek, while the left is stretched along the body. The hair is represented in curls and there is the prominent "ushnisa." The body is covered with drapery characterized by folds. In front of the pedestal there are three figures in mourning attitude, one of which, Subhadra, the last convert of Buddha, sits with his back turned towards the visitor. The statue is made of reddish sandstone. It is 20 ft long and 3 ft high. The length of the pedestal is 23 ft 9 in the breadth 5 ft 6 in. the height varying from 1 ft 3 in. to 2 ft 6 in. The Buddhists, who now worship in the temple, have painted the sculpture in gold dust and covered it with silken robes which hide

the limbs and the sculptured drapery from view.

Below the central figure of the pedestal there is an inscription which has been deciphered by Dr. Vogel as follows:

(1) Dugadharmanāḥ mahāvihārayamito Haribhāṣya.

The Nirvana Statue of Buddha

(2) Pratimā ch=eyani Ghatita Rone .
Ma (?) Svarena"

Dr. Vogel supplies "na" for the missing syllable and reads 'mathurena' for 'masvarena' so that the translation runs as follows.

'This is the gift of Haribala, master of the great Vihara. And this image was fashioned by Dima, an inhabitant of Mathura.'

From the characters of the inscription the date of the sculpture has been assigned to the 5th cent. A.D. i.e. to the Gupta period. If Dr. Vogel's reading be accepted, then its sculptor must have hailed from Mathura.

* Corpus Inscriptionum Indicarum, Vol III
No. 69, p. 272.
† ASI. 1906-07, pp. 49-50.

At any rate it shows striking resemblance with the Gupta Sculptures of Mathura.

Its massive limbs, heavy lips and chin, full cheeks, spiral curls, folds of drapery rendered in

conventional lines, the symbolic wheel on the sole of the feet, all indicate close affinities with the Mathura School of Sculptures.

AMERICAN IMPERIALISM AND NICARAGUA

By JEHangir J. Vakil, B.A. (Hons.), Oxon.

AMERICA is determined on going one better than England, and when America is determined on something she generally gets it. Two centuries and a half ago she determined to get rid of British domination, and she did it with splendid thoroughness. By the end of the last century she did away with British influence in North and Central America, and to-day her nascent power is challenging British world-dominion. Capitalistic England may boast of her far-flung empire whose raw material she can exploit together with its cheap labour, and where she can dump down her over-production and surplus population, but America too has vast interests at stake in almost every country of the earth to-day and a tremendous surplus capital which she cannot invest at home and must invest somewhere. It is estimated that by 1950 she will have fifty billion dollars invested in foreign parts. She is to-day the banker and creditor of Europe which requires, dreads, resents her financial strength. And not only in Europe is America plunging into the deep waters which breed national hatred and strife, but in Latin America, Nicaragua, Mexico, Haiti.

A glance at the map of Central America will show us why Nicaragua has, in the latter half of the 19th century, been a dangerous field of rivalry between the 'Anglo-Saxon cousins' of the old and the new world. Where the San Juan river and Lake Nicaragua all but span the breadth of the Central American isthmus, is obviously the site of a trans-oceanic canal, a water-way linking up the two great oceans, the Atlantic and the Pacific. Humboldt's famous journey had drawn attention to this obvious fact, but it was Great Britain and not

America who made the first move to enter into possession of it.

Britain first obtained a foothold in Central America as early as 1720 when the semi-civilised and less than semi-dressed chief (subsequently dubbed king by his patrons, the British) of the Mosquito coast—the perpendicular coast-line East and North-East of Nicaragua—was favored with the protection of the British Governor of Jamaica. In order to protect the Mosquito chief, Britishers found it necessary to settle in his territory and exploit its valuable timber until the year 1783, when, under the treaty of Versailles, Britain had to give up all pretensions to the sovereignty of any part of Central America, Belsize excepted. Henceforth, Spain was supreme in Central America, until her yoke was thrown off by her colonies who formed the five states' federation of Central American Republics. But the federation did not last long, carrying as it did, within itself, the seeds of an early dissolution. Civil wars became the order of the day. Britain, seeing her opportunity, encouraged one or other of the contending parties in many cases, by financial aid and sale of arms. Within ten years of its inception the federation was dissolved, and then Britain could do pretty well what it wanted with the separate republics into which it disintegrated. The frontiers of Belsize (re-named British Honduras, and declared a crown colony) were arbitrarily extended at the expense of Guatemala and declared a crown colony whose protests were not fit evidently, to be answered even by the flimsiest diplomatic explanations but were just ignored. The island of Ruanan belonging to Honduras was similarly

and without any provocation, occupied by force majeure, and no explanation vouchsafed for such cavalierly conduct.

In 1849 we find Britain once more befriending the 'king' of the Mosquito coast, and inducing him to claim possession of San Juan del Norte the port at the eastern terminus of the projected canal, and sent British marines to occupy it. Nicaragua, not being in a position to resist this piece of aggression, turned to America for protection and met with willing response. Indeed, the United States would have stepped in before this to spoil England's little game, had not her attention been diverted away from Nicaragua by the Mexican annexation. Nicaragua was quick to point out to the United States that Britain's object in trying to control the mouth of San Juan River was to make herself the mistress of a future canal across the isthmus. The spring of 1849, in fact, saw a British Company trying to win concessions from the Nicaraguan government for the construction of such a canal. Nicaragua, however, was well on her guard, and the representative of the enterprising British Company had to return home with his mission unfulfilled. An American Company, however, succeeded in winning substantial concessions where the English Company had failed totally, because Americans were shrewd enough not to rouse suspicion by claiming special privileges. On the other hand, they stipulated that the canal should be open equally to all nations that would solemnly affirm their willingness to respect Nicaraguan Sovereignty over the territory through which the canal would pass, and that the equal rights enjoyed by these nations should include rights not given to nations who would give no such undertaking—thus cleverly putting England out of court. She hoped by this treaty, to bind together, ultimately if not in the near future, all nations interested in the canal, against the claims of Great Britain, and so to isolate her in any dispute arising over the canal.

The British representative at Nicaragua, as may easily be imagined, raised a storm over this. Eventually, the situation, becoming too grave for the local representatives to handle, was taken in hand by London and Washington, neither of which were willing to push matters to extremes. Result: a compromise known as the Clayton-Bulwer treaty. This treaty, concluded in 1850, which, for a considerable time played an

important part in matters Caribbean, provided that neither government should claim control over the prospective canal or establish zones of influence in Central America.

We must pass over the events of the next ten years, to record the Dallas-Clarendon treaty between England and America. This compelled the British to 'clarify' their relations with Honduras and Guatemala, and relinquish the claim to 'protect' the Mosquito coast. Nicaragua got Greytown (the name given to San Juan del Norte in 1819) on the understanding that it was to be a free-port. This triumph of American diplomacy was possible partly because of the growing strength of the United States, and partly because England was engaged in the Crimean War and unwilling to risk the development of serious complications in the new world. This brings us down to 1860. American diplomacy had gradually and, as it were, imperceptibly outstripped Britain in the race for Pacific supremacy. The latter country was too far away to check effectually the steady push of American capitalism southwards. But though now decidedly a beaten horse, it still hung on, and if America was to get away and win the race clear, she still had work before her. She wisely forbore, however, to precipitate events knowing that it would pay her more to play a waiting game. So the next twenty years saw a lull in the active rivalry of the 'cousins.' During this period, the Nicaraguans and English carried on their dispute about the Mosquito coast. The Emperor of Austria, who was arbitrating in the dispute decided, at the long last, for a technical Nicaraguan Sovereignty, thus adjudicating the substance to Britain's *protege* who got practically free from Nicaraguan control—which meant of course that Britain could speak with the voice of the savage chief whenever she chose to. This made America sit up, and if anything more was needed to rouse her thoroughly, she got it in the fact that Lesseps, after building the Suez canal, got a concession for a canal across the Isthmus of Panama, which is vital to American interests—as vital as the Suez canal is to England's interests in India, a fact whose fullest significances Egypt has every reason to appreciate. Angry notes flitted to and fro between London and Washington for a period of about twenty years, both sides hotly resenting the claim of the other in the prospective Panama

canal. But America had tried her strength in her own Civil War and was confident in her own power to resist by force of arms any power in a contest in her own neighbourhood. In her own waters—the Pacific—she was as set upon non-interference as Britain in the Suez canal and her persistence gained the victory in time. The situation hung in the balance until the close of the last century, when with the annexations of Hawaii and the Philippines, and the extension of her influence in the Pacific, she was in a position admitting of no serious rivalry, in the two Americas, on the part of any power in the world. Britain had to bow before the logic of facts and by the Hay-Pauncefote treaty of 1900 acknowledged the United States' complete control over and sole right of protection of the prospective canal.

All the world knows how Lesseps failed to construct the Panama canal, and that it was not until a fortnight after the outbreak of the European war that it was opened. No doubt many commercial benefits have come out of it, but the main object of America in building it was the strategic advantage which, it was supposed, would accrue. Since about 1900 America has played havoc with 'the rights of small nations' unfortunate enough to lie in the path of the southward drive of American Empire. Cuba, Haiti, Porto Rico, Panama, the Dominican Republic, Nicaragua, have all paid with their independence for the crime of tempting the greed of American capitalists. Referring to United States' dealings in the Caribbean, we find this priceless gem in the editorial of the American Monthly for February 1927: "We must examine the question solely from the point of view of the larger interests (of 'big business'—J. J. V.) of the United States, which are identical with the interests of civilization." Oil and the church are mentioned in this connection, and President Coolidge, speaking about the same time about Nicaragua in particular and the capitalist interests of the United States generally, proclaimed his determination "to take the step that may be necessary for the preservation and protection of the lives, the property and the interests of its (i. e. the United States J. J. V.) citizens." Here we have the usual formula inspired by capitalists who get their government to send troops to silence all opposition to their exploitation, whenever it dares to raise its head. In this connection

it is interesting to note that there are 150 American citizens in Nicaragua. The main consideration, however, that determine American policy in the Caribbean are oil, investments, trade, prestige, and the canal—the prospective Nicaraguan canal even more than the Panama canal. And of these considerations, the canal that may be built in Nicaragua, is not the least important. For, statistics now indicate that the full capacity of the Panama canal will be reached within the next eight or ten years. Another lock could be built for about \$125,000,000, but there are reasons for preferring to construct the new Nicaraguan interoceanic canal. For the naval experts have found that whatever else the Panama canal may be, it does not afford that strategic safety, which was the main reason for its construction. The canal is not broad enough to enable a whole fleet to pass at once; the existing locks are not adequate for battle-ships and battle-cruisers of the prevailing type. Add to that the fact that the locks, the power plant, and the drainage system upon which they depend are not expected to be able to withstand a really well-concerted attack by air, and you have reasons for the construction of a canal in Nicaragua which promises to afford better facilities on all these points, and incidentally you have the reasons why Nicaragua must not be independent and defy the interests of United States capitalists—for they are "identical with the interests of civilization." These interests would require, in Nicaragua, a 'zone,' then the 'guarantees' of sanitation and 'law and order' for the preservation of the zone; and then more territories on either side to fence the zone and safeguard the guarantees—for, as Lord Salisbury said with reference to the expanding north-west frontier of our country; "If you believe the military man, nothing is safe."

Since 1909, three revolutions or civil wars have afflicted this unfortunate country, and for about fifteen years there has been practically a military occupation of it by the United States—all in the name of law and order, and in the interests of civilization, of course. The Bryan-Chamorro treaty destroyed the independence not only of Nicaragua, but of the other Central American republics as well. The Government of the United States is to-day under the thumb of the grandees of Wall Street, who by a system of loans and financial control preceded by military occupation, are strangling the Central

American republics These have now tasted sufficiently of the bitter fruits of disunion and mutual jealousy, and aspire once more to unite and form a federal republic. They are culturally and racially one unit, and now that they have realised that their economic interests can only be safe-guarded by concerted action against the common foe, they are determined to unite in face of the Bryan-Chamorro treaty and the canal policy of the United States.

The years 1912 and 1914 again saw armed intervention by American marines in the domestic quarrels of Nicaragua. American bankers acquired "by the request of the Nicaraguan government" full control of Nicaraguan finance and credit. The conservatives under Diaz sold themselves to the United States and for twelve years fattened upon the good things that American capitalism allowed them for betraying the interests of their land. Then Moncada, the Liberal leader conceived the novel plan of getting into power by being a more abject tool of the United States than Diaz himself! He openly declared that it was madness to resist the power of the states and that the only sane course was to offer them more than the conservatives did. He was denounced at first as a mad man and a traitor, but he soon converted the liberals who were too weak to keep up the struggle against their conservatives plus Wall Street. For, as the New York World declares with reference to the present American interference which began with the landing of troops in December 1926, the states are "committed to the guarantee of a free and fair election" in Nicaragua! The same paper asserts that "pulling out at the present would make a bad matter worse." The revolution under the liberal leader Sacasa had given the United States an excuse to land troops, and help Diaz, the conservative President. On the other hand, the Calles Government of Mexico sent arms to the liberals—sold them, to be exact—thus incurring the further displeasure of the U. S. Babbitts who had done this kind of thing over and over again, in Central America. Moncada received the arms on behalf of Sacasa but receiving information that General Coolidge would send troops to impose peace in Nicaragua, as soon as the American Congress adjourned, he made ready to betray the cause. At this point, Sandino, the great Nicaraguan hero-patriot, a young man in his thirties, steps in upon

the stage, and a few words about him will not be out of place as it will enable the reader to appreciate the part which is, at the present moment, being played by him.

Sandino is the son of a farmer, an important man in the little central-western Nicaraguan village which is Sandino's birth-place. He received the primary education prevalent there and early became a produce-merchant in which capacity he gained a real knowledge of the life of his country which is agricultural. He prospered and soon was able to buy a small farm, out of which he could have made more money had his ambition not been to make it a model one in his country. It did become that, but with the United States taking over the financial control of Nicaragua in 1912, Sandino was ruined along with many another farmer like him. He left his native village and went to northern Nicaragua to work in the mines. His personality soon won for him a wonderful influence over the working-man, and drew the attention of Moncada who thought it would be a good plan to attach this young man to himself. He got up a merry-making party for the special benefit of Sandino and there had a beautiful young virgin brought in. He said to Sandino that he had intended to take this girl himself but as he was his friend and would be his lieutenant he would give her up to him. The poor girl stood there in fear and trembling. Sandino jumped up and said, "This girl is Nicaragua. No man shall take her or give her to another." This said, he lifted the girl on to his saddle and rode out with her into the night. At dawn he arrived at the convent in which he wanted to place her so as to be out of harm's way. She is now a Sister of Mercy ministering to the Philippines. From that day, Augusto Sandino was a name to conjure with, in Nicaragua. "This girl is Nicaragua"—with these words he branded upon the hearts of his people the beauty and the shame, the torture and the humiliation of their land, torn with dissensions, groaning under cruelty from within and without. The corrupt politicians of Nicaragua looked askance at the dynamic energy, the lambent flame of his pure will. They tried to bribe him over to their side—money, honors, a seat in the Nicaraguan chamber of deputies were offered, one after another, but always in vain, to this young patriot whom the Babbitts and the Yellow press have not blushed to call a bandit—had

not French imperialism killed about thirty thousand nationalists in Syria and called them bandits? Failing to win him over to their ignoble side, they tried to have him assassinated at a tavern but Sandino wounded one of his assailants and escaped. Since that day he has abjured drink and we now read in an Associated Press dispatch that Sandino is understood to have established prohibition in the territory under his control." Another addition to his count of sins against 'big business'! Nicaragua under Wall Street administration had become an unbearable place for many Nicaraguans, among them Sandino. He went away to Mexico in 1924 to work in Tampico oil-fields, and stayed there till 1926, when Mexico as has been stated, sold arms to Moncada. Then fearing that Moncada would, to use his own words in a letter to a friend, "at the first opportunity sell out to America" and "betray Sacasa", he, although a supporter of the labour cause, decided "to get into" the Sacasa revolution and save it from Moncada and the United States. He, therefore, went back to his country and asked Moncada for arms which were refused him. Some of the men who were faithful to Sacasa, however, gave him forty rifles and some ammunition. He then allied himself with General Parajon, a field-organiser of the Nicaraguan Federation of Labour. When the States intervened in December 1927, as already stated, Diaz and Moncada vied with each other as to who should sell his country at bargain price to American capitalists, and get their backing. Moncada outbid Diaz by guaranteeing the surrender of all the Generals except Sandino. General Parajon came to the conclusion that it was

useless to try and withstand the god-like might of America, and so laid down his arms. But Sandino still keeps up the fight in the foothills of Nicaragua, although the United States has sent in a good few thousand troops to crush this 'bandit,' who, moreover, is ringed round by traitors in his own country. For, both Diaz and Moncada are thirsting to present his head to the American capitalists, mounted on a silver charger.

Measure the greatness of this young hero in his thirties, with his tenderness. Realising the extreme danger, the 'hopelessness' of his fight with America, he lined up his men. To those who had families, he said, "You must not be sacrificed. I bid you farewell." Then turning to the others he said that if there was any man among them who wanted to leave him he was free to do so. "You need give no explanations. I know that no one of you is a coward." Small wonder his men prefer to stay by him.

For, these men who are fighting today under his banner Labour's red and black flag know that they are fighting for no petty causes but fighting to keep their dear land safe from the rapacious vultures of Wall Street. How long these brave men and their brave chief will be made to go on fighting this shamefully unequal fight, nobody knows. It is up to the liberal section of the Great American people in whose name these things are done, to stop this wrong which is being done to a country already too often wronged before, and to save from possible destruction, the brave men fighting under one whom History has lifted out of the nameless among men, onto the pedestal on which are set the true sons of Humanity, the Liberators of men—General Augusto Calderon Sandino.

THE CAUSES OF THE SECOND AFGHAN WAR

By MAJOR B. D. BASU, I. M. S., (Retired)

THE acquisition of territory in, and the extension of the boundaries of India by England, would seem to have terminated with the suppression of the Mutiny and the proclamation of Queen Victoria. In that memorable document, Her Majesty announced:

"We desire no extension of our present territorial possessions." To make the proclamation solemn, Her Majesty concluded it by invoking the aid of Providence. "May the God of all power," wrote she, "grant unto us, and to those in authority under us, strength

to carry out these our wishes for the good of our people." But the earth had hardly completed eighteen revolutions round the sun since the issue of the above-mentioned proclamation when those in authority under Her Majesty began to concoct schemes and plans with the object of extending the territorial possessions of Her Majesty in the East.

Their schemes or rather conspiracies ended in that terrible disaster which equalled, if not surpassed, the Indian Mutiny in magnitude and proportions. That terrible disaster was the second Afghan War.

To trace the causes of the War, one would find that the lessons derived from the first Afghan War and the Indian Mutiny were lost upon the ministers of Her Majesty. They caused Her Majesty to violate treaty obligations with an independent Prince and also made the solemn Proclamation issue by her a dead letter and a farce. The object aimed at by these Christian ministers was more territorial possessions, or, to quote the words of the man who was at the head of the Ministry in England, they were in search of the "scientific frontier" of India.

Lord Dalhousie made the Khan of Khelat sign a treaty in 1854 by which that Chieftain was reduced to the position of a feudatory vassal of the Government of India. He (the Khan of Khelat) moreover, agreed to allow British troops "to occupy such positions as may be thought advisable by the British authorities in any part of the territory of Khelat."

In India itself Dalhousie had too many irons in the fire to avail himself of the advantage which the new treaty with the Khan of Khelat placed at his disposal. But twenty-two years afterwards, i.e., in 1876, when every one was under the impression that Her Majesty had no desire of extending her territorial possessions, the people of India and Afghanistan were surprised to learn that Quetta had been occupied by British troops under the treaty engagements of 1854 with the Khan of Khelat. This occupation of Quetta greatly alarmed the people of Afghanistan.

In this place it is necessary to recount the events which preceded the occupation of Quetta. For this purpose we should advert to the correspondence that had passed between the Ministry in England and the Government of India in India. Although many passages in this correspondence are suppressed, yet the published records will

enable any intelligent man to form his judgment on the subject.

No treaty was entered into between the Government of India and the Amir of Afghanistan till 1855. When in 1840 and 1841 the Christian Government of India was carrying fire and sword in Afghanistan, its legitimate ruler, Dost Mohammed Khan, was a state-prisoner in India. After the evacuation of Afghanistan by the British Dost Mohammed was allowed to return to his country and resume his throne. But he had not bound himself by any treaty with his Christian benefactors. It was in 1853 that Sir Herbert Edwardes, who was then Commissioner of Peshawar, suggested to Lord Dalhousie the desirability of entering into treaty engagements with the Amir of Cabul. Lord Dalhousie authorised Sir John (afterwards Lord) Lawrence, the then Chief Commissioner of the Punjab, to conclude the treaty with Dost Mohammed. This treaty bears the date of May 1, 1855. It was supplemented by another in 1857. The former treaty of 1855 professed 'perpetual peace and friendship' between the Government of India and the Amir of Afghanistan. The supplementary treaty was entered into when the British Government was at war with Persia. It provided that a lakh of rupees per month should be paid by the Government of India to Dost Mohammed for military purposes, and that British officers should reside in Afghanistan to see that the subsidy was properly applied, and to keep the Government of India informed of all affairs. To quote the words of the Treaty :—

"The subsidy of one lakh per mensem shall ~~cease from the date on which peace is made~~ between the British and Persian Governments, or at any previous time at the will and pleasure of the Governor-General of India.

"Whenever the subsidy shall cease, the British officers shall be withdrawn from the Ameer's country; but at the pleasure of the British Government a Vakeel, not a European officer, shall remain at Cabul on the part of the Government, and one at Peshawar on the part of the Government of Cabul."

Dost Mohammed died in June 1863, and was succeeded by his son Sher Ali Khan. In 1867 he allowed the Government of India to send a Muhammadan gentleman of rank and character to reside at his court, and there to represent the British Government.

Up to 1875, no attempt was made to replace the Muhammadan gentleman who acted as the agent of the Government of India at

the Court of Cabul. But in that year the Indian Government was told by the Secretary of State for India to replace the Muhammadan gentleman by an English officer. The conservative party was at that time in power in England. Its chief was Disraeli. His ambition was to color the map of Asia red. This shrewd prime minister of England conspired to destroy the independence of Afghanistan.

He found an able lieutenant in the person of the Secretary of State for India named Marquis of Salisbury, who afterwards rose to be the Prime-Minister of England. The natives of India have no reasons to cherish with reverence the name of the Marquis of Salisbury. For he inflicted many miseries and calamities on the people of Hindustan. It was he who brought about the War with Afghanistan; it was he who tried to "cheat" the people of India by reducing the age limit of candidates for the Civil Service Examination; it was he who declared in a public meeting that no English constituency would return a "black man" to Parliament. The black man referred to was the well-known Indian patriot Dadabhai Naoroji. Again, when he rose to be the Prime-Minister of England and it was proposed to grant in a small measure the boon of Representative Government to India by expanding the scope of the Legislative Councils of India, this nobleman objected to it, declaring that the people of the East were accustomed to despotic, and not representative, systems of Government. Several other instances could be adduced to show why the people of India have just grounds for detesting his name.

But to resume the thread of our narrative, In the beginning of 1875, i. e., on the 22nd January, this nobleman was directed by his chief to write to the Governor-General of India a secret despatch. At that time Lord Northbrooke was the Governor-General of India. The Marquis of Salisbury desired the Earl of Northbrooke to substitute an Englishman for the Indian, as the agent at Cabul. He wrote:—

"Your Excellency maintains a Native Agent at Cabul, I am informed that he is a man of intelligence and respectability. But it appears to be very doubtful whether he is in a condition to furnish you with any facts which it is not the Amcra's wish that you should receive. Even if you could rely upon the perfect frankness of his communications, it is not likely that any Native Agent would possess a sufficiently insight into the policy of Western nations to collect the information require. One of the principal qualifications

for this function is the neutrality of feeling in respect to religious and national controversies, which only a European can possess. Of the value of the Cabul diaries different opinions are expressed. It is obvious that they are very meagre, and doubts have been thrown upon their fidelity.

"Her Majesty's Government are of opinion that more exact and constant information is necessary to the conduct of a circumspect policy at the present juncture. The disposition of the people in various parts of Afghanistan, the designs and intrigues of its chiefs, the movements of nomad tribes upon its frontier, the influence which foreign powers may possibly be exerting within and without its borders, are matters of which a proper account can only be rendered to you by an English Agent residing in the country. There are many details, moreover, a knowledge of which it is material that the military authorities should possess, and with respect to which it is not to be expected that a Native Agent would be either able or willing to collect for your Government trustworthy information."

The Agent for whose removal Lord Salisbury was so keen, was a Muhammadan gentleman named Ata Muhammad. The noble Marquis was unable to bring forward any evidence to show that the Agent had ever failed in his duty. No instance is known in which it could be asserted that Ata Muhammad did not keep the Government of India informed of what was going on in Afghanistan and its frontiers.

Why was then Lord Salisbury or rather the Disraeli ministry so anxious to replace Ata Muhammad by a Christian officer?

This question can only be satisfactorily answered on a hypothesis based on the political transactions of the British with the Princes of Hindustan. Whenever the British wanted to swallow up an Indian principality or whenever they desired to reduce an independent Prince to the position of a feudatory, their first move has always consisted in the fastening of an English Resident or Agent on the non-Christian prince. These English residents or agents play the part of diplomatists in the courts of Indian princes. Regarding these diplomatists the well-known English General Gordon, who met with his death in the besieged town of Khartoum, wrote:—

"Our diplomatists are conies, and not officially honest. * * I must say I hate our diplomatists. I think with few exceptions they are arrant humbugs, and I expect they know it."

This estimate of British diplomatists by General Gordon is borne out by facts. These diplomatists, known in India as Political Residents and Agents, create confusion and

disorder in the states to which they are sent to represent their employers. This is not denied by the British historians of India. In the last century it was considered expedient to create disorder and confusion in the kingdom of the Peishwa; hence a British Resident was sent to the Peishwa's court. The name of this resident was Mr. Mostyn. The historian of the Mahrattas, Captain Grant Duff, naively writes that Mr. Mostyn was sent to Poona "to foment domestic dissensions."

Again, when Kashmir was required to be brought under the political control of the Government of India, the first step that was taken to secure this end was to despatch a British Political Resident to the court of the Hindu Ruler of the Happy Valley. No sooner had this officer settled himself in his new position than the grand discovery was made that the Raja of Kashmir was intriguing with Russia to overthrow the British Government in India! It was alleged that regular correspondence passed between the Raja and the Czar. It is now an open secret that the correspondence was all forgery and that the officer who represented the might and power of the great Empire over which the sun never sets had a hand in the creation of this forged correspondence.

The Amir of Cabul and his Afghan subjects knew very well the stuff of which these European politicals are made. They knew how the European officers whom they had hospitably entertained, for the Afghans are well-known for their hospitality, plunged their country into a war from the effects of which they were still suffering. They knew that a highly pious Christian like Sir William Macnaughten did not scruple to create confusion and disorder in their country by assassinating their chiefs and sowing discord in the ranks of their nobles. Imagine how black must have been the deeds of the Christians in Afghanistan when Captain J. B. Conolly, who, as political Assistant and in the confidence of the Envoy, Sir William Macnaughten, could and *did* write to Mohan Lal:—

"Tell the Kuziltash chiefs, Sherian Khan, Naib Sherif, in fact, all the chiefs of Shah persuasion, to join against the rebels. You can promise one lac of rupees to Khan Sherian on the condition of his killing and seizing the rebels, and arming all the Shahs, and immediately attacking all rebels. * * * Tell the chiefs, who are well-disposed, to send respectable agents to the Envoy. Try and spread 'ufak' amongst the rebels. I promise

10,000 rupees for the head of each of the principal rebel chiefs."

The Amir of Cabul was not expected to fasten the rope round his own neck. Lord Northbrooke invited the opinions of all those who were conversant with the Afghan politics to ascertain whether the Amir would consent to have a British officer in his Court as a Resident or an Agent. All of them assured him that such a step would not be approved of by the Amir. Lord Salisbury's despatch was replied to by the Government of India on the 7th June, 1875. The Viceroy wrote —

"If the concurrence of all those who may be supposed to have the means of forming a correct judgment of the sentiments of the Ameer is of any value, we must be prepared to find him most unwilling to receive a British Agent."

There can be no reasonable doubt that there still exists a strong party among the Sirdars of Afghanistan opposed to the measure. Although the time which has elapsed since the Afghan War appears to us to be long on account of the succession of Governors-General of India, and the importance of the events that have intervened, there are many persons living in Afghanistan who were engaged in that war, and whose memory of what took place is probably the more lively from the narrow limits of their thoughts and actions. Those who have had the most intimate acquaintance with Afghanistan have always expressed their opinion that the establishment of complete confidence between the Afghans and the British must be a work of time."

Lord Northbrooke protested in vain against the forcing of a British agent on the Amir. The fiat had gone forth that a British officer should be delegated to Afghanistan. Her Majesty in assuming the direct government of India, proclaimed:

"And it is our further will that, so far as may be, our subjects, of whatever race or creed, be freely and impartially admitted to offices in our service the duties of which they may be qualified, by their education, ability and integrity, duly to discharge."

Why were then Her Majesty's ministers so hostile to the Muhammadan agent at the court of the Amir? Lord Salisbury in his despatch admitted that the agent was "a man of intelligence and respectability." But his Lordship expressed his doubt whether the "Native Agent would possess a sufficient insight into the policy of Western nations." If the Native agent did not possess the required qualification the fault was not his but of the government for not training its subjects in such a way that they might

"possess a sufficient insight into the policy of Western nations."

It was in 1833 that Mr. Thomas Babington (afterwards Lord Macaulay, from his place in the House of Commons, said:—"Are we to keep the people of India ignorant, in order that we may keep them submissive?" But in 1853, Mr. John Bright had to use the following language to show that the Government of India had done nothing to educate the people of that country and that the object of that government was to keep the people of India submissive and therefore ignorant:—

Mr. Cameron, a gentleman who presided over the Indian Law Commission and Council of education from Bengal, said in 1853:—

"The Statute of 1833 made the natives of India eligible to all offices under the Company. But during the twenty years that have passed [they have not got any posts except] such as they were eligible to before the Statute. It is not, however, of this commission that I should feel justified in complaining, if the Company had shown any disposition to make the natives fit, by the highest European education, for admission to their covenanted service. Their disposition, as far as it can be devised, is of the opposite kind.

"When four students were sent to London from the Medical College of Calcutta, under the sanction of Lord Hardinge, in Council, to complete their professional education, the Court of Directors expressed their dissatisfaction."

Speeches of John Bright, Vol. I, p. 22. (Speech on India June 3rd, 1853.)

Lord Salisbury, in his despatch indirectly admitted that the British rule in India had been a failure. For while "the grandsons of the Gauls who had besieged Julius Caesar in Alesia commanded legions, governed provinces, and were admitted into the Senate of Rome", no Indian after enjoying British rule for over a century is considered fit to act as an Agent in the Court of an Asiatic Prince because he is not supposed to "possess a sufficient insight into the policy of Western nations."

In the despatch, dated London, November 19, 1875, the Viceroy and Governor-General of India was peremptorily ordered by Lord Salisbury to replace the Native Agent in Afghanistan by a British officer. With this end in view, the noble Marquis even suggested the adoption of a tortuous course of policy. He wrote to the Viceroy:—

* How does this compare with the policy of the Mughal Emperors who appointed Hindoos as Viceroy and Commanders-in-Chief to govern their Afghan possessions? Akbar's Viceroy in Cabul was a Hindoo.

"The first step, therefore, in establishing our relations with the Ameer upon a more satisfactory footing, will be to induce him to receive a temporary embassy in his capital. It need not be publicly connected with the establishment of a permanent Mission within his dominions. There would be many advantages in ostensibly directing it to some object of smaller political interest which it will not be difficult for Your Excellency to find or if need be, to create. I have, therefore, to instruct you, on behalf of Her Majesty's Government, without any delay that you can reasonably avoid, to find some occasion for sending a mission to Cabul; and to press the reception of this Mission very earnestly upon the Ameer."

The italicised sentences in the above show how anxious the noble Marquis was to press a British officer on the Ameer and to gain this object he did not hesitate to advocate the adoption of questionable means.

To Lord Northbrooke's credit it should be mentioned that he tried to dissociate himself from the crooked and unrighteous policy which the Marquis of Salisbury asked him to adopt. Again, a protest was made by the Viceroy of India. In his despatch, dated Fort William, January 28, 1876, Lord Northbrooke pointed out the undesirability of forcing a British Agent on the Ameer. Regarding the efficient work of the Native Agent, he wrote:—

"We had no reason to believe that information of importance was withheld; that, on the contrary, the information supplied was fairly full and accurate, and that the diaries contained internal evidence that the intelligence reported in them was not submitted to the Ameer for his approval. * * * A perusal of the recent diaries is sufficient in our opinion to establish the improbability of the statement (for which, indeed, we have never seen any evidence advanced) that the Agent withheld information in deference to the wishes of the Ameer. As a matter of fact, we are not aware that any event of importance, which it would have been the Agent's duty to report, has not been promptly communicated to us."

Referring to the tortuous course which the Marquis of Salisbury enjoined, Lord Northbrooke wrote:—

"If a Mission is to be sent to Cabul, the most advisable course would be to state frankly and fully to the Ameer the real purpose of the Mission. The Ameer and his advisers are shrewd enough to understand that only matters of grave political importance could induce us to send a special Mission to his Highness' Court. If the Mission were directed to objects of minor political importance, the Ameer and his officials would be incredulous. He might then decline to discuss the weightier questions brought forward by our envoy and in all probability his confidence in us would be shaken, especially as the proposal to establish British Agents in Afghanistan is, as we pointed out in our despatch of June 7, a departure from the understanding

arrived at between Lord Mayo and, the Ameer at the Umballa conferences of 1869."

But all the logic and arguments of Lord Northbrooke and his colleagues composing the Government of India were lost upon the Secretary of State for India and the members of the cabinet of which Disraeli

was the chief. As Lord Northbrooke could not conscientiously carry out the behest of the Disraeli Ministry, he saw no other course open to him but to resign the Viceroyalty of India. And this he did.

(To be continued)

INDIA—MY SISTER

"If I bring thee nought but a wounded heart
To plead with thy wounded pride;
If I bring thee nought but repentant tears
For the boon so long denied—
The love that should bind all men as one,
That should link the East and West,
That should kull all pride of place or power
Of race or of creed professed:
If I bring thee nought but a bitter shame
At thy people's rightful ire
That a sister's hand should have struck thy face
And dragged thy name in the mire:
I bring thee at least no empty smile
And my pity is not for thee—
O India, the land of a thousand ills—
But for those who are blind as we
Who stand apart in our sinful pride
And taunt thee with thy despair,
Unheeding the need to lend a hand
Thy burden to aid the bear;
To repair the ravage of ceaseless feuds
To nourish the goodly seeds;
For my faith is through that the best endures
Beneath a forest of weeds.
And who are the heroes all strong and pure
And where are the saints, alas!...
And which is the nation can fling a stone
From a house that is not glass?.....
O India, I bring thee a clearer sight,
And the healing balm of prayer
For the daily struggle thou hast to make
And the ills that are thy share.
I strive to follow thy subtle thoughts,
Thy dreams and thy wistful aims:
I long to feel the pangs of thy thirst,
And burn in the self-same flames
As thou, O Sister of mine that sits
In the dust of thy sun-lit land
And spins, or bakes, or sings, or pray
Or begs with a piteous hand:
That knows no shame of honest toil,
Nor poverty nor blight—
For all are surely gifts of God,
And He is surely right.
I see as in a dream the years
Steal slowly o'er thy head,
From that first dawn that saw thy birth
To that which nigh is sped—
I see a many million shades
Of men arise and walk:
I view a wondrous pageantry,

And hear a wondrous talk.
I list a thousand tales re-told
In strangely well-known words,
I note familiar airs and garb
And spears and glittering swords...
And in the dusk a thousand deeds
Are once again performed,
And once again is heard the din
Of war, and cities stormed.
And e'en amid the din of war
I hear a well-known cry:
And see familiar faces light,
Or darken, ere they die...
I see the page of history wrought
Not written yet by men,
Of wars, and crimes, and dreadful deeds
Of times beyond our ken.
I see a world of world-wide woes,
From end to end of time,
I see God everywhere defined
In every land and clime.
I hear familiar curses cried,
I see familiar sin.
Where'er I go, which way I turn
The Evil seems to win.....
But does it?—Ah, another view
Presents itself to me:
The noble deeds of noble men
Are quite as plain to see.
Beside the weeds of sins and crimes
The good green corn is grown
In daily tasks, in kindly acts
In love for kindness shown—
Ah, Sister India, in thine eyes,
I see the light of hope,
I see thee gaze within thy past
And 'mid the pages grope
For those dear faces, those dear names,
That shine forever there
As beacon lights to other men
Because so wondrous fair,
I see thee turn from name to name
And ask thyself with pride,
If other lands have greater hearts
Than those for thee that died.
Did they not love thee, live they not
In word and works divine?
Did they not win immortal fame—
Hast thou no gods like mine?
I gaze in pain down fruitless years
That have kept our lives apart,

For nought can save the souls of men
 But union—heart with heart—
 A league of souls to break all bars
 Of creed and caste and race,
 And build a realm of God on Earth

That shall all His sons embrace—
 O Sister India, thou who kilt
 So firm on thy lowly soil—
 Should we not strive to form that League
 To reconquer the Earth for God?

St. CLAIR

POLITICS, PROPAGANDA, PRESS AND PUBLIC

By VICTOR MOGENS—OSLO

DURING the war, the word 'propaganda' underwent an unhappy change of meaning. In those unhappy days, when we neutrals were bombarded with books, brochures, articles, telegrams and photographs, from both the belligerent parties and thus such a confusion that created and it was impossible to think out matters calmly. As in most other points, the confusion was complete also regarding propaganda. The neutral countries were divided into two camps and the "communications" from the opposite parties were, as a rule, called 'propaganda.' 'Propaganda' became synonymous with lying and that with conscious and wicked lies as well as other devilries. For the sake of accuracy it was often called "lying propaganda" and even when this characterisation was not expressly mentioned it was all the while implied. Even now this word signifies something hateful and it is generally used to designate various attempts of the enemy.

In a work on political propaganda the chapter on the propaganda of the world-war would be certainly a shameful piece of literature. The powerful apparatus which was again and again built for propaganda work, the power of fabrication which was displayed and the boldness and impertinence which were exhibited are in their way a monument of human ability, but like the war itself, ability which served to produce discord and hatred and to fabricate shameless lies. Never has false morality recorded such triumphs, never was hatred and contempt mixed with such refinement of hypocrisy and that to such an extent; never were conscious lies used so systematically as a political weapon. It is contemptuous but

is in its way imposing. The English maxim, "tell a lie and stick to it", seems to have been the suitable but highly immoral motto of all this propaganda. And this may be said also of another English proverb which was adopted by all the countries: "right or wrong, my country."

The war propaganda worked on three fronts. First in one's own country in order to excite the spirit of war and to keep up the hatred against the enemy and maintain the justice of one's own cause.

Further, the propaganda was extended so far as possible into the enemy country, principally by throwing fly-leaves from aeroplanes on or behind the enemy front, the contents of which were detrimental to the morale of the troops. The English were past masters in this and later Americans too followed their example. They had established printing machines behind the front solely for the purpose of printing papers of this sort; and towards the end of the war when the masters of advertisement displayed their full power, every day hundreds of thousands of fly-leaves were thrown upon the German lines, and surely they contributed to the confusion of the German front. Much of this bungling work was so startling that they had just the opposite effect; other papers, however, were composed with accurate psychological estimation of the enemy. "The American propaganda officer Capt. Blankenhorn published many characteristic texts in his book, "Adventures in propaganda." These papers were mostly in the form questions such as the following:—

1. Are the Germans really still so strong as in July 1918?

2. Their enemies are daily growing stronger or weaker.

3. Have the heavy defeats which you suffered in 1918 brought you the victorious peace, which was promised by your leaders.

4. Have you still faith in final victory

5. Do you wish to sacrifice your life for a hopeless cause?

The highest leader of the powerful propaganda machinery of the entente was the great advertising expert, Lord Northcliffe, and if he claims for himself a great share of the honor of the victory it is not at all unjustified, however ludicrous it may sound. In the campaign led by him, he was certainly a more genial leader than any of the entente military leaders in the battle-field. The defeat of the central powers began in their south-east front. The break-down of the Bulgarian front and the dissolution of the heterogeneous Austro-Hungarian army were the factors which rendered the final defeat of the central powers unavoidable. Northcliffe had admitted that he had directed his main attack against the weakest point of the enemy, that is to say, against the Austro-Hungarian front. Here of the fifty-two millions of men at least 31 millions were anti German and wanted to see the defeat of the central powers. To these peoples it was equivalent to a promise of self-determination and political independence. Northcliffe, however, had to get over great political difficulties. According to the secret agreement in London, April 1915, the allies had promised to Italy large tracts in the Adriatic coast as remuneration for joining the war and Italy did not then think of giving the right of self-determination to these districts. Yet however after long negotiations carried on by his fellow-workers Steed and Seton-Watson, Northcliffe succeeded in coming to an agreement between the Italian minister Orlando and the South-Slav leader Trumbitch. The result of the agreement of April, 1918 was that Northcliffe who had achieved this political step started a powerful propaganda with the purpose of undermining the fronts of the dual monarchy. The world had never seen a propaganda work greater than this. These fronts were literally covered with a hail-storm of fly-leaves, proclamation, maps, sketches, declarations of independence etc. The result was not far in coming. Desertions in the Italian front and the betrayal of offensive plans and positions increased in course of a short

time to such an extent that it was impossible to keep the front intact. We know how it ended and there is no doubt that Northcliffe's "propaganda-poison" was one of the most potent contributive factors.

The third front in which the war propaganda was active was that of the neutral countries. These were the unfortunate objects of a double bombardment. Each of the two parties wanted to gain the sympathy of the little part of the world which was still neutral. Propaganda worked hand in hand with politics, each party wanted to create a suitable field for its political machinations by flooding us with literature which was intended to convince us of the just cause for which it fought in the battle "which was forced on it." They would also convince us how criminal the enemy was and that the neutral powers too should plunge into this holy war, which was, in fact, carried on only for their sake (cf. England's love for the weak nations).

Now a decade after this "blooming period" of this propaganda it is possible to judge it and we can see with what abominable methods this propaganda was carried on among the neutrals to arouse hatred and abhorrence against the enemy. A short time ago an English propaganda officer published a communique that the story that the Germans used to extract fat out of the corpses of dead soldiers was a lie fabricated by him and that the illustrations accompanying the text were fakes. Hundreds of such falsehoods were fabricated. I have seen a series of horrible pictures of pogroms in Russia which were distributed in millions of copies all over the world by the French propaganda bureau under the superscriptions "Après le passage des barbares," "les crimes des hordes allemandes en Pologne," etc. A photograph of peace time representing a number of German officers with their trophies of victory after a race competition consisting of silver beakers, goblets and cups was distributed all over the world during the period of the war under the subscription "the German robbers after plundering a castle". We still remember the horrible reports of the Germans who hacked off the hands of Belgian children and the pictures of whipped and half-naked women, and to-day we neutrals are horrified when we come to know the methods by which people wanted to have us on the "right" side.

The chief seat of the entente propaganda was the propaganda centre in London and

Sir Campbell Stuarthas written a very interesting book "The secrets of Crewe-House" about its activities. But from February 1918 the organisation was transformed into an "Information Ministry" under the guidance of Lord Beaverbrook. For every country, for instance, France, Holland, U. S. A., Norway, there was a special departmental chief, and in biweekly conferences, all the information received were discussed and new lines of action were prescribed. A particular department in this ministry, the National War Aims Committee, was entrusted with the duty of maintaining the belligerent spirit of the people and keeping clear the aims of the war. Another department took charge of guiding visitors from neutral countries and to treat them in proper way. Besides the ministry, Northcliffe carried on his own propaganda institution dealing with the enemy countries.

During the first year of the war the chief duty of English propaganda was to work upon the spirit of the people of U. S. A. so that they were at last ripe for joining the war. We know with what boldness this propaganda was carried on. There was no method which was too coarse or shameless if it could but contribute to the realisation of the final aim. Sir Gilbert Parker relates in an article in *Harper's Magazine* about this activity :

"I need hardly say that the range of our propaganda department in America was very great, and its activity very comprehensive. Every week we submitted a report to the British Government. We were always in connection with the correspondents of American papers, and provided for every American paper at least one English paper. We influenced the people by means of kinopresentations, newspaper articles and pamphlets. We answered the letters of critical Americans. We gave advice and tried to induce people of every sort to write articles. We availed ourselves of the good services of confidential persons in America. By means of personal correspondence with influential men of all classes we organised societies for propaganda. We founded libraries, clubs and journals for the use of the Y. M. C. A. We had 10,000 propaganda agents in America."

What must have been the cost of all this ! But the entente has on that account gained the war, thanks to their masterly propaganda. And for the seventh and the

last time, nothing is so dear as to lose a world war.

In France the propaganda was carried on by the *Maison de la Presse*, dependant on the foreign ministry, and on the reorganised form of *Bureau de la Presse et des Informations* as well as of *Service de Propaganda*. This propaganda institution whose chief duty was to influence the foreign press had in its first year of existence an official budget of 25 million francs. But how great the secret funds were, is still unknown.

The German propaganda, on the other hand, was as bad and planless as the entente propaganda was brilliant and heedless ; but for this reason the German propaganda was much more honest. When the German army during the whole period of war was on the offensive in all the fronts, the propaganda even from the very beginning was defensive and so had lost the game even at the very beginning. The German propaganda may be regarded as an example as to how a propaganda should not be carried on. First of all, organisation, for which the Germans are so famous in all other departments, was wanting in it. Various organisations were at work but without mutual understanding and without a fixed plan. The highest power lay in the foreign office and it was bureaucratic and ossified, moreover, the German propaganda worked without any psychological understanding of those peoples who were to be influenced, and the result was that they were more frequently offended rather than won for the German. Above all, they did not appear to comprehend the secret of advertisement and of the art of influencing the mass. They did not understand the importance of a good shibboleth and the secret of repetition was unknown in German propaganda as we have it in the American principle of advertisement, "What you wish to be believed, you must say a dozen times." The German propaganda opposed the shibboleths of the others, which burnt like a prairie fire in the whole world, with circumstantial and well-grounded essays which painfully tried to prove that the Germans were right but which were never read up to the end by any man. Before the reasoned-out essays of the German professors appeared the publicity experts of the other side coined a new shibboleth.

When Miss Cavell was executed, the whole world cried "revenge for Cavell."

The Germans replied that the military laws of every country prescribe capital punishment for what was done by Cavell. But to raise a hue and cry at least over one of the women who were executed by the enemy—that the Germans failed to accomplish. The entente propagandists time and often sounded the chord of sympathy, and fully understood how to produce abhorrence against the alleged cruel war of the Germans. In those years of despair, when the hunger blockade daily claimed the heavy toll of hundreds of victims, the German foreign propaganda was engaged only in describing in glowing terms the miserable condition of the country instead of fighting this most cruel weapon of war through propaganda.

It may be said in defence of this unsuccessful propaganda that from the first moment it was defensive and a propaganda which is exclusively meant for demerits has lost the game even from the beginning. The Germans did not think what their enemies wished to do and actually perform to call a world to arms. They thought that Bismark's words "one shoots the enemy not with" public opinion but with powder and lead, could be applied even to the present day.

But this foreign propaganda was not over with the war. Besides the very active trade propaganda which began after the conclusion of the war, chiefly from the side of the Americans, the culture propaganda has since then assumed huge proportions. Its chief activity consists of founding foreign associations. We have been lucky enough to have a series of such associations, one of which is Italo-Norwegian, but as yet there is no sign of the German-Norwegian association.

In culture propaganda France far excels all other countries. The Alliance Française is the oldest of the innumerable French foreign associations. It was founded in 1883 by professor Focin with Paul Cambon as the honorary president. To-day this society counts more than a hundred thousand members all over the world and is a propaganda organisation for the French language, or, as its founder has formed the programme in his beautiful mother-tongue, the aim of the society is to "realise the noble destiny of the French language—to rule over the whole world in all honour." By means of lectures, courses of instruction and writings and with the help of zealous Frenchmen and foreigners who are French in spirit, this propaganda is carried on in

every part of the world with this definite aim. Under Alliance Française there is again a number of special organizations. I mention here only the Société de Conférences the lectures of which are translated into seven languages and are strewn all over the world in at least 30,000 copies.

Besides the Alliance Française the Amities Françaises was founded in 1909 (the name is taken from a novel of Maurice Barres); it is a culture propaganda organisation on a wider plan than the old organisation, but, like it, with a strong imperialistic tendency. The first groups were formed outside France; the management, however, lies in the hands of a group of twelve persons in Paris. The Amities Françaises, according to its programme, wishes to "propagate not only the language but also all the ideals, traditions, usages and culture of the French spirit. It hopes to construct a bulwark against every thing that is anti-French, above all, against pan-Germanism." In Norway it has many Germanic members. Particularly after the war it has displayed an intensive campaign for enlisting members. The writer of these lines was himself honoured no less than three times with invitations to become a member of this society from the head office in Paris during the last year.

I say that during the war the word "propaganda" had undergone an unhappy change of meaning. But the thing itself is not so bad—so far as he who carries on the propaganda does it with his own sacred conviction and does not allow himself to be led by considerations lying outside this thing (such as personal interests) and so far as the means resorted to are not such as to be justified only by the end.

To carry on propaganda for an idea and for the belief and conviction with which a person thinks of serving others, is not only permissible morally but justified in a high degree and even a duty! The American William Bayard Hale told me once when I spoke to him about his undaunted propaganda against America's entry into war, "he who does not wish to make a propaganda for his idea, is not worth having one."

The greatest propaganda to-day and for all times is that which is carried on for the Christian religion, and even a propaganda centre like that of Northcliffe cannot, in this respect, be compared with the Catholic church. Even Jesus himself with the words "go you to every part of the world and make

importance. It was not enough for woman to be the helpmeet of man. It was not even enough for her to be his equal—Her pleasure must be law both for herself and for man. And man trucked to it. When a nation is growing old, it renounces its will, its faith, the whole essence of its being, in favour of the giver of pleasure... No doubt the Eternal Feminine has been an uplifting influence on the best of men: but for the ordinary men, in ages of weariness and fatigue, there, is, as some one has said, another Feminine, just as eternal, who drags them down. This other Feminine was the mistress of Parisian thought, the Queen of the Republic.

THE CRY OF THE MODERN PARISIAN EDUCATED WOMAN

"But what sort of work can we do? There isn't any that we could find interesting—for, I know, we dabble in all sorts of things, and pretend to be interested in a heap of things that do not concern us; we do so want to be interested in something! I do what the others do. I do charitable work and sit on social work committees. I go to lectures at the Sorbonne by Bergson and Jules Lemaitre, historical concerts, classical matinees, and I take notes and notes. I never know what I am writing! and I try to persuade myself that I am absorbed by it, or at least that it is useful. Ah! but I know that it is not true. I know that I don't care a bit, and that I am bored by it all. Don't despise me because I tell you frankly what everybody thinks in secret. I am no sillier than the rest. But what use are philosophy, history, and science to me? As for art,—you see,—I strum and daub and make messy little watercolor sketches; but is that enough to fill a woman's life? There is only one end to our life: marriage. But do you think there is much fun in marrying this or that young man whom I know as well as you do? I see them as they are. I am not fortunate enough to be like your German Gretchens, who can always create an illusion for themselves. That is terrible, isn't it? To look around and see girls who have married and their husbands, and to think that one will have to do as they have done, be cramped in body and mind, and become dull like them! One needs to be stoical, I tell you, to accept such a life with such obligations. All women are not capable of it. And time passes, and the years go by, youth fades; and yet there were lovely things and good things in us—all useless, for day by day they die.—Even our mothers ignore us, and actually try not to know what we are. They only try to get us married. For the rest, they say, live, die, do as you like! Society absolutely abandons us."

EROTIC SOCIALISTS

"In love they were altogether in their element; that was their special province. The casuistry of pleasure had no secrets for them: they were so clever that they could invent new problems so as to have the honour of solving them. That has always been the occupation of people who have nothing else to do: in default of love they 'make love,' above all, they explain it. Their notes took up far more room than the text, which, as a matter of fact, was very short. ^{gave a relish}

to the most scabrous thoughts: everything was sheltered beneath the flag of sociology: though they might have had pleasure in indulging their vices, there would have been something lacking if they had not persuaded themselves that they were labouring in the cause of the new world.—That was an eminently Parisian sort of socialism: erotic socialism.

"Among the problems that were then exercising the little Court of Love was the equality of men and women in marriage, and their respective rights in love. There had been young men, honest, protestant, and rather ridiculous—Scandinavians and Swiss—who had based equality on virtue: saying that men should come to marriage as chaste as women. The Parisian casuists looked for another sort of equality, an equality based on loss of virtue, saying that women should come to marriage as besmirched as men,—the right to take lovers. The Parisians had carried adultery in imagination and practice, to such a pitch that they were beginning to find it rather insipid: and in the world of letters attempts were being made to support it by a new invention: the prostitution of young girls—I mean regularised, universal, virtuous, decent, domestic, and above all, social prostitution. There had just appeared a book on the question, full of talent, which apparently said all there was to be said: though four hundred pages of playful pedantry, strictly in accordance with the rules of the Baconian method, it dealt with the best method of controlling the relations of the sexes." It was a lecture on free love, full of talk about manners, propriety, good taste, nobility, beauty, truth, modesty, morality—a regular Berquin for young girls who wanted to go wrong...

THE CULT OF AMORALISM

"It seemed that there was everywhere the same spirit of mental prostitution. The pleasure-mongers were divided into two schools. On the one hand, there was the good old way, the national way of providing a coarse and unclean pleasure, quite frankly: a delight in ugliness, strong meat, physical deformities, a show of drawers, barrack-room jests, risky stories, red pepper, high game, private rooms—a manly frankness as those people say who try to reconcile looseness and morality by pointing out that, after four acts of dubious fun, order is restored and the code triumphs by the fact that the wife is really with the husband whom she thinks she is receiving—(so long as the law is observed, then virtue is all right): that vicious sort of virtue which defends marriage by endowing it with all the charm of lewdness—the Gallic way.

"The other school was in the modern style. It was much more subtle and much more disgusting. The Parisianised Jews and the Judaicised Christians who frequented the theatre had introduced into it the usual bash of sentiment which is the distinctive of a degenerate cosmopolitanism. The men who were at that time in control of the theatres in Paris were extraordinarily skilful at beating up filth and sentiment, and giving virtue a flavouring of vice, vice a flavouring of virtue, and turning upside down every human relation of age, sex, the family, and the affections. Their art, therefore, had an odour *signiferis* which smelt good and bad at once,—that is to say, it

all men my followers" has given us a direct command for propaganda for his teachings. The missionaries in the heathen countries are propagandists for Christian teachings, and the magnificent church buildings with their high towers rising towards heaven and the solemn ecclesiastical ceremonies, the grandeur of the church, the music of the organ and the exhorting call of the bells, all these are means of propaganda for this faith intended to act on the mass. Propaganda should never be despised because, as Lamartine says, "Dieu lui memo a besoin que l'on sonne les cloches," "God Himself requires somebody to sound His bells."

It cannot be said that a good cause requires no propaganda, for the truth is victorious by its own strength. The truth rather wins only then—and thus becomes real truth—when some men have been thoroughly permeated by it and consider it their duty to convert other people. Only then it becomes living truth. A lie may very well triumph over the absolute truth if only this falsehood has followers and propagandists while nobody has faith in the truth and none wishes to serve it.

But we, the public, who are outside all parts of the propaganda, must be on our guard. There is another word for this matter: advertisement. Propaganda is carried on for

an idea, advertisement for a soap. But the public has to regard critically both propaganda and advertisement. The public must suspect both the advertisers and the propagandists with regard to their want of objectivity. People are mostly suspicious against advertisement till a subjective corroboration of its pretensions is found. But even as a man is suspicious about the "best soap in the world," even so critical should we be about the assertions of blessings which "our party" would pour over the country if it comes to power, and we should be careful also about outlandish propaganda.

We must remember that the overwhelming number of papers are party papers or organs for a certain cause or certain interests. The four P's in the superscription, politics, propaganda, press and public, form together an organic whole. The path of politics to the public passes through press propaganda. In our day there is no other way than this for any one who wishes to put forward a political idea. Such a propaganda is in every way justifiable if only the means is morally permissible.

[Summary translation by Batakrishna Ghosh of the German version of the article in *Deutsche Rundschau*, December, 1927.]

ROMAIN ROLLAND ON PARISIAN ART

COMPILED BY A BOOK-LOVER

M. Romain Rolland's novel, *Jean Christophe* has been hailed by Mr. Edmund Gosse as 'the noblest work of fiction of the twentieth century.' Mr. Gilbert Cannan, the English translator, considers it to be 'the most comprehensive survey of modern life which has appeared in literature in this century.' In the advanced vernacular literatures of India the influence of modern French literary art has become quite evident, and discussions on art and morality form a distinct feature of Indian vernacular magazines. The views put forth by M. Romain Rolland in his novel on modern Parisian art and morality will, therefore, be

of interest to our readers. Before we quote these views, we think it necessary to observe that M. Rolland is not a strait-laced moralist. His hero, John Christophe the artist had his love-affairs with shop-girls and others, and the author did not sympathise with the Vogels, who were scandalised by Christopher's misconduct.

"Very religious, moral, and oozing domestic virtue, they were of those to whom the sins of the flesh are the most shameful, the most serious, almost the only sins, because they are the only sins to be dreaded (it is obvious that respectable people are never likely to be tempted to steal or murder)". [Eng. Trans. Vol. II, p. 115.]

The author says of a theatrical actress, a confirmed coquette, as follows :

"It was impossible to be angry with her. She was an honest [sic] girl, without any moral principles, lazy, sensual, pleasure-loving, child-like coquettish ; but at the same time so loyal, so kind, and all her faults were so spontaneous and so healthy [sic] that it was only possible to smile at them and even to love them." [Eng. Tran. Vol. II, p. 253]

The significance of the above passage will be made clear from the following extract :

"Christopher had never invented any moral theory : he loved the great poets and great musicians of the past, and they were no saints when he came across a great artist he did not inquire into his morality ; he asked him rather : 'Are you healthy ?' To be healthy was the great thing." [Vol. III, p. 80.]

One more extract to show that M. Rolland's attitude, towards sexual problems was not that of a narrow-minded Puritan .

"For anyone who can envisage life with serenity, there is a peculiar relish in remarking the perpetual contrast which exists in the very bosom of society between the extreme refinement of apparent civilization and its fundamental animalism. In every gathering that does not consist only of fossils and petrified souls, there are as it were, two conversational strata, one above the other : one— which everybody can hear— between mind and mind ; the other— of which very few are conscious, though it is the greater of the two— between instinct and instinct, the beast in man and woman.— The beast in man and woman, though tamed by centuries of civilization, and as cowed as the wretched lions in the tamer's cage, is always thinking of its food. But Christopher had not yet reached that disinterestedness which comes only with age and the death of the passions." [Vol. III, pp. 111-12.]

We shall now quote the views of this advanced thinker on modern French literary and dramatic art. The extracts are taken from the last but one volume (i.e., Vol. III) of the English translation, part V. s. v. 'The market place.' Indian imitators of the French model in the literature of fiction will find much in M. Rolland's views to warn and instruct them.

FRENCH PERIODICAL LITERATURE

[After Christopher had recoiled in disgust from the horrible incestuous filth that filled the pages of the daily papers, he was referred to].

"The report of a recent inquiry into Art and Morality, which set out that 'Love sanctified everything,' that 'sensuality was the leaven of Art,' that 'Morality was a convention of Jesuit education,' and that nothing mattered except 'the greatness of desire' A number of letters from literary men witnessed the artistic purity of a novel depicting

the life of hawds. Some of the signatories were among the greatest names in contemporary literature, or the most austere of critics. A domestic poet, *bourgeois* and a Catholic, gave his blessing as an artist, to a detailed description of the decadence of the Greeks. There were enthusiastic praises of novels in which the course of Lewdness was followed through the ages : Rome, Alexandra, Byzantium, the Italian and French Renaissance, the Age of Greatness. Nothing was omitted. Another cycle of studies was devoted to the various countries of the world, conscientious writers had devoted their energies, with a monkish patience, to the study of the low quarters of the five continents. And it was no matter for surprise to discover among these geographers and historians of Pleasure distinguished poets and very excellent writers. They were only marked out from the rest by their erudition. In their most impeccable style, they told archaic stories, highly spiced.

"But what was most alarming was to see honest men and real artists, men who rightly enjoyed a high place in French literature, struggling in such a traffic, for which they were not at all suited. Some of them with great travail wrote like the rest, the sort of trash that the newspapers serialize. They had to produce it by a fixed time once or twice a week, and it had been going on for years. They went on producing and producing, long after they had ceased to have anything to say, lacking their brains to find something new, something more sensational, more bizarre for the public was surfeited and sick of everything, and soon wearied of even the most wanton imaginary pleasures. They had always to go one better— better than the rest, better than their own best— and they squeezed out their very life blood, they squeezed out their guts it was a pitiable sight grotesque spectacle....

"Christopher.. could have no idea that this artistic degradation, which showed so rawly in Paris, was common to nearly all the great towns.. And so, like so many of his compatriots, he saw in the secret sore which is eating away the intellectual aristocracies of Europe the vice proper to French art, and the bankruptcy of the Latin races.

SRIAMATI MALATILATA SEN topped the list of successful candidates in Sanskrit (standing first-class first) at the last M.A. Examination of the Calcutta University. She stood first in all the eight papers. Mrs Sen took first-class honors in Sanskrit at the B.A. Examination and passed the Intermediate and Matriculation Examinations in the first division.

B.A. Examination she got first-class honours in the same subject.

MISS RAJEE GUPTA of the Poona Agricul-

Srimati Malatilata Sen

Mrs G Pavitrani

SRIAMATI BINA GHOSH stood first (first class) in Mathematics at the last M.A. Examination of the Benares Hindu University. In the

Srimati Bina Ghosh

Miss Shamkumari Nehru

Miss S. Das

Miss Kalyanikutti Ammal,

tural College stood first at the last intermediate Examination in Agriculture from the Bombay University. We hope other lady-students will follow her example and win academic distinction and strive for the advancement of agriculture.

MISS SHANMUKHI NEHRU, daughter of Pandit Shamlal Nehru and niece of Pandit Motilal Nehru after a brilliant academic career has headed the list of successful candidates at the last L.L.B. examination of the Allahabad University. She will join the Allahabad High Court and serve her apprenticeship under Sir Tej Bahadur Sapru.

MISS KALYANI KUTTI ARNAL, B.A., daughter of Mr. E. Narayana Nair, Vakil has topped the list of successful candidates in History and Economics (Honours Course) of the Madras University. She has been awarded *Todhunter Prize* and *Allama Garu Gold Medal*.

The following ladies have been nominated to local bodies in different provinces. Miss S.

Miss Rajil Gujar

Das (Indore Municipal Corporation), Mrs. G. PAVITRA, B.A., I.I. (Ernakulam Municipality, Madras)

TWO MAY-MEMORIES

MOZOOMDAR AND VEERESALINGAM

By. PRINCIPAL V. RAMAKRISHNA RAO M.A., L.T., F.R.D.

VANGA and Andhra have long stood close knit by the spiritstrings of the Theistic Movement in Modern India. In the Saints' Calendar of the New Church, sacred in common to both, the 27th. of May shines out prominent as the focussing point of two hallowed memories those of two worthy leaders called to rest on the same day, though at an interval of nearly a decade and a half, from either province and community. Pratap Chandra Mozoomdar and Kandukuri Veeresalingam, certainly, are, and will continue to be, stars of the first magnitude, however wide apart in the firmament of the Liberal Faith. No two personalities can readily be thought of as more dissimilar in temperament and training, in talent and taste. Yet, even as a study in contrasts, these two images, placed side by side, afford an object lesson strikingly interesting and profitably

significant. First, they bring home the reality of the Pauline experience of one spirit amid a diversity of gifts. They illustrate, in flesh and blood, the truth of Mozoomdar's own words: "God is one but to each man He has a new phase, a new form, a new message, a new kind of personality" (*The Silent Pastor*). Next, in particular, they demonstrate the capacity of a Church like the Brahmo Samaj to serve alike as an ark of shelter and a vineyard of service for types of living spirits never so opposite.

In the

OTHER CONDITIONS

of life in general, one cannot fail to observe the clear beginnings of the difference between the two great men we contemplate to-day with grateful veneration. While both belonged practically to the same formative period

of Indian Renaissance in this age, Mozoomdar saw the light 8 years earlier in 1840 and Veeresalingam closed his eyes 14 years later in 1919. How serenely impressive was Mozoomdar's physical frame, a stalwart statuesque figure imposingly refined with an all too untroubled countenance: You turned round to Veeresalingam, and what did you find but an unprepossessing rustic dilapidated and broken up into wrinkles'. For subjection to the ills of the flesh, if the one specialised in diabetes, the other was an expert in asthma. In garb and garment, the former was wont to be as clean-cut as the latter, perhaps, was clumsy. Predominantly Hindu with a clear impress also of the Greek in his interior, Mozoomdar might well be regarded as wholly Greek in his exterior. On the other hand, quite an embodiment of the Hebrew in his interior, Veeresalingam remained out and out Hindu in his exterior. Here, the qualifying clauses about the inward build become necessary to foreshadow how the search for, and fellowship with, the Spirit of God and, again, the struggle for, and satisfaction in, the Kingdom of Righteousness made the two what they essentially were in their respective spheres of life and work. It was rightly given to Mozoomdar to enjoy almost world-wide fame in his own day after those three successful tours through the Western mansion of our Father's Home, as Keshub would piously christen the Occident. As for Veeresalingam, it were only to be devoutly wished that the due need of celebrity had made his golden deeds and his sovereign worth more intimately familiar in far horizons beyond Southern India.

Lines of divergence are, likewise, traceable between the

EARLY CAREERS

of the two. In neither was the child father to the man that is, in the strict sense of the terms. Frivolity and profanity through loose associations were soon replaced in youthful Mozoomdar by earnestness and devoutness, as witness the prayer scrolls and devotional prepossessions even of the working-hours of blank service. So that, his friend and admirer through after-life, Dr. Samuel J. Barrows (President of the Chicago Parliament of Religions), could testify how "Even at a very early age his religious nature began to feel the mystic thrill and prophecy of

the God-life." But a staunch adherence to custom-ridden orthodoxy formed a characteristic trait self-announced in Veeresalingam even as an adult. Accordingly, the later story is the process of conversion, in one case from secularism to religion and in the other from conservatism to liberalism. Mozoomdar herein possessed a rare advantage—the beckoning example and guidance of superior spirits. Of the two personal influences that wrought mightily upon him, he himself referred, in the congenial language of art, to Maharshi as a "finished piece of workmanship" and to Brahmananda as "unfinished and yet growing" at that stage. Furthermore, about the latter, "He became to me really a part of myself, the better part. He was like another self to me, a higher, holier, diviner self." One other testimony will suffice, not to linger long over this romantic and inspiring chapter of spiritual comradeship.

"Placed in my youth by the side of a very pure and powerful character whose external conditions were similar to my own, I was helped to feel the freshness of my susceptibilities by the law of contrast that I was painfully imperfect and needed very much the grace of a saving God."

THE ORIENTAL CHRIST

To Veeresalingam, however, with none to look up to and none to lean upon, belongs all the honour of a self-evolved, self-regulated soul save for faint, far-off reports of a Vidyasagar and a Vishnu Sastri elsewhere in this continent of a country. And just as, in earlier life, it had been Mozoomdar's high privilege to be received into the welcoming embrace of other outstretched arms, so even in later life, when he came to be reckoned among the 'anointed', he was one such only behind and beside others of varying degrees of power. But this was all denied to lonely Veeresalingam—himself the struggler and the climber, the path-finder and the torch-bearer, the pioneer and the organiser, from beginning to end in a 'benighted provincia.' Whereas no deprecation is implied in the least as regards Mozoomdar, this is a circumstance which must rebound the more to the glory of Veeresalingam and call forth the undying gratitude of the nation towards the patriarch of public life in Andhradesa. Mozoomdar was initiated into Brahmoism in the last year of his teens. Thenceforward, except for the breach with the ancestral home when he dared openly

to take his wife to Devendranath's house at Keshub's investiture with the ministership, his struggles through life (as reviewed in *Ascesh*) were, for the most part, inward wrestles with all the subtle-shaped brood of sin and sordidness. Veeresalingam entered the war-path at a comparatively later period in life with his solemnisation of the first widow marriage in the Southern Presidency in 1881, although, as a matter of fact, he had long since burnished his armour and blown his bugle. The formal discarding of the 'sacred thread' and acceptance of *Brahmadharmadev-lsha* did not come about, too, till so late as 1906. And the tale of these long years, as recounted in *Sveeyacharithra* is the tale of fire-baptism—of fierce social persecution, awe, of the crucifixion of the spirit inch by inch. Naturally therefore, the real man is revealed, in Mozoomdar's case in the heart-beats and in the Himalayan communings, and in Veeresalingam's in the clash of arms and in the dint of blows given and taken.

As we step, next, into the precincts of

HOME LIFE

we come upon a remarkable phenomenon of parallelism in the two careers. The partners in life to whom Mozoomdar and Veeresalingam were wedded, as by custom bound, at such tender ages as 18 and 11, 12 and 8, respectively, proved, by force of love to be equally devoted companions and comforters through the sahara-weariness of solitary, childless life. Forsooth, the gracious tribute of unqualified acknowledgment, "If it had not been for her, I could not have got on at all", might literally be applied to Rajyalakshamma as to Soudamani Devi. Its touching note is what resounds through the dedicatory lines in *Sveeyacharithra*.

Then, as to the

WRITINGS

the same classical taste is apparent here as there, with the purest graces of elegance and finish, dignity and sweetness, not without freedom and naturalness. There is also alike the purposiveness of letters as a vehicle of self-communication. Mozoomdar points thus to the mainspring of all the forth-puttings of his own literary energy: "The religious impulses that come to me open all my powers of expression and thought. My religion is entirely and absolutely the source of my education, character and power of

speech." In fact, his is the sublime Logos—doctrine of the ancient Greek philosopher which he re-enunciates in the affirmation, "All language is merely worked out in conceiving, expressing and glorifying God". (*The Spirit of God*). Veeresalingam, it is true, dwells not equally upon the deep things of the spirit within the wide range of his ten volumes, a unique collection by themselves in Telugu literature. But as the preacher in Mozoomdar nobly vindicates the ways of God to man, so the protester in Veeresalingam powerfully enforces the will of God among men, the dynamic of inspiration being the same behind both. Hence, 'Thy words are fresh glimpses of the True' is our free acknowledgment to the one, even as 'Thy words are half battles for the Truth' is our full acclaim, to the other. In the fulfilment; accordingly, of their separate missions, Mozoomdar's pen is verily the skilled painter's brush, creative artist as he is in English prose; Veeresalingam's, on one side, is the flowing fount of mercury and, on the other—what a jewelled Excalibur of magic, what a puissant sword of the Crusades, also recalling now the resistless axe of Parasurama, now the crushing club of Bhima and again the unerring bow of Arjuna!

In fine, the

SPECIAL VOCATION

of each cannot be more expressively described than by the coinage of his own-mint. The priest and preacher will always be cherished as our 'Interpreter' and our '(Silent) Pastor'. With something in him of the trio of Thikkana Brothers—Karya Thikkana, Khadga Thikkana and Karya Thikkana, the editor of the *Vivekaiardhani*—and founder of the 'Hitakarini Samaj' will in his turn, be enshrined in the memory as our '*Vivekaiardhana*' and our '*Hitakari*'. "Thinker, prophet, reformer" this is the summing up of the one in the words of Dr. Barrows, his renowned admirer. Nothing short of "Kin to Providence"—this is the appellation of the other in the estimate of Sir Dr. R. Venkata Ratnam, his worthy coadjutor. The *sadhal* and the *acharya* we designate as our spiritual mystic; the hero and the humanist as our social mystic. And in relation to both alike, we herein imply by mysticism not merely the theoretical side of it as the Science of Reality, according to Coventry Patmore's definition, but also the vaster practical aspect of it agreeably to

Edmund Holmes's exposition in last April's Hibbert Journal: "There is more of art than of science, more of practice than of theory, more of feeling than of thought in the mystic's handling of his subject." Mozoomdar and Veeresalingam were at one about the basic truth that social evils, in their ultimate analysis, are due to spiritual causes and require to be spiritually healed. Only, in this healing and regenerative process, the former, alike by message and example, revealed to his generation how spiritual things are spiritually discerned. The latter went forth, rousing the social conscience with the prophetic strain

"Cursed be the social wants that sin against
the strength of youth !
Cursed be the social lies that warp us
from the living truth !"

There is, it is believed, enough in the recorded word to support the characterisation of the

DISTINCTIVE OUTLOOK

of Mozoomdar as one of subjective idealism and of Veeresalingam as one of objective rationalism. In the former, how happily the keynote is struck in the autobiographical statement, "My utterances are only my personal record"! This same feature is reiterated in the writer's own account of the scope of his *magnum opus*, *The Spirit of God*: "In His name and glory I have only tried to describe His dealings with me". Even the headings of its chapters—"Sense of the Unseen", "Spiritual Power of the Senses"; "The Spirit in the Spirit" etc afford a sure clue to the character of the genius that has thereby enriched the worlds' religious classics. The whole of *Heart-Beats* is there, again, with its self-reflections from the realms of inward meditation as evidence both of the intense subjectivity and of the lofty idealism. Also, according to the marvellous development of Keshub's concept, recognised by Dr. Barrows as an original contribution to Christology in *The Oriental Christ*, even the "present relationship to the soul and sympathy of Christ"—"the meat and drink of my soul"—the recompense of that period of "special isolation" in the 27th year of his age—constitutes a historic landmark in Mozoomdar's subjective realisation of ideal humanity. Doubtless, he was far from being unmindful of the values of objective truth. If proof this were needed, it could be found,

clinching the conclusion, in his own statement of the very occasion for the *Aids to Moral Character*. "History and biography", he says, "have much greater value than aphorisms and essays. Deeds and examples affect the mind of youth everywhere but nowhere so much as in India, where the doers of good deeds and possessors of virtue are generally invested with a mystical semi-divine glow". At the same time, to quote once again from Dr. Barrows, "Mr. Mozoomdar is so completely identified with his work and so habitually lives in the contemplation of universal principles and the Universal Life that he shrinks from bringing into contrast concrete elements of individual history". Consequently, taken up more with spirit—perceptions than with mind-processes, Mozoomdar is among those to whom we repair, not to know the philosophy of faith but to witness the faith of philosophy. The common foreword to every utterance of his runs thus in invisible ink: *Om Brahmaradino radanti*. No so with Veeresalingam—the Akshay Kumar Dutt of Andhra Brahmoism as of Telugu Prose Literature. His pages are packed with close reasoning. Trenchant and crushing in argument, he is a true Titan in controversy, his armoury abounding evermore in all the resources of wit and humour, banter and irony, sarcasm and satire. The admirable discourses against Caste, Idolatry, the Transmigration of Souls and the Infallibility of Scriptures are some of the instances in point, besides the formidable Widow-Marriage Appeals on grounds of scripture, reason and expediency. As we have it on his own authority, Mozoomdar drank deep of the springs of both literature and philosophy during his editorial charge of *The Indian Mirror*. Yet, his writings bear scarcely any trace of formal, systematic philosophy, while they are redolent with the perfume of literature. Nor is there to be found any deep-built theology in Veeresalingam either, though a working principle of faith lies imbedded in the works as in the life. Mozoomdar's religion is the religion of psychology. Veeresalingam's religion is the religion of common sense. Among brother-theists in the West, Mozoomdar's affinities are with Francis Newman of *The Soul*, the episode of their personal fellowship forming part of the well-known continental experiences of our Apostle to the West. Veeresalingam's reflex is furnished by Charles

Voysey of the Church Militant. Incidentally, perhaps, it may be suggestively added in this context that, if Mozoomdar reminds one of Newman in England, Keshub—not, of course, the mature Keshub—recalls Theodore Parker of America. Mozoomdar's was the Brahmoism of Realisation, and Veeresalingam's the Brahmoism of Reformation, whereas in both the Brahmoism of Regeneration had been previously reached soon enough to be early made the starting point in the career. It is as though with Mozoomdar religion was an end instead of a means; with Veeresalingam it was a means to an end. Life, as conceived by the former, is the realisation of religion and its beatitude. Religion, as understood by the latter, is the realisation of life and its efficiency. "Self-realisation through disinterested service of the commonweal" is Sir Dr. Venkata Ratnam's paraphrase of the ideal of the school which he fitly identifies with the name of Veeresalingam. As already indicated, superstitions having been sloughed off, if ever they had any hold, and right beliefs and ideals having grown to be axiomatic comparatively earlier and the surrounding atmosphere itself being differently constituted, we hear far, far less of the destructive blast, the protestant note, in Mozoomdar than in Veeresalingam, the lifelong denunciator of externalism and ecclesiasticism, of the tyranny of custom, the hollowness of cast and the sublimeness of corruption. It were hard to fix upon more flaming diatribes than Veeresalingam's memorable apostrophes to *Duracharapisacham* (the Demon of Evil Custom) indited with a pen of fire in the Widow Marriage Appeals. If Mozoomdar set himself wholly to temple-service, Veeresalingam had to be occupied largely with jungle-clearance. To light the lamp of faith, to ring the bell of fervour, to burn the incense of devotion, to sing the hymn of praise, to chant the canticle of love, to blow the conch of peace—these were the offices of the one. To fell down stifling Upas-trees, to burn up rank brush-wood, to hunt down ravenous beasts, to destroy venomous reptiles, to bore impassable hills, to weed out pricking thorns—these were among the tasks of the other. To say among the tasks is essential, inasmuch as the jungle-clearance was nothing if not preliminary to the garden-culture that strove to rear a very Eden in our midst. Hence "thru' the centuries let a people's voice" attest,

"With honour, honour, honour, honour to him,
 Eternal honour to his name".

how the good husbandman who cleared the tares sowed also the wheat and wore himself out in training the struggling, in pruning the exuberant, in watering the dropping, in tilling the fallow, in protecting the fruit-bearing, in gathering in the ripening—aye, in diverse work, of noble note! Eastern introspection *antardrishti* and Western practicality *Karyabeksha* here, then, are typified the two hemispheres of our orb of perfection. While Veeresalingam's religion of humanity subverted our 'domestic mission' in the Homeland, Mozoomdar's religion of harmony carried our 'foreign mission' across the waters and raised it to its rightful status when he was elected to lead the Parliament of Religions in its opening prayer.

One or two more points of marked contrast can be but barely touched upon before closing. A living communion with Nature in the true Wordsworthian mood of 'wise passiveness' was one of the constant preoccupations of the wonder-worshiper whose magnificent pen-and-ink reproductions of the Niagara Falls so beautifully adorn the *Sketches of a Tour Round the World* and of the *dhyanyogi* the bulk of whose profounder works were reared on the hill-top of Kureseong and whose expositions of 'The Spirit in Nature' and 'Kinship in Nature' challenge acceptance as part of the Apocalypse of the Age. On the other hand, despite exquisite poetic touches about Nature in his verse productions, the conflicts with Man out of the love of Man crowded out such communion with Nature in the *Karmayogin* of the Andhras, their Vidyasagar as well as Dayasagar. Again, if *Heart-Beats* has been rightly appraised by Dr. Barrows as "the most remarkable devotional book since that of Thomas A. Kempis", the collocation of these two names would seem to justify itself also on another and a minor ground—the common absence of humour. As to the originator of those novel varieties of Telugu Composition, the *Prahasanams*, *Vyasaaharadharmabodhini*, *Satyaraja's Travels* and *Rajasekhara-charitra*, it can safely be claimed that he has surely no superiors and scarcely any equals in the field of humour, reproducing the eighteenth century vein, now of Swift and now of Goldsmith. Lastly, if Mozoomdar won laurels everywhere as one of India's foremost orators to crown his eminence as a writer, Veeresalingam,

who, like Goldsmith again, touched nothing he did not adorn, excelled only by the wizard-wand of that pain which clung to the hand right up to the last breath.

Now, to bring these rambling thoughts to their due

CONCLUSION

If History is made up of the Biographies of Great Men and Great Men are no other than God's Men, the life-stories, as told by themselves, of two such of God's Men as Mozoomdar and Veeresalingam must acquire for us a far greater value than any of their works. *Iscesh* and *Succyacharitra* thus taking rank among the foremost tokens of the redemptive triumph of *Brahmadharma*, we do well to feel that, were these alone extant out of all Brahmic literature, in the company of Rammohun's Autobiographical Note, Devendranath's Spiritual Autobiography, Keshub's *Jeevan Veda*, Siranath's *Atma-*

charit, Rabindranath's *Jeevansmriti* and the like, we could, over again, build upon them, like edifices upon a ground-work, the whole theology and history, liturgy and hymnology of a century of Brahmoism, aye, of modern Indian thought and life. Mozoomdar and Veeresalingam have both lived and died without any issue from their loins. Each nevertheless does possess his own progeny in spiritual discipleship the one, though not to the same extent as the person-cult of his own friend, philosopher and guide; and the other, too, though oftentimes damned with faint praise and even beset with his own Peters and Judases.

A far, far cry all this—do you say? from 'Peace Cottage' Calcutta, to 'Ananda Gardens', Rajahmundry! But even as the Gauges and the Jumna spring out of the self-same heights and, after varied courses, mingle and merge and reach their common close in the one only main, so do Peace and Bliss, Bliss and Peace!

AUROBINDO GHOSH

By RABINDRANATH TAGORE

FOR a long time I had a strong desire to meet Aurobindo Ghosh. It has just been fulfilled. I feel that I must write down the thoughts that have come to my mind.

In the Christian Scripture it has been said:—"In the beginning there was the Word." The Word takes form in creation. It is not the calendar which introduces a new era. It is the Word, leading man to the path of a higher manifestation, a richer reality.

In the beginning and end of all great utterances in our scriptures we have the word Om. It has the meaning of self-acknowledgement of Truth, it is the breath of the Eternal.

From some great sea of ideas, a tidal wave tumultuously broke upon Europe carrying on its crest the French Revolution.

Was a new age, not because the oppressed time in France stood against their oppressors, but because that age had in its

beginning the Word which spoke of a great moral liberation for all humanity.

Mazzini and Garibaldi ushered in a new age of awakening in Italy, not because of the external fact of a change in the political condition of that country, but because they gave utterance to the Word, which did not merely enjoin formal acts, but inspired an inner creative truth. The feeling of touch, with the help of which a man gathers in darkness things that are immediate to him, exclusively belongs to himself; but the sunlight represents the great touch of the universe; it is for the needs of every one, and it transcends the needs of all individuals. This light is the true symbol of the Word.

One day science introduced a new age to the Western world, not because she helped man to explore nature's secrets, but because she revealed to him the universal aspect of reality in which all individual facts find their eternal background.

because she aroused in him the loyalty to truth that could defy torture and death. Those who follow the modern development of science know that she has truly brought us to the threshold of another new age, when she takes us across things to the mystic shrine of light where sounds the original Word of Creation.

In ancient India, the age of creation began with the transition from ritual practices to spiritual wisdom. It sent its call to the soul, which creates from its own abundance; and men woke up and said, that only those truly live, who live in the bosom of the Eternal. This is the Word spoken from the heart of that age. "Those who realise Truth, realise immortality."

In the Buddhist age, also, the Word came with the message of utmost sacrifice, of a love that is unlimited. It inspired an ideal of perfection in man's moral nature, which busied itself in creating for him a world of emancipated will.

The Word is that which helps to bring forth towards manifestation the numanifest immense in man. Nature urges animals to restrict their endeavour in earning their daily wages of living. It is the Word which has rescued man from that enclosure of a narrow livelihood to a wider freedom of life. The dim light in that world of physical self-preservation is for the world of night; and men are not nocturnal beings.

Time after time, man must discover new proofs to support the faith in his own greatness, the faith that gives him freedom in the Infinite. It is realised anew every time that we find a man whose soul is luminously seen through the translucent atmosphere of a perfect life. Not the one who has the strength of an intellect that reasons, a will that plans, the energy that works, but he whose life has become one with the Word, from whose being is breathed Om, the response of the everlasting yes.

The longing to meet such a person grows stronger when we find in men around us the self-mistrust which is spiritual nihilism, producing in them an indecent pride in asserting the paradox that man is to remain an incorrigible brute to the end of his days, that the value of our ideals must be judged by a standard which is that of the market price of things.

When, as today, truth is constantly being subordinated to purposes that have

their sole meaning in a success hastily snatched up from a mad scramble for immediate opportunities our greed becomes uncontrollable. In its impatience it refuses to modulate its pace to the rhythm that is inherent in a normal process of achievement, and exploits all instruments of reckless speed, including propaganda of delusion. Ambition tries to curtail its own path, for its gain is at the end of that path, while truth is permeatingly one with the real seeking for her, as a flower with its stem. But, used as a vehicle of some utility, robbed of her love's wooing, she departs, leaving that semblance of utility a deception.

Ramachandra, the hero of the great epic Ramayana, during the long period his of wanderings in the wilderness, came to realise, helped by constant difficulties and dangers, the devotion of his wife Sita, his companion in exile. It was the best means of gaining her in truth through a strenuously intimate path of ever-ripening experience. After his return to his kingdom, urged by an immediate political necessity, he asked Sita to give an instant proof of her truth in a magic trial by fire before the suspicious multitude. Sita refused, knowing that such a trial could only offend truth by its callous unreality, and she disappeared for ever.

It brings to my mind the opening line of an old Bengali poem which my friend Kshitimohan Sen offered to me from his rich store of rare sayings. It may be translated thus -

"O cruel man of urgent needs,
Must thou in thy haste scorch by fire the
mind that is still in bud?"

It takes time to prove the spirit of perfection lying in wait in a mind that is yet to mature. But a cruel urgency takes the quick means of a forced trial and the mind itself disappears leaving the crowd to admire the gorgeousness of the preparation. When we find everywhere the hurry of this greed dragging truth tied to its chariot-wheels along the dusty delusion of short-cuts, we feel sure that it would be futile to set against it a mere appeal of reason, but that a true man is needed who can maintain the patience of a profound faith against a constant temptation of urgency and hypnotism of a numerical magnitude.

We badly need today for the realisation

of our human dignity a person who will preach respect for man in his completeness. It is a truism to say that man is *not* simple, that his personality consists of countless elements that are bewilderingly miscellaneous. It is possible to denude him of his wealth of being in order to reduce him to a bare simplicity that helps to fit him easily to a pattern of a parsimonious life. But it is important to remember that man is complex, and therefore his problems can only be solved by an adjustment, and not by any suppression of the varied in him or by narrowing the range of his development. By thinning it to an unmeaning repetition, eliminating from it the understanding mind and earnestness of devotion we can make our prayer simple and still simpler by bringing it down to a mechanical turning of the prayer wheel as they have done in Tibet. Such a process lightens the difficulty of a work by minimising the humanity of the worker. Teachers who are notoriously successful in guiding their pupils through examinations know that teaching can be made simple by cramming and hushing the questioning mind to sleep. It hastens success through a ruthless retrenchment of education. The present-day politics has become a menace to the world, because of its barbarous simplicity produced by the exclusion of the moral element from its method and composition. Industrialism also has its cult of an ascetic miserliness that simplifies its responsibility by ignoring the beautiful. On the other hand, the primitive methods of production attain their own simplicity through a barren negation of science and, to that extent, a poor expression of humanity. We recognise our true teacher when he comes not to lull us to a minimum vitality of spirit but to rouse us to the heroic fact that man's path of fulfilment is difficult, "*durgam pathas tat.*" Animals drifting on the surface of existence have their life that may be compared to a simple raft composed of banana trunks held together. But human life finds its symbol in a perfectly modelled boat which has its manifold system of cars, helm and sails, towing ropes and poles for the complex purpose of negotiating with the three elements of water, earth and air. For its construction it claims from science a principle of balance based

upon countless observations and experiments, and from our instinct for art the decorations that are utterly beside the purpose with which they are associated. It gives expression to the intelligent mind which is carefully accurate in the difficult adjustment of various forces and materials and to the creative imagination that delights in the harmony of forms for its own sake. We should never be allowed to forget that spiritual perfection comprehends all the riches of life and gives them a great unity of meaning.

While my mind was occupied with such thoughts, the French steamer on which I was travelling touched Pondicherry and I came to meet Aurobindo. At the very first sight I could realise that he had been seeking for the soul and had gained it, and through this long process of realisation had accumulated within him a silent power of inspiration. His face was radiant with an inner light and his serene presence made it evident to me that his soul was not crippled and cramped to the measure of some tyrannical doctrine, which takes delight in inflicting wounds upon life. He, I am sure, never had his lessons from the Christian monks of the ascetic Europe, revelling in the pride of that self-immolation which is a twin sister of self-aggrandisement joined back to back facing opposite directions.

I felt that the utterance of the ancient Hindu Rishi spoke from him of that equanimity which gives the human soul its freedom of entrance into the All. I said to him, "You have the Word and we are waiting to accept it from you India will speak through your voice to the world, 'Hearken to me'."

In her earlier forest home Sakuntala had her awakening of life in the restlessness of her youth. In the later hermitage she attained the fulfilment of her life. Years ago I saw Aurobindo in the atmosphere of his earlier heroic youth and I sang to him, "Aurobindo, accept the salutation from Rabindranath."

Today I saw him in a deeper atmosphere of a reticent richness of wisdom and again sang to him in silence,

"Aurobindo, accept the salutation from Rabindranath."

S.S. Chantilly,

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, The Modern Review.]

"Prof. Radhakrishnan on Indian Philosophy" : A Rejoinder

Mr. B. S. Guha should have been certain of the accuracy of his statements before rushing into print. The name of Rai Bahadur Sris Chandra Basu is conspicuous by its absence throughout Prof. Radhakrishnan's work. I would invite Mr. Guha to be so good as to point out the page which contains it.

Mr. Guha is ignorant of the fact that Rai Bahadur Sris Chandra Basu was not the author of "Patanjali" which is mentioned at the end of the chapter on Yoga System in Prof. Radhakrishnan's book. Pandit Ram Prasad, v.a., was the author of it. Sris Chandra Basu only contributed the foreword to it. This work forms Vol. IV of the *Sacred Books of the Hindus* series.

The *Yoga Shrista* or a treatise on Practical Yoga forms Vol. XV of the *Sacred Books of the Hindus* series and Sris Chandra Basu was its author. Prof. Radhakrishnan has, in my humble opinion, borrowed from this work without acknowledgement. Was it a sealed book to him?

As Mr. Guha has not categorically answered the questions contained in my letter on the subject published in the May number of *The Modern Review*, page 593, I repeat them here substantially :

1. Will Mr. Guha say whether Prof. Radhakrishnan is a practitioner or student of medicine and, as such, he hunted all the volumes of the *British Medical Journal* to find the extract from its issue of December 5, 1903, which he has given in footnote 4 of page 356 of his book?

I suggest that he has not done anything of the sort, but has copied it without acknowledgment from Rai Bahadur Sris Chandra Basu's *Introduction to Yoga Philosophy*, pp. 46-48, published in Vol. XV—part IV of the *Sacred Books of the Hindus* series. The extract he has given is a second-hand one and he was, therefore, bound in honour to mention the book to which he was indebted for it.

2. The Professor has referred in his work to Baladeva's *Govinda Bhasya* and *Prameya Ratnakar*. Has he consulted the original works, which, so far as I am aware, are printed in Bengali character, not in Devanagari? Rai Bahadur Sris Chandra Basu translated these works into English and

published them in the *Sacred Books of the Hindus* series as Vol. V. Was the Professor ignorant of the fact? Why has he not mentioned the book in his work?

I suggest that he derived his information about Baladeva from Basu's translations.

3. Is he not indebted to Sris Chandra Basu for his account of Vyasa Bhikshu's commentary on the Vedanta Sutra?

There is only one edition of this work, published in the Chowkhamba series at the expense of Sris Chandra Basu who also made it known to the public by his translation of its introduction in the pages of the *Theosophist* for 1898.

The professor of philosophy should know the meritorious and original works on the Vedanta Philosophy written in Bengali when he writes a history of Indian Philosophy in Calcutta, the cultural centre of Bengal.

Mr. Guha sincerely suggests that Bengali historians of Indian Philosophy should be taken to task for their ignorance of Tamil publications on the subject, because I had in my letter pointed out that Prof. Radhakrishnan had not done justice to several authors who have written on the Vedanta philosophy in Bengali. Mr. Guha is right. If there be good original Tamil works on philosophy, all historians of Indian philosophy, Bengali or non-Bengali, should certainly know and make use of their contents. Professor Radhakrishnan's philosophical dignity would not have been impaired if he had condescended to know and make use of Bengali publications on philosophy, because he is the premier professor of Indian philosophy in Bengal's premier university, at which some distinguished holders of the Sreechopal Basu Malik Fellowship have delivered their lectures on Indian philosophy in Bengali. All philosophical writings in Sanskrit are not necessarily more valuable than all such writings in the current languages of India. Does the Professor know that Ram Mohan Roy wrote a commentary in Bengali on a Vedantic work?

Let me take an imaginary case. Suppose a German philosopher occupying the best endowed chair in Oxford wrote a history of philosophy in Latin and did not mention or make use of any philosophical publication in English. What would be thought of him? I know the cases of the Mysore Professor and the imaginary German one

are not on all fours; but they are sufficiently similar for my purpose.

Mr. Guha thinks that the writer of an authoritative work on philosophy need not know the *history* of a particular view. That is strange. Opinions may differ as to whether a philosophical writer should know the history of a particular view. But it cannot be laid down as a general proposition that the history of particular views need not be known. Those who claim to be authorities on a subject should certainly know with whom an idea, a hypothesis, a theory, an opinion, or a view originated, and who are mere repeaters or borrowers. How otherwise can the value of the labours of different workers be

ascertained? To compare great things with small, a writer on the history of Evolution should be acquainted with the works not only of modern authors but also with the Sankhya system and the views of some of the early Greek philosophers.

A man may be a "most distinguished student of philosophy" and may "enjoy a world-wide reputation as a thinker", but those facts may not ensure a particular work of his being creditable.

The selected bibliography does not name any translation of the *Purva Mimamsa*. So far there have been only three translations of it—one complete and two incomplete. The select bibliography does not mention any.

X. Y. Z.

SOME ASPECTS OF BUDDHIST PHILOSOPHY*

By PROF. S. N. DASGUPTA, M.A., Ph. D. (*Cantab*)

SANSKRIT scholarship is under a deep debt of gratitude to the works of Western scholars.

The many-sided activities of Sanskrit researchers of the present day would have been well-nigh impossible if occidental scholars had not opened so many new avenues and continued persistently their labour of love to unravel the mysteries of Indian civilisation and culture. By their researches in Vedic philology and literature, their editing of the Pali canons, their connecting Tibetan and Chinese studies with Sanskrit, their archeological discoveries in India, Central Asia, Turpan, Indo-China, Java and Bali and by their scholarly works in many other spheres of Sanskrit studies, they have opened up almost a new world of civilisation to the students of Ancient India. But in one sphere, namely, that of Indian philosophy their works have not however, been as remarkable, though in this field also they have been opening new sources of study for Buddhistic researches by their translations from Tibetan and Chinese. The reason for their backwardness in Indian philosophy is primarily threefold. Firstly, the Sanskrit of the philosophical texts and commentaries is often too difficult for them; secondly, most of the European Orientalists lack proper sympathy for Indian philosophical and religious thoughts; and thirdly, there are probably no European Orientalists who are also *bona fide* students of philosophy. As a rule, the European Orientalist is seldom able to understand a difficult piece of philosophical Sanskrit and when he tries to understand it he can proceed only philologically and most often misses the true philosophical import. This is enhanced by the fact that he starts, with a preconceived notion, implicit or explicit, that Indian philosophical or religious literature does not contain any such original or

deep thoughts as might stimulate our present-day philosophical enquiries. His interest in Indian matters is almost wholly antiquarian and he is always satisfied with curious and antique aspects of Indian culture in his investigations. He seldom has proper respect for the thinkers whose thoughts he is trying to decipher and consequently great thoughts pass before his eyes while he is running after shadows. There are, however, a few notable exceptions, and Professor Stcherbatsky is one of them. He studied the old *Nāgārjuna* at Darbhanga and Benares. He can speak in Sanskrit as fluently as a Benares Pundit. He is an excellent scholar of Tibetan. He knows half a dozen European languages almost as well as his own mother tongue. And above all, he has a genuine sympathy and high respect for Indian thoughts and thinkers and when he approaches Indian philosophy, he does so with the deep reverence of a humble learner. He has long been devoting himself to the study of mediæval Buddhism, the *Vaiśiṣṭyas*, *Sautāntikas* and the *Mādhyamikas*. His present work, *The Conception of Buddhist Nirvāṇa* has been published from the publishing office of The Academy of Sciences of the USSR, Leningrad, April, 1927. It may be considered as a sister volume to the author's *Central Conception of Buddhism* published by The Royal Asiatic Society, London 1924. The author was stimulated to write this work as a criticism of L. de la Vallée Poussin's *Nirvāṇa*, Paris 1925. The book contains 246 pages, of which only 62 pages are devoted to the main work of the book; 150 pages are devoted to the translation of Chapters I and XXV of *Nāgārjuna's Mādhyamikaśāstra* and the *Prasannapadā* commentary by Candrakīrti, as an appendix. The remaining 34 pages form various indices of the book.

One of the main theses of Professor L. de la Vallée Poussin, which Professor Stcherbatsky combats is that at the beginning *Nirvāṇa* meant a simple faith in the immortality of the soul, its

*"The Buddhist Conception of *Nirvāṇa*" by Th. Stcherbatsky, Leningrad, 1927, and "*Nirvāṇa*" by de la Vallée Poussin Paris 1925.

blissful survival in a paradise, a faith emerging from practices of obscure magic. I may quote here one or two passages where Prof. la Vallée Poussin tries to emphasise the view that the original conception of Nirvāṇa did not evolve in opposition to the Brahmanic view of a permanent state of liberation, but it itself meant an everlasting, eternal deliverance as a positive state of supreme happiness. It is to be regarded as an invisible state of existence into which saints retired. Thus he says in his *Nirvāṇa* (Paris 1925, p. 57) "Sur tout rien ne permet d'affirmer que le Nirvāṇa des bouddhistes fut conçu en opposition avec quelque théorie brahmanique que ce soit. Le Nirvāṇa, immortel ou délivrance, nous apparaît comme une donne rudimentaire, vierge de toute spéculation métaphysique, bien plutôt engagée dans le mythe que dans la métaphysique. Le Nirvāṇa est un séjour invisible où le saint disparaît, souvent au milieu des flammes et dans une sorte d'apothéose." In support of it he refers to a passage in the *Udāy* VIII 10, where the Buddha is represented as saying "On ne reconnaît pas où va le feu qui s'est peu à peu éteint de moi, ne est-il impossible de dire où vont les saints parfaitement délivrés, qui ont traversé le torrent des désirs, qui ont atteint le bonheur immuable." He further holds that there has been a primitive Buddhism, very much different, even as it would seem, quite contrary to what later on finds its expression in the Pali Canon Pessimism, Nihilism, Soul-denial, psychology without a soul, annihilation as ultimate end, all these features that mark out Buddhism among other religions. Indian as well as non-Indian did not exist (*Nirvāṇa* pp 17, 27, 33-34, 46, 52, 115-116, 125, 129, 132 etc.) He further considers Buddhism as a branch of yoga or asceticism, but as to the meaning of this yoga, he thinks, one feels uneasy when such a question is asked (rien de plus malaisé p. 11) But, yet on the next page, he informs us that this yoga was nothing but vulgar magic and thaumaturgy coupled with hypnotic practices (Nous pensons que le yoga est, dans les temps pré-bouddhiques, ce qu'il restera au cours de l'histoire, essentiellement un ensemble de pratiques au bonheur des plus vieux âges de l'Asie aryenne ou autochtone, pratiques des sorciers et des thaumaturges, et dont il semble que la recherche des états hypnotiques soit le motif dominant). He further thinks that this yoga was a technical routine in itself quite foreign to every moral, religious or philosophic view—C'est une technique (transcrite en soi) à toute morale comme à toute vue religieuse ou philosophique (p. 12). The yoga from which according to Prof. la Vallée-Poussin Buddhism sprang forth was thus this kind of yoga without any speculative tendencies. And the Buddhism of the Hinayāna remained in this condition beginning from the Mahāvagga up to Buddhakosha as a yoga, almost without any alloy (p. 53).

The objections against the views expressed in Prof. la Vallée-Poussin's *Nirvāṇa* as raised by Prof. Stcherbatsky in the first part (pp. 1-63) of his book under review are thus directed to two principal points viz, la Vallée-Poussin's theory that the early Buddhism was but a yoga of the thaumaturgical nature and that the conception of Nirvāṇa in early Buddhism was but a simple faith in soul's immortality. Prof. Stcherbatsky urges that there is no vagueness in the meaning of the word yoga.

The word yoga can be derived, in an objective sense (*yogate elad ity yogaḥ*), meaning the concentrated thought itself as a psychical condition, or in the instrumental sense (*yogate anena ity yogaḥ*), as the method through which this condition has been created or in the locative sense (*yogate tasmin ity yogaḥ*) as the place where this concentrated thought has been produced. In the third sense the word yoga or more exactly the term samāpāti is used as a designation of the mystic words in all the eight planes of mystic existence where the denizens are eternally merged in trance. In the second sense yoga rather the word samāhāra as the faculty of concentrated attention denotes a mystical power which can transfer the meditator to higher worlds and change life altogether. Yoga is neither vulgar magic nor thaumaturgy but is in essence that concentrated meditation that induces a

Stcherbatsky

condition of quiescence. He then goes on explaining the method of yoga according to *Abhidharmaśāstra* of Vasubandhu (300 A. D.) and describes how in the incessantly changing elements, that produce delusion of a personality the struggle of moral progress between the good and bad inclinations takes place. Though the momentary elements of moral inclinations cannot really influence one another, yet in consequence of the predominance of the good elements the immoral elements are driven out. The immoral faculties or elements are of two kinds, one that can be removed by insight or reason, (*dṛṣṭi-haya*) and the other that can be removed by concentrated attention only (*bhāvanā-haya*). The fully developed faculty or concentration becomes a mystic power which can transfer the individual into higher planes of existence or spheres of purified matter (*rūpa dhātu*) or still

higher regions of pure spirits (*arūpa-dhātū*) with ethereal (*bhūtarā*) bodies. The denizens of these spiritual realms are merged in contemplation of some unique idea e. g. the infinity of space, the infinity of thought or of the void or in a dreamy semi-conscious state. Their condition is merely cataleptic. In this state since the meditator does not require any food, the sense-data of smell and taste do not exist for him. The feeling of hatred is totally absent. These beings have no need for clothes, they are provided with houses by their own karma. The phenomenon of sex is spiritualised and there are no organs of physical procreation; gross sexual passion does not at all exist though there may be delicate feelings. The birth of a new being is quite free from all pain and filth. The new born child does not come out of a female, and those who happen to be nearest to the place of his birth are his parents. But it is also possible that sages who are living on this earth can develop such mystic powers, that though their bodies may belong to this earth, they may attain powers of vision and sense objects of other higher worlds of the superior mystical meditators, referred to above. This shows that given a certain change, in the nature of one's existence, where the necessity of food, clothing and homes have been eliminated, there will be newer and superior spiritual elements forming the structure of his personality which are akin to those of the mystic meditators of the higher worlds. According to some schools the highest cataleptic states of trance are eternal (*asaṃskṛta*), i. e., they do not differ from Nirvāṇa. But, according to the majority of schools, Nirvāṇa is beyond even that. It is the absolute limit of life, the extinction even of this kind of the thinnest vestige of consciousness which is still left in the highest of all imaginable worlds of cataleptic trance. Apart from the above described, general functions of yoga, the Hinayāna Buddhism also believes in the possibility of a sudden illumination by which the saint directly views the universe as an infinite continuity of single moments in gradual evolution towards final extinction. Arguing in the above manner Prof. Stcherbatsky holds that the doctrine of yoga is to be regarded as an "inseparable, inherent part of the pluralistic universe of separate elements (*dharma*) gradually evolving towards extinction," though the possibility is not excluded that the germ of the yoga doctrine is older than the Buddha himself. Continuing in the same strain Prof. Stcherbatsky demands:—"In any case there is no historically authenticated Buddhism without this theory, without the mystic worlds and its inherent part, the philosophic explanation of yoga. All yoga practices which had not this philosophic and moral aim, all sorcery and thaumaturgy, the Brahmanical sacrifices not excepted, were strongly condemned by the Buddha. They were considered as one of the cardinal sins. The details of the conditions in the worlds of the mystic and the degrees of mystic concentration have always given opportunities to much scholastic controversy between the schools. We can safely assert that within the pale of Hinayāna Buddhism there is no place for trivial sorcery." (pp. 18, 19.)

Before passing to the discussion of Nirvāṇa, it may be considered desirable to review the views of the two great scholars of Buddhism, la Vallée-Poussin and Stcherbatsky, on yoga. Both of

them apply the word yoga to denote the earliest practices of concentration among the Buddhists. Prof. Stcherbatsky gives its threefold etymology in the accusative, instrumental, and locative senses. But is this application strictly correct? The word yoga can be derived from three different roots of different meanings, the intransitive verb *yuj* in the sense of concentration (*yuj samādhan*) the transitive verb *yuj*, to control (*yogayati*) and also from the transitive verb *yujir*, to connect (*yujakti*). The word yoga is formed by the addition of the suffix *ghan*, Pāṇini's rule III. 3.19 allows the addition of the suffix *ghan* for the formation of technical words in all cases-senses except the nominative, and as such Prof. Stcherbatsky is right in deriving the word yoga in three different senses. But yoga in the sense of *samādhi* or concentrated thought (*yuj samādhan*) cannot be formed in the accusative sense, as the root *yuj* of *yuj samādhan* is intransitive. It does not also seem proper that yoga can be formed in the locative sense to denote the higher worlds, where the mystic meditation is performed, for the location of a meditative operation cannot be placed in a spatial world. Prof. Stcherbatsky has not indicated the source from which he has taken these derivations. But whatever may be the source the objections pointed out seem to be strong. The word yoga in the sense of *samādhi* cannot probably be found in earlier literature. The root *yuj* with the suffix *ghan* irregularly forms another word *yuga* to denote periods of time and also parts of a chariot and in these senses the word *yuga* is pretty old as it is found in several places in the R̥gveda. The word *yoga* is sometimes found in the R̥gveda as in VII. 67. 8, but in the sense of journey or drive. In the *Satapatha-brāhmaṇa* 14. 7. 1, 11 the word *yoga* is used in connection with the word *ratha* in *Mahābhārata* in various senses derived from "connecting" (evidently from *yujir*, *yoga*). The word *yoga* is used also in the *Kaṭha Upaniṣad* (6. 11) to denote controlling of senses. The word is used several times in the *Gītā*, but in howsoever diverse senses, it may seem to have been used, they are all derived directly or indirectly from the sense of connecting (*yujir*, *yoga*). Manu uses the word *yoga* in the sense of controlling, evidently from *yuj*, *saṃyamana* (Manu 7, 44). *Mahābhārata* III. 263y also uses the word *yoga* in the sense of controlling. But nowhere in any literature earlier than Patañjali do we find the *yoga* in the sense of *samādhi*. Any actual verbal use of the intransitive verb *yuj*, *samādhan* is hardly available. Turning to Pāli use, the word *yoga* is found in the derivative senses of connection, control and effort as in *pubbayoga*, or in *cittassa niggāhane yoga karānīyo*. It seems therefore that the word *yoga* was not familiarly used in any literature earlier than Patañjali in the sense of *samādhi* and its accessory disciplines. The word *yogin*, also, in the sense of a man who habitually practises the *samādhi* processes, is hardly available in any literature earlier than Patañjali. The *Gītā* which in my opinion is pre-Buddhist as I shall show in my forthcoming volume of the *History of Indian Philosophy*, has no doubt the word *yogin* in it, but the word *yoga* is almost always used in the *Gītā* in the sense of connecting or its other remote derivative meanings but not in the sense of *samādhi*. It is probably Patañjali who first used the word

yoga in the sense of *samāhi*. *Vyasa* thus gives the meaning of the word *yoga* as *yogah samādhih*. *Yacopati* definitely points out that the word *yoza* in *Pañājali* is derived from *yuj samadhā* and not from *yujir yoge* (*yuj samādhiu ityasmāt vyutpannah samādhyartho, na tu yujir yoge ityasmāt samyogārtho ityarthah*—*Tattvasūtrādi*).

Prof. Stcherbatsky is therefore right in contending against the view of la Vallée-Poussin that Buddhism is a branch of *yoga*. He is also right in holding that *yoza* in the sense of *samādhi* is not to be found in pre-Buddhist literature. But I should like to go further than this and assert that in Buddha's time the word *yoga* meant only control or the effort of control and the different disciplines that constituted in later times the *yoga* processes were not brought under one systematic concept of *yoga*. The application of the term *yoza* in *Vasubandhu's* work ought not to lead us to believe that the word *yoga* meant in early Buddhism a comprehensive science holding within it the processes of *śīla, samādhi* and *prajñā*. It is possible that *dhyāna* meditations were practised by many people as isolated endeavours and it is also possible that beliefs about the mystical powers of those who perform these meditations, were current in certain circles. From the *Kaṣṭha*, we know that senses were felt like uncontrollable horses and sense control was very much praised and that cataleptic states of trance were also regarded as high achievements of perfection. It may thus be supposed that the Buddha collected all these floating traditions, interpreted them in terms of his own *dhyāna* experiences and assimilated them into his own system of thought. The way in which the Buddha systematised the different practices, associated them with high nobility and perfection of character and welded them together in a comprehensive whole, served as a model to *Pañājali* who adapted it in his own way with some very important modifications. Far from being a branch of *yoga* it was Buddhism which made *yoga* what it was. It is needless to say that Prof. Stcherbatsky is perfectly right in saying that the Buddhism of the Buddha has nothing of sorcery and thaumaturgy in it. The mere fact that any one indulging in mystic experiences believed in certain mystic worlds in which mystic experiences could be continued without the impediments of bodily limitations of hunger, thirst and lust, cannot constitute sorcery. If it did, then even Christianity which indulged in the belief in the kingdom of God, in resurrection, in the day of judgement and in the angels of God would also be called sorcery. The fact that Buddhism firmly believed in the gradual advancement and elevation of our being through more and more moral purity, the gradual destruction of passions and antipathies and the gradual moral strife in which the higher and nobler states of the mind gained supremacy over the lower ones and with the dawn of the superior wisdom all desires and rebirth became finally extinct, makes Buddhism one of the highest religions of the world. In fact, it is difficult to believe that a scholar of la Vallée-Poussin's attainments should indulge in such baseless and uncritical fancies. And one may well suppose that Prof. la Vallée-Poussin did not actually mean it; and it is on account of the lack of precision and looseness of expression that it appears that he

identifies Buddhism with sorcery, beggary, mendicancy and thaumaturgy; for, on page 25 he says that these saints were very much higher than sorcerers as they looked forward towards gradual elevation and saintliness—Mais si les Yogins ou ascètes prébuddhiques tiennent du "mendiant" qui jette contre les villages qui refusent, l'aumône, tiennent du sorcier et mettent à très haut-prix l'hypnose et la thaumaturgie, ils sont souvent mieux que des sorciers et des mendiants : ils visent à la sainteté, ils sont souvent, avec des idées philosophiques rudimentaires et inconsistantes, une conception arrêtée de la destinée de l'homme, une sagesse. Le Yoga, vers l'époque que nous considérons, s'était ordonné ou s'ordonnait suivant trois ou quatre pensées maitresses, les pensées qui dominent l'Inde post-vélique, l'Inde brahmanique bouddhique, hindoue, transmigration avec des enfers et des paradis, mérite et démérite, délivrance de la transmigration bonheur suprême et définitif, chemin qui conduit à la délivrance, à savoir le Yoga, l'effort, la discipline méditative et ascétique.

On the subject of *Nirvāna* Prof. Stcherbatsky points out that Prof. la Vallée-Poussin holds that since in the Pali Canon the word 'immortal' is used as one of the epithets of *Nirvāna* and since in the later literature *Nirvāna* is described as a reality (*astu*), it can well be supposed that the pre-canonic Buddhism believed in immortality of the soul. He further says that Prof. la Vallée-Poussin explains Buddha's silence on the question of *Nirvāna* as his incapacity in the philosophical field. But if this is so, how can Prof. la Vallée-Poussin argue that early Buddhism believed in the doctrine of the immortality of the soul. If the Buddha denied an eternal soul against the eternalist, but maintained the doctrine of moral responsibility against the materialist, how can he be supposed to be believing in the doctrine of an immortal soul. Prof. la Vallée-Poussin draws a historical outline to explain the growth of Buddhism in which he says that there was in the beginning a simple faith in soul and immortality and a primitive teaching of an indefinite character, mainly of obscure magic, after that a mixed period supervened, when this simple creed was contaminated with confused ideology and this allows us to ask whether Buddhism at that period was not a *gnosis*. At last Buddhism received a super-structure of insane scholasticism and we have scholastic period of Buddhism just as we had in mediaeval Europe. Primitive faith, then a period of *gnosticism* and then a period of scholasticism, these are three stages of the development of Buddhism, just as we had in the development of the Western Church.

In criticising the above view, Prof. Stcherbatsky points out that early Buddhism never believed in the doctrine of the existence of the self or its immortality. If by later scholastic Buddhism, the *Vaibhāṣikas* are meant, then it is not true that they represented in their teaching anything substantially different from the views of the early canonical schools, for, the *Vaibhāṣikas* are only the continuators of one of the oldest schools, the *Sarvāstivādins* and their teachings are therefore quite different from the *Sautrāntikas* who may be regarded as initiating a new school of Buddhism. By *Ilīyāna* therefore, one ought to include the

Vaibhāṣikas, and the Sautrāntika school may be regarded as a new transitional school leading to the Mahāyāna school of pure idealism. Early Buddhism started from a sound philosophical idea of a pluralistic universe, it denied substance and established lists of ultimate realities (*dharma*s). Some of these elements are highly artificial constructions. The maxim which guided these assumptions was that corresponding to each difference of the connotative terms of language, there must be differences of things or entities. The Sautrāntikas differed from the Vaibhāṣikas in attributing only nominal existence to these felt differences in experience. They thus objected to the comprehensive list of elements or entities as the ultimate data of the Vaibhāṣikas and only believed in the sense data and the mind data. It is therefore wrong to take them in the same class with the Vaibhāṣikas under the sweeping term of scholasticism. The Sautrāntikas flourished for at least five hundred years from the first to the fifth century A. D., side by side with the Vaibhāṣikas and the Mahāyānists. Vasubandhu and his pupil Dinnāga may be regarded as partly Sautrāntika and partly Vijñānavādin. Ultimately the Sautrāntikas merged into the Mahāyānists or the Vijñānavādins. When the Vaibhāṣikas declared Nirvāṇa to be something real, they did not mean by it that Nirvāṇa was a kind of paradise. They only regarded Nirvāṇa as the annihilation of all life and as a materialistic lifeless reality (*nirōdhasatya, vastu*). Sautrāntikas, on the other hand, admitted the existence of the Buddha's cosmo-body and adhered to the Mahāyāna conception of identifying Nirvāṇa with the living world itself and denying its reality as a separate element transcending the living world. Thus both the Vaibhāṣika and the early Buddhist schools regard saṃsāra and Nirvāṇa as real. But Nirvāṇa is real only in the sense of a materialistic, lifeless reality (*yaśmin sati celaso rimokṣaḥ acetanah*). The Sautrāntikas believed saṃsāra as real and Nirvāṇa as unreal (i. e. separately unreal). The Vijñānavādins or the Yogācāras believed saṃsāra as unreal and the Nirvāṇa as real. The Mādhyamikas regarded both the saṃsāra and the Nirvāṇa as unreal (i. e. separately unreal).

According to the Vaibhāṣikas, existence is of two kinds as phenomenal and as eternal. Phenomenal existence of matter, mind and forces are but complexes of elements. Only space and Nirvāṇa are eternal existences. The phenomenal elements are however all real in the present, past and future. This reality is thus conceived in two ways, firstly, as momentary flashings in actual life and secondly, in their abiding and everlasting nature (*dharmaśakṣaṇa* and *dharmaśvabhāva*). They held therefore that when all flashings in actual life stopped in Nirvāṇa, there remained that lifeless entity in which all flashings of eternal death, but only as a separate element and the ultimate reality of the elements, in their lifeless condition. The simile of the extinction of light is to be explained as meaning only this lifeless condition. The difference between this view and ordinary materialism is that in the latter

every death would be Nirvāṇa (*dehacchedo mokṣaḥ*). And this view is therefore called *ucchedavāda*. In the Vaibhāṣika view however, there is no Nirvāṇa at every death, but the different worlds in which a saint may be born are produced by karma and the elements composing his personality are gradually one after the other reduced to a state of quiescence and extinction until in final Nirvāṇa all are extinct. The moral law through a long process of evolution reduces the living world into a state of final quiescence, where there is no life, but something lifeless and inanimate. It is therefore wrong to think that the Vaibhāṣikas regarded Nirvāṇa as a vastu or reality in the sense of spiritual immortality. The Sautrāntikas, however, denied this materialistic Nirvāṇa and regarded it as being the ultimate extinction of the entire cyclic processes of life without any residue of any kind. There was, however, a class of Sautrāntikas who believed that there was a subtle consciousness which outlived the final extinction of Nirvāṇa and that it was from this that the elements which manifested as life experiences (see Vasuṣūtra's *Samayabhedha-upaśāsanakāra*, Asia Major II. 1. pp. 1-78, Leipzig 1925). It is possible to trace the germs of the Jāyavilāna of the Yogācāras in this doctrine. Later on however, the Sautrāntikas objected to this doctrine as it leads to the denial of the external world in the Yogācāra school. It is also possible that this view was drawn from the Mahāyānikas who did not wish to believe in the total disappearance of the Buddha in a materialistic Nirvāṇa. The Yogācāra view consisted in the belief in one pure knowledge as being the ultimate reality which seemed through ignorance as being modified into the diverse modes of phenomenal experience. In the Mahāyānist view therefore, there is no difference between the Nirvāṇa and the saṃsāra. Prof. Stecherbatsky then compares the Vaibhāṣika view of Nirvāṇa with the Nyāya-Vaiśeṣika view of salvation, and the Mahāyānist view of Nirvāṇa with the Vedānta view of salvation. He also supplements this with a valuable general analysis of the principle of relativity of the Mādhyamika school.

The main argument of Prof. Stecherbatsky against Prof. de Vallée-Poussin may be summed up in two propositions, firstly, that nowhere in early Buddhism has the doctrine of the existence of self been preached, and secondly, it is said that this negative conclusion is strengthened by the fact that the Vaibhāṣikas who are the continuators of early Buddhism, believed in a form lifeless reality as being the Nirvāṇa. I am in general sympathy with Prof. Stecherbatsky's conclusions, but I do not think that he has sufficiently proved them. Firstly, the assertion that in early Buddhism we do not come across any belief regarding the soul's immortality as Nirvāṇa, however true it may be, should have been attested by exhaustive references from the Pāli canons. Secondly, admitting that the Vaibhāṣikas were the continuators of early Buddhism, it still remains to see how far the Vaibhāṣikas made new addi-

tions to the views of early Buddhism or left off some of their doctrines or changed and modified them. This would mean an exhaustive comparison of the contents of the Pali canons their commentaries and the Vaibhāṣika works. And unless this is done, it may be dangerous to make assertions regarding the views of Pali canons from assertions in Vaibhāṣika works.

Judging from the early Pāli texts it seems very probable that Nirvāṇa was a ethico-religious state of the extinction of desires as a result of ethical practices, contemplation and insight. As such it need not be regarded as transcendental. Such a state, however, clearly belongs to transcendental, rather than normal psychology. It is, therefore, sometimes described as unspeakable, and as immeasurable, as in *Sutta Nipāta* 1076 (*attham gaṭassa na pamāṇamathī*). It is also sometimes described as an eternal reality and as such it is described as *aculam* *thūnam*, *amatam* *padam*, *amata nibbāna dhātu*. In the Abhidhamma period it is sometimes described positively, as a sphere of existence, and negatively, as a condition of utter annihilation. F. Heiler in his *Die Buddhistische Versenkung* very aptly says that "only by its concept Nirvāṇa is something negative, but by its sentiment it is a positive term of the most pronounced form. In spite of all conceptual negativity, Nirvāṇa is nothing but eternal salvation after which the heart of the religious yearns." It is by extinction (*Nibbāna*) of the fire of passions (*rāga agni*) that the ultimate freedom is attained and there is the final extinction (*pari-nibbāna*). The fire of passions and desires can only go out in consequence of the cessation of the causes that were producing them, they cannot be destroyed by force all on a sudden. It is, therefore, that in the earlier texts Nibbāna is compared to a dying fire (*aggi anāhāro nibbuto Maḥma* I. 487) and not to a fire blown out—compare also *anūtharo nibbayettha*, *Apadāna* 153, also *padipassa eva nibbānam timokkho ahu cetaso*. The eternity of Nibbāna in all probability refers to the undisturbed tranquility and peace through the cessation of rebirth and there is probably no text which can lead to the supposition that it is a state of the immortality of soul *ajaram amaram khamam pariyesāmi nibbutim* (*Vināya Vatthu* 514), *saddasankhārasamatho nibbānam* (*Samyutta* I. 136). The same idea is repeated in *Maḥma* I. 503, *āroga paramā lābhā nibbānam paramam sukham affhangiko eva maggūnam khamam amata gūṇinam*. Nibbāna is also often described as cessation of desire *tanhākkhaya* as in *Vināya Vatthu* 73, also in *Samyutta* I. 39—*tanhāya uppalāhāna nibbānam itī rucati*, also in *Vināya* I. 5—*sabbasankhārasamatho nibbānam*. The idea of Nibbāna as the ultimate extinction and the psychosis as a whole is to be found in *Samyutta* I. 136, *Anguttara* II. 118, IV. 423 V. 8, 110 etc. Again in *Sutta Nipāta* 1094 we find a similar passage—*alīcanam*, *andānam* *etam dipamanāparam nibbānam itī nam brumi varamaccu-parikkhaya*; so also in *Samyutta* II. 117, *bhavanirodho nibbānam itī*. In one of the earliest passages also Nibbāna is described as cessation and as wisdom—*upassamāya abhināya sambodhāya nibbānāya samvattati*, again in *Vināya* V. 86

Nibbāna is definitely described as non-self—*aniccā sabbe sankhārā dukkhā nāntā eva sankhatā nibbānam eva etam paññati ananta itī nocchaya*. Coming to some of the most authoritative traditional interpretations of Pali Buddhism, I shall for the sake of brevity only refer to some passages of Buddhaghosa's *Visuddhi Magga*. Buddhaghosa defines Nibbāna as the substanceless cessation of desires (*tanhā*)—*yasma -tanhāya nikkhanto nissato visamyutto tasmā nibbānam itī rucati itī*. On page 205, Nibbāna is described as the highest moral quality along with other moral qualities—*khanti paramam tapo titikkhā nibbānam paramam vadanti buddhā*. On page 498 Nibbāna is again described as the supportless liberation, the getting rid of, the forsaking and the entire and absolute cessation of desires through disinclination to them—*yo tassa yeva tanhāya asesavirāganurodho cāgo patinassaggo multo anāyogo ti evaṃ virodhaniddhese atthato etam eva nibbānam*. On page 507 a subjective and objective distinction of the meaning of Nibbāna is made. On the subjective ethico-religious plane Nibbāna is described as in the passage as *asesavirāganurodho* and on the objective side it is called the noble truth of *dukkhanurodho*. It is said there that it is on this account that Nibbāna is described as peace (*santi lakkhaṇam*) and as eternal (*accutirasam*). It cannot be said that because ordinary men cannot perceive it, Nibbāna is therefore non-existent like the hare's horn. For, had Nibbāna been non-existent, the ennobling of character and contemplation and wisdom which are methods of the attainment of Nibbāna would be futile. For, if Nibbāna does not exist, then the processes of character-discipline etc. do not exist, and if they do not exist, then passions and afflictions which are destroyed by them do not exist also which is impossible. Nibbāna thus is not non-existent, it is not also mere destruction (*lakkhaya*), but it is the destruction of passions (*rāgakkhaya*). Nibbāna is called deathless and eternal, because it is attained only through the right path and not produced by anything (*palābham eva h' etam maggena, na uppādetabbam*). *Tasma appabbhavam eva, Appabbhacitā ajaramaramam, Pubbaṃajaramaramam bhūvato nīcam*) It does not seem that Nibbāna can be described as an existent with positive characters, it can be called as a negation of non-existence only because it is attainable by special wisdom and steady efforts which are positive in their nature *caṣṭhulaparikkhamasiddhena onnaveesena adhiḥamanīto sabbānūttaranato ca paramamathena sabbhūvato nibbānam nāvīpīnamam*, page 509. Again, on page 567, it is said that just as a crow when set free from a merchant's boat on sea flies to the shore if it is visible, whereas, if no shores are visible returns back to the mast of the boat, so if a man perceives Nibbāna as the wisdom of disinclination to all sankhara elements (elements forming one's individuality, he leaves the course of the out-flow of all sankhara and springs forward to Nibbāna; if he has not the wisdom of disinclination to sankhara, he falls again and again in the course of the flow of the sankhara. It is also said there in a description of the nature of liberation as Nibbāna that he who takes to Nibbāna as mere void (*suññata*) perceives it as such. Again on page 666, it is said that just as a man suffering from heat desires cold, so does one

suffering from the fire of rebirth desire Nibbana as the cessation of that fire.

It is unnecessary to multiply examples. But it is clear from the above that the view of Prof. la Vallée-Poussin that Nirvāṇa in early Buddhism meant immortality of soul cannot be attested by textual references from Pāli canonical works or from the works of responsible commentators like Buddhaghosa. So the negative contention of Prof. Stcherbatsky may be regarded as absolutely correct. But it must also be said that there is no proof in favour of his view that the philosophy of Nirvāṇa of the Vaibhāṣikas was identical with the view of Nirvāṇa of early Buddhism, or that in early Buddhism Nibbāna meant a lifeless reality as the elements of dharmas as Prof. Stcherbatsky holds. Space does not allow me to enter into any discussion regarding the view of Nirvāṇa among the Vaibhāṣikas. I fear, I have to differ on some important points here also from Prof. Stcherbatsky, but I must reserve it for some future occasion.

Prof. Stcherbatsky's illuminating work on the "Conception of Nirvāṇa" throws a flood of light on many obscure points of the development of the history of Buddhist philosophy, and every scholar of Buddhist philosophy will feel grateful to him for his contribution. But yet it is only in his translation of the first and the twenty-fifth chapters of Nāgārjuna's *Mādhyamika Kārikā* and its commentary by Candrakīrti, that he shows his great scholarship of Buddhism, wonderful mastery over abstruse dialectical Sanskrit and over all his superior philosophical acumen, a rare combination among scholars of any country. I shall not enter into any details, but I fear that the translation may not generally be regarded as very exact, but it is exceedingly readable, and excellent on the whole. There are only a few scholars either in this country or in Europe who can read Candrakīrti's commentary with such ease and insight as Prof. Stcherbatsky has done. Though he has translated only two chapters of the book, yet I feel confident that they will be a real help to most Buddhist scholars in being introduced to Candrakīrti and his master.

* To give only one example, let us turn to the adoration verse with which Candrakīrti starts his introduction to his commentary on the *kārikas* of Nāgārjuna. The verse runs as follows:—
Yacchāsi loḥ kleśapīṇaśeṣaṁ santrāṇaḥ durgatā
tito bhavūca : taccāśānāṁ trāṇagunūcca sūstramegat
dṛṣṭvāyācānyamatēṣu nāsti Stcherbatsky's translation:—(indeed a philosophic treatise should contain a doctrine of Salvation, it then "rules and it saves"). "It rules over all our enemies, our passions. It saves us from the misery and from phenomenal experience (altogether.) These two advantages are not to be found in other philosophic doctrines."

Suggested translation:—Because it checks all our enemies of passions and saves you from misfortunes and rebirth, therefore on account of this checking power and the quality of saving (two parts of the word *sūtra* from *śā* and *tra* yielding these two different meanings) it is (called) a *sūtra*. And these two do not exist in other systems (which therefore may be called a *māta* but not a *sūtra*).

I now propose to subjoin a running review of some of the most salient points of Nāgārjuna's philosophy as contained in Prof. Stcherbatsky's translation of the first and twenty-fifth chapter of the *Mādhyamika-Śāstrī* which form an appendix to his work under review.

Nāgārjuna's main thesis was that all things are relative and hence indefinable in themselves and hence there was no way of discovering their essences and since their essence are not only indefinable and indescribable but incomprehensible as well, they cannot be said to possess any essences of their own. Nāgārjuna was followed by Aryadeva, a Ceylonese by birth, who wrote a separate work on the same subject in 400 aphorisms. For about two centuries after this, the doctrines of Nāgārjuna were in a sleepy condition as is evidenced by the fact that Buddhaghosa of the fourth century A. D. does not refer to them. During the Gupta empire Asaṅga and Vasubandhu flourished in the fifth century A. D. In the sixth century A. D. the relativistic philosophy of Nāgārjuna again flourished in the hands of Buddhapālita of Valabhi in Surat and Bhavya or Bhavyaviveka of Orissa. The school of Bhavya was called *Mādhyamika Sāntāntika* on account of his supplementing Nāgārjuna's arguments with special arguments of his own. At this time the Yogācāra school of Mahāyāna monism had developed in the north and the aim of this school was to show that for the true knowledge of the one consciousness (*viñjāna*) all logical arguments were futile. All logical arguments showed only their own inconsistency. It seems very probable that Śrīhaṁsa was inspired by these Yogācāra authors and their relativistic allies from Nāgārjuna to Bhavya and Candrakīrti, the master commentator of Nāgārjuna's *Mādhyamika Kārikā*. Buddhapālita sought to prove that the apprehension and realisation of the idealistic monism cannot be made by any logical argument, for all logic is futile and inconsistent while, Bhāvaviveka sought to establish his idealistic monism by logical arguments. Candrakīrti finally supported Buddhapālita's scheme as against the scheme of Bhāvaviveka and tried to prove the futility of all logical arguments. It was this *Mādhyamika* scheme of Candrakīrti that finally was utilised in Tibet and Mongolia for the realisation of idealistic monism.

In taking up his refutations of the various categories of being, Nāgārjuna first takes up the examination of causation. Causation in the non-Buddhist systems of philosophy is regarded as being the production from some permanent or abiding stuff or through the conglomeration of several factors or through some factors operating over an abiding stuff. But Nāgārjuna not only denies that anything ever is produced but also that it is ever produced from any one of the above ways. Buddhapālita holds that things cannot arise of themselves, for if they are already existing, there is no meaning in their being produced; if things that are existing are regarded as capable of being produced again, then things would eternally continue to be produced. Bhāvaviveka criticising Buddhapālita says that the refutation of Buddhapālita should have been supplemented with reasons and examples and that such a refutation would imply an undesirable

thesis that if things are not produced of themselves, they must be produced by other factors. But Candrakīrti objects to this criticism of Bhāṣavya and says that the burden of proof for establishing the identity of cause and effect lies with the opponents, the Sākhyaists who hold that view. There is no meaning in the production of what already exists and if that which is existent has to be produced again and that again, there will be an infinite regress. It is unnecessary to give any new argument to refute the Sākhya sākhyasāsa view for it is enough to point out the inconsistency of the Sākhya view. Thus Āryadeva says that the Māhyamika view has no thesis of its own which it seeks to establish for it does not believe in the reality or unreality of anything or in the combination of reality and unreality. * This was exactly the point of view that was taken by Śīhaṛa. Śīhaṛa says that the Vedīstas have no view of their own regarding the things of the world and the various categories involved in them. Therefore there was no way in which the Vedīstas view could be attacked. The Vedīstas however is free to find out faults with other views and when once this is done and the inconsistencies of other positions are pointed out its business is finished for it has no view of its own to establish. Nāgārjuna also thus says in "Vigraha-vyākṛtānti":—

"When I have these (of my own to prove), I can commit mistakes just for the sake

(of proving) (of being inconsistent)

If I d'd (really) cognise some (separate) things, I could then make an affirmation or a denial. Upon the basis of these things perceived or (inferred) But these (separate) things do not exist for me. Therefore I cannot be assailed on such a basis." †

Candrakīrti thus emphasises the fact that it is not possible for the Māhyamikas to offer new arguments or new examples in criticising any view, for the Māhyamikas have no view of their own to support. They cannot even prove their own affirmations and if their affirmations contain any thesis, they quarrel with it also themselves. So the Māhyamika scheme of criticism consists only in finding fault with all theses whatever they may be, and in replying to the counter-charges so far as inconsistencies could be found in the opponents' theses and methods, but not by adducing any new arguments or any new counter-theses, for the Māhyamikas have no theses of their own. In an argument if one can only follow the principles that are admitted by him no one can be defeated by arguments carried on the basis of principles admitted only by his opponents.

Things are not also produced by any conglomeration of foreign factors or causes, for had it been so then there would be no law of such production and anything might come from any other things,

darkness from light. And if a thing cannot be produced out of itself or out of others, it cannot be produced by a combination of them both. Again the world could not have sprung into being without any cause (ahetutah).

The Buddhist logicians try to controvert this view by pointing out that whatever a view may be it must be established by proper proof. So in order to prove the thesis that all existents are unproduced the Māhyamikas must give some proofs and that would involve a further specification of the nature of such proofs and a specification of the number of valid proofs admitted by them. But if the thesis that "all existents are unproduced" is a mere assertion without any proof to support it then any number of counter assertions may be made for which no proof need be shown; and if proofs are not required in one case they cannot be required in the other case as well. So one could with equal validity assert that all existents are real and are produced from causes. The Māhyamika answer to such an objection as formulated by Candrakīrti is that the Māhyamika has no thesis of his own and so the question whether his thesis is supported by valid proofs or not is as meaningless as the question regarding the smallness or the greatness of a mule's horn. Since there is no thesis, the Māhyamika has got nothing to say regarding the nature of valid proof (pramāṇa) or their number. But it may well be asked that if the Māhyamika had no thesis of his own, why should he at all hold the proposition that all existents are unproduced (koti bhūṇa anutpannāḥ)? To this the Māhyamika replies that such propositions appear as definite views only to the ordinary people, but not to the wise. The proper attitude for the wise is always to remain silent. They impart instructions to those who want to listen to them only from a popular point of view. Their arguments are not their own or which they believe as right, but only such as would appeal to their hearers.

It is not out of place here to mention that the Māhyamika school wishes to keep the phenomenal and the real or the transcendental view wide apart. In the phenomenal view things are admitted to be as they are perceived and their relations are also conceived as real. It is interesting to refer to the discussion of Candrakīrti with Dignāga regarding the nature of sense-perceptions. While Dignāga urges that a thing is what it is in itself (śvalakṣaṇa) Candrakīrti holds that since relations are also perceived to be true, things are relational as well. Phenomenally substances exist as well as their qualities. The "thing in itself" of Dignāga was as much a relative concept as the relational things that are popularly perceived as true; that being so it is meaningless to define perception as being only the thing in itself. Candrakīrti thus does not think that any good can be done by criticising the realistic logic of the Naiyāyikas, for so far as the popular perceptions or conceptions, go, the Nāyāya logic is quite competent to deal with them and give an account of them. There is a phenomenal reality and order which is true for the man in the street, on which all our linguistic and other usages are based. Dignāga in defining perception restricts it only to the unique thing in itself (śvalakṣaṇa) and think that all associations of quality and relations are extraneous to perceptions and should

* sadasatśadacceti yasya pakṣe na vidyate :
upālamhaścetiṇi tasya taktum na śakyate
Mādhikarmakīrti pp. 16.

† Anyatprattiya yadi nūma paro'bhaviṣyat

tulyaṁ paratvamakkhile' jñānā'pi yasmāi
Mādhikarmakīrti p. 36.

be included under imagination or inference. This however does violence to our ordinary experience and yet serves no better purpose, for the definition of perception as given by Dinnaga is not from the transcendental point of view and thus represents the lower point of view. If that is so, why not accept the realistic conceptions of the Nyāya school which fits in with the popular experience. This reminds us of the attitude of the Vedāntists who on one hand accepted the view point of popular experience and regarded all things as having a real objective existence, and yet on the other hand considered them all as false and unreal from the transcendental point of view of ultimate reality. The attitude of the Vedāntists on this point seems to have been directly inspired by the attitude of the Mādhyamikas. The attempts of Śrīharaśa to refute the realistic definition of Nyāya were intended to show: that the definitions of Nyāya could not be regarded as absolute and true as they used to think. But while the Mādhyamikas who had no view points of their own to support could leave the field of experience absolutely undisturbed and allow the realistic definitions of Nyāya to explain the popular experience in any way it liked, the Vedānta had a thesis of its own, namely, that the self-luminous Brahman was the only reality and that it was through it that everything else was manifested. The Vedānta therefore could agree with Nyāya interpretations of experience and their definitions. But as the Vedānta was unable to give the manifold world-appearance a footing in reality, it regarded it as somehow existing by itself and invented a theory of perception by which it could be considered as being manifested by coming in touch with Brahman and being illusorily imposed on it.

Continuing the discussion on the nature of Causation, Nāgārjuna and Candrakīrti hold that collocations of causal conditions which are different from the effect cannot produce the effect as is held by the Hinayāna Buddhists, for since the effect is not perceived in those causal conditions, it cannot be produced out of them, if it is already existent in them its production becomes useless. Production of anything out of some foreign or extraneous causes implies that it is related to them and this relation must mean that *it was in some way existent in them. The main principle which Nāgārjuna employs in refuting the idea of causation or production in various ways is that if a thing exists it cannot be produced and if it does not exist, it cannot be produced at all. That which has no essence in itself cannot be caused by anything else and having no essence in itself it cannot also be the cause of anything else.**

Nāgārjuna similarly examined the concepts of going and coming and says that as the action of going is not to be found in the space traversed over, nor is it to be found in that which is not traversed over and apart from the space traversed over and not traversed, there cannot be any action of going. If it is urged that going is neither in the space traversed nor in the space untraversed, but in the person who continues to go for going is in him in whom there is the effort of going then that also cannot be right. For if the action of going is to be associated with the

person who goes, it cannot be associated with the space traversed. One action cannot be connected with both; and unless some space is gone over there cannot be a goer. If going is in the goer alone then even without going, one could be called a goer which is impossible. If both the goer and the space traversed have to be associated with going, then there must be two actions and not one, and if there are two actions that implies that there are also two agents. It may be urged that the movement of going is associated with the goer and that, therefore going belongs to the goer, but if there is no going without the goer and if there is no goer without going, how can going be at all associated with the goer. Again in the proposition "the goer goes" (*gantū gacchati*) there is only one action of going and that is satisfied by the verb "goes," but what separate "going" is there by virtue of the association with which a "goer" can be so called and since there are no two actions of going there cannot be a goer. Again the movement of going cannot even be begun, for, when there is no motion of going, there is no beginning and when there is no motion of going, there cannot be any beginning. Again it cannot be urged that "going" must exist since its opposite "remaining at rest (*sthiti*)" exists, for who is at rest? The goer cannot be at rest for no one can be a goer unless he goes; he who is not a goer being already at rest cannot again be the agent of another action of being at rest. If the goer and going be regarded as identical, then there would be neither verb nor agent. So there is no reality in going. "Going" stands here for any kind of passage or becoming and the refutation of "going" implies the refutation of all kinds of passage (*niṣkāraṇa*) as well. If seeds passed into the state of shoots (*āṅkura*), then they would be seeds and not shoots; the shoots are neither seeds nor are different from them; yet the seeds being there, there are shoots. A pea is from another pea, but yet no pea becomes another pea. A pea is neither in another pea nor different from it. As one may see the beautiful face of a woman in a mirror and feel attracted by it and run after her, though the face never passed into the mirror and there was no human face in the reflected image. Just as the essenceless reflected image of a woman's face may *rouse attachment in fools, so are appearances of the world, the causes of our delusion and attachment.*

It is needless to multiply examples and describe elaborately Nāgārjuna's method of the application of his dialectic for the refutation of the various Buddhist and other categories. But from what has been said, it may be possible to compare or contrast Nāgārjuna's dialectic with that of Śrīharaśa. Neither Nāgārjuna nor Śrīharaśa are interested to give any rational explanation of the world-process, nor are they interested to give a scientific reconstruction of our world experience. They are agreed in discarding the validity of world experience as such. But while Nāgārjuna had no thesis of his own to uphold, Śrīharaśa sought to establish the validity and ultimate reality of Brahman. But it does not appear that he ever properly tried to apply his own dialectic to his thesis and tried to show that the definition of Brahman could stand the test of the criticism of his own dialectic. Both

* *Mādhyamikakīrti* p. 90, line 6.

Nāgārjuna and Sribhāṣa were however agreed in the view that there was no theory of the reconstruction of world-appearance which could be supported as valid. But while Sribhāṣa attacked only the definitions of Nyāya, Nāgārjuna mainly attacked the accepted Buddhist categories and also some other relevant categories, which were directly connected with them. But the entire efforts of Sribhāṣa were directed in showing that the definitions of Nyāya were faulty and that there was no way in which Nyāya could define its categories properly. From the fact that Nyāya could not define its categories, he rushes to the conclusion that they were intrinsically indefinable and that therefore the world-appearance which was measured and scanned in terms of those categories were also false. Nāgārjuna's methods are largely different from that of Sribhāṣa in this that the concepts which he criticised were shown by him to have been intrinsically based and constructed on notions which had no essential nature of their own, but which were only understood in relation to others. No concept revealed any intrinsic nature of its own and one could understand a concept only through another and that again by the former

or by another and so on. The entire world-appearance is thus based on relative conceptions and is false. Nāgārjuna's criticisms are however largely of an apriori nature which do not treat the concepts in a concrete manner and which are not also based on the testimony of our psychological experience. The opposition shown therefore is very often of an abstract nature and occasionally degenerates into verbalism. But as a rule they are based on the fundamentally-relative nature of our experience. They are never half so elaborate as the criticisms of Sribhāṣa, but at the same time they are fundamentally more convincing and more direct than the elaborate round-about logical subtleties of Sribhāṣa's dialectical criticisms. It cannot be denied that based on the dialectical methods of Nāgārjuna, Buddhapaṭha and Candrakīrti, Sribhāṣa's criticisms following an altogether different plan of approach show wonderful powers of logical subtleties and fineness, though the total effect can hardly be regarded as an advancement from the strictly philosophical point of view, while the frequent verbalism of many of his criticisms is a discredit to his whole venture.

A GLIMPSE INTO THE GENERAL ELECTION IN GERMANY

By S. P. RAJU, B. A., B. E., A. M. L. E.
(Munich, Germany)

GERMANY has been in the throes of a General Election, and the whole country was in a state of comparative excitement. Party papers were full of declarations of their own creeds and denunciations of their opponents, while in every street one found innumerable posters with a variety of design and colour, calculated to arrest the attention of the voter, and if possible to convert him to their faith. Above these methods of cold print came the animated personal appeals in small drawing-room gatherings as well as in big public halls, and when weather permitted demonstrations, in the open. One evening the National Socialist Labour Party had arranged twelve simultaneous gatherings in the halls of the different breweries of the city. In addition to the speakers appointed for each place every one of the meetings was addressed by Adolf Hitler, the Leader of the Party and General von Epp, the top candidate of the Party, who rushed round to all of them.

But the excitement is said to have been very mild compared to what it was on previous occasions. The Reichstag is according to the Constitution, elected once in four years, and from the establishment of the Republic up to 1924 the elections took place at times, when the country was faced with burning political problems and was subjected to a severe economic stress and when what the Government did or did not do was a matter of almost life and death to the average man. Even now one hears touching stories of the "Inflation Period", as to how the wages of the workmen were fixed and paid not by the month or the week, but by the day; how at the end of the day they would run to buy all the provisions they could for the money, lest by the next morning it may have depreciated in value; how a house sold did not fetch enough money with which to buy a suit of clothes; and so on. Such stories always end with a sigh and the expression of a wish that it

country may never pass through such a time again. But now politics is comparatively steady, and economics steadier, and the people can afford to listen to election speeches sipping a glass of beer.

ELECTORAL LAW

According to German electoral law every man and woman who has completed his or her twentieth year on the day of election is eligible to vote. From the thorough records maintained by the State about the life's history and movements of every individual in the country, there is no difficulty whatever in determining the eligible voters. The number of forms one has to fill up in Germany, and the detailed information required are very striking. For example, every change of abode of an individual has to be reported to the police; if a person happens to have more than one 'Christian name', the one with which he is usually called should be underlined; and so on. Thus being in possession of all the necessary information the State sends out cards two or three weeks in advance, which have to be presented at the booths for identification. Out of a total population of 62,500,000 the voting strength is 41,000,000.

For purposes of election the whole country is divided into 35 electorates and 17 groups, the groups being formed by the combination of neighbouring electorates. People vote not for the candidates but for the parties. A party is recognised if it can produce signatures of 500 persons with powers of voting, but in the case of parties already represented in the previous Reichstags only 20 signatures are enough.

A party will get one seat for every 60,000 votes it obtains in an electorate or in a group. The surplus votes, i. e., those left over after taking the highest multiple of 60,000, in all the groups are added up into what is called a 'Reichs List' and fresh seats allotted on the same basis, but at the rate of only one for every seat already obtained in the groups; i. e., a party that has got 10 seats in the groups cannot get more than ten in the Reichs List, even if its surplus votes amount to more than 600,000.

Each party submits a 'List' of its candidates in the order in which it wishes them to be elected, so that the election of a candidate depends upon the number of

the seats his party gets and his position in the list.

On account of the nature of the system of election the strength of the Reichstag is indefinite, and the small parties that are scattered over have very little chance. In this election the votes of such parties that went to waste amounted to over 2,700,000 (as against 800,000 of the previous election) i. e., a number which could have sent 45 more members into the Reichstag.

THE PARTIES

There are not less than 32 different political parties in Germany; but the differences between some of them are not so fundamental, that they may be said to form subsections of main parties. The following facts may serve as a background for the understanding of what the different parties stand for.

Germany, as is well-known, consisted for a long time of separate kingdoms, principalities and duchies, until they were all combined by Bismarck in 1871 into a united 'German Empire'. In internal administration, however, these are still independent "Free States" (*Freistaaten*), and the keenness with which they strive to maintain their independence often forms a knotty point in the domestic politics of the country.

The population of Germany consists chiefly of 38 million Protestants, 19 million Catholics and over half a million Jews. The north and middle Germany are mostly Protestant, while Bavaria and portions of Prussia are keenly Catholic. The preponderance of Jews in trade, their supposed control of the Press, and the prominent positions held by some of them in science and art, are often red rags to some of the parties.

The flag of the old monarchy was black, white and red, while the one adopted by the Republic is black, red and gold. This, however, does not seem to have met with universal acceptance, and one often hears of the 'Battle of the Flags'.

Then there are other minor social and economical problems that form the domestic politics of the country. Foreign politics, on the other hand, bristles with exceedingly acute problems like War Reparations, evacuation of Rheinland, recovery of south Tyrol; and over these there are strong

divergences of opinion and manifestation of feeling.

According to the positions of the seats occupied in the Reichstag in Berlin the parties fall into three groups: the "Right" being composed of Nationalists, the "Middle" of Democrats, and the "Left" of Socialists. The chief parties forming the 'Right' are the German National Party (*Deutsche Nationale Partei*) and the National Socialist Labour Party (*Nationalsozialistische Arbeiterpartei*). The German National Party is more or less a successor of the old Conservative Party of the monarchical times and represents large landed proprietors and capitalists. They

into the Reichstag. This party has the support of General Ludendorf, the well-known co-operator with Hindenburg in the Great War. Although occasionally the General addresses meetings in Munich, he has

were, in general, opposed to the Revolution and the Republic and favoured war to recover the lost German territories. The National Socialist Labour Party is under the leadership of Adolf Hitler, who fought in the ranks of the German Army during the war, but being an Austrian cannot himself be elected

practically retired from politics. This party with a uniform of khaki shirt and cap and

In front of a Polling Booth

the emblem of a red swastika is vehement against the Jews, and bitterly opposed to the conciliatory foreign policy of Dr. Stresemann. It so happens that Stresemann's wife is a Jewess! The National Socialists form the extreme Right and have persistently refused participation in any Coalition.

The 'Middle' comprises chiefly the Centre (*Zentrum*), the Bavarian People's Party (*Bayerische Volkspartei*) and the German People's Party (*Deutsche Volkspartei*). The first two are supported by Catholics, while the third represents the professionals and the moderate section of the capitalists. The German People's Party is led by Dr. Stresemann, who is perhaps the one German politician who is much in the eye of the world. While he was hooted and interrupted by the Socialists during his election speeches in Munich, he was warmly praised in Berlin on his 50th birthday by Prince Bulow for all that he had achieved for Germany by his 'gentle and clever tactics'. His illness has not affected the elections apparently, although the simultaneous illnesses of himself and Briand were whispered in some quarters to be due to machinations of some secret international plot against foreign ministers!

On the extreme 'Left' are the Communists who have also refused to join any Coalition from the commencement of the Republic. But the important party of this Wing are the Social Democrats, who are not only the most numerous but the most influential body in the Reichstag. They in coalition with Stresemann have several most important achievements to their credit, like the ending of the war, conclusion of the Treaty of Versailles, stabilization of the Mark, the Dawes Plan, Locarno Treaty and the entry of Germany into the League of Nations.

ELECTION DAY

Sunday the 20th May was the Election Day. According to law it should be either a Sunday or a holiday. Almost every street had its polling booth, in front of which the parties exhibited their posters. The booths were mostly inns, schools, etc. The voting started at 8 in the morning. The people approaching in queues would receive their Voting Papers (*Wahlzettel*), enter a covered "Cell," mark a red cross in the circle opposite to the name of the party they wished to vote for, enclose it in an envelope, and,

coming out, drop it into box through a slit after getting their identification cards checked.

The principal results of the voting are as follows:—

| | | | | |
|------------------------------|-----|-----|-----|-----|
| Social Democrats ... | ... | 9 | 287 | 433 |
| German Nationalist Party ... | ... | 4 | 464 | 832 |
| Centre Party ... | ... | 3 | 713 | 866 |
| Communist Party ... | ... | 3 | 217 | 339 |
| German People's Party ... | ... | 2 | 692 | 444 |
| German Democratic Party ... | ... | 1 | 448 | 763 |
| Economic Party ... | ... | 1 | 409 | 704 |
| Bavarian People's Party ... | ... | ... | 938 | 870 |
| National Socialists ... | ... | ... | 840 | 856 |
| Other Split Parties ... | ... | 2 | 716 | 717 |

ELECTION A REALITY TO THE PEOPLE

Although there may not have been the same outward demonstrations as on previous occasions, there is no doubt that the voting is a reality to the people. The maid in our Pension when asked why she was a National Socialist could not at once think of an answer except that her father knew everything, but she almost hissed as she

said pointing her finger towards the next room. 'The gentleman there is a Bayerish People's Party!' Among a family that went to a small drawing-room political meeting, the father sat out in the vestibule as he did not believe in the party that had arranged the meeting, the mother listened passively and approvingly to the speaker, while the daughter was continually putting cross questions. On the election day the voting was over by 5 p.m. I happened to be spending the evening with some friends in their country-house. At 7 p.m. the loud speaker in the next room began to announce the results of the elections in Munich. The whole family was nationalistic, and as the radio boomed out the enormous successes of the Social Democrats there were vehement gestures and exclamations of dissatisfaction! As some paper remarked the other day, although the people may not personally do much in the four years of the life of a Reichstag, yet during the elections the voice of the people is supreme and sets the direction in which the Reichstag has to move.

A REPLY TO MISS MAYO

By ALIDE HILL BOOTH-SMITHSON

(An American poetess)

On India! Country of divine dis-content,
Grieve thou not, at the cruel comment
Of our country maid (?)
Having eyes she seeth not at all,
Having ears she heareth not the call
Of thy soul. She's swayed by things external,
As all of us are—
She hitched not her vehicle to a star—
She loveth "brass tacks." (Statistics)
She heweth down here and scattereth there,
She forgetteth her ancestors bowed in prayer
For the truths which she lacks.

Forgive her India—forgive us all
For our Spiritual blindness—
For the Pekin-like wall
We've built round our hearts,
Lest seeing the light of the ages we'll be
Converted to true spirituality
That thy country imparts.

We Westerners mean, of course, to be kind,
In our science and industry we know you find
Much that is good.
But we have seen illness, disease and strife,
Where you have seen only God and Life...
We've not understood.
What you understand—

For Christ is not real
Nor Buddha, nor Krishna to us;
We don't feel
That anything matters here and now
We're SURE of THIS life
But wrinkle our brow
And scoff or doubt, or accept some creed
A few religions and faults to weed
From out our home garden—but then somehow
We always behold the far-off mote
While our beam remains—as it did in rote.
You really BELIEVE—man lives not by just
bread alone,

We give it the lie...
What our teacher taught we think is a joke,
You love and live what Buddha spoke.

So Forgive us India—! I implore,
My country-woman's blunders—heart-sore
I wish my Native land could see
The depth of your—Spirituality...

[This is an Answer to Miss Mayo's own article about her book, appearing in the January 14, 1928 issue of the "Liberty Magazine" 217 Park Avenue, New York City, N. Y., U. S. A. In it she mentions that she prefers "brass tacks" (statistics) to flowery language or poetry.]

ENGLISH

THE ECONOMIC ORGANIZATION OF THE SOVIET UNION: By Scott Nearing and Jack Hardy. Published by the Vanguard Press, 80 Fifth Avenue, New York. 245 pp. Price 60 cents, postage paid.

There is little excuse for any of us to remain ignorant of conditions in Soviet Russia today, or to fall back upon those threadbare charges and calling of names indulged in by the ignorant and reactionary. For, apart from the separate studies and general books that have appeared on Russia in recent years, we now have a very excellent and complete series of thirteen volumes devoted to the detailed study of various aspects of Russian life and of Soviet Russia. They are published by the Vanguard Press of America and sold at the ridiculous sum of 50 cents each, that each person may buy them. The volumes have been written after extensive and exhaustive studies by specialists, and the editor is a Professor in the Economic Research Dept. of Yale University. They cover the following subjects, one volume being devoted to each: the Economic organization (here reviewed) of the Soviet Union; How the Soviets Work; Soviet Production and Distribution; Trade Unions; The Family; Religion; Village Life; the School System; Health; Civil Liberties; National Minorities; Art and Culture; and, Russia and her Neighbours.

The volume under review deals with economic organization, and is written by the noted economist, Dr. Scott Nearing, and an economist trained by him, Mr. Jack Hardy. It is the first and most exhaustive study made so far of the system of Soviet economic organization. It speaks in facts, figures and charts. It is in three parts, covering the following subjects: Part I, being a study of the pre-war and war system which was eventually inherited by the Bolsheviks, from the wreck of which they had to make something; and the tremendous attempt to establish a proletarian state. Part II is a very exacting study of economic functions and relationships in the Union, covering the following heads: natural resources; the central economic plan; agriculture; industry; transport and communication; internal and foreign trade; finance, banking and credit; the co-operative movement; the position and organization of labour; new capital and the policy of foreign concessions;

developing new skill. The last, or third part, covers the results of all these activities. A section is given also to the productivity of the Union, and the economic trend.

Part I, devoted to pre-war and war Russia, constantly reminds one of India today, not only in the feudal land system, but in retarded economic development requiring importation of manufactured products, machinery, and even capital, from abroad. It was this economic machinery, headed by an inefficient, ignorant, corrupt and tyrannical State machinery that was expected to carry on a war. 15 million Russian men, including most of the skilled workers, were taken from industry and mobilized for slaughter. The gradual collapse of the system is followed—again in facts and figures—until we see starving cities, rebelling soldiers shipped to the front with no provisions or weapons; we see manufactures, mining, transport and agriculture shrink to a small fraction of pre-war volume. Then came the February break, the attempt of the Kerensky Provisional Government to carry on the War hated by the people, then the uprising against this Government. It was this collapsed, ruined system that the Bolsheviks inherited and were expected to make something of. The October Revolution had Peace, Bread, Land to the peasants and the Factories to the Workers, as its slogans. But it was prevented from peaceful reconstruction. Surrounded by a hostile world the country was decimated by war, revolution, and then by counter-revolution, blockade, armed intervention, and famine. From 1917 to 1921—for five long years—the Soviet Union fought for its life against the most formidable of armed European powers. At the end of that time production had further sunk until, in many industries, it had reached the zero point. And still the workers and peasants defeated all enemies. It is only from 1921 that peaceful economic construction has been possible, and even this has been carried on under constant threat of further intervention and war.

Part II covers the entire economic organization upon which the Soviet system rests. The fundamental principles underlying this organization may be given in Dr. Nearing's own words:

1. The socialization of all basic productive forces, such as land, mines, railroads, factories.
2. The organization and direction of productive forces on a unified, scientific plan.

3. The elimination of private profit and the social use of all economic surplus.

4. Universal obligation on all able-bodied adults to render some productive or useful service—"He shall not eat who does not work." (Article 18, Soviet Constitution).

5. Active participation, by the workers, in the direction of economic life.

6. The widest possible provision, among all who render productive and useful service, of: a) food, clothing, shelter, health service; b) education, recreation, cultural opportunity.

7. "The abolition of exploitation of men by men, the entire abolition of the division of the people into classes, the suppression of exploiters, the establishment of a Socialist society and the victory of Socialism in all lands." (Article 3, Soviet Constitution)

Two or three general results of the system may be briefly noted:

1. The budget was balanced and the currency stabilized without external loans or credits. No such record has been made by any of the other major European belligerents. The Soviet Union accomplished this result in 1924, before it was achieved in Britain, Germany, France, Italy, or Belgium.

2. The volume of production has increased each year since 1921. No other principal nation can show an equally steady gain in productivity.

3. The material well-being of Soviet workers has been improving steadily since 1921. No other European country can make a similar showing.

Part III is a short summary of the results of the Soviet system—which means the co-operative system of production and distribution. After analyzing the factors that forced Russia to introduce the New Economic Policy in 1921, with its concessions to the peasantry, its concessions to foreign capitalists, and its permission for free trade within the country, Dr. Nearing asks the very timely question if Russia is drifting towards capitalism, as its enemies amongst the Social Democrats would have us believe in an attempt to justify their own betrayal, or if the Soviet Union is developing along Socialistic lines.

The Soviet Union, he says, is passing through the transition to Socialism, and not one Communist inside or outside of Russia would hold that the present system has achieved the full measure of Socialism. An economic system is not built so quickly. But the trend of historical forces at work there is clearly seen in three prime factors: 1) the State power "is in the hands of the new order and wielded in the interests of the working class and against the growth of the capitalistic forces; 2) Socialism is not possible without large scale industrialism, and Russia is being industrialized; 3) the socialized forces of production, distribution and exchange continually expands, and those of private capital lose ground in the struggle—this book under review proves by facts and figures that this phase is a living reality." Therefore, we see that the capture of the State by the toiling masses is complete; the country is being industrialized, and its agriculture is also being modernized and industrialized; and socialized agriculture and industry is gradually replacing private ventures that sprang up after 1921. Foreign trade, transport, and finance are State monopolies. In Russia we see the coming to birth of a new world order, and in it we see socialized economy making attacks

upon private capital—not vice versa. And this is the way to Socialism.

The book is written in that lucid and yet fundamental style for which Dr. Nearing is noted. Every phase of Soviet Russian economy has been covered, and the results shown in figures and in charts. This book, as well as the entire series on Soviet Russia, should be read by Indians.

AGNES SMEDLEY

THE LIFE OF BUDDHA AS LEGEND AND HISTORY:
By E. F. Thomas M. A. D. Litt (St. Andrews),
London: Kegan Paul, Trench, Trubner & Co Ltd.
1927. 12s. 6d. net. Pp. XXIV, 297 with Appendix and Index

This work, as the author says in his preface, attempts to set forth what is known from the records and to utilise reformation that has never yet been presented in a Western form. Both the Pali and the Sanskrit canons may be regarded as having originated from other original versions which are now practically lost and the task of separating historical from legendary materials is a difficult one and few scholars could have approached the subject in a more impartial and critical spirit than Dr. Thomas has done. The discourses in *Sutta* and *Vinaya* cannot often claim to be historical and many legends of different traditions have often grown round them. The Tibetan Scriptures contain a collection of legends which are probably based on the earliest Sanskrit legends, some of the most important of which have been translated in Rockhill's *Life of the Buddha*. *Mahavastu* and *Lalitavistara* are also Sanskrit works which are based on earlier different traditions and so also is *Abhiniskramana-sutra*, an abridged translation of which from its Chinese translation has been published by Beal. *Buddhavamsa* and *Nidanakatha* are similar works in Pali and it was on works like these that the later Singhalese and Burmese works were based and a Tibetan work on the life of the Buddha was composed as late as 1734 which has been summarised by Scheffner and Klaproth. None of these documents can however be called historical, nor is it easy to discover in them any firm basis for any historical work. Their chronology is as uncertain as their legends. The genealogical accounts of ruling families found in the *Puranas* and the Pali chronicles of *Dipavamsa* (fourth century A. D.) and the *Mahavamsa* which was probably based on it and written in the fifth century, form the chief basis for chronology. From the conflicting accounts of these various sources Dr. Thomas has tried to form his conclusions carefully weighing his judgments in the light of available evidence suggesting a separation of the historical from the legendary materials as far as possible. The work is divided into seventeen chapters, such as the ancestry of Buddha, the home and family of Buddha, infancy and youth, the great renunciation, asceticism and enlightenment, the first preaching, spread of the doctrine, legends of the twenty years wandering, rival schools, the last days, the order, Buddhism as a religion, as a philosophy, Buddha and myth, Buddha and history, Buddhism and Christianity. The method adopted by Dr. Thomas has been that of placing the informations available from different sources side by side and then of commenting on them as he dealt with them leaving the

readers to judge for themselves. Thus in the chapter on Buddha's infancy and youth, he first gives the oldest version of the story given in *Nalaka-sutta* of the *Sutta-nipata* and shows that the legend was much later than the *Sutta* and attached to it probably in the Christian era. He then notices the chief differences of this version with the other accretion of legends in the *Lalitavistara*, the *Mahavastu*, the Tibetan account, the *Divyavadana*, the *Jataka* commentary and the *Buddhavamsa* as well as their agreements.

In discussing Buddhism as a religion the author says that the most primitive formulation of Buddhism is probably found in the four Noble Truths. These involve a certain conception of the nature of the world and of man. The first three insist on pain as a fact of existence, on a theory of its cause and on a method of its suppression, which is the Noble eightfold path. It is this way of escape from pain with the attaining of a permanent state of repose which as a course of moral and spiritual training to be followed by the individual constitutes Buddhism as a religion. Regarding the relation between Yoga and Buddhism Dr. Thomas rightly points out that it is not probable that Buddhism borrowed its Yoga tenets from the Yoga system. My own view is that the Yoga practices were current in the country and that it was probably Buddha who gave it a systematic form for the first time. The Yoga of Patanjali is certainly indebted to Buddhism for its formulation of the Yoga system in accordance with the metaphysics of Sankhya. Dr. Thomas's treatment of the Buddhist *Nibbana*, though brief, is instructive. He rightly points out that *Nirvana* is not peculiarly a Buddhistic term though it has undoubtedly a definite Buddhistic significance regarding the chief end of man. For the Buddhist it means the extinction of craving, of the desire for existence and the consequent cessation of pain. It is difficult to find out Buddha's own words describing what happens to one who has attained *Nirvana* in this life and many passages show that the Buddha has himself left it unexplained. But Dr. Thomas is right in holding that there is nothing to show that the conception of *Nirvana* implied any existence after death as is wrongly held by Prof. de la Vallée-Poussin in his *Nirvana* (Paris 1925) which has led to the publication of *The Conception of Nirvana* by Prof. Stecherbatsky in its refutation. Though the distinction of *sopadi* and *nirupaḍi* *Nirvana* cannot be found in earliest Buddhism and was later on introduced by the commentators, it was fully in keeping with the spirit of early Buddhism. I have elsewhere discussed it in my review of Prof. Stecherbatsky's "The conception of Buddhist *Nirvana*" in the July number (1928) of the *Modern Review*.

It is not possible to refer to the many now contributions that have been made in this work regarding the life of Buddha and Buddhism in general within the compass of this brief review. But it may safely be asserted that it has not only utilised all available literature on Buddhism, ancient and modern, but Dr. Thomas has often thrown a new light on the problems that he has handled and decidedly advanced our knowledge of Buddha's life and Buddhism in general a step further.

S. N. DASGUPTA.

STUDIES IN INDIAN ECONOMICS: By M. S. Seshu Iyengar, M. L. A. Madura. Pp. 152: price Re. 1-8-0. 1927.

This is a collection of ten lectures delivered by the author under the auspices of the Madras Economic Association and of three papers contributed by him to the *South India Mail* and to the *Modern Review*, during the years 1916 and 1917. They comprise a variety of subjects, including land revenue, currency, high prices and taxation. The author seems to have a thorough grasp of these subjects and shows considerable skill in marshalling his facts and using them tellingly. The discussions on currency and high prices might with advantage have been brought up-to-date. Few will be found to dissent from the author's view that Indians in larger numbers should turn their attention to the study of economic problems, if responsible government is to have any meaning in the country.

ESSENTIALS OF INDIAN ECONOMICS: By B. G. Sanyal, M. A. Professor of History and Economics Willington College, Sangli. Pp. 512: Prices Rs. 4-4-0.

In the preface, the author makes a profession of his object in writing this book, first, he desires to supply the student of Indian Economics with a book which "treats of the subject as a whole" and which deals "almost exclusively with Indian economic conditions" and not with "pieces of Indian Economics sandwiched between long dissertations upon ordinary economic theory"; and, secondly, he has tried "to arrange the subject in a manner that clearly shows the historical as well as organic relation between the various problems of Indian Economics."

We find ourselves completely at variance with the first object of the author. In the first place because we think that it is not possible, in the present stage of the development of economic studies in our country, to produce even a fairly satisfactory work on 'Indian Economics' treating of the subject as a whole; and, in the second place, because a book which deals simply with Indian economic conditions and makes no attempt to bring out the real significance of those conditions by reference to economic theory, would, in our opinion, be a mere catalogue of facts and figures and not a book on economics. The author also does not seem to have been very successful in realising his second object, i.e., "arranging the subject in a manner that clearly shows the historical as well as organic relation between the various problems of Indian Economics." The novel plan of arrangement that he has adopted will, we are afraid, only confuse the students, without facilitating a better understanding of the subject.

THE EXAMINATION OF THE CURRENCY COMMISSION REPORT: By P. B. Jinnarkar, M. A., LL.B., Reader and Head of the Department of Commerce, Dacca University. Pp. 121: price Re. 1-4-0.

Mr. Jinnarkar's criticism of the Currency Commission's Report is not likely to attract much attention today, though it is a book of more than ephemeral interest. The controversy regarding the relative merits of the 1s. 6d. and 1s. 4d. ratios seems already to belong to a by-gone age; but that does not mean that we have heard the last

of it. The author's statement that "the 1-6 ratio came into existence under artificial conditions produced by a definite monetary policy pursued by the Government of India" is largely true; but that the Government's policy of contraction of currency "has reduced the level of prices, paralysing industries and reducing the demand for capital" appears to us to be an over statement, while his contention that the 1-6 rupee has "considerably reduced the purchasing power in the hands of the agriculturist" and that "this is the cause of the stagnant condition of the piece goods trade, since the year 1921" is extremely fallacious. The 1-6 rupee has certainly reduced the money income of the agriculturist; but it has not reduced his purchasing power—at least not to any appreciable extent.

The question of rupee ratio will never be satisfactorily settled, nor are we ever likely to see the end of India's currency troubles, until she has openly and frankly adopted a gold currency as the proper accompaniment of her gold standard (however retrograde such a measure may appear to the more advanced currency theorists of to-day). The Commission's arguments for the rejection of the Indian Finance Department's proposals for the establishment of a gold currency would not bear close examination. We find here the same solicitation for the interests of other countries, the same (unwarranted) anxiety about the expense of the experiment to India, the same fear of opposition from the gold grabbing countries of the West, as in the case of previous Commissions. It would be fairly safe to predict the break-down of the Gold 'Bullion' Standard as recommended by the Commission. It might work in a country where the currency system is not complicated by the presence within it of a silver note of unlimited legal tender and where the people have become long accustomed to the use of paper. But in India, the gold bullion standard would in practice mean the gold exchange standard, with the added liability of the Central Reserve Bank to pay gold at a fixed ratio to an unlimited extent to enable the Government and foreign traders to meet their obligations abroad without loss. The internal circulation will continue to be, as heretofore, silver rupees and currency notes nominally convertible into gold but actually cashed in silver—with all the attendant inconveniences of the system.

The author takes strong exception to two features of the Central Reserve Bank as proposed by the Commission, viz. (i) that the other banks should be compelled to maintain minimum reserve balances with the Central Reserve Bank; and (ii) that the Central Reserve Bank should have no direct dealings with the public. He himself would prefer to see the Imperial Bank of India, which carries on its business in close touch with the Indian banking and business world and already performs many of the functions of a Central Bank act as the Central Reserve Bank of India. Thus he favours, by implication, a share holders' bank. We need not follow the author into his criticism of the other features of the Bank, which have not found support even with the Government of India.

ECONOMICS

ENGLISH WOMEN IN LIFE AND LETTER: By M. Phillips and W. S. Tomkinson. O. U. Press. Pp. XVIII+408.

"This book," say the authors, "describes the lives of past English Women, some rich and of great place, others poor and unknown to fame. The material is in the main historical: but throughout the book we have drawn freely upon the rich stores of English fiction, the better to illustrate and interpret our theme. Thus Pamela Andrews and Mor Flanders testify in these pages along with Dorothy Osborne and Fan Burney. And it has been thought well to tell their own story with as little prompting as possible." We could not improve upon the authors' description of the purpose and scope of their work. It is an interesting gallery of feminine portraits, drawn from actual life and from imagination by poets and novelists from Chaucer to Mrs Gaskell but all of these intensely realistic.

But whether the subjects of these portraits were actual human beings in flesh and blood or whether they existed only in the imagination of their creators they seem to us mostly, as we judge them by present-day standards, creatures of the fancy and fancy creature-too, made by man what they are and moving about in a man made world pelted and pampered, scorned and exploited, on the whims and tastes and needs of the stronger sex demanded. Now and then, there is an exception, but only to prove the general rate. What a far cry from the England of today where woman, having at long last come of age, has amply avenged her century old subjection by a series of triumphs culminating in the recent amendment of the Representation of the people Act which gives the flapper of twenty-one the right to vote and this incidentally, we might mention, secures for the women of England a numerical majority and therefore, the power to rule over the men, so that a few generations hence, we may expect the great-great-grand daughters of Mr. Phillips and Mr. Tomkinson to write a book called 'English Men in life and letters.'

The Book is profusely illustrated & beautifully printed.

HIRANMATH SANTAL.

ELEMENTS OF SURVEYING AND RELAYING. By Mr. R. L. Banerjee, Principal, Manamali (Govt.) Survey School, Via Comilla (Bengal) pp: 196 with Walla, bound in cloth. Price Rs. 6-8

This book deals with the practical methods of ordinary Survey works, with special reference to relaying boundaries. It is well-written and will prove useful to Civil Court Commissioners and to pleaders, preparing for Survey examination.

INDUSHEKHAR BHATTACHARYA.

THE LAW RELATING TO REGISTRATION OF DOCUMENTS IN BRITISH INDIA: By Mr. Kshutis Chandra Chakravarti, M. A., B. L., Advocate, Calcutta High Court; Published by Messrs. N. M. Raychoudhury & Co., College Square, Calcutta. Price Rs. 6 only.

The publication is an excellent commentary on the Indian Registration Act, 1908 Act No. XVI

of 1908 in which careful and elaborate collection of authorities has been made. The author has given a complete history of Registration Law in India which will be found very useful. In the appendix, rules and notifications issued by the different Local Governments have been set out which have added to the value of the book. On the whole, this edition of the Registration Act is a very useful publication and we hope that it will be found to be of great use by the legal public.

G. S.

WHEN PARLIAMENTS FAIL: A Synthetic view from the Gallery. By a Sympathiser. With a Foreword by Bertram Keightly of the Lucknow University. Thacker Spink & Co. 1927 Pp. VI+50.

The author of this book, Mr. S. Nehru, goes to the capital cities of France, England, Germany, Italy and Switzerland in order to study the working of the national legislatures of the leading states of Europe and of the League of Nations and records his impressions in powerful and picturesque language in this small book. He sees through the pomp of Parliaments, the solemn stage-acting of representative democracy. Even the grandeur of the League of Nations leaves him unmoved. Geneva, where the League is domiciled, appears to him to be the "Mecca of the Mighty and the Babel of Babblers." He winds up by saying: "Europe's Parliaments are everywhere in chains—of their own forging, or other's imposing. They have, in a deep sense, ceased to function without friction or restraint. But, if reality, the actual world of parliamentary muddle-headedness and democratic mis-government, proves to be such a chaos of confused issues and conflicting interests, can we not seek refuge in Utopia, or, to be more precise in a dream of it, following the example of some of our most illustrious predecessors from the time of Plato downwards? And that is exactly what our author does. The Utopia that he speculates upon however, is not, happily altogether Utopian—it is not devoid of a practical interest for the erring political animals who rule and are ruled in the modern states. For, as the author remarks: "Each leading country possesses the means and the possibilities of making the most of its parliament, and of ensuring that it does its duty by the people. This clear duty is apt to be overlooked in the welter of false issues; which shortsighted deputies are tempted to raise in order to secure transient triumphs at one another's or even at the country's expense."

"No parliament is perfect. But all are perfectible". We earnestly commend this book to every one interested in the study of Government. To Indians, specially, the book conveys a message which should not be missed. For, as Mr. Keightly says in the Foreword: "Our India is just entering on democratic and parliamentary development and one hopes her guiding intelligentsia, especially the younger ones, may mark, learn and inwardly digest the lessons, which this survey of the position, now becoming so marked in Europe, is well-calculated to impress upon them." Those of our countrymen who think that India in order to attain her goal, not of mere political autonomy but real *Swaraj*, inward and outward, should steer her parliamentary craft clear of the Scylla

of autocracy and the Charybdis of Anarchy, the fetish of Law and Order, and the wild orgy of Freedom's Battle, might do worse than reflect over the contents of this book. H. S.

"KRISHNA OF VRINDAVANA" which was reviewed by Prof. G. Tucci last month has been priced at Rs. 6 and published by the Bengal Library, Patuatuli, Dacca.

HINDI

ITIHAS KI KAHANIYA: By Zohur Buksh. The Ganga-Pustak-mala office, Lucknow.

Some interesting incidents of the lives of great men are here collected and told in a beautiful style. This will be an attraction in the juvenile literature of Hindi.

LADKIYON KA KHEL: By Mr. Girija Kumar Ghosh. The Ganga-pustak-mala office, Lucknow.

We congratulate the author for bringing out this book of action-songs and dramatic pieces specially for the girls. The style is light and most suited for the purpose. The book is sure to give enjoyment to the little girls. The pictures also match well with the poems.

MAHILA-HITAISHINI: By Chaturvedi Dwarka Prasad Sharma, M.A. S. The Navakalishore Press, Lucknow.

This is mainly compiled and translated from the Bengali writings of the late Satish Chandra Chakravarty on women's welfare.

VANITA-VILASA: By Pandit Mahabir Prasad Dornedi. The Ganga-pustak-mala office, Lucknow.

Lives of 12 eminent women of various nationality are described, with some pictures and photos.

ZACHCHA: By Kaviraj Pratap-Sinha Vidya Visarada. Ganga-pustak-mala office, Lucknow.

A book on maternity and child welfare.

COMMUNISM KYA HAI? By Mr. Radhamohan Gokulji, Cawnpur.

The principles and practice of communism are described showing their various aspects.

PREM DVADASHI: By Mr. Premchand, The Ganga-pustak-mala office, Lucknow.

Twelve out of about a century of short stories written by Mr. Premchand the best writer of short story in Hindi are selected in this volume.

ACHHUTODDIHARA-NATAKA: By Hameswariprasad Ram. Hindi Sulabha Sahitya Mandir, Barh, Patna.

A drama on social reform of the so-called untouchables.

APNA AUR PARAYA: By Thakur Jugal Kisore Narain Singha-Nawal Kisore Book Depot, Lucknow.

Translation of Mr. Hemendraprasad Ghose's Bengali story *Apna-o-par*.

KUSUMAYATI: By Babu Chandrabhan Sinha. Moham Ratsanda, Ballia.

A book of poems on various phases of nature and the human mind. The poet suggests in the preface that a compromise should be arrived at between the *braja-bhasha* and *khadi-boli* and Persian words also should not be excommunicated.

GO-FALANA : Published by the Indian Press, Ltd., Allahabad.

Various informations as regards the cow are given herewith pictures and diagram.

RAMES BASU.

MARATHI

THE VIJAYA-SAHITYA-MALA AND OTHER BOOKS—
Publisher Vyaya Press, Poona City.

This series has to its credit about a dozen books of considerable merit written by well-known Marathi writers on various subjects such as biography, poetry, novels, drama, science etc. *Kahin Tares* is a collection of stray political pieces composed by Mr. H. S. Gokhale. The range of subjects in this book is pretty large and the happy combination of emotion and reason displayed in some pieces appeals to the readers. The Foreword of Prof. Lagu is discriminating and impartial. *Kulbyachi Dandy* and *Pahatepurvicha Kalokh* are two novels by two well-reputed authors. Both books are entertaining and useful in their own way, though they are widely different in style, sentiment and out-look of society. *De Valera and Me-Sweeney* are two biographies brightly written and likely to absorb the interests of politically-minded class of Marathi readers. *Santati-Niyamana* or Birth-control is a subject which is exercising the minds of a great number of young persons at present and Professor Phadke's interesting brochure on the subject will no doubt be read with pleasure by them. It must, however, be said that little good to the Society can be expected from the propaganda work of this new movement adopted from the West without due regard to the special conditions and religious sentiments which characterise Indian Society. *Khadashak* by Mr. S. P. Joshi is a dramatic play which will entertain those who do not look for any high and noble sentiments leading to the elevation of society in drama but crave only for something likely to excite an outburst of laughter. *Grim Punch Warshen* or the past five years is a collection of certain articles in the *Kesari* edited by Mr. N. C. Kelkar. The sub-title of the book is explanatory and tells us that the articles chosen and incorporated in the book relate the history of the five years' period viz 1921-26,—a period as eventful as it is disgraceful in the political history of India. It was a period which saw the rise, growth and decline of the non-co-operation movement, the diplomacy of a dubious character on the part of a certain section of the Nationalist party, the incessant squabbles and wranglings among public leaders and the rabid tone of the Press of both sides. These quarrels which have disgraced and humiliated Maharashtra in the eyes of the rest of India should have been allowed to be buried unceremoniously and forgotten for ever. But it is a pity that the responsivist leaders like Mr.

Kelkar who wrote the articles re-printed in the book and Mr. Aney who wrote an appreciative foreword to their collection were both carried away by passion and both in their misdirected enthusiasm decided to give the unfortunate controversy a permanent form. The decision was quite unwise and I for one cannot congratulate the publisher on his achievement.

V. G. AITE.

MALAYALAM

SRI DEVA-HARANAM A drama in seven acts
By Kongot Krishnan Nair. The Mangalodayam Press, Trichur. Price As 5.

The theme of this play is based on an incident known in history. The first meeting of the hero and the heroine and their mutual falling in love are depicted in a manner quite prosaic. The play opens with a Nandi and ends with a *Bharatavakya*. It starts with a prologue in the beginning, and has a *Vishimbha* proceeding every *ink* (act). In the matter of dramaturgy it is a pure imitation of Sanskrit drama.

MANI-MANJUSHA.—'A chest of gems', collected from the numerous learned articles contributed to the *Mangalodayam Journal* by Pandit P. S. Ananthanarayana Sastri. Printed and published by the Yogakshem Co. Ltd., Trichur. Pp. 139. Price As 12.

P. ALUNJAN ACHEN.

GUJARATI

THE AUTOBIOGRAPHY OF DHONDO KESHAV KARVE :
Translated by Kishan Singh Gouind Singh Chandra, and published by the Pustakalaya Sahayak Sahakari Mandal, Baroli, printed at the Kshatriya Printing Press, Ahmedabad. Cloth bound. Pp. 377. Price Rs. 3 (1927)

Prof. Karve, the founder of the Indian Women's University has become a man of world-wide publicity and his autobiography written in Marathi is a book depicting the wonderful personality and indomitable courage of a more poor in worldly resources but rich in determination and self-sacrifice. His life is a standing lesson to all those patriots who want to raise India in the scale of nations. The translation is very well done, and the interest so well sustained that one does not like to put down the book—a big one as sizes go—his one has furnished it.

PREMA SWARUP SURI, KRISHNA : First Part : By Mohanlal V. Gandhi. Printed at the Aditya Printing Press, Ahmedabad. Cloth bound. Pp. 252. Price Rs. 2 (1927)

"Shri Krishna, the Lord of Love," written by Baba Premananda Bharti has attained great fame as a book explaining why Shri Krishna is held in such veneration by us, and the deeper truths underlying his worship. This book is a translation of the first part of that treatise and the Notes given at the end add to its usefulness. It is sure to interest all those who have a religious turn of mind.

K. M. J.

Social Reform Legislations

Mr. Indra Vidyalkara in an article in the *Vedic Magazine* for May points out some social and moral maladies in India and urges for their eradication by the legislative bodies. Says the writer

Look, whichever side we may, what sight meet our eyes? It is an oppressive sight of pauperism and illiteracy all around us. The people seem to be extremely discontented with their existence. They find no happiness in their lives, as they are always on the verge of starvation and destitution. Really they have no comfort, no ease, no peace of mind. How to raise their standard of living! How to enhance their earning capacity? There are twenty-seven lacs of *Sahdus* in our country, we are at our wits' end to find out means of making them useful to our society and country. Again there is the knotty problem of widow-marriage. How to persuade the orthodox section of the Hindu community to allow young girl-widows to remarry? How to get its sanction even for the prevention of child-marriage? All these reforms are required urgently for the welfare of the country at large, but reformers alone cannot bring them about in less than a century or even more. It is impossible to wait for so long a time only for such insignificant measures of re-generation. If by means of legislation our object can be realised at once, why not resort to it? The writer is firmly of opinion that legal restrictions alone can check the ever-increasing degeneration of India. It is simply an idle business to reason with antiquated Pandits and their so-called *Shastras*. Really 'that which conduces to the highest good of society is *Shatru*.' Let every reform come which is consistent with the happiness and prosperity of the people. Let even a revolutionary legislation take place which ultimately adds something to the peace and tranquility of the nation. If we wish to see an end of the curse of untouchability, let a strong, definite measure be put on the statute book and enforced strictly so as to make such inhuman behaviour a severely punishable crime. Again, if we desire our country to go 'dry,' let a Total Prohibition Bill be enacted and applied by the Executive with all the earnestness at its command. The drink evil, even a part of which cannot be eradicated by hundreds of sermons, will then leave the shores of India for good.

Khadi in Foreign Lands

The question whether those Indians who go abroad should put on Khadi dress

or not and whether it can serve the purpose has been coming more and more under discussion. Several Indian sojourners have furnished themselves entirely with Khadi suits (both woollen and cotton) from Indian Khadi depots. *Khadi Patrika* of Ahmedabad gives several such instances.

FOR ENGLAND

Sjt. Ramji Hansraj while going to England on business, got all his dresses made of Khadi. But at the last moment he had to resort to one foreign cloth suit and hence he sent us instructions for a better, softer, though a little costlier quality of woollen cloth. Now such qualities have also been made available from Kashmir.

BABU RAJENDRAPRASAD

Only last month Babu Rajendraprasad left for England attired *cap-a-pie* in Khadi.

JAPAN

Sjt. Nilkanth Mashruvala accompanied by his family had been to Japan on business. He had all his dresses made of Khadi. During his stay there he used to order out all his clothing necessities from here. This gentleman used only white Khadi cap for his head dress in Japan also.

CHINA

Sheth Maherjibhai Navroji (a Parsi gentleman) went to China all in Khadi.

FOREIGN ORDERS

Occasionally, there are orders for Khadi even from such distant centres such as: London, America, Africa, Arabia, Malaya State, Jesselton, (North Borneo) and Singapore. Several members of the Khadi Sangathan scheme also belong to these centres

The Synthetic Vision

The editor of *Probuddha Bharata* in the course of a thought provoking article states that there cannot be a more urgent task in India at the present time than the production of a large number of young workers who will represent the highest synthesis in their outlook and experience of life and reality. Says the writer in conclusion,

One great obstacle in the way of young minds devoting themselves to the realisation of the spiri-

tual world-synthesis is the superstition that religion is a life of passivity, and devoid of the glow of life that characterises more concrete struggles. Young minds want the taste of power. They seek those fields of action where they can wield great energies, and this often attracts them to lesser ideals. Let us assure them that the life of spiritual struggle, of the struggle to realise the Universal Vision such as we have discussed above, requires the greatest amount of strength. There is an amount of adventure in it as is not to be met with anywhere else and may daunt even the stoutest heart. Spiritual realisation is the manliest of games and the most daring of adventures. India and the world are eagerly waiting for those brave souls who will build up the glorious future of humanity through their titanic life-struggles. Where are they? They alone can lead humanity to the land of promise.

Calcutta in 1870

Francis H. Skrine narrates his interesting recollections of Calcutta's external aspect during the seventies of the last century in the *Calcutta Review* for June, we read in one place:

The present generation must find some difficulty imagining Calcutta without pure water or scientific drainage; without motor-cars, autobuses, tramlines, electricity and the other conveniences which render life in the tropics more than tolerable. Bishop Heber declared in his delightful *Diary of a Residence in India*: "People talk of luxuries of the East, but the only luxury I am aware of are cold air and cold water—when one can get them." Half a century later things were but little better in this respect. The ministrations of a sleepy pookah-coolie were far less efficient than an electric fan, and the supply of ice was precarious. In the good bishop's time wealthy Europeans cooled their claret with ice skimmed from shallow pans set out at night during the cold weather. In the twenties, however, an enterprising American made his fortune by cutting huge blocks from the frozen surface of lake near Boston and exporting them to Calcutta, where they were stored in a massive edifice at Howrah. As the precious commodity arrived per sailing ship, stocks were apt to run short at the hottest season. In such cases every subscriber received a notice that ice would be supplied only to hospitals. In the sixties of last century a method was discovered of manufacturing ice cheaply by machinery, and several plants for this purpose arrived in Calcutta. Each was bought up and sent back by the powerful Tudor Ice Company; but it is monopoly could not be sustained, and the Howrah donjon was demolished.

Kindergarten or the Garden of Children

Srimati Susama Sen (Mrs. P. K. Sen) writes in the *Children's News* for May:

The beautiful word kindergarten which, in German, means the garden of Children is known

throughout the world unfortunately the idea that underlies it has not been vividly realised. The ideal garden of children ought to be the home and their gardener the mother. Few mothers watch the development of the child, so as to make it bloom into the flower that it is destined to be. Instead of being under the loving care of the mother children are often put in the hands of ill-tempered and fagged out teachers. No wonder before the bud blooms, it fades away, and the garden presents a dreary, desolate sight.

At the present moment in the Western countries the health, happiness and welfare of the children are being seriously considered. Cultured women are busily engaged in discovering the right path to education of children. Only through the insight of love and sympathy can the mother direct her child's course along the right track. What are the kindergarten and the Montessori systems, but methods adapted for letting the child learn through its play. The great names of Pestalozzi, Froebel and others are associated with this endeavour to turn the instinct of play into account and make the child's play-ground its field of study. Another notable endeavour to advance education is found in the Parent's National Educational Union, which has been founded in England to bring about a greater unity in Education by securing harmony between the home and the school by co-operation between parents and teachers who are able to meet on the same ground.

We in India have seriously to think over the question of children's education and utilise all our resources of thought and action for the benefit of children. That is what makes ultimately for them building up of India's nationhood. The time has undoubtedly come when the mothers must realise their true place when the mother's heart must awake to beat not only for own selfish ends, but for the service of the nation, and of humanity. It is when we realize this in all its fulness, that Indian womanhood will attain its end and goal.

Causes of Strikes

The *National Christian Council Review* for June says that the hunger of an empty heart and the hunger of an unfilled stomach are the main reasons of the labour unrest in India.

We have no right to ignore, withdrawn upon a hill apart, the fact that in the plains beneath, men and women and children are hungry. We are inclined at times to think that the hot-weather outbreaks of discontent, the strikes and communal conflicts are in large measure due to overwrought and jangled nerves. But neither this nor Bolshevism nor the 'labour agitator' is a sufficient explanation for what we see about us in the cotton mills of Bombay and the railway workshops of Bengal. There are two main sources for the unrest that is never still about us; first, the hunger of an empty heart; and, second, the hunger of an unfilled stomach. We cannot afford to ignore—least of all in India—this second cause of so much distress and bitterness. There is no 'agitator' that a government has so much cause to dread as the one

called 'Unemployment,' and his dangerous influence is evident on every side of us today. There is good reason why the Jerusalem Council gave so much attention to the problems both of industry and of rural areas. It is not only among the steel workers of Jamshedpur that we see the spirit of rebellion awaking, but also among the peasants of Bardoli. We dare not turn away with indifference from problems that affect so vitally the happiness, and indeed, the very existence, of multitudes.

And suggests the following reform :

One reform that appears to be greatly needed, and that immediately concerns the employed rather than the employers, may be mentioned. It scarcely seems open to doubt that some of the leaders of the workers are seeking purely personal ends. When these leaders are from outside the ranks of the workers themselves, the opportunity for 'professional agitators' is obvious. The remedy for this evil is the training of the most capable among the workers to understand the economic situation and themselves take the position of leaders and advisers of their fellow-workers. Something similar to the institution of the Labour College in England is demanded—some means of adult training of the workers—before we can expect to find moderation and sanity in the Labour Movement.

Rural Reconstruction

The Hon'ble V. Ramdas Pantulu in the course of an informative article in *Rural India* for April gives an outline of a scheme of rural reconstruction and sketches a plan of work to carry it out. He is of opinion that social and economic reconstruction of Indian villages would not come about by gifts from the British Government but it can only be brought about by a "reconstruction of our mentality so as to make us self-reliant."

The village can be regenerated only by a reconstruction of the mentality of the villager. Charitable doles of money, or cheap money thrown into his pocket, whether by the co-operative society or by the Government, will only serve to make him more dependent and less self-reliant. If the financial assistance rendered to the ryot is not closely associated with the inculcation of co-operative principles, his position may become worse. That is why Wolf is never tired of emphasising that 'the first step which the people's bank is bound to take is to make the improvident thrifty, the reckless careful, the drunkard sober, the evil doer well-conducted, the unlettered capable of using the pen. In this way it has become a moralising and educating agency of the greatest value to the nation among whom it acts.'

The writer proceeds :

The next essential principle which reconstructors should bear in mind is, that their scheme should embrace all sides of the village activities, which

are compendiously described in Horace Plunkett's classification of the ten principal needs of the farmer as 'business needs' and 'social needs.' Mr. MacNeil summed up the idea in the words, "Better Farming and Better Business would be a soulless thing without Better Living. (Better Living Societies' are a noteworthy feature of the movement in the Punjab. There are 59 societies of this description with a membership of over 2,000. The plan is most popular and gives a lead to the informal groups of caste-fellows who were already trying to reform their ways. All classes and castes have joined these societies and resolutions have been passed in various places, restricting expenditure on ceremonies, penalising cattle-trespass, forbidding the sale of daughters and the giving of false evidence, and enjoining temperance and inoculation. Fines have been inflicted and realised for breach of these resolutions. Hygienic improvements are also effected by these societies.)

The question of a suitable agency for the propagation of co-operative principles and carrying on the work of Village Reconstruction is one of supreme importance. If the thousands among middle classes realise their responsibilities to the nation and resolve to contribute their legitimate share to the cause of nation-building, then India is certainly rich in human material. Let those who render this contribution remember that a regenerated village will repay their sacrifice a thousand-fold. Every one will be benefited. Our Educated men should cultivate a rural bias and should go back to the villages to spend all the spare time at their disposal. The student should spend his vacation in the village. Men who retire from services and professions should settle down in their village. The lawyer and the doctor should spend their holidays in their villages. The holiday-seeker must make the country side his pleasure resort. The cry of 'Back to the Village' must be carried to the door of every educated man. The village will then present a new life and a new aspect. Non-officials must equip themselves in large numbers for co-operative and rural propaganda.

Civics and Politics

Mr. P. P. Sathe in an article in the *Progress of Education* for May discusses in brief what is meant by civics and the scope of the science and advocates the introduction of subject in the curricula of the Indian Universities. He says that Civics and Political Science are very much allied but they are not the same. Says the writer :

Confusion is generally made between Civics and Politics. It is true that both the sciences go hand in hand upto a certain extent. Both the sciences postulate the existence of a State, but, their ways part here. The State is a political unit out of several and it must make itself sufficiently strong to assert its own existence in that group. The State must, therefore, be strong enough to deal with other States. This question is dealt by International law. To be strong the State has

to be more efficient. It must be efficient both to maintain its position in other States as well as to be able to do more good. It must organize as the present united whole. How to make the State self-efficient is taught to us by the study of Political Science. How to make the State more useful is taught to us by Civics. We thus find that Civics and Political Science are very much allied but they are not the same. The study of both the subjects is necessary for one who wants to take part in the development of his nation, social as well as political. It is, therefore, high time for Indian universities to introduce this subject in their curricula in these days of progress when every student would have his turn to participate in the public life of his country. The importance of the study of Civics and Politics can never thus be overestimated.

State Measures for the Encouragement of Shipping

Welfare for June publishes an article from the pen of Mr. Doongersee Dharamsee wherein he shows how in "other" countries State impetus is giving for the encouragement of shipping :

For the double objects of securing the large possible share of ocean commerce to national merchant fleet and of making the ocean traffic subservient to the interests of the production and commerce of the country, the state-measures for the encouragement of shipping in other countries have taken one or more of the following main forms:—

- (1) The Navigation laws.
- (2) Construction and navigation bounties,
- (3) Postal subsidy.
- (4) Admiralty subsidy.
- (5) Reservation of coastal traffic for national ships
- (6) Cheap loans
- (7) Preferential railway-rates.
- (8) Training ships in all the big ports with complete arrangements for training young people as officers
- (9) Training in Naval engineering.
- (10) Arrangements for granting employment to the trained youths.

It is important to note that almost all the countries except Great Britain have reserved their coastal traffic to national vessels. In Great Britain however there is no legal reservation, there being no necessity of it as 99 p. c. of her coastal trade is carried by British ships. The history of all the maritime countries in the world, from which Great Britain is not excluded, proves that state-aid in one form or another has played a very important part in the development of a mercantile marine.

But in India the condition is just the reverse. Our coastal trade even is in the hands of foreign companies. The hold of the British shipping interests on the Indian export trade and the absence of an Indian mercantile marine are the reasons why

the once-great Indian shipping is now left at the mercy of others.

Liberty

Major B D. Basu, I. M. S. (Retd) writes in the same journal :

'Give me room to stand and I will move the universe' was uttered by a Greek philosopher. In the uplift of humanity also, standing room is required to effect it. It is liberty which supplies it. Without liberty there can be no progress, whether social or political. How liberty uplifts nations is well illustrated in History. Take for instance, the history of ancient Greece, Herodotus V 78) says that

'The Athenians who, while they continued under the rule of tyrants were not a whit more valiant than any of their neighbours, no sooner shook off the yoke than they became decidedly the first of all. This shows that while they were oppressed they allowed themselves to be beaten because they worked for a master but so soon as they won their liberty each man was eager to do the best he could for himself'

Indian Cultural Influence in Oceania

Dr E S Craighill Handy in the course of an illuminating article in *Man in India* (January-March) gives illustrative examples about the traits of Vedic, Brahminical and Buddhist culture in Oceania and shows that story of Polynesian culture is a mere appendix to Indian history

The most recent phase of the movement of Indian culture eastward that concerns the student of Polynesian history is that which witnessed the spread of Buddhism into Indo-China and Insulinidia during and after the seventh century A.D. While evidence of the presence of Buddhist cultural traits in Polynesia are not as clearly defined as those indicating Brahminical influence, they nevertheless do exist. In view of the fusion of Buddhism with Brahminism in Further India it would be inevitable that Buddhist traits that came to Polynesia from this region, would have been obscured. An example of a trait that probably had Buddhist derivation is the division by the New Zealand Maori of their sacred lore into what they called "The Three Baskets of Knowledge," said to have been entrusted by the Supreme Being in the highest heaven to the God of Light, who transmitted the sacred lore or wisdom (*wananga*) contained in the "Three Baskets" to the Maori priesthood. The Maori "Three Baskets" of course, suggests the Tripitaka, or Three Baskets" of the Buddhist canon

Traits of the Brahminical culture known to have preceded the Mahayana Buddhist expansion having flourished in Indo-China and Insulinidia in the first centuries of our era, spread throughout Polynesia. In Indo-China and Insulinidia the heart of this Brahminical culture was the worship

of Siva. In Polynesia the cult of the lingam was fundamental in the ancient worship. Its manifestations in Symbol and philosophy parallel their prototypes in Saivism. And associated with this cult in all phases of the native culture are innumerable traits of Indic derivation.

A good case can be made out for presence in Polynesia of distinctively Vedic elements, but the existence of such traits as distinct from the Brahminical tradition which was, of course, based upon Vedic teaching is by no means provable as yet.

Though the title of my paper is "*Indian Cultural Influence in Oceania*" as regards Oceania as a whole only Indonesia and Polynesia have so far been mentioned. It may, however safely be presumed that cultures that have dominated Indonesia and travelled as far as Polynesia, have also contributed largely to Micronesia and Melanesia which lie between Indonesia and Polynesia.

In closing, I should like to point out that, while the story of Polynesian culture is a mere appendix to Indian history, it may be found, like appendices to some books, to contain information of prime importance to the main subject. In the isolated islands of Polynesian fringe of further India there may have survived, there may still survive, ancient Indian lore and customs that have become hopelessly obscured or lost in India proper and colonial India.

The Dawn

Mr. C. E. Andrews welcomes the efforts of those who are striving for "the spiritual awakening of mankind" in the following words in the *Star* :

There has never been a time in human history in which, from one point of view, things have looked so dark and threatening as they do at present, when judged merely from the human standpoint.

Let me explain. Not a single man of eminence to-day is unaware of the fact, that a new war means nothing less than the suicide of the human race. The last war was terrible enough. But a single day of war on the new scale would be equivalent to a year's agony and misery on the old scale. For where, during the late war, a single aeroplane hovered in the air with its death-dealing bomb, in the new war, if it ever came, a thousand such death-dealing missiles would be hurled from the sky and whole cities could be blotted out in a single night. Even more horrible than this would be the results of chemical warfare, by which poison gas and disease germs could be made to penetrate the ranks of the enemy till complete desolation resulted.

Yet, in spite of knowledge so obvious, the preparations for war go on and the bitterness which leads to war increases. In every part of the world, we find that the war-spirit has not diminished, though the war-dread has become more acute.

Personally, I have felt in my own heart the agony of darkness during the past years. I have known what humanity is suffering and have felt conscious of the depths of that suffering. At times

it has enveloped me in a mist which seemed impenetrable and led me almost to despair. But all through these years, I have been conscious within of a new hope dawning. Even when the darkest hour seemed to have come, the light has come with it, flashing from afar. The despair which had darkened my life has been relieved with hope.

For this reason, I welcome all the efforts of those who are looking forward to a new revelation of spiritual light and grace in the future. The special method, by which the light may come, may not be clear to me, as it is to others. There are many ways leading to the same goal. But the fact of a spiritual awakening of mankind, already dawning to-day, breaking through the darkness of our age, is to me no longer a mere hope, but a certainty.

Harvard University

Prof. A. K. Siddhanta gives in an article in the *Young Men of India* the reasons of the paucity of Indian students at Harvard :

The annual number of Indian students at Harvard hardly ever exceeds a dozen, whereas there are ten times the number of Chinese boys there. The reasons for this are obvious:—The Foreign University Information Bureau in India have in many cases been discouraging Indians from going to any non-British Universities; the Government of India does not encourage boys to study along lines appropriate to American Universities; and to crown all, recent American immigration laws place Orientals in an unenviable position. Yet there are about 300 *Ponafide* Indian students in the various American Universities at the present time.

He then summarises his impressions on Harvard life as follows :

Firstly, Harvard to-day is passing through a state of 'Discontent and Self-Criticism'. She has largely abandoned her original purpose, which was the production of an educated clergy for the ministry of the Church; she seeks now not so much to produce 'gentlemen' as 'men'. And as men, the 'College boys' do honourably revolt against any old-fashioned tendencies; and they are grateful to President Eliot, who gave them so much opportunity for self-expression.

Secondly, 'New methods' are at work at Harvard. Compared with other first-class American Universities, especially the Mid-Western ones, Harvard is conservative; but in many respects one finds her quite progressive. She encourages the joint method (Tutorial-Effective) of training, and allows students more freedom, encourages initiative and develops in them a sense of responsibility. She believes in the 'Honour System' and never hesitates to give the boys more of 'reading periods' with every decade that passes.

Finally, one is agreeably surprised at the great interest the students take in College affairs. There is a waning interest in inter-collegiate games. The undergraduate 'daily' paper openly declared recently against 'Juggling with football while

studying'. The same paper, "The Crimson", published recently a 'Guide to Courses' whereby many old professors and their old courses were mildly rebuked and politely shown a new light. Prof. William James once asked Prof. Munsterberg to be 'thick-skinned'. I feel every Harvard Professor needs to be 'thick-skinned,' otherwise he will misinterpret the undergraduates' suggestions!

We in India may profitably study the following principles which Harvard follows, amongst a few others:—(1) Intellectual and moral quality of the professors leads to higher work. The University professors must be free from pecuniary anxiety and pensions must be given them in case of disability and to their families in case of premature death. (2) Libraries and laboratories must steadily improve and they must be managed almost entirely for the students. (3) The University must be in touch with the Alumni and the general public; the professors must be in touch with public life and thought through their books, lectures and addresses. (4) 'Youth' must be respected, as well as 'experience'.

Hand Bat of Indian Railway Employees

We read in the *Indian Railways*;

Public agitation over the invidious distinction between the Indian and European as well as Anglo-Indian Locomen in the matter of their pay and allowances though apparently succeeded, it does really continue to exist. The said distinction has transformed its character and has materialised in the shape of class I—illiterate with a maximum of Rs. 62-, class II—illiterate with a maximum of pay of Rs. 140-, of class III, European and Anglo-Indians with a maximum pay of Rs. 240-. Now in this connection, may we ask the authorities the following pertinent questions? What do they earnestly mean by the word 'illiterate' in the case of a mechanic, while a Bengali or a Urdu knowing man is as good a worker (and occasionally better) as an illiterate English-speaking European or Anglo-Indian? Is it not an indirect mode of barring the promotion of a good many experienced and sound workers of exceptional ability? Literacy does not evidently mean in the opinion of the authorities University qualifications, because many European or Anglo-Indian-drivers, shunters, firemen have no university qualifications whatsoever. The object of our complaining against racial distinction really means that our capacity and education will be the determining factors that are to be counted in the appointment and promotion of officers. But alas we find not a single soul of the Indians in the class III grade. Does the authority mean to say that no Indian however good, is capable to hold a post in the class III grade and hence it is filled up by Europeans and Anglo-Indians?

Some Cottage Industries of Bihar and Orissa

Federation Gazette describes how some of the cottage industries in Bihar and Orissa have been working well on modern lines.

Tasor—Bihar and Orissa is the home of Tasar silk worn and in no other province of India, this variety of silk is produced in such a large quantity as here.

Nearly 4000 silk looms are reported to be weaving tasar in this province. The silk is reeled from the cocoons by the female members of the weavers family in such a laborious method that the output per reeler can only be 2 chitaks a day. The tasar silk weavers are therefore, forced to remain idle for want of sufficient silk yarn. However those of Bhagalpur have started weaving imported spun silk thread very largely. If the local tasar industry is at all to be developed, economically sound reeling machines to reel silk of better quality should be introduced and new designs in tasar fabrics woven after bleaching and dyeing the silk to satisfy the changing tastes of the people.

Pottery or earthenware—No attention seems to have been paid in any part of India to the development of the pottery industry.

It is common to see a potter in almost every village toiling with his crude wheel and an equally inefficient kiln. It is surprising that the potter is still content with a wheel which always comes to a standstill specially when he is giving a finishing touch to the article he makes. Much of his time is also wasted in giving necessary momentum to the wheel which is being done with the help of a bamboo stick every time the wheel slows down. In the Punjab the potter has replaced this wheel with a treadle driven one which can be kept revolving at a uniform speed thereby enabling the potter to devote all his time and attention to the shaping of the articles. The pots, after being sundried, are piled one above the other and baked on an open hearth a process which causes considerable breakages and unequal baking of the pots. The quality of the earthenware particularly of those, use for storage purposes can also be improved by glazing them as it is being done at Chunar in the United Provinces. With further investigation and closer observation of the various processes now employed by our village potter, it may be possible to effect other improvements and economies in manufacture. In a country, where an earthen vessel is very often not used for the second time, cheap earthenware would be a great boon to poor people.

Basket making of bamboo and reed is an equally important village industry of our province as pottery, supporting another lakh and a half of our rural population. As it is carried on mostly by "Doms," "Bastors" and other low caste Hindus, this industry is neglected and very few of us know its actual needs. The basket-maker in India is however carrying on his trade with some difficulty in spite of the absence of foreign competition in his goods. As Japanese split bamboo chunks and mats are slowly being introduced into this country, he can no longer remain indifferent to foreign competition. He will have not only to improve his own efficiency but also produce better class of goods for which there is a market.

Smithy and iron works.—A "lohar" is an essential functionary of our village organisation, for the supply of iron and steel tools and implements to our agriculturists and artisans. The iron workers living in towns manufacture cutlery,

trunks and boxes, "kudis" for lifting water, domestic utensils etc.

The principles of smithy and fitting on modern lines are now being taught to a few young men and boys in four or five technical institutes started in the province. But the village "lohar" is not in any way affected by the existence of these institutes; for, in the present, state of his poverty and ignorance, he cannot be expected to leave his home and family and undergo a course of training in industrial schools. The few students coming mostly from non-artisan classes and trained in these schools, either get employed in big workshops or remain in towns where they can carry on more lucrative trade. Thus the scientific training given in these institutions hardly filters down to rural areas. The village "lohar" has therefore to be instructed how to use modern tools and adopt improved processes, in his own smithy, through itinerant demonstrators as it is being done in the case of hand weaving.

Municipal Expenditure on Education

The Educational Review writes :

It is a notorious fact that local bodies in India have not been particularly forward in incurring expenditure on educational purposes. In the majority of instances, they have been content to distribute the doles given to them by the Government and have been able to spend only a very small proportion of their revenues on even elementary education, not to speak of the fact that they have very rarely been able to do anything for secondary and higher education. *The Modern Review* has just published some interesting statistics with regard to the educational expenditure incurred by Municipal Corporations in the United States of America, which should serve as an object lesson to the local bodies in India. It has been calculated that on the average, they are now spending about one-third of their revenues on educational purposes! Some idea of the magnitude of the effort made by municipal bodies can be gathered from the circumstance that in the 250 cities containing a population of more than 30,000 each, the aggregate outlay on education was 607,059,853 dollars. The average expenditure per head was 6.30 dollars and the investments in school buildings, grounds and equipment were 2,112,000,000 dollars. We commend these figures to the city fathers in India.

The Ideal Man

According to the *Oriental Watchman and Herald of Health* the following "essentials" constitute the ideal man :

Man's first essential is pure air and plenty of it, night and day. More time should be given to voluntary deep breathing efforts.

Second in the essentials is water—pure, fresh, uncontaminated water, four to six glasses daily. Our physical bulk is seven-tenths water.

The third essentials is a full complement of vitamins known as A, B, C, D, and E. These

substances are more important for maintaining health and full vitality than the grosser food substances which compose the bulk of our diet. Vitamins are mainly found in uncooked, fresh, raw fruits, and vegetables.

Fourth:—Consideration should be given to the sixteen essential mineral salts as found in wholemeal bread, fruits, nuts and vegetables. Food must be so selected as to supply the full quota of all sixteen. Absence or deficiency in any one produces impaired health.

Fifth:—Avoid taking an excess of remaining food elements such as protein, starch, sugar and fats. Excessive food intake of proteins and starches is responsible for more ill-health than an insufficient supply.

Sixth:—Health necessitates a sanitary environment to live in. Insanitary and unhygienic practices lay the foundation for disease.

Seventh:—Daily exercise of nature to bring all groups of muscles into operation. Such exercise need not be necessarily heroic but should be done in a manner to make it interesting, and not irksome.

Finally, we must stress the importance of positive, cheerful, hopeful and spiritual thoughts. The crowning glory of man comes from his thought life. A lofty mentality in a well-poised body constitutes the ideal man.

Post Office and Telegraph Budget

Sj. Tarapada Mukherjee points out some of the anomalies in the Post office and Telegraph Budget Statement presented before the Assembly in March last in *Labour*. Says the writer :

In page 2 is given the Revised Estimate of net profit or loss of the Posts and Telegraphs Department for 1927-28. The Post Office shows a net profit of Rs. 15,97,000, the Telegraph a loss of Rs. 19,89,000, and Telephones a loss of Rs. 66,000. So far so good. But on looking into the different items of expenditure I find that under the head of "Inter Branch Adjustment" a sum of Rs. 11,22,000 has been added to the expenditure of the Post Office and Rs. 4,60,000 to that of Telephones, while the expenditure of the Telegraph Branch has been reduced by Rs. 15,82,000. What is meant by the inter-branch adjustment? The expenditure of the three branches have been separately shown in the detailed accounts embodied in the Budget Statement; and unless the detailed accounts are admitted as wrong, where is the room for inter-branch adjustment of such a heavy amount? The Telegraph Branch shows a large deficit of Rs. 19,89,000; and but for the manipulation of the accounts under the head of inter-branch adjustments the deficit would mount up to Rs. 35,71,000. The Postal account, on the other hand, shows a surplus of Rs. 15,97,000; and, but for the manipulation of the accounts the surplus would amount to Rs. 27,19,000. I invite the attention of the Hon'ble Member to this matter that has been a puzzle to me and urge upon him to clear up the mystery.

Then, a sum of Rs. 3,58,000 has been charged as interest on capital outlay. But it appears from

the detailed account that the capital expenditure in the Post Office is met from the revenue of the department. How is interest chargeable on the money spent out of the revenue of the department passes comprehension. I have drawn attention to this anomaly year after year but have received no solution as yet. Will some member of the Assembly kindly have the point cleared up? But for this charge of interest, for which I do not find justification, the net surplus of the Post Office would amount to Rs. 50,77,000.

A novel system of "Commercialisation of Accounts" indeed! The accounts of the Post Office and Telegraph departments should properly adjusted so as to remove the impression that the deficit of the Telegraph department is minimised at the cost of the Post office.

Child Marriage

The Editor of *The Indian Ladies' Magazine* for April expresses her opinion on the question of child marriage as follows.

One has also to point out that, if India is to advance, which means, as all admit, that Indian women should advance, some of our old customs must be done away with, in spite of public and personal inconvenience. Sacrifices have to be made, ancient rites and privileges sacrificed; or how shall we hope to hold our place in the line of advancing nations? And don't we wish our India to acquire her deserved tribute? Certainly, we do!

That being so then, ought we not to do everything in our power to benefit India? And is it not good for India that her women should not be dwarfed, as they now, are by child-marriages? Even if early marriage has been sanctioned by the Shastras, which many deny, why should we not

go against the Shastras? Have we not done so in other important matters, such as going to England, breaking caste, etc? But then perhaps, some of these contradictions are of benefit chiefly to men, not only to poor suffering women! But, even Indian women are becoming modernised; and certainly early marriage will not go with modern customs. What is the use of wishing with one breath to give education to our women; and with another breath asking them to marry early. How will they find time for education, if they are so early burdened with family and maternal cares? True home education can be given, but narrow and cramped indeed will such an education be, if it has to be wedged in between arduous labours. Moreover such an education is apt to be merely conventional and domestic. And do not our women, I ask, deserve to be given a larger education than a merely domestic one? It is good to learn cooking and housekeeping, it is good to be able to see to the welfare of husbands and children. But, I say, that some women are capable of a larger treatment. Have not our enlightened sisters proved the point? That being so, it will be but just to give them an opportunity of testing their powers, and such a chance can only come if young girls are not married, as soon as they get into their teens, but are allowed first to be educated, and then left to choose their lot in life. Moreover, how sad it is to see our girls never being allowed to enjoy a free and untrammelled girlhood. The glory of womanhood starts, I think, in early girlhood. As is the girl, so will the woman be. But says, Mrs. Muthulakshmi, 'a new cry has taken hold of the orthodox section. They attribute the physical degeneration, the ill-health, suffering and death of the mother and infant of the Brahmin community to changed conditions, English education and Western habits.' But how, she asks, can such a thing be? How is it that the men do not deteriorate thereby? And how is it, that those very same conditions do not affect at all the Non-Brahmins, and other classes, who do not indulge in early marriage? How indeed?

no loving members of the Ashrama.

In welcoming Swami Paramananda the same Journal says:—

It is with great happiness we welcome Charu Shila Devi, the new Indian. Sister whom Swami Paramananda brought with him on his last trip from India. We cannot help but feel that this new aspect of the Swami's activities in bringing Hindu ladies to assist in the American work will be of significant value. No amount of reading from books written by globe trotters can give us as clear a view of India's life, religion and social customs as the presence of these cultured Hindu ladies among us.

A HOLY MAN WAS SPEAKING. HE HAD A WHITE FAUP, WITH WILD BLACK HAIR AND A BLACK BEARD, AND ALL HE WORE WAS A DIRTY LOIN CLOTH. BUT HIS LOOK WAS KEEN, AND HIS BEARING PROUD AND SELF-POSSESSED. HE EXPLAINED TO ME IN EXCELLENT ENGLISH THE PRIMITIVE PAINTINGS IN THE OUTER COURT OF THE HINDU TEMPLE. I LISTENED TO HIM IN AMAZEMENT. WHERE HAD HE LEARNED SUCH GOOD ENGLISH:

'I used to be in government service.'

'In what capacity?'

'I served in the Indian army.'

'What rank did you occupy?'

The tattered preacher tightened his lips scornfully. 'I was an officer.'

He had fought in France, Mesopotamia, and in the Malabar revolt. He even spoke a little French, and described Neuve-Chapelle and the cemetery near La Bassée.

And now?

The beggar made a disdainful gesture, as if he were pushing aside something offensive. "One day I awoke," And on that day he cast aside everything—home, family, and position.

"Are you happy now?" He looked off in the distance. "Yes, I wander about meditating. What inconceivable journeys I have made. I have just arrived from Tibet from the holy lake of Manasarovar."

"What do you live on?" "Whatever I am given. I need nothing." With the able and learned Bishop Peter of the Moravian Mission, one of the few real Christians I have ever met in my life a similar holy man, a real Sadhu, who had spent the last year and a half in a woodshed. This Sadhu had reached such a degree of indifference and humility that he ate out of the same dish with the dogs.

Soviet Student Life

Poverty and nervous afflictions are rampant in the Universities' tells us the *Pravda* (reproduced by *The Living Age*).

Two thirds of the students at the Second Moscow State University live on twenty-one to twenty-five rubles a month (about twelve dollars), and twenty-seven per cent get along on even less. This means that most of them spend only ten kopecks on breakfast, twelve on dinner, and nine on supper. Nearly all the students eat at the Moscow Social Relief Kitchens, where the food is neither good nor nourishing, and frequently contains insects. Forty per cent of the students are undernourished and the rest are half hungry, or even famished. Their living quarters are miserable, and they seldom take baths or change their underwear.

Under these conditions it is not, perhaps, surprising that the relations between the sexes should be conducted on a higher plane than seems to exist at our own co-educational institutions. Questionnaires prove that only twenty per cent of the students stand for casual, temporary relations; the rest prefer a stable married life. The girls are treated with increasing politeness, fewer distinctions are drawn between Party and non-Party members, and a more friendly atmosphere prevails.

On the other hand, a new ambitious type is beginning to appear. This brand of student wants a snug berth for himself, and is inclined to look down on women. The reason for this may be that the female students are of a higher standard than the males—supposedly because the present epoch encourages the feminine temperament. The old-fashioned girl is going out of style and is being replaced by up-to-date young women, full of initiative, and eager to change and influence their men or man, as the case may be. If present tendencies continue, the Russian male will be reduced either to a sort of drone or to a self-seeking opportunist, while the real progress of the country will rest in the hands of the women.

There is, however, some ground for optimism. Since education cannot be easily come by, it is valued enormously, and the students work from twelve to thirteen hours a day, and even more.

Nervous afflictions, loss of sleep, and lack of exercise accompany this state of affairs, which should certainly tend to arrive at some sensible balance in the course of time. The Communist League rejoices over the fact that ninety per cent of the students read the newspapers, forty per cent the magazines, and, twenty-eight per cent books on social problems outside their regular work. The teachers all agree that interest in study has grown perceptibly of recent years, especially along philosophical, ethical, hygienic, and theatrical lines.

Dr. and Mrs. Sudhindra Bose noured in America

The Hindustanee Student reports regarding Dr. and Mrs. Sudhindra Bose, whom the mother country has been so glad to receive though for a short time—

Letters of appreciation of the valuable services rendered to the cause of the Hindustani Association of America by Dr. Sudhindra Bose, one of the founders of the Association, and its former president, reached Dr. J. T. Sunderland who was presiding at the "Farewell Dinner-Reception" arranged in honor of Dr. and Mrs. Bose by the members of different organizations in New York City on March 25th at the Ceylon India Inn.

He (Dr. Bose) has been interpreting India to America in a true light, and he is one of those energetic pioneer students from India whose efforts have resulted in a public appreciation of Indian culture in America," wrote Mr. B. S. Sindhu of Michigan University, the present President of the H. A. A. Similar commendation of Dr. Bose's work came from many chapters: Massachusetts, Pittsburgh, Utah, Chicago, New York, Cornell, Iowa, and from Mr. P. C. Mukerji, Chairman of the Committee on International Federation of Indian Students of which Dr. Bose is a member.

The members and friends at the gathering (about 150 in number) and the chairman of the evening wished him and Mrs. Bose bon voyage.

Swedish Students as anti-drink Workers

It fills one with hope to learn from the *International Student* that Swedish students are going on anti-alcohol lecture tours—

The leaders of the Swedish Students Abstinence Society regard the lecture work they have organized as perhaps the most valuable task that they have undertaken in their educational work against Alcoholism. On one hand, it seeks to bring information on the temperance question to the younger students and the boys and girls in the schools of Sweden; on the other hand, adds new members as a result of the work done by S. S. U. H. and keeps former members active.

A number of young men and women, mostly university students, selected by the Central

Board, are sent out on circuits, or separate lecture engagements, especially in the fall months, to various parts of the country. These speakers visit the local groups connected with the society and deliver lectures at meetings of the society and the public gatherings arranged by these local societies; they work for the distribution of temperance literature.

Egyptian Independence—and India

Dr. Tarakanth Das writes in *The Chinese Students' Monthly* on the Egyptian Independence and India.

Great Britain has theoretically acknowledged the independence of Egypt; but in actual practice Egypt's sovereignty is limited. Under the garb of protecting the interests of foreigners, the British Government maintains the right to interfere in Egypt's internal affairs. Great Britain infringes upon Egypt's territorial sovereignty by maintaining British troops on Egyptian soil. Lastly, Egypt does not enjoy the freedom of carrying on foreign relations to promote her best interests.

The Egyptian Nationalists, the followers of the late Zaglul Pasha, are determined to remove these limitations of sovereignty of their motherland and make her truly independent of foreign control. On the other hand all the political parties of Great Britain are imperialistic in action. They are virtually united in following the policy of preserving the British Empire at any cost.

Egypt will have a bad time of it for

Today, as a matter of general principle, Great Britain, France, Italy and Spain, to preserve their North African colonial empires, are agreed to follow a uniform policy of keeping the North African peoples under subjection.

Willingly or unwillingly, India will be made to share the guilt though not the gains will go to her masters:

British authorities are hoping that communal struggle between the Hindus and Moslems of India will prevent the Indian Nationalists from making their agitation effective. They are depending upon a section of Moslem Indian leaders (especially of the Punjab and Bengal) to support the British Indian Government against the Indian Nationalists. They are hoping that the demand of Moslem Indians will afford splendid opportunity to perpetuate "Communal Representation" which is bound to promote communal distrust and conflict and hinder the cause of national solidarity.

Many Moslem Indian supporters of the British autocracy in India are Pan-Islamists. However, it is a fact that for some peculiar reasons they do not seem to realize that India holds the key to the solution of international problems affecting the Far East, Central Asia, the Middle East and the Near East. They seem to ignore the fact that unless the people of India become masters of their own country and control India's Internal Affairs, National Defense and Foreign Policy, one of the Islamic countries, now under British control and

domination, can never assert their complete independence.

It may be safely asserted that as long as Britain holds India in subjection, she, for the purpose of retaining control over the sea route to India, will maintain some form of control over Egypt. Thus some day after the Indian people will recover their national freedom, the final act of Egypt's struggle for independence may be enacted in India.

In this connection it should be noted that the All-India National Congress, during the last session held at Madras, adopted a resolution in favour of Egyptian independence.

East and West to Indians in West

The Edinburgh Indian says its Editorial —

There is an inner contest between East and West. The East has survived because of its culture, and the West is now leading because of its tremendous success in physical science. On the one hand, the West is now transplanting thoughts of the East. On the other hand, the East is tempted to follow in the footsteps of the West while watching its new lead. After years of struggle the West has learnt how to face troubles and why strength is necessary, but the East has learnt what is perhaps a more important lesson—that though old age may bring wisdom through experience, it also brings weakness. To-day we find the West sending its people to the East as traders, soldiers and governors, while the East sends only students—students to know how to assimilate what is best and beneficial in the West. Thus their purpose is not singular. The object of the one is to preserve, and that of the other is to observe, and thereby revive. The contest lies not in the purpose, but in the speed to gain security for the purpose.

Not very far back from our present age in the history of man there was a time when the purpose of various nations of the world was directed towards the extension of area of land under domination. For some, perhaps, it was necessary for the material maintenance of their well-being, but for others it was just a curious game. For some it was for the struggle for existence; for others it was an attainment of fashion of the age. We shall not be far from the truth if we say that Europe was not out of that pursuit. To capture land and utilise it to every possible extent was the clamour of instinct of nations then. When such was the state of things outside, East was musing upon its glory achieved in the past. Unguarded as it was, East lost many of its brilliant jewels, not to shine again. What was fashion (call it necessity if you like) some years ago, has now taken the shape of "policy." Policy of the present age is to maintain things gained in the past. Thus we will not have much to say against the Indian Reform Commission when its report will be announced, for we know that no Commission can give what India wants to-day. It is the Indian people alone who must work for their own salvation.

League and China

On the Chinese appeal to the League of Nations concerning the Japanese invasion of Shantung, the following observations of *The Japan Weekly Chronicle* will be read with interest :—

Long ago, when the League of Nations was still an ideal, people had an idea that when such a body came into being there would be a sort of supreme court of appeal. If a weak nation complained that it was even threatened by a strong one, wise and impartial representatives of the Powers, it was supposed, would examine the case, and decide whether the complaint was a just one. If the weaker power's fears turned out to be unfounded, the wise men would not thereupon be scornful, but would search into the causes for such disturbing suspicions, and have them removed. However, the League has never operated that way. There have been national disputes since its formation; it started quite well, with Sweden and Finland agreeing to leave the settlement of the Åland Island dispute to the League; but that appears to have exhausted the League's capacities. It occupies itself with a number of activities, all excellent in their way, like a sort of glorified Red Cross; but when the military men get busy, why then the League seems to understand that old women must not interfere with serious affairs. A telegram from Geneva states that the appeal made by the Chinese Nationalists to the League of Nations concerning the invasion of Shantung by Japan has caused quite a flutter. This flutter is described as being due to the fact of the Nanking Government not even being a member of the League, the consequence of which, from the juridical point of view, is that the appeal has hardly any standing. If the appeal is so ineffectual, then why the flutter? But it is a strange sort of League if it refuses to listen to any communication from nations which are not members. Such an attitude reduces it to a sort of combino for self-interest, and if anybody has aggressive designs against a country which is not a member of the League, well, they must just go ahead. No cry for help from a non-member can be listened to: we should never know where we were.

The most striking feature of the business of presenting an appeal to the League is the alacrity and ingenuity with which a search is immediately instituted for reasons for doing nothing. "How can we put this troublesome person off?" is the first instinct, the Council being in fear of losing face by being defied by even a second-rate Power.

Democracy and Autocrats

Is Democracy a Failure is a vital question today and in *Current History* Ex-Kaiser Wilhelm, Benito Mussolini, and Governor Ritchie (of Maryland) say 'Emphatically yes,' while Prof. James T. Shotwell says, 'no.' In course of his reply to the autocrats the Professor says:

To conceive of democracy in terms of the mob is as unfair as to conceive of autocracies in terms of a Nero or an Ivan the Terrible.

Instructive are the ideas of the historian regarding the best form of government and Democracy :—

This brings us to a point which somehow is often forgotten in this world-old controversy as to the best form of government. We keep forgetting that we cannot get rid of the "people" by concentrating our attention upon the monarch. They are always there, just as much there in monarchies as in republics; and their interest in their own betterment is a continuing one under all forms of government. Now after centuries of experimentation, we are finding that there is only one path of progress which does not turn back upon itself, and that is through the education and advancement of the entire nation. Education is as definitely called for in the field of politics as in art or science or literature; for politics is, after all, a part of the art of living. In its theoretic aspects it plays with the forces of economics, national characteristics, geographical situations and the changing phenomena of material forces, as well as the inherited strength of ancient and accepted ideals and in institutions pertinent to its need, it builds the architecture for a society to live in. Democracy is a nation at school studying the great theme of human adaptation. But it should not be forgotten that this schooling has only just begun; for there never were any complete democracies in the world before our day. There was slavery to falsify its antique counterpart; there was privilege to modify and limit its capacities in the early modern period. Its advent is so recent that only now has it begun to grapple with the final problem of its great concerns, namely, the inter-relation of the States in which it has taken its most enduring form.

DEMOCRATIC EXPERIMENTS STILL EVOLVING

This newness of democracy means that it has not by any means completed any of its experiment. It is still working with a parliamentary form which it has inherited from the earlier days of the formation of the national State, when representation rested primarily upon the basis of an agricultural society. Representation according to localities is the simplest and oldest method that has been devised, and is valid in so far as these localities have political personality based upon local interests and points of view. But the cross-section of any nation that has achieved industrial democracy is not the same as that of the agricultural era, and representative government must take account of the transformation that is going on within the State and adapt itself to the new situation. There will be, therefore, many changes in the form of democratic government with reference to the problem of representation.

Post War German Mind

Post War Germany is to some a future term, to some others a helpless object of

pity, to others again a curiosity; but to all Germany is of engrossing interest, and it will be of interest to us all to hear one of the greatest German novelists of the day, Lion Feuchtwanger, the author of 'Jew Suss,' and 'The Ugly Duchess,' on *The German mind in the London Express*.

"There is much talk in Germany just now of what is known as 'S. chlichkeit'—thingliness,' a practical realism which insists on getting down the brass tacks of life. Berlin is fond of calling itself the most American city in Europe. It is 'the thing' to laugh at enthusiasms and force down emotions to the sphere of things measurable and real.

"As soon, however, as you pass beyond the newspapers and literary coteries, and leave the great city of Berlin, you find that all this Americanism is external. It is paint; a modish pose which has no bearing on the true character of the nation.

"If you want to find a factor common to every German, a dominant characteristic in terms of which you can calculate all his other peculiarities, you had best turn to his bourgeois idealism. 'Yes, despite all his shrieking protestations of Americanism there is still a wealth of religion and metaphysical speculation in the German.'

Surprise may follow Herr Feuchtwanger's next assertion—that politics "do not appeal to the German, foreign affairs leave him cold, and the class-war interests him little." Then—

The musical feeling of the German is right down deep within him. It is surprisingly sure and swift to condemn the cheap and materialistic. "He has little love of pomp, but great sympathy for well-produced drama. His craving for culture is constant, hard to satisfy, and often rather pedantic.

"German literature is not light and pleasant, but the Germans write and read more books than any other people under the sun. Their scientific literature is more theoretic than practical—it is twice as comprehensive as that of any other race, and is absorbed not merely by a narrow circle of scholars, but by the whole country. 'The German inquires 'Why?' and 'Wherefore?' oftener and with greater insistence than any other nation. Less frequently than others he asks 'What for?' and even then he does not press overhard for an answer. "Despite his lip-parade of practical realism and his much-talked-of business instinct, the German is a fundamentally reflective being. He is slow to the point of awkwardness, kindly, heavy-mannered, contemplative, and reliable.

No Speed Limit

'Speed' is the cry of the age, and Prof. A. M. Low is of opinion (as can be seen from his article in the *Daily Mail*) that there is no speed limit for man:

"That every one should appreciate the importance of speed is very material. We must accustom ourselves to the idea that in the future 500 miles

per hour in the air will be an every-day—or night—affair.

"There is no limit. The suggestion that speed will kill is as out-of-date as the famous medical expression of opinion eighty years ago to the effect that sixty miles per hour might be fatal to the heart's action.

"Speed is so relative that without its accompanying sensations it is virtually unnoticeable. The rapid development of engines, of electrical methods of transmission, and the economical use of fuel are all leading to a decreasing weight and an increase of speed in our travelling vehicles. When we remain in constant touch with homes and offices throughout our tours all over the world at speeds which will render it possible to pay week-end visits to India, we shall lose the fear of bodily translation, and we only look for more comfort or new means of thought transmission in order that our dwindling bodies can be saved from all exertion.

"In motor-cars it is not only high speed that causes danger, it is the immense forces produced by changing the direction of motion of a relatively heavy body. In airplanes we may travel so fast that the heating effect of the air becomes important. Even to day it is necessary to get rid of the electrical charges upon the skin of airships produced by the rush of wind. Who knows but that these very forces may not eventually be turned to useful account until we regard this world as a mere landing-ground in the path of travel so vast as to be beyond conception."

"Wide-world travel is not an accomplished fact, it is only beginning. How interesting it will be when the inhabitants of Central Africa take week-end excursions to Hyde Park on Sunday morning, or when the necessary power is transmitted over half a continent from centralised coal-mines."

Marriages and Divorce which will be the day:

In this age of speed 'speedy divorces' are not however, so much in the air as they are taken to be. The *Literary Digest* quotes Judge Appell from the Baltimore *Sun* to prove that old-fashioned marriages are still in fashion.—

"In this country marriages were 87 a thousand of population in 1890; they were 103 a thousand in 1906, they averaged 1052 a thousand for the years 1922-25.

"Thirty-eight per cent. of the inhabitants of the United States were married in 1910, according to the census figures for that year. This proportion had increased to more than 40 per cent. in 1926. Despite a prevailing opinion to the contrary, our people are continuing to marry in normal numbers. The figure of a 25 per cent. fall in marriage licenses can reflect nothing but a local or temporary fluctuation.

"As for the increase of divorce, while it is rapid, it still strikes at only a very small minority of American homes. Out of something over 24,000,000 couples in this country, 180,686 secured divorces in 1926.

This much married dreaded phenomenon of the decaying American home is something that every body talks about as tho it were a fact somewhere, but always remote from our own circle of friends. Looking about us in our own neighbourhood, we see happy, prospering families, such as we knew in our youth. We do see broken homes here and there but very much in the minority.

The tendencies towards materialism selfishness spiritual insolvency and sense-gratification which I emphasized above are present and obvious everywhere. They are increasing to an ominous extent. But they still are very far from infecting the American home universally. The drift has not become so powerful as to be irresistible.

Turkey's Religious Outlook

Turkey was much agitated over the Christian propaganda in American Schools. But Turkey is fair to all religions as will appear from an article by Md. Asim Bey in *Vakul* (quoted by the *Literary Digest* for May 19, 1928.)

"Turkish laws do not permit any discrimination in dealings as between Moslems and Christians. Any one may profess any religion he chooses. Such matters of conscience lie outside the duties of government. The fact that the educational system of the Turkish republic is based upon

secular principles," adds Asim, "is not an excuse for making Christians out of Turkish children."

Silk Culture

The *China Journal* devoted in the May issue a great deal of attention to silk, and the following will show that there are reasons for it :—

The astounding increase in the production of artificial silk during the past few years, and the enormous profits made by the companies engaged in the development of that industry, read almost like a romance. As pointed out by the founders of one of the most important of the artificial silk producing companies, the world's population is increasing at a faster rate than can be kept pace with by the production of silk and cotton goods for clothing; which simply means that every bit of additional fabric for clothing that can be produced must find a ready consumption. This accounts for the fact that the enormous production of fabrics of artificial silk and artificial wool (for wool, too, now has a very good substitute) has not affected the world's consumption of silk, cotton or woolen goods.

Following is a table kindly supplied by the Chinese Maritime Customs Statistical Department giving statistics of the import of artificial silk, etc. into Shanghai during the past three years.

| | 1925. | 1926. | 1927. |
|---|-----------|-----------|-----------|
| Artificial Silk Floss and Yarn. Piculs. | 27,233 | 42,781 | 82,169 |
| " " & Cotton Piece Goods Yds. | 2,151,090 | 3,663,698 | 5,130,123 |
| " " & Woollen " " " | 183,442 | 1,363,781 | 221,473 |
| " " Piece Goods " " | 1,114,229 | 1,151,301 | 869,193 |

The silk export trade of Shanghai is, as large this year as ever, yet great quantities of artificial silk are being used in Europe, and America for the manufacture of fabrics that are finding a ready sale.

In Shanghai, perhaps unknown to the general public, a very big industry in artificial silk and artificial woolen goods has arisen. In fact, fabric of this nature is actually being manufactured in Shanghai on a large scale and shipped to Europe and America, some of the stuff being of such high quality and beautiful design as to compare more than favourably with that of European manufacture.

Strangely enough, this local production is not all used to satisfy local demand, and large quantities of artificial silk fabric are imported.

All of which goes to show how important is the silk industry, with which must be included the production and weaving of artificial silk, to Shanghai and China generally.

'Risks' in Labour life

'Measurement of Risk' in connection with Labour statistics forms the subject of an informative, and remarkable article by J. W. Nixon in the *International Labour*

Review, May. Risks include unemployment, sickness, accidents a 'confused Terminology' and industrial disputes, each of which has been thoroughly studied, and the writer's conclusion on their basis is this:

The problem of measuring risk has not yet been reduced to a common set of principles. Though each of the risks has its special peculiarities which must necessarily be taken into account in measuring the risk, yet there are certain common principles underlying the problem.

For each social risk, two different rates can be calculated, frequency and severity; and though in practice prominence has been given in certain social risks to the former (e.g. in accident) and in other social risks to the latter (e.g. in unemployment), both are necessary if the whole problem of the risk is to be understood. The frequency rate corresponds to the probability of an event; the chance of being injured by accident is a measure similar to that of the chance of death or the probability of dying within the year of the actuary. The severity rate is a measure of the loss occasioned by such events and is of value to the worker in giving the number of days of work he is liable to lose and to the employer or the State in giving the amount of compensation which may have to be paid, or the amount of

productive time lost. This rate is the one of chief value for purposes of for insurance or compensation.

There are two methods of calculating this severity rate—on which the time lost on a single day is taken as measure, and the other in which the time lost over a certain period is taken. Both of these applications are justifiable. Where the phenomenon is fairly continuous and not subject to sudden and unexpected events (e.g. unemployment and sickness) the usual method of a "sample severity rate" is satisfactory, even though there may be, and often is in regard to unemployment, a considerable "turnover". In the case of accidents, however, though statistics show that there is a remarkable uniformity in the average casualty rate over a period of years, yet within these periods the events often happen with sudden and erratic movements, and it is more desirable to calculate the time lost by considering not a single day but a long period. The source and nature of the statistics also determine which of these methods is to be used.

Hitherto there has been no general survey of the problem of social risk as a whole. In some cases, the evil has not been considered at all from the point of view of a risk. The risk of becoming unemployed by reason of a strike or lockout may be as important to the workers in some countries or industries as the risk of becoming disabled through sickness or accident, and the loss of production may be as serious to employers or the community as the loss through other risks, yet the statistics of industrial disputes have not hitherto been compiled with a view to measuring this risk.

What America thinks of the Afghan Tour

The Amir rather the King of Afghanistan is back to his territories, but he still looms large in the press of the Continent of the New World. Interesting and significant are the following remarks of *The New Republic*.

Shortly before the Ameer of Afghanistan began his triumphal tour of Europe, the papers carried an inconspicuous report of the opening of an air line connecting Tashkent in Turkestan with Kabul, the capital of Afghanistan. The line is operated by the Russian government, and connects with the air route from Moscow to Tashkent. There is no railroad across Afghanistan. The map shows how the rails have pushed up to Quetta and Peshawar on the Indian border, and to Kooshk on the Turkistan border, but the final link is lacking. The Hindu Koosh mountains may partly account for its absence, but trade history offers a better explanation. From time to time before the War, British or Russian interests would project a railroad into Afghanistan, only to find their plans obstructed by jealous Russian or British interests. So the only western approach to India was by sea the southernmost rail route across Asia was at the level of northern Manchuria, and Afghanistan remained, as Chicherin recently called it, a fortress at the junction of the Asiatic trade routes. Now this fortress is claiming new attention. The King of England gave the Ameer and his queen a

doubly royal welcome on his visit last month, never referred to the Anglo-Afghan wars, and looked away politely in the carriage when the non-chalant Ameer blew his nose with his fingers. The Russians are providing a competing entertainment; the Russians are wily diplomats and fellow orientals. Even if their hospitality should fail to outshine King George's, they would still have stolen a march on him. Amanullah is used to going home in a caravan. Now he can go home in a Russian aeroplane.

Colour Prejudice Dying

It is refreshing to learn this from *The World Tomorrow*:

Two Negroes have been asked to contribute to the new Encyclopedia Britannica. Dr. W. E. B. Dubois will write on the literature of the Negro; James Weldon Johnson on Negro music.

Pacifist-spirit

The same journal—pacifist itself—has from the pen of Reinhold Niebuhr the following on the pacifist position:

The Validity of the pacifist position rests in a general way upon the assumption that men are intelligent and moral and that a generous attitude toward them will ultimately, if not always immediately, discover, develop and challenge what is best in them. This is a large assumption which every specific instance will not justify. The strategy of love therefore involves some risks are not as great as they are sometimes made to appear for the simple reason that love does not only discover but it creates moral purpose. The cynic who discounts the moral potentialities of human nature seems always to verify his critical appraisal of human nature for the reason that his very scepticism lowers the moral potentialities of the individuals and groups with which he deals. On the other hand, the faith which assumes generosity in the fellowman is also verified because it tends to create what it assumes. If a nation assumes that there is no protection against the potential peril of a neighbor but the force of arms, its assumption is all too easily justified, for suspicion creates suspicion, fear creates fear, and hatred creates hatred. It is interesting to note in this connection how in the relations of France and Germany since the war every victory or seeming victory of the nationalists in Germany has given strength to the chauvinists of France, and vice versa; while every advantage for the forces of one nation which believe in trust has resulted in an almost immediate advantage for the trustworthy elements in the other. Hence the contest between the apostles of force and the apostles of love can never be decided purely on the basis of scientific evidence. The character of the evidence is determined to a great degree by the assumptions upon which social relations are initiated. This is the fact which gives the champions of the strategy of love the right to venture far beyond the policy which a cool and calculating sanity would dictate. It may not be true that love never fails; but it is true that love creates its own victories, and they are always greater than would seem possible from the standpoint of a merely critical observer. I

By BENARSIDAS CHATURVEDI

Returned Emigrants at Matlaburz

I understand that the Government of India is now in communication with the Government of Bengal regarding the possibility of emigration to Malaya being arranged for those returned emigrants at Matlaburz who are anxious to take up employment in the country. It will not be out of place to mention here that the following standard wage rates have been fixed in certain areas in Malaya for Indian labourers on estates:

| | Men (per day) | Women (per day) |
|---|---|---|
| Fairly healthy and easily accessible tracts (Province Wellesly) | 50 Malayam Dollar Cents = 12 annas | 40 Malayam Dollar Cents = 10 annas approximately |
| Rather unhealthy, inaccessible and costly tracts (Island districts of Penang) | 58 Malayam Dollar Cents = 14 annas approximately | 46 Malayam Dollar Cents = 11 annas approximately |

The Government is endeavouring to pay its own employees these rates and an effort is being made to get the standard rates applied to private employees in other areas.

It is now for the returned emigrants at Matlaburz to make their choice. If they get an opportunity to go to Malaya let them go after knowing these facts and figures. I do not know anything about the cost of living in Malaya but there can be no doubt that it will be higher than that of India. It is necessary to explain everything to these unfortunate people before their departure to Malaya.

I am glad that the Government of India is now trying to do something for these people. Mr. S. A. Waiz, Assistant Secretary of the Imperial Indian Citizenship Association of Bombay, wrote to me in his letter of 28th January:

"I may tell you that the Education Department of the Government of India is horribly slow and indifferent towards these unfortunate people.

After my last visit to Calcutta in 1926 the Government of India had definitely promised to ameliorate the helpless condition of these wretched countrymen of ours, but inspite of our repeated reminders their condition continues to be as bad as ever."

The problem of these returned emigrants has been continually before the Indian public and the Government for the last seven or eight years. After a good deal of agitation in the press Mr. Andrews was able to persuade the Indian Government to give Rs. ten thousands to the Indian Emigrants Friendly Service Committee, which did useful work for more than a year. But as soon as this committee ceased to exist the Government, so far as we know, did not do anything to ameliorate the condition of these wretched returned emigrants. A number of them died miserable deaths living as do in the most unhealthy quarter of Calcutta. If the Government had been at all careful about these people it could have done a great deal to improve the lot of these people by inviting the assistance of some non-official workers, as it did in 1921, but it didn't do anything of this sort.

Yesterday, I interviewed some of these returned emigrants. More than five hundred of them have already got their names registered at the Emigration office to be sent to Malaya. There still remain a few misled by some malcontents to believe that they may be sent to Trinidad or British Guiana. Of this there seems to be no possibility. I have one suggestion to make in this connection. Leaflets written in vernacular should be distributed among these people giving all possible information about Malaya and telling these people to make their choice.

Five years ago some of these people were sent to Mauritius by the Government and most of them returned again to Calcutta to live here in those dirty quarters! It is to be hoped that the Government would give consideration to this suggestion.

Joint Imperialism and Chhota Imperialists

My notes in the *Modern Review* of March on this subject have attracted much wider attention than I expected. The Indian Daily Mail of Kenya, the Zanzibar Voice, the African Chronicle of South Africa, and the Vriddhi of Fiji have commented upon them. I have read these comments carefully and with an open mind but they have only convinced me of the rightness of the views and sentiments expressed by the poet Tagore, Mahatma Gandhi and Dinbandhu Andrews. The Poet is absolutely right when he says "Our only right to be in South Africa at all is that the Native Africans, to whom the soil belongs, wish us to be there." I am afraid our colonial critics take a different attitude and thus there is a fundamental difference between our views. It is not a question of mere sentiments or over-suspiciousness as the Zanzibar Voice puts it. If our compatriots in the Colonies have an earnest desire to serve the cause of the Natives, let them do so by opening schools and hospitals for them, by living among them and devoting a part of their charities to their institutions. No doubt they have done a great deal of good to Natives but *indirectly*. Will our critics tell us how much good they have done *directly*? With the exception of the late Mr. M. A. Desai I do not know of any Indian leader in East Africa who stood up for the rights of the Africans. Let us cease to talk of the Natives in a patronising manner as most of our leaders in the colonies have been doing. The very idea of trusteeship has something of the superior attitude so frequently taken up by the "whites" and we, who have suffered at their hands, must not copy their arrogance. It is all very nice to say on the paper that the interests of the African Natives must be paramount, and that if, and when, those interests and those of the immigrant races should conflict, the former should prevail but has this noble sentiment been ever carried into practice? There is nothing

but hypocrisy behind it and we must refuse to be hypocrites even in the company of the British the British Imperialists in India have been saying that they are the trustees of the dumb millions and we know to our cost what this trusteeship means. What reasons have we got to suppose that the British Imperialist in Fiji or Kenya is different from his cousin in India? And then what guarantee is there that we shall not be as bad trustees of the Africans or the Fijians as the British have been. The probability is that we shall be much worse. A slave will prove a much worse slave-owner than a free man. During the days of slavery the slaves received the harshest possible treatment at the hands of their own countrymen under the service of the white planters

Mahatma Gandhi, who understands the mentality of our countrymen abroad much better than any one else, has written:—

"I fear that if the British Imperialist rulers offer the Indian emigrants in any part of the world, sufficient inducement, they will succumb and imagine that they are 'equal partners' not knowing that they are but Jackals."

It will be really unfortunate if our colonial compatriots fall a victim to this policy of 'Joint imperialism' so aptly called as 'Jackal policy' by Mr C.E. Andrews.

Fort Hare College

Shriyat Bhawani Dayal Sanyasi, a prominent worker of South Africa, has, at my request, sent the following communication about the College at Fort Hare:—

"As desired by you I give here my views regarding the Fort Hare College Scheme. The 'Gentlemen's Agreement' states that better provision shall be made for Indian Students at Fort Hare, and the Indian Community in South Africa has generally agreed to this proposal with the exception of a few short sighted people who cannot at present see beyond the political horizon. There is no fear of losing dignity or degrading oneself by attending this college which has been a great boon to the members of the Indian Community in the past. I know that Indian students had some difficulty in their meals when attending this College, but I was told by responsible people that this defect could be easily remedied provided there was a larger number of Indian students. Why should Indians object to send their children to the College? We claim equality with the Europeans and we shall have no objection if they admit us in their Colleges to-day; why then should we object to attend a Native College? Many Mohammedan and Hindu students have studied in this institution and are proud of their *Alma Mater*. The

Natives are progressing. This is *their* country and we have no right to grumble at the arrangement made by the Rt. Hon. Sastri. Of course it will be left to the leaders to decide when the final arrangement is made. The Poet, Rabindranath Tagore, has rightly rebuked Habib Motan and his crowd and he has sounded the right note at the right moment and his statement has been greatly appreciated by majority of people of S. Africa. Why should the Natives, who attend this College, be considered lower than the Indians? Professor Jabawa who takes Latin and the European Professors who teach other subjects are qualified to teach students in any College of the world. I am afraid the agitation against this College is carried on with some personal and ulterior motives by people who have no inkling of what education is and I should warn the India public not to be misled by the writings of irresponsible people who represent none except themselves.

A Responsible Statement

The Secretaries of the Congress in South Africa write in the Natal Advertiser:—

"The objections raised against the facilities for higher education at Fort Hare are ridiculous and beyond the comprehension of any-one claiming that men are equal and that one's education and character should, if at all, be the line of demarcation. What one would like to say to these objectors is that if it is the proper thing to claim to sit alongside the European for your studies why not alongside a native of the country? If the European does the wrong by refusing this right, has the Indian the right to look down upon a native and refuse to sit alongside of him? We have yet to learn that two wrongs make a right. What is more regrettable about these objection to Fort Hare is that it savours of base ingratitude in return for what that institution has done for several Indian youths. We are sure if these young men who have gone to England from Fort Hare for their further studies are to learn of what is being said about their Alma Mater, their blood will boil."

In view of these opinions so ably expressed by Sanyasi Bhawani Dayal, Vice-President of the Natal Congress and the Congress Secretaries, the Indian public should reject the irresponsible utterances of our *Chhota* Imperialists.

An Advice to Mr. C. F. Andrews

The editor of Indian Views of South Africa after strongly criticising Mr. Andrews' article on the Round Table Agreement published in the *Modern Review* of April 1923, offers him the following piece of advice:—

"We know we are in very bad odour with the Rev. Andrews and other of our venerables simply because we refuse to be mercenary-minded slaves of expediency—because we try to stick to the truth and damn the consequences. Nevertheless, we will venture to proffer him a word of

well-meant advice, and that is; Shun politics, as you would the devil, for they are both of a kind—because Saint and Politician are diametrically antagonistic terms. To the Rev. C. F. Andrews who is a gentle, sweet, sacrificing servant of humanity—whose noble fire to serve Him and His oppressed creatures knows no bounds—who, while himself sick spends sleepless nights tending small pox victims; crosses oceans to succour the poor and the needy—To him—To this God's own good Charlie Andrews we humbly take off our hat. But to the other Andrews who—after the style of Dr. Jackyls Mr. Hyde—is budding out into a polished diplomat; who pays smiling courts to ministers and Viceroy's and hobnobs with the cunning forces of politics, parties, expediency and propaganda, we would say: Please chuck it—The game is not worth the candle."

I am afraid the Editor of the Indian Views has been rather quarter of a century too late. If he had only given this wholesome advice in 1904 it should certainly have been in time to prevent the misguided activities of this gentleman. Then the immense mischief that he had done since that time would have been prevented and evil nipped in the bud, to use the phrase of the editor. The blessed Indenture system should have then continued at least five years longer and the many improvements made in the position of our people in Ceylon, Malaya, Fiji and other colonies should have been delayed at least by a decade, Alas! now it is too late to shut Mr. Andrews' activities in watertight compartments. We sympathise with Mr. Editor for the keen disappointment that is in store for him.

Though this Andrews is a humanitarian his humanity is not divided in different compartments, educational, social and political etc., and he will continue to serve the cause of India in all these fields as a humanitarian in spite of the advice of the Editor of the Indian Views.

Hindu or Indian?

Our readers will remember that His Excellency the Governor of F. M. S., while referring to the appointment of Honourable Mr. S. Veerasamy of Kuala Lumpur as a member of the Federal Council, uttered the following words:—

"Though the community which is represented now by Mr. Veerasamy is called the Indian community, we regard it as including Ceylonese, and him as especially representing Hindu interests on this Council"

It was decidedly a mischievous move to put the Indian community of Malaya on a wrong track and it has produced its desired effect. The Mohammedans of Klang

have passed a resolution for special representation !

The Tamil Nesan makes the following comments on this subject :—

"We stick to the conviction that the Indian whatever his caste or creed will ever act in the true interests of his community when he is placed in a position of trust and responsibility. In this respect we are happy to find that the Government of India has not allowed itself to be swayed by any other considerations but the fitness of the person to his task. We have in mind the appointment of the first Agent of the Government of India who was not a Hindu and the present one who is not a Tamil. The interests of the Indian labourer never suffered but on the contrary, considerably improved under their paternal care. Appropriately enough we have at present a Mohamedan of eminence in the person of Sir Mohammed Habibullah Sahib Bahadur in charge of the port folio of Emigration to Government of India. This brings back to our mind that in the last Commission of enquiry into labour conditions in Malaya it was Khan Bahadur Ahmed Thamby Maricar who accompanied Mr. Marjoribanks the only other member. All the above adds force to our contention that the Indians abroad have nothing to fear from any distinction brought about by religion or nativity. Reverting to our original suggestion we wish to add that any other line of conduct will land us in endless difficulties and greatly disturb the peaceful progress of the community in these parts.

As far as our experience goes we feel sure that the leading Mohamedans of Klang have full faith in the capacity of the Hon. Mr. Veerasamy to protect and further their interests. We are sorry for the hasty action of the misguided section and we hope that better Counsels would prevail, and correct the wrong impression created. Just as we expect our Mohammedan and Christian brethren to acknowledge Mr. Veerasamy as the Indian representative we make bold to say that our Hindu compatriots will welcome with similar enthusiasm the appointment of a Mohammedan gentleman in the Straits Council.

We whole-heartedly support the views expressed by the Tamil Nesan and earnestly request Sir Hobbibullah to take immediate action to stop this evil of communalism from spreading in the colonies.

Indian Servants in Kenya

I confess that I have read without any great regret the news cabled by the London correspondent of the *Leader* that the Domestic Servants' Bill, which originally provided for the identification of native servants by finger-prints, photographs and registration, has been amended so as to include Indians also. Nothing will draw the two communities—the Indians and the Africans—nearer than common suffering at the hands of the whites. That will ulti-

mately result in common action on behalf of the two communities and thus there will be a greater chance of the removal of these disabilities. The solution of the Indian problems in Africa does not lie in "due share in the trusteeship of the Africans and their nomination along with the Europeans to represent native interests" but in *due share* of the suffering of the dumb Africans, who are the children of the soil and who will ultimately control her destinies.

Hindustan Ka Meva foot

Here is a resolution passed at the tenth anniversary of the Arya Pratinidhi Sabha in Fiji :—

"This tenth Anniversary of the Arya Pratinidhi Sabha of Fiji regards with contempt the words used by Mr. Chowla (President, Indian Reform League) in a meeting of the Madrasis of Suva held on 26th December 1927 to the effect that the religious people are *badmashes* and do not know religion."

The annual report of the Indian Reform League for the year 1927 contains the following words :—

There are, however, in the community, extremists who still advocate sectional unity at the expense of Indian unity as a whole, but their influence, owing to the recent formation of important associations, is on the wane. Their attitude is undoubtedly due to ignorance of local conditions, as some of these men are new arrivals in the Colony. The League trusts that these men will soon realise the folly of their actions and fall into line with others representing sicer elements

Elsewhere in the same report we read :—

"There also arrived in the colony Pandit Srikrishna, Aryasamaj preacher, Thakur Sardar Singh and Prof. Amichand Vidyalanekar, teachers by profession. We cannot agree with all they have said or done since their arrival, but we hope that after they have studied local conditions they will become more liberal in their attitude and act differently."

So we can easily understand for whom the hints are meant.

Some months ago I received news of an Aryasamajist preacher in a colony whose only business was to condemn the *Sanatanists* and the Muslims and now I learn that a Sanatanist has been reading 'Dayanand Timir Bhaskar' a wretched book writes against the Aryasamaj, to his audiences.

Pandit Tota Ram Sanadhya has sent me a copy of a letter, alleged to have been

writer by a Sanatanist preacher in India, who is extremely anxious to go to Fiji Islands. The letter says that the Aryasamaj was established to uproot all *Dharma* and it urges the Sanatanists in Fiji to oppose it with all their might even at the cost of their lives!

It has been alleged that some Christians have joined hands with the Sanatanists in a conspiracy against the Aryasamaj.

Where will these things end? Has not the time arrived when our religious associations in India should take some steps to stop the undesirables from going to the colonies? We should specially draw the attention of Pundit Madan Mohan Malvia, Lala Lajpat Rai and Shriyut Narayan Swami to this subject.

It was perhaps Bhattendu Harishchandra who used in one of his books the phrase '*Hindustan Ka Mera fool*' (Disunion, a peculiar fruit of India). Why should our Indian people be so anxious to introduce this peculiar fruit in Greater India also, we fail to understand.

Indian Education in Tanganyika

On 29th May, 1928 Sir Donald Cameron the Governor of Tanganyika laid the foundation stone of the Indian Central School at Darassalaam. After the speeches of the Director of Education and Honourable Mr. S. N. Ghose, the Governor delivered a sympathetic speech which was much appreciated by the Indians. Here is a report of the speech published in the Tanganyika opinion:—

His excellency the Governor made an excellent speech which had a profound effect upon all those present on the occasion. He said that he required no thanks from the Indian community for coming over to that place to be able to lay the foundation of the school buildings, he had nothing more to add to what the Hon. the Director of education had already said except to confine himself to two or three things in particular. First was the contribution of £3,000 by the Indian community already referred to by the Hon. the Director of Edu-

cation. H. E. congratulated the Indian community on their readiness to co-operate with the Government, H. E. joined with the Hon. The Director of education in acknowledging the debt of obligation to the leaders of the Indian community who came forward in the spirit of real service and brought to success the programme of raising the necessary funds.

H. E. further said that besides the Indian Central School, Dar-es-Salaam, the Government had in view the system of grants-in-aid for the benefit of other schools in the territory. They were preparing a code of regulations for these schools which would in due course be laid before the Legislative Council for its approval and in which, he said, provision had been made for setting up a council to deal with questions connected with the education of the Indian children. Before these draft regulations would be passed the Indian leaders would be given an opportunity to discuss them in consultation with the Hon. the Director of education and other Government officials.

Before he came to Tanganyika he had thought that while returning he should have the satisfaction to know that the young Tanganyikan, born of the Indian parents, the son of those who had been taking a large share in trade, in commerce, in public life of the Territory would now have the opportunity and the means of taking his due place in every phase of the public life and future development of the land of his adoption. H. E. wished every measure of success to the school.

Lastly, he emphasised the fact that they should not forget that they were building not for to-day, not for to-morrow but for generations and generations to follow who would continue to reap the benefit long, long after they (the present generations) had disappeared from this place. (prolonged cheers).

The Governor, it may be noted, has sanctioned £5000 for the building of this Central school.

Honourable Mr S. N. Ghose spoke of the May 29th 1928 as a red-letter day in the history of Indian education in Tanganyika and praised the Governor for his wisdom and foresight. No doubt Sir Donald deserves every praise at the hands of our compatriots in Tanganyika, for he has been absolutely just and genuinely sympathetic towards them.

NOTES

India's Congress Presidentship

Every year, for a good many years, one has been reading in the papers that the coming session of the Indian National Congress will be a very important one, that the times are critical, that momentous issues have to be settled and vital problems solved, or words to the same effect. And then it has been argued that the circumstances being such, this or that public man being possessed of this or that supreme qualification ought to be chosen to lead the army of constitutional or non-violent or *passive* (!) fighters to victory. And so some leading person has been elected president. But it does not seem that the country is on that account any nearer the goal. If, however, we are blind and do not see that we are within sight of victory, can it be rightly claimed that the nearness of success is due to some one having presided over a particular session of the Congress and not some one else? Can it even be claimed that when victory comes it would be because the country had for its Congress presidents exactly the persons it had and not others? On the attainment of Swaraj, would it be right to claim that the result was due entirely or even mainly to the *sittings* of the Congress?

This year, as in years past, a discussion is going on in the papers as to who should be elected president for the next session of the Congress. We are not among the king-makers and have not the least desire to poach on their preserve. But as journalists we may be allowed to say a few words.

For some years past the Congress has been run by the Swarajists, who claim to be non-co-operators both within and outside the Councils whereas your orthodox and old-fashioned non-co-operators waged their non-violent war only outside them. The Swarajists also profess to believe in the efficiency of civil disobedience as the last weapon in their armoury. It seems to us that, as except

Mahatma Gandhi, no other past president of the Congress ever led a campaign of non-violent resistance to despotism in India or abroad, and as these persons, including Gandhi, have had their say from the Congress presidential chair, it would be a *novelty* and an *experiment* worth trying if this year we had as president one who has led a campaign of non-violent resistance in India. There have been several such campaigns hitherto that led by Mahatma Gandhi in Champaran, Bihar; the campaigns which the Sikhs fought to the death in and about Garu-ki Bagh, Nanakana Sahib and Jaito, the present Bardoli campaign; etc. It would be fitting therefore, if some leading Sikh campaigner or Mr Vallabhbhai Patel were chosen to preside over the next session of the Congress.

The Swarajist's Claim of Non-Co-operation

It has been said above that the Swarajists claim to be non-co-operators within and outside the Councils. Those who are not Swarajists have often pointed out that there have been numerous occasions when this claim could not be consistently maintained. A few days ago a correspondent sent us a note, entitled "A Swarajist M. L. A. on the Swaraj Party and its Leader," in which he gave some extracts from Mr. C. S. Ranga Iyer's "Father India." We have not seen the book and are not in a position to pronounce any opinion on the subject. What is needed is that all parties should be what they profess to be, and should claim to be what they really are. If circumstances necessitate a change of policy, there should be an open declaration of such change. The extracts sent to us are given below:

"With the passing away of Mr. C. R. Das, the Swaraj Party, under the leadership of Pandit Motilal Nehru, imperceptibly settled down to

policy of opposition *cum* co-operation. Obstruction, which had succeeded in Bengal in suspending dyarchy, the last achievement of the Deshabandhu, was after his passing away, suspended actually, if not verbally, as an active policy of the party. In the winter session of the Legislative Assembly of 1926-27, the Swaraj Party abstained from making, as in previous years, the rejection of the Finance Bill on the ground of "no taxation without representation" a party question. Last year, when Miss Mayo's "thrice damned" member of the Swaraj Party moved the rejection of the Finance Bill, he was clearly incurring the displeasure of the mighty stalwart who led the Party. The Secretary and the whip of the Swaraj Party remained neutral when the motion was pressed to a division. The leader of the Party was absent from the House, only irresponsible extremists like Lala Lajpat Rai, also known as "the Lion of the Punjab, and Pandit Madan Mohan Malaviya, also known as the "Dharmatma" (the soul of goodness), and their satellites voted for the extreme step, but not the saner Swarajists. Surely this is not Swarajist obstruction, but plain and simple co-operation." Pp. 151-52.

"Pandit Nehru has roused the suspicion of the extremists in the country, who fear that he and his party might even secede from the Congress like the old moderates and go over completely to the side of the Government and work the Reforms, if the Government accept the compromise, which clearly falls short of Dominion status. If he has roused their suspicions, he has done so deliberately and with open eyes. The Pandit has never been a believer in the spiritual idealism of the East, or the Socialism of the West. He is a man of the world with abundant commonsense and a penetrating head for practical politics. So far as temperament, taste and outlook are concerned, he has more in common with the conservative aristocrat of England than middle-class Liberal and Labour Parties." P. 155.

The Next Congress Exhibition

The papers are discussing what things are to be allowed to be exhibited in the next Congress Exhibition in Calcutta. It is, we suppose, correct to assume that these latter-day Congress Exhibitions are Swadeshi exhibitions. If so, evidently only those things ought to be exhibited there which are Swadeshi. In the widest sense—a sense which would suit the purposes of the foreign administrators and exploiters of India alike, everything made in India is Swadeshi. But there is another meaning of Swadeshi more acceptable to Indians and more in accord with the spirit of the Swadeshi movement. Mind is superior to matter and man to materials. In India that alone is a genuine Swadeshi article which is produced by a combination of Indian skilled and unskilled labour, Indian capital and Indian direction and management. Pro-

ferably such labour, capital, management and direction should be entirely Indian. But unless these are Indian at least for the most part, the goods produced cannot be considered Swadeshi. If the machinery and the raw materials be also Indian, that would be a matter for satisfaction. But as India does not manufacture most kinds of machinery, the use of machinery made abroad has to be allowed, and there is no harm in using imported raw materials also, where necessary. But foreign machinery ought not to be allowed to be exhibited in a Swadeshi exhibition.

Crusade against the City College

The Anrita Bazar Patrika, which is a paper owned and conducted by Hindus, writes:—

No student will be admitted into any of the Colleges in the Punjab unless he signs a pledge, at the time of admission, that he will take no part in political activities of any kind as long as he is a student of that college. If students in the Punjab have any sense of self-respect they will give a wide berth to Government Colleges. But we are not very sanguine, for we find that, in Calcutta, Colleges from which students have been expelled or otherwise punished for participation in politics continue to draw as before a large number of students while all the fury is reserved for a College, the politics of which has all along been ardent nationalism, but which had the temerity to claim some indulgence for the religious faith of its founders and conductors.

The college referred to is the City College of Calcutta.

Our contemporary adds:

There are colleges in which the hearing of lectures on the scripture of the religion to which the college belongs is made compulsory for all students and where even in the general classes pungent criticism is made of other religions and from where politics is banned. But these colleges have all along challenged the students to do their worst with impunity. How to explain this when we remember the crusade against another inoffensive denominational college? The matter is one of psychological speculation. People who are themselves weak have an instinctive desire to persecute others who are weak like them. These very people will, however, avoid taking up the challenge of the strong. The well-known story of 'Brahma' and the deputation of goats readily comes to mind.

The "inoffensive denominational college", referred to above is the City College.

In the prospectus of the C. M. S. St. Paul's College in Calcutta, which is given to all students who want to join it, the following sentence, framed within "two thick black upright lines, occurs under the heading, "Religious Life and Teaching":

bureaucratic and Scottish missionary control, so that Indian educational talent may not have free and full scope.

There are endowed chairs in most of the subjects referred to above. With their classes transferred to some Colleges, are the occupants of these chairs to be like capitals without shafts and bases? That would indeed be a very original style of academic architecture!

Both as teachers and examiners, the best professors of the Colleges should be certainly invited to take their part in University work. Neither "youngsters," who have been sneered at, nor "old fossils," who are also at times sneered at, should be condemned as forming a class of academic Brahmins. The services of all should be utilised according to their capacity, as far as necessary and practicable.

Wanted, Economy in Calcutta University

We have always been for economy in the Calcutta University. If the University had not been, as it is now, in dire need of funds, if its coffers had been overflowing with cash, we should still have been against wasteful expenditure. But economy is all the more necessary now, because there is not enough available money even for necessary expenses, not to speak of extravagant expenditure. And economy is possible. It has become necessary, because the artificially impoverished Bengal Government will not help the University to the extent desired, unless forced to, which there is no available means of doing, nor will the Government of India do so, unless compelled to do so, which also there is no available means of doing, though both the governments ought to supply the just requirements of the premier university in the artificially impoverished province of Bengal. All the internal resources of the University have been exploited to the full. The income from examination fees and other fees has been decreasing and will still further decrease in the coming year. With the decrease in the number of candidates for examinations the income from the sale of university publications has decreased and will diminish further. Nothing substantial would be gained by increasing the rate of tuition fees in the Post-graduate classes, as the number of post-graduate students is falling rapidly.

One has, therefore, to see how expenses can be cut down without impairing efficiency.

The post of controller of examinations with a separate office and staff was created a decade ago in order to hoodwink the public as to the real cause of the repeated leakages of question papers engineered during the Vice-Chancellorship of Sir Devaprasad Sarvadhikary. No such separate high officer, office and staff were necessary. The leakages were due not to the absence of these paraphernalia, but to other causes which need not be now discussed. If the work of the Registrar's office had grown heavy, the addition of some more clerks would have quite sufficed. We think that, if retrenchment cannot be effected immediately, then when the term of office of either the present Registrar or the present Controller expires—whichever may expire first, the posts of Controller and Registrar and of assistant Controller and assistant Registrar, and their offices should be combined and a reduction should be effected in the establishments of both offices. An enquiry should be instituted as to whether the two sides of the Post-Graduate Department have not any superfluous secretaryships, staff, etc. Proper auditing is no doubt essentially necessary. But a big Accounts staff like the present one is not necessary.

The financial condition and needs of the Law College and the Post-Graduate Departments should not be mixed up. They stand on different footings. Let us take the Law College first.

Under the scheme of Sir Asutosh Mookherji, adopted by the Senate, each section of 100 students is to be placed under the charge of two teachers. In 1927, though there were only 2300 students, yet in spite of protest, 51 lecturers were reappointed. In 1928 the number is about 2050; but still there has been no reduction of staff and expenditure. On the contrary, the cost has increased from 2.06 lakhs in 1924 to 2.50 lakhs in 1928-29. Four lecturers costing Rs. 1000 a month are engaged for delivering M. L. lectures. Now M. L. is only the examination portion of the D. L. which ought to be gained by self-study. D. L. students do not require to be spoon-fed by means of lectures. Moreover, for some years past only one candidate, in some years none at all, has been appearing at the M. L. examination, and yet the annual expenditure of Rs. 12,000 is going on.

Government is niggardly in its educational expenditure in Bengal.

| Province. | Population. | Govt. Educational Expenditure. |
|-----------|-------------|--------------------------------|
| Madras | 42,318,935 | Rs. 1,71,38,518 |
| Bombay | 19,343,219 | " 1,81,47,165 |
| Bengal | 46,697,533 | " 1,33,82,962 |
| U. P. | 45,375,787 | " 1,72,28,490 |
| Punjab | 20,635,024 | " 1,18,34,364 |

The British administrators of India have, intentionally or unintentionally, kept the public exchequer of Bengal "poverty-stricken," though as a milch-cow she is not deemed poverty-stricken. It is the duty of these administrators to feed the province educationally and in other ways to an adequate extent. Moreover, as Bengal is poverty-stricken, the European and fat-salaried Indian Government servants here should draw lower salaries than elsewhere.

Though Bengal is a poverty-stricken province so far as its native Bengali population is concerned, the foreign and non-Bengali Indian industrialists, merchants, traders and other exploiters here grow wealthy;—they are not poverty-stricken. Should not they be among the educational benefactors of Bengal? How many, if any, among them are so? If they did their duty, Bengal would not be hard put to it, to maintain its Post-Graduate classes.

The majority of rich Bengalis also have done little for the cause of the highest education in Bengal.

It has been said that "there never is earnestness and solvency enough among our Bengali students to justify two separate Post-Graduate machinery at two different centres in Bengal." We do not know the shop where solvency-meters and earnestness-meters can be had. So we must needs admit that we cannot refute the argument of our contemporary. But as nevertheless, we have our doubts we have to point out that the United Provinces of Agra and Oudh have five universities, four unitary and one affiliating, all of which have the right to teach up to post-graduate standards, which they do. We have also to point out that in the Madras Presidency (excluding the Indian States of Mysore and Hyderabad, which have Universities of their own) there are two Universities teaching up to post-graduate standards and there is going to be another richly endowed one at Chidambaram. So, there is no objection to there being more than two separate post-graduate machinery at more than two centres in the U. P.

and in Madras; but such arrangements are bad for Bengal, because there are few earnest and solvent post-graduate students in this most poverty-stricken province.

Let us go to a foreign country. Scotland with a population of less than five millions (as against more than 46 millions in Bengal) has four universities teaching up to post-graduate standards. We know, it will be said that the Scots are a thrifty, earnest and solvent people, and so they may have four centres of post-graduate teaching. But in 1901 Andrew Carnegie gave £2,000,000 for the Scottish Universities, "for (among other objects) paying the University fees of students Scottish born or of Scottish extraction." If Scottish students are all solvent, why did hard-headed Carnegie give away his hard-earned money for the free University education of all of them? Did he want to pour oil over oily heads, as the Bengali adage goes? Perhaps at least a considerable proportion of Scottish students are not "solvent," and yet, wonder of wonders, nobody has questioned their right to have free University education up to any standard they like!

We have no objection to the Vice-Chancellor increasing the value of the Bachelor's degree. But even when it has been made more valuable, there is no reason why the Master's and Doctor's degrees and their examinations should be scrapped. Are there no British or other occidental Universities with "valuable" Bachelor's degrees which have higher degrees also? Our inspired contemporary should be ready with its answer.

After having made a wholesale pronouncement against two centres of P.-G. teaching, our contemporary relents and becomes very kind to the P.-G., Science side, and to the endowed chairs of the Arts side. Let them remain, it says. Why? Because, for one thing, being endowed, they cannot be abolished! But there is no reason why departments such as English, History and Economics should continue to be separate departments." It is suggested that M. A. classes in these three subjects and "some of the sister" subjects should be transferred to "the leading Colleges in the city." The only leading Colleges in Calcutta professing to be competent to teach all these subjects up to the M. A. are the Presidency and the Scottish Churches Colleges. So the suggestion comes to this that the higher Arts teaching should be placed under British

ment, where the color bar keeps down struggling merit even now. So that it is mathematically correct to say that more research work of a genuine character stands to the credit of the Post-Graduate Department of the Calcutta University during the ten years of its existence (1917-1927) than that which stands to the credit of the Bengal Education Department during the seventy years which have passed since the foundation of the Calcutta University. The Post-Graduate Department has encouraged the spirit of research even among its students, which has not been the case with our colleges. It is not entirely irrelevant to state here that the I. E. S. men and many P. E. S. men have drawn higher salaries than the generality of post-graduate teachers. It should also be borne in mind that the *Post-Graduate Department*, which has been always entirely under Indian control, has proved beyond doubt the high intellectual and educational capacity of Indian teachers to a degree and to an extent which the Government Education Department and the Colleges do not give facilities for proving and have never done so.

Hence we earnestly hope that the Post-Graduate Department will continue to exist to promote the cause of learning and high education.

But in order that it may do so, it must get rid of "duffers," of superfluous men and of plagiarists. Those who have opposed all reform have been and are its worst enemies.

We will turn now to the adjective "generous-minded." We have not got the exact figures before us now to be able to say who have given most for the Post-Graduate Department—the Government or the people. The people have given large sums in the shape of endowments, examination fees, tuition fees, prices of text-books published by the University, etc. And what the Government has given has also come from the pockets of the people.

The starting of the Post-Graduate Department, even "on the Arts side," was "certainly" not a mistake. It cannot be said that even the Science side is not open to criticism. But the Arts side has given more scope for "patronage" of an injurious character, because, whereas in the Science College no one can be a teacher of Physics or of Chemistry who has not taken a degree in these branches, on the Arts side there have been and are self-made, patron-made and self-constituted teachers and researchers in

ancient and modern history, economics, anthropology, current Indian languages, Indian philosophy, etc. But even the presence of these prodigies should not blind one to the existence "on the Arts side" of real scholars and good teachers.

'Bengal cannot live on idealism alone or on a pursuit of culture for its own sake.' Can any other province of India, can any other country, do so? Can or should Bengal live on the negation of idealism and on a pursuit of money-making alone? Both idealism and the practical spirit are required. Neither culture nor business enterprise is a superfluity in any country. But while the abolition of the Post-Graduate Department may seriously affect Bengal's idealism and culture to some extent, it is not certain that such a step will promote practicality and business.

Bengali students are generally poor and are not solvent in the sense of having comfortable bank balances. But even in countries and provinces which are not "poverty-stricken" like Bengal, has it ever been the case, as it is the case even now, that the most earnest and capable students have come from the wealthier classes? Even in rich countries the money value of a degree is never a secondary factor to a large proportion of students. It is not axiomatic that "a Post-Graduate course must be the affair of a handful of earnest and solvent students." In the progressive countries of the world, those who pursue post-graduate studies are not a handful. In Bengal, we do not know what proportion of post-graduate students are earnest, but the proportion of solvent men among them may be ascertained by enquiring how many, if any, of them are beggars and loafers without ostensible means of livelihood and thieves.

Bengal has been rightly called a "poverty-stricken province", and that is indirectly urged as a ground for depriving it of its Post-Graduate Department. But if the British Government in India, which extended its empire in the country very largely with the help of Bengal's revenues, and which even now collects more revenue in Bengal than in any other province, does its duty to poor but most revenue-yielding Bengal, then it can easily maintain its Post-Graduate Departments. The following figures for 1921-25, the latest available, will show that, both absolutely and relatively to population,

the medium of a foreign tongue. To arrive at a comparative estimate of the number of children of a certain age possessed of a certain amount of knowledge in England and Bengal, one should, therefore, take the enrolment in the highest classes in elementary schools in England and that in the highest classes in secondary schools in Bengal.

But that is a digression. What we drive at is that in order to solve the problem of unemployment in Bengal, it is not necessary to aim at diminishing the number of educational institutions and students. What is necessary is to have in addition a sufficient number of institutions for technical, industrial and technological training, as is the case in all progressive Western countries and in Japan. In order to solve the problem of unemployment, there should be a variety of careers. For that there should be adequate commercial and industrial development, for which the State in India should do at least as much as the Japanese Government has done in Japan.

Above all, the educated people of Bengal should be cured of their excessive preference for clerical jobs and the legal profession. The people of Western countries have prospered, because they have combined in their ideals of manhood those of *homo sapiens* (the man who knows or who is wise) and *homo faber* (the man who can make things). Figuratively speaking, they are devoted both to Minerva and to Vulcan.

As for the illiterate people of Bengal, agriculture is at present their mainstay. There are also numerous landless unskilled labourers who support themselves with difficulty by doing odd jobs when they can get them. But neither agriculture, nor such casual work can be sufficient for such a numerous population. Agriculture must be improved and extended. That would depend on agricultural education, fixity of tenure and the financing of agriculture by facilities for obtaining loans on easy terms. Irrigation is also required, particularly in the West Bengal districts, where Government has been guilty of criminal neglect in allowing the ancient irrigation works to become useless and in not providing new facilities for irrigation. The landless labourers can get sufficient work only if there be an adequate development of manufacturing industries in the province. Even then, however, these persons would not be able to work unless

malaria and kala-azar are stamped out in the province. For a people devitalized by attacks of various diseases for decades, nay generations, can never work as hard as labourers belonging to regions where these diseases have not done such havoc for such long periods.

Superfluity (?) of Post-Graduate Machinery in Bengal

The *Bengalee*, which is not now a days exactly what its name signifies, says, without any note of regret that we can detect in the statement that, "as students are falling off in the way they have been doing in recent years, the Post-Graduate Department will have to be closed down." We hope and trust it will not have to be closed down. In the opinion of this cynical Calcutta daily,

It was rather a generous-minded error to have started a separate Post-Graduate Department: on the Arts side at least it certainly was. Bengal cannot live on idealism alone or on a pursuit of culture for its own sake. For a poverty-stricken province like Bengal the money value of a degree can never be a secondary factor. A Post-Graduate course must be the affair of a handful of earnest and solvent students. There never is earnestness and solvency enough among our Bengalee students to justify two separate Post-Graduate machinery at two different centres in Bengal. Educational efficiency consistent with Bengal's present-day conditions can only be secured by strengthening the courses and increasing the value of the B. A. degree and not by taking away two years of every student's life, almost compulsorily, by getting him to make up for a poor B. A. degree by an at least showy M. A. degree. The Vice-Chancellor must make this his chief duty; he will be judged by the posterity according to the degree to which he succeeds in taking away unreality and pomposity from Bengal's higher education.

It need not be discussed whether the starting of a separate Post-Graduate Department was a generous-minded act; but a mistake it certainly was not. No journal has tried more than the *Modern Review* to expose the nepotism, favouritism, plagiarism, sham research, etc., of which the history of the Post-Graduate Department has furnished examples, and consequently none has been calumniated so much. But it has never denied and can never deny that this department has really done much for the cause of the advancement of learning and of genuine research. Men like Sir J. C. Bose and Sir P. C. Ray won fame as researchers not because of but in spite of the conditions of work of the Government education depart-

practice is elsewhere) ordinary foreign letters do not bear any post-mark indicating the day and hour of delivery.

Unemployment in Bengal, and High Education

Statements relating to the financial condition of the Calcutta University have appeared in many papers, in some cases with comments on the same. We also feel bound to contribute our quota of comments. Before proceeding to do so, we wish to draw the attention of the reader to some remarks on the subject which have appeared in the *Bengalee*. It writes:—

A somewhat anxious situation has arisen at the University on account of its rapidly growing expenditure and diminishing income. The Post-Graduate Department shows a forty per cent. falling off of its students and the University Law College of at least thirty-three per cent. The students' fees which are a large source of income have thus decreased. On the other hand, the increased emoluments of teachers in these departments as well as other commitments have led to an abnormal growth of expenditure. The reason for the decline in the number of students is easily discovered, not in the alleged unpopularity of Mr. Jadunath Sarkar, as was foolishly done by 'Forward', but in the unemployment problem.

That the decrease in the number of students is not in the least due to the alleged unpopularity of Mr. Jadunath Sarkar, is quite true. But neither is it due solely or mainly to the unemployment problem. That problem has existed for at least more than a decade and was discovered long ago. It is not a year old or two or three years old problem that it should now suddenly affect the number of students.

It is not merely in the post-graduate departments or in the university law college that there has been a falling-off in the number of students. The number of candidates for the Matriculation, I. A., I. Sc., B. A. and B. Sc. examinations has also fallen, and the number of B. A.'s and B. Sc.'s has consequently decreased. That in itself would naturally mean a diminished enrolment in the university classes. The decrease in the number of under-graduate candidates for examinations is due partly to the fact that the university no longer, directly or indirectly, pursues the "ideal" of having as large a number of candidates and passing as many of them as possible, irrespective of their intellectual attainments. Of course, the evil

has not been killed yet, it has been only scotched. The reason for the erstwhile artificial inflation in the number of candidates and passes is to be found in the fact that the larger that number, the larger was to be the fee-income and the income from the sale of the university publications prescribed for the examinations, thus providing ample resources for patronage, nepotism and favoritism.

There are critics who seem to consider the spread of secondary, collegiate and university education as the only or the main cause of the unemployment problem in Bengal. That is not a correct view. Do matriculates who never graduate, do graduates who never pass the M. A., M. Sc. or B. L. examinations, get plenty of jobs? Or, are there plenty of jobs for even absolutely illiterate Bengalis? The unemployment problem in Bengal would remain at least as acute as now even if all the schools, colleges and universities were closed to-morrow. The number of the really unemployed would in that case remain substantially the same, though there might be an apparent decrease in their number owing to there being less applications for clerkships, etc.

That foreigners and non-Bengali Indians in large numbers can earn a decent living and even get enormously rich in Bengal shows that money can be made here by Bengalis also, provided they would turn their hands and their minds to all those avocations which make others well-to-do or wealthy. Scotland, England, Belgium, Czechoslovakia, France, U. S. A., Japan, Germany, etc., from which foreigners come to Bengal to exploit its resources, and become rich, have all populations proportionately far more literate than Bengal, and the number of Universities in those countries is larger in proportion to their population than in Bengal. But in those countries there is also ample provision for technical, industrial and technological training, which is not the case here. It is some times asserted that in Bengal secondary education is more widespread than even in England. Those who say so are misled by the name "secondary". The pupils in the highest classes of Bengal secondary schools know less than the pupils in the highest classes of English elementary schools, generally aged 14 or 15, which is due in part to the fact that our secondary school children have to learn mostly through

It is necessary resolutely to combat the attempts made to paint non-Communist revolutionary liberation tendencies in backward countries in Communist colors. It is the duty of the Communist International to support the revolutionary movements in colonies and backward countries only for the purpose of enabling the elements of future proletarian parties, Communist not only in name, in all backward countries, to be grouped and trained to recognize their special tasks of fighting the bourgeois democratic movement in each country. The Communist International must enter into temporary agreements and even alliances with the bourgeois democracy in colonies and backward countries, but must not merge with it, but preserve the absolute independence of the proletarian movement, even in its most rudimentary form.

It is necessary persistently to explain to and expose before the masses of the toilers, particularly of the backward countries and nations, the systematic deceit which the imperialist powers, aided by the privileged classes of the oppressed countries, perpetrate by setting up alleged politically independent states which in fact are completely dependent upon them economically, financially and in a military sense. In contemporary international conditions, there is no salvation for the dependent and weak nations except in an alliance of Soviet Republics.—*Thesis on the National and Colonial Question* (1919).

It must be recognised that the Soviet Russian Government in the past supported the Turkish Nationalists under the leadership of Mustapha Kemal Pasha, and also the Chinese Nationalists under the leadership of Chiang Kai Shek and others. But true to the principle of "fighting the bourgeois democratic movement in each country," the Soviet agents' activities have proved to be disruptive of nationalist solidarity both in Turkey and China. There is much talk about establishing a socialist government in India and international solidarity with the socialists and communists of the world. But the thing that should receive the foremost attention of Indian nationalists is national solidarity.

T. D.

There is a tendency noticeable among some of our political and labour leaders of seeking the pecuniary and political help of Soviet Russia. We are against such mendacity and political alliance. The Soviet leaders are at heart opposed to nationalism. They are as much interested in promoting class struggle as the British autocrats and exploiters are in the longevity of religious dissensions in India.

Nor are we in favour of allying ourselves with the British Trade Unions or the British Labour Party. We do not believe in the disinterestedness of these and other similar

bodies in other European countries. India's welfare must depend on her children learning to stand on their own legs.—Editor, M. R.

Dacca University (Amendment) Bill

A short Bill to amend the Dacca University Act has been published in the *Calcutta Gazette* of the 7th June, 1928. As stated in its Objects and Reasons, with one exception, the Bill deals with minor matters. The material amendment is in clause 5, which seeks to take away an important academic matter from the control of the teachers of the University.

The constitution of the University of Dacca is materially different from that of Calcutta. The Dacca University Court, unlike the Calcutta Senate, is a purely advisory body, the actual management of the University being vested in the Executive Council. The Academic Council has, as its name implies, power to deal with academic matters only. As the soul responsibility for finance rests with the Executive Council, not a farthing can be spent by anybody without its sanction, and its decision is final. At present, it consists of 18 members, 9 of whom are non-teachers. The Academic Council now consists of about 20 members, all of whom except the Librarian are teachers.

Section 20, clause (c) of the Dacca University Act, 1920, runs thus—

"The Executive Council shall, subject to the powers conferred by this Act on the Vice-Chancellor, regulate and determine all matters concerning the University in accordance with this Act, the Statutes and the Ordinances:

Provided that no action shall be taken by the Executive Council in respect of the fees paid to examiners and the emoluments of teachers otherwise than on the recommendation of the Academic Council."

It is now proposed to amend this proviso by substituting the words "without consulting the Academic Council" for the words "otherwise than on the recommendation of the Academic Council."

The object of this change, as stated in the Statement of Objects and Reasons, is to "make it clear that the final word about fees to be paid to examiners and the emoluments of teachers shall rest not with the Academic Council but with the Executive Council." This is not correct. For, by the Act, as it now stands, the final word does rest with the Executive Council—

whose names are kept on the rolls to provide bread for the staff.

We need not give more details. While we are firmly of the opinion that both sides of the Post-Graduated Department ought to be maintained, we are equally convinced that, if they are to be saved, all make-believe should be sternly done away with. We say this with particular reference to the fat-salaried professors who do no work, or are not required to do any. In India in bureaucratic parlance retrenchment has usually been a synonym for the discharging of a few peons or low-salaried clerks. It would be a tragic farce if the Calcutta University authorities followed this tradition and stopped short with doing away with the services of a few low-salaried lecturers, teachers and clerks, while the big sinecurists continue to be able to soap their fingers at them by taking shelter behind legal technicalities relating to the terms of their appointment and by currying favour with the powers that be. Those responsible in times past for the creation and in recent times for the continuance of these sinecures, superfluities and shams have done the greatest disservice to the cause of higher education in Bengal, including the moral education of our youth. How can farcical arrangements and sham professorships exert an elevating influence on the character of students? Our newspapers discuss in detail and *ad nauseam* the alleged merits and demerits of this or that Vice-chancellor or possible Vice-chancellor, while the most patent evils remain unexposed and unremedied. What a pity!

Pandit Gopabandhu Das

The sufferings of Orissa know no bounds. She is poverty-stricken, she has been repeatedly devastated by flood and famine, she is parcelled out among many provinces, making it impossible for her sons to make a combined effort for the amelioration of their lot. Not the least of her misfortunes is the untimely death of a devoted, self-sacrificing, well-informed, wise and pure-hearted leader like Pandit Gopabandhu Das. He was the very embodiment of plain-living and high-thinking. With that he combined incessant labours for the realisation of his high ideals for his motherland. He became known to the public first as an idealist in education by founding an open-

air school known as the Satyabadi School, which was conducted on lines different from those recognised by the education department. Later, he came to be known and respected as also a self-sacrificing philanthropist on account of his untiring labours to improve the economic, social and moral condition of Orissa. Though he thought and worked most for Orissa, he felt and worked also for India as a whole. At the time of his death, he was a Vice-president of the Servants of the People Society of Lahore.

The Simon Commission

The little concession made by the Simon Commission to the Punjab Council Committee elected to co-operate with it, which relates to evidence in camera and the calling for and inspection of confidential papers, cannot be considered by boycotters of the commission a sufficient ground for changing their attitude towards it; and so they have not changed their attitude. One of the main objections, for example, still remains—the Commission continues to be a purely British one without any Indian members in it. Our opposition is *fundamental*. In our opinion, which may be considered the opinion of an impractical dreamer, every nation or people is entitled to self-rule as its birth-right, and no foreign nation has the right to judge of another nation's fitness for self-rule. Therefore, we do not admit the right of the British Parliament to appoint a British, or an Indian, or a mixed British-Indian Commission to judge us. What ought to have been done was to take it for granted that India is to have self-rule within a year or two and then to ask the Indian legislatures to appoint a committee of Indians, with foreign constitutional experts to advise them, if necessary, for the drafting of a constitution and the elaboration of administrative details. Or arrangements for the convening of a constituent assembly might have been made.

Principal Syamacharan Ganguli

Though a man may die at an advanced age, honoured and loved by all who knew him, and after doing all his duties to the best of his knowledge and ability, yet it is human nature to feel sorrow at his departure.

Such a man was Principal Syamacharan Ganguli, who died a few days ago in Calcutta, aged 90. He was a sound scholar and a man of high character and strict sense of duty, known for his clear thinking, lucid style, and up-to-date information about the affairs of the world till almost the year of his death. He was one of the earliest graduates of the Calcutta University. Taking his B. A. degree from the Presidency College in 1860, Mr. Ganguli entered the Provincial Educational Service two years later, and held, among others, the appointments of Head-masterships of the Malda, Arrah, Chapra and Uttarpara Government Schools, Lectureship in the Sanskrit College, Calcutta, and ultimately Principalship of the Uttarpara College when that institution was founded.

He has left a trust fund of Rs. 2,000 for help to the needy of his native village, Garalgacha in the Hooghly district, and in 1921 he made over to his University Government Promissory Notes of the face value of Rs. 3,000 for the creation of an endowment for the award of two annual money prizes.

He was one of our most valued contributors. Among his contributions to the *Modern Review*, twelve full articles and an extract from another brought together in his *Essays and Criticism* in that book will be found, along with his contributions to some other periodicals. Some months ago he permitted his autobiographical sketch, written in Bengali for his family, to be published in *Prabasi*, with some omissions. It is to be hoped that an attempt will be made to bring out a fuller biography. So far as we know, he was the first Bengali to advocate the adoption and use of "spoken" Bengali in books, his article on "Bengali, Spoken and Written" having appeared in the *Calcutta Review* in October, 1877—more than half a century ago.

Famine in Bengal

Famine conditions continue to prevail in many districts of Bengal. News have been published in the papers that 29 persons have died of starvation in Balurghat sub-division of Dinajpur district! Sales or desertions of children, and the desertions of husband or wife, are also reported.

Details of the relief work being done in various districts are being published in the dailies. The appeals for help issued by the philanthropic committees doing relief work

are also to be found in the dailies. We earnestly support these appeals. Kind-hearted persons cannot make a better use of their money than to feed those who are without food—sometimes for days together.

Famine in Bankura

The editor of this *Review* has been entrusted by the Bankura Sammilani to receive contributions in cash, rice and cloth for the relief of the famine-stricken persons in a few villages in Bankura district. Other organizations are doing good work in other villages. Those who wish to help the Sammilani to do its work will kindly send their contributions to the Modern Review Office.

Sweepers' Strike in Calcutta

Some months ago the municipal sweepers and scavengers in Calcutta struck work for the redress of their grievances. They resumed work on the late Mayor Mr. J. M. Sen Gupta promising to increase their wages, to pay the wages of the strikers during the period of the strike and not to victimise any one among them. These promises not having been fulfilled even after the lapse of some months, many of these humble individuals have again struck work after giving a month's notice. We have every sympathy with them. They cannot be blamed for doing what they have done, after petitions, representations, and entreaties have failed to bring them relief.

It is alleged that the municipal authorities are trying in conjunction with the police to terrorise the strikers into submission. It would be wiser and better to look into their grievances and wants sympathetically and remove them at once. Even the poor and despised can never be crushed once they have become self-conscious. These humble servants of the public are more necessary for social welfare and a civilised existence than many a fat-salaried man dressed in brief authority.

Arrest and Persecution of Sweepers' Leaders

It has been alleged in the papers that, as part of the campaign of terrorism, two

"Full liberty of conscience in the matter of no acts of corporate worship which are contrary to the Christian principles are allowed to all students in any of its attached messes."

In the City College and in the Ram Mohan Roy Hostel and messes attached to it, "full liberty of conscience in the matter of personal devotion" has always been given to all students, the only restriction being that in the Ram Mohan Roy Hostel no acts of corporate worship which are contrary to

Brahmo principles have been allowed. The City College has, however, agreed to open an "attached mess" for orthodox students of any sect where they may perform corporate acts of worship according to their faith, provided at least thirty such students of a sect apply for this privilege. In the City College, unlike some Christian Colleges where "hearing of lectures on the scriptures" is made compulsory for all students, there is no compulsory attendance at any kind of religious lecture or service.

But in spite of these differences between the City College and some Christian Colleges, all the fury of some self-constituted defenders of the Hindu faith is reserved for the City College! The explanation implied but not expressed in words in the *Bazar Patrika*, is that these crusaders and their followers are not exactly heroes.

They have, in addition, little regard for truth.

The student crusaders and some of their leaders started by stating that of the total amount subscribed for the City College more than 75 per cent. was subscribed by Hindus, and that the contribution made by Brahmos was insignificant. This statement has been repeatedly contradicted. It was contradicted for the last time in the *Asahi* number of *Prabasi* (published on the 14th June last), which published a full list of the principal donors and showed that more than two-thirds of the total amount was subscribed by Brahmos and the balance by persons belonging to the Hindu, Christian, Muslim and Sikh communities. But the falsehood is repeated in "An Appeal to Brahmo Samaj and College Authorities", published in the *Amrita Bazar Patrika* of June 22 last. This "appeal" has been issued over the names of the following persons:—

Shahabuddin Khan, Pandit Panchanan Tarkatara; Shahabuddin Khan, Pandit Lakshman Sastri Dhravid; Shahabuddin Khan, Pandit Banacharan Kalyacharya;

Maharaja Sir Jaijendra Chandra Mandy; Sr. Chandra Bose; Mahamahopadhyay Pandit Durga Charan Sankhyabhartha; Pradyumna Atal Prasad Goswami; Rai Dewchandra Chakravarty Bahadur; Tarkatara Maharaj, M. L. C. Hon'ble Jaijendra Bahadur, M. L. C. Durga Charan Bahadur; J. C. Bahadur; Biju Chandra Singh; Dr. Fromentia Nath Mandy; Mr. D. P. Mahalan; Dr. Haridrajan Maharaj; Hemendra Nath Sen; Sankar Kumar Bose; Pandit Siva Nath Sen; Jyotirprasad Sankhyabhartha; Chandra Charan; Gobinda Chandra Dey Roy; Swami Jaganmadda.

We need not examine the other off-repeated and repeatedly contradicted false allegations contained in the "appeal," that relating to donations being quite sufficient for our purposes, as it is a question of simple arithmetic.

We cannot hold the gentlemen whose names are printed above responsible for making false statements, as we do not know whether all or any of them have really signed the "appeal." But if any of them are really doing so after reading it, they are guilty of making false statements, some or all, it may be, unconsciously.

1928, published an excellent article on "National and Colonial Revolution" by V. J. Lenin. This article contained several valuable and interesting excerpts from the writings and speeches of Lenin dealing with the colonial and national revolutionary movements. The following extracts will give the fundamental principles on which the Soviet authorities are interested in supporting the cause of nationalism in Asian countries and opposing it (nationalism) and the Pan-Asian Movement.

It is necessary to combat the Pan-Islam and Pan-Asiatic and similar tendencies against European and American imperialism with the growing power of the struggle against the nobility, large landholders, the priesthood, etc. Particularly necessary is it to give special support to the peasant movements in backward countries against all manifestations or survivals of feudalism. Efforts must be made to make the peasant movement assume a more revolutionary character and wherever possible to combine the peasants and the exploited in Soviet and in this way to all the exploited in the West European Communist parties and the revolutionaries peasant movements in the East, in the colonies and backward countries generally.

leaders of the strike, Dr. Miss Probbabati Das Gupta and Mr. Mujaffar Ahmed, have been arrested, and re-arrested after having been let out on bail. On the other hand, the police allegation is that there are six charges against them. The courts of justice will decide whether these charges are true or false. What the public are rightly indignant over is that bail was refused for a whole night to Miss Das Gupta on some flimsy pretext or other and she was kept without food and rest the whole night in the police station. This is an outrage which throws into the shade the "third degree" treatment accorded to Miss Savidge in Scotland Yard which roused such angry feelings in and outside the British House of Commons, compelling the Home Secretary to appoint a committee of inquiry. Such outrages are possible in India because we are not a free people.

Labourers' Strikes in India

The strikes at Lilooab, Jamshedpur, Asansol, etc., continue and may spread to other centres. Fear of loss of prestige prevents the men in possession of wealth and power from agreeing to negotiations with the strikers. We do not say off-hand that all their demands and grievances are just. But they certainly have some just grievances, otherwise they would not face starvation and run the risk of being shot down. Their housing conditions, for example, are a disgrace to civilization and savagery alike. Wages of Rs. 9, 14, or 16 a month are quite insufficient. We have to pay more to our menials, besides free quarters.

The Barh "Sati" Case

The Barh "Sati" case, which recently came up in appeal before the Patna High Court and in which the accused have been rightly punished, shows that there are still people who superstitiously support the inhuman and barbarous custom of concrementation of widows with the bodies of their dead husbands. Such suicide and its abetment can neither be commended nor tolerated or permitted. The best and only course which widows who want to remain widows should adopt is to lead pure and

useful lives of beneficence to their families and neighbors.

Sir A. Muddiman's Successor

The vacancy created by the sudden death of Sir A. Muddiman has been temporarily filled by the appointment of the Nawab of Chattari, senior member of the U. P. Governor's Executive Council, to the acting governorship of that province. He has not been superseded as Sir Abdur Rahim was in Bengal in similar circumstances. What is the reason?

Some people have been asking, without hope, that Sir Atul Chandra Chatterjee, who is senior to Sir A. Muddiman, should now be made *pucca* governor of Agra and Oudh. No doubt, he should be. He is an able man. But so long as the government remains foreign and the system of this foreign government remains what it is, no governor, whatever his nationality, character inclinations and capacity, may be, can do any substantial good. In small things an able and sympathetic man is of some use. But even in such matters, if they require courage and the taking of risks, other things being equal, a British officer may be able to do more than an Indian officer; because the British officer is sure to receive support even if he makes mistakes or does illegal or non-legal acts, whereas the Indian officer may not receive similar support under the same circumstances.

Responsibility of Parents of Child Wives

Recently the Allahabad High Court had to try a case of rape by an adult husband on his child wife. After passing sentence on the accused, the Judges have drawn attention in their judgment to the defect in the law which provides no punishment for the parents of little girls whom they hand over to their elderly husbands. This defect should be remedied as soon as practicable.

Housing Conditions of Indian Labourers

Dewan Chamanlal, the Indian Workers' Delegate to the International Labour Conference at Geneva, has secured the adoption of a resolution requesting the International Labour Office to investigate "the housing and general living conditions" of the workers in

India. In many industrial centres these conditions are extremely bad and insanitary. Dewan Chamanlal deserves credit for the adoption of the resolution. Such an investigation ought to have been held long ago.

Here is a description of Indian workers' living conditions in an industrial centre, taken from an article contributed to the *Daily Herald* by Mr. A. A. Purcell, M. P., who with Mr. J. Hallsworth, recently spent several months in India inquiring into labour conditions on behalf of the British Trade Union Congress.

A poor, illiterate peasant evinces more interest in his cow, or goat, in the course of one day than do the capitalists, governmental, native or foreign, in their work people in the course of a whole twelve months. My considered view is that the workers are treated worse than cattle.

Life is regarded as dirt cheap, but one would have thought that the law of self-preservation would have induced the British and native rulers to pay more attention to sanitary matters. There are women and grown-up girls, most of them remarkably beautiful—even though poorly clad—who are paid a daily wage of less than four pence for attending to the street sweeping and sewage and garbage gullies, keeping the much moving, often pushing it along with their hands.

The housing conditions are in conformity with the prevailing sanitation I have mentioned the huts. Each hut is a one-roomed structure, windowless, built of any old thing, a mosaic of shreds and patches. May be a dozen persons, sometimes of both sexes, various ages, often not all of one family, live, eat, sleep in a room eight to twelve feet square at the most.

Over two hundred and fifty millions of the Indian people are hungry all their lives—hungry with a raw, gnawing, physical hunger. They do not get even enough rice to satisfy this hunger. All the time there are thousands who must be dying from sheer, slow, agonising, torturing starvation.

Honored During Exile

New India writes:—

Mr. Khankhoe has been an exile in America owing to the displeasure of the Indian bureaucracy. He has been a Professor in an Agricultural College in Mexico for a long time. His knowledge and efficiency have so impressed the Mexican Government that he has now been appointed a Minister of Agriculture by that State.

Satyagraha at Bardoli

Mahamata Gandhi writes in *Young India*:

Here is the naked paw. Says His Excellency: "Why should Government give up its undoubted right of administration to, as you suggest, the

decision of some independent committee? I am anxious to meet the situation in every way that is possible, but no Government would be worth the name of Government which allowed such a thing to happen."

'The undoubted right of administration' is the uncontrolled licence to bleed India to the point of starvation. The licence would be somewhat controlled if an independent committee were appointed to adjust the points in dispute between the people and the executive authority. But it is noted that the independent committee does not mean a committee independent of the Government. It means a committee appointed by the Government of men known to be independent of official pressure and authorised to hold the enquiry in the open with the right to the aggrieved people to be duly and effectively represented. But such an open enquiry means the death-knell of the secret autocratic revenue policy of the Government. Where is in the modest demand of the people, the slightest usurpation of the functions of Government? But even the least check upon the utter independence of the executive officers is enough to send the Government into a furv. And when the British lion is in a furv in British India, God help the gentle Hindoo. Well, God does help the helpless and He only helps when man is utterly helpless. The people of India have found in Satyagraha the God-given infallible *gandua* of self-suffering. Under its stimulating influence the people are slowly waking up from the lethargy of ages.

Gandhi then proceeds to refer to some struggles in recent Indian history which show how God has helped the weak, and also that Satyagraha is not unconstitutional.

The Bardoli peasants are but showing India that, weak as they are, they have got the courage to suffer for their convictions. It is too late in the day to call Satyagraha unconstitutional, it will be unconstitutional when truth and its fellow-self-sacrifice—become unlawful. Lord Hardinge blessed the South African Satyagraha and even the all-powerful Union Government gracefully bent before it. Both Lord Chelmsford, the then Viceroy, and Sir Edward Gait, the then Governor of Bihar, recognised its legitimacy and efficacy and an independent committee was appointed *resulting in* adding to the prestige of the Government and resulting in the ending of a century-old wrong. It was then recognised in Kheda and a settlement reluctant, half-hearted and incomplete as it was, was made between the Government agents in Kheda and those who were guiding the movement and the people. The then Governor of the Central Provinces condescended to treat with the Nagpur flag Satyagrahis and released the prisoners and recognised the right claimed by the Satyagrahis. Last but not least Sir Leslie Wilson himself, when he was yet untouched by the atmosphere of the most efficient service in the world, recognised its efficacy in Borsad and granted the Borsad people relief.

I wish both His Excellency the Governor and Sir Munshi will take note of these facts that have happened within the past fourteen years. Satyagraha in Bardoli cannot now be suddenly declared unconstitutional. The fact is, the Government—

have no case. They do not want their revenue policy to be challenged at an open enquiry. If the Bardoli people can stand the final heat, they will have the open enquiry or the withdrawal of the enhancement. It is their undoubted right to claim for their grievance a hearing before an impartial tribunal.

Slavery in Assam Tea Gardens

Messrs. Purcell and Hallsworth write in their report on labour conditions in India :—

"Our view is that, despite all that has been written, the tea gardens of Assam are virtually slave plantations, and that in Assam tea the sweat, hunger and despair of a million Indians enter year by year.

Anti-Purdah Movement in Bihar

Some leading gentlemen of Bihar have started an anti-purdah movement. It is to be welcomed. The education and emancipation of women should proceed *pari passu*. In the purdah-ridden provinces of India it was the Brahmo Samaj which began the movement for giving women freedom and education more than half a century ago. Many other movements, since re-started or joined in by others, owed their origin to the Brahmo Samaj.

Dr. Iqbal Leaves Shafi League

Dr. Sir Mohammed Iqbal has resigned the Secretaryship of the All-India Muslim League, Lahore, known as the Shafi League, because that League's Memorandum to the Simon Commission is considered objectionable by him. Says he in his letter of resignation :—

The extract of the League Memorandum, as published in the Press, makes no demand for full Provincial Autonomy and suggests a unitary form of Provincial Government in which law, order and justice should be placed under the direct charge of the Governor. It is hardly necessary for me to say that this suggestion is only a veiled form

of Diarchy and means no constitutional advance at all.

"Since I still stick to my opinion, which I expressed at the first meeting of the Draft Committee, that the All-India Muslim League should demand full Provincial autonomy (which in my opinion is the demand of the whole Punjab Muslim Community), I ought not, in the circumstances, to remain Secretary of the All-India Muslim League. Kindly accept my resignation."

Tenth Anniversary of the Arya Pratinidhi Sabha, Fiji Islands

One of our correspondents has sent us full proceedings of the tenth anniversary of the Arya Pratinidhi Sabha, Fiji Islands, which was celebrated at Lautoka. Of the resolutions passed two deserve special mention: one about the observance of Indian festivals in Fiji and the other about the solemnisation of marriages of boys and girls according to Vedic rites. Thakur Sardar Singh made an appeal for a Kanya Mahavidyalaya to be built at Suva. £503 were subscribed on the spot and an equal sum was promised. Seth Jagannath of Labasa promised to pay the entire expenses of building an orphanage on the Gurukula grounds and Mr. Santokhi of Tabua promised to donate £100 for the creation of an Arya temple at Tabua. Some gentlemen promised to supply the timber and iron for the extension of the Gurukula and construction of a Kanya Pathshala in Lautoka.

Young men's conference was also held under the Presidentship of Mr. Raghwanand. Speeches were delivered by Messrs Gopendra Narayan, Amichand, Shrikrishna, Tej Ali, Shanti Swaroop and others. Undoubtedly the Undoubtedly Aryasamaj is doing very useful social and educational work in Fiji.

We congratulate the Aryasamajists of the Islands on the splendid success of their anniversary.

Paper Gods For Sale

In China the Paper Gods are freely sold and bought by the purchasers for worship. They are

printed over in Chow Wang Miao Here are some of them as presented by a writer in *The China Journal*.

The Chinese God of Riches

Devil Drivers.

A Pair of Door Gods:—These are fastened on the door to keep out evil from entering the house.

A Woman Designs the Stratford Theater

The winner of the prize for a design for the Shakespeare Theater at Stratford-on-Avon is a woman. Out of seventy-two competitive designs submitted, it was one of the six selected for the final choice. Out of the six, Mr. Bernard Shaw says it is the only one that showed "any theatre sense". An invitation to compete was sent to the Architects of Canada and the United States as well as to those of Great Britain, and at least one design from America figured in the final six. The winner is Miss Elizabeth Scott, aged twenty-nine, the daughter of a Bournemouth doctor, who completed her architectural studies only three years ago.

It has a largeness and simplicity of handling which no other design possesses. Miss Scott says, "The main theory to which I have sought to give expression in the Shakespeare Memorial Theatre is that buildings should not conceal the functions which they exist to fulfil. My design certainly owes something to France, Germany, and America."

Miss Elizabeth Scott—the Woman Architect.

CHINESE REVOLT AGAINST CHRISTIANITY

By SUDHINDRA BOSE

Lecturer in Political Science, State University of Iowa

I

IN trying to understand China, one should keep in mind the simple fact that most of its institutions were developed a long time before the birth of Jesus Christ, away back before the dawn of Jewish history—sacred or profane. They have behind them the sanction of centuries, even milleniums. The Chinese, however, are not an intolerant race, any more than Indians are. Confucianism has taught Chinese for twenty-five centuries that "within the four seas all are brothers." As far as religious freedom is concerned, Buddhism, Taoism, Mohammedanism, Judaism, and other religions have lived in China side by side for ages with no cause of burning human beings at the stake because of credal differences. Tolerance, alas, is too deeply rooted in the institutions of Oriental society and in the hearts of Asians.

Why then, ask the zealous missionaries, are Chinese now anti-foreign, anti-Christian? The question is not overeasy, and the answer cannot be given in a single sentence. The situation, even from an American angle, is extremely complicated. Whereas America went through a single revolution in 1776—

a political revolution—events have so come to pass that China is now confronted with six revolutions simultaneously: a political revolution, an economic revolution, an educational revolution, a social revolution, an industrial revolution, and a religious revolution. China is passing through a period of transition and readjustment. Within the past few years, there has been a radical change in China's form of government, in its social and economic organizations. Due to violent contacts with the West, the older civilization of China is giving birth to a newer civilization. The Chinese intellectuals are calling for an examination of the old social and political order as well as of religion. Is there any system of belief which is infallible? Is there any human institution which is immutable? During this period of searching and overhauling, China must make many readjustments. Things that are of native beauty and strength will doubtless be retained; but those that are not, will be dumped into the gutter.

II

Instead of making any intelligent attempt to understand the new psychology of China, the returned missionaries that I have seen

go on spouting fiery brimstone and eternal damnation against the Chinese. The milder and less noisy of the rev. gentlemen are, however, content to repeat:

East is East and West is West, and never the twain shall meet.

Perhaps the hon. Doctor Rudyard Kipling was right when he said, "there ain't no ten Commandments East of Suez"—for Westerners, I suppose. Didn't a certain eminent citizen of the enlightened municipality of San Francisco solemnly declare that the Chinese are beyond redemption? "The Chinese have no souls," he testified before a Congressional Committee of investigation

Orthodox. He who does not believe wholeheartedly in this exclusive Christian scheme of salvation is damned.

Now the Chinese are not narrow-minded and bigoted enough to be religious in the Christian sense. They do not believe that any one religion has a patent on heaven. When a Chinese has a religious yearning, he is likely to try all the religions which are offered him and try them all at the same time. The Chinese are true polyglots in religion. An orthodox Confucian can worship in Taoist and Buddhist temples when he wants to, without losing his caste with his fellow-Confucians.

Take, for instance, the case of an ordinary Chinese family when death claims one of its members. The funeral services are likely to be held in a most cosmopolitan way. The Confucian priests, the Taoist priests, as well as the Buddhist monks and nuns are called in to recite prayers and perform other religious rites for the departed. The idea seems to be that there are many ways of ascending heaven. If one cannot get to the "pearly gate" by the Confucian ladder, he can still climb either of the other two.

III

Some one has observed in discussing Voltaire and the French enlightenment that the thinking people of France in the eighteenth century were "more absorbed with the economics of this life than with the geography of the next." In mingling with the Chinese in China and in other parts of the world, I feel that they too are more deeply concerned with the kingdom of God Here on earth than over There beyond the clouds. Chinese, especially the modern Chinese, are so made that they have little interest in ethereal ecclesiasticism. They are by racial temperament more concerned with this life than the one hereafter. They are immensely practical.

Can the Chinese then, as a people, be converted to Christianity? I do not wish

What strange things we're hearing from China Nowadays!

—American Paper.

on Chinese Immigration; "if they had any, they are not worth the saving."

The Chinese idea of salvation and of religion does not coincide with that of Christian missionaries. These divines profess that there is no salvation except in Christianity. Their theory is that there is one God which is Jehovah, one incarnation which is Jesus Christ, one Church which may be Catholic or Protestant, though strangely enough it not be Russian, Greek, or Armenian

to put on the chemise of a prophet; but I can at least note what the Chinese themselves think of the job.

"In the six centuries of unceasing and almost uninterrupted centuries of Catholic missionary effort since John of Monte Carvino became the first Bishop of Peking in 1307," writes a Chinese scholar, "the number of Chinese Catholics was only 1971 199 in 1919. The Protestants, entering the field considerably later, boasted of only 700,000 in 1923. At this rate the salvation of heathen souls is indeed a long, tedious job, fatally disheartening to all except those inspired with divine courage and fortitude. The most elementary mathematical calculations will show how hopeless the task is, how the ratio between the saved and damned will always remain where it is now (that is, about 133- $\frac{1}{4}$ to 1), since the birth-rate of heathen Chinese is apparently greater than the rate of baptisms, infantile, juvenile or adult."

Moreover, one should not forget that the two or three million Chinese Catholics and Protestants may not be hundred per cent Christians. The Chinese "rice Christians," like the Indian "belly Christians," who literally "eat" religion are notorious. It is equally well-known that many Chinese call themselves Christians because of the special advantages they can have in mission schools and hospitals, and not because of their devotion to the Bible creed. Can such Christians be considered as hundred per cent saved?

IV

The Chinese, as has been stated before, have the traditions of utmost religious tolerance. The earliest Catholic missionaries were not only received with hospitality, but were given honors at the court. The present anti-Christian movement is not so much religious, as it is political. One may also add that political intolerance of the present age was born in the Occident. It is an undeniable phenomenon of this time, and cannot be removed by the waving of a wand in the Orient.

The China of today is nationalistic. "China

for the Chinese" is on every one's tongue. This nationalism is no longer an academic affair. It is aggressively pro-Chinese and vigorously anti-foreign. When necessary it practises non-co-operation with the foreigner, using such weapons as strikes, boycott, withdrawal of service, and withdrawal of patronage from Christian missionaries. Practically all China—north and south, radicals, moderates and reactionaries—is in active agreement with this program of non-co-operation, which is born of nationalism. Somehow or other, the benighted Chinese are unable to reconcile the inhumanities and barbarities of the whiteman with his white christianity. Say the Chinese in effect: "Let the whiteman be honest, be just, be human, or stay where

Interested Spectators

—American Paper.

he belongs and forever hold his peace." John Chinaman is nationalistic. He sees in the non-co-operation philosophy the salvation of his country. He is in no mood to import eretical devil-chasers from the Occident, which is a reeking nest of Christian imperi-

go on spouting fiery brimstone and eternal damnation against the Chinese. The milder and less noisy of the rev. gentlemen are, however, content to repeat:

East is East and West is West, and never the twain shall meet.

Perhaps the hon. Doctor Rudyard Kipling was right when he said, "there ain't no ten Commandments East of Suez"—for Westerners, I suppose. Didn't a certain eminent citizen of the enlightened municipality of San Francisco solemnly declare that the Chinese are beyond redemption? "The Chinese have no souls," he testified before a Congressional Committee of investigation

Orthodox. He who does not believe wholeheartedly in this exclusive Christian scheme of salvation is damned.

Now the Chinese are not narrow-minded and bigoted enough to be religious in the Christian sense. They do not believe that any one religion has a patent on heaven. When a Chinese has a religious yearning, he is likely to try all the religions which are offered him and try them all at the same time. The Chinese are true polyglots in religion. An orthodox Confucian can worship in Taoist and Buddhist temples when he wants to, without losing his caste with his fellow-Confucians.

Take, for instance, the case of an ordinary Chinese family when death claims one of its members. The funeral services are likely to be held in a most cosmopolitan way. The Confucian priests, the Taoist priests, as well as the Buddhist monks and nuns are called in to recite prayers and perform other religious rites for the departed. The idea seems to be that there are many ways of ascending heaven. If one cannot get to the "pearly gate" by the Confucian ladder, he can still climb either of the other two.

III

Some one has observed in discussing Voltaire and the French enlightenment that the thinking people of France in the eighteenth century were "more absorbed with the economics of this life than with the geography of the next." In mingling with the Chinese in China and in other parts of the world, I feel that they too are more deeply concerned with the kingdom of God Here on earth than over There beyond the clouds. Chinese, especially the modern Chinese, are so made that they have little interest in ethereal ecclesiasticism. They are by racial temperament more concerned with this life than the one hereafter. They are immensely practical.

Can the Chinese then, as a people, be converted to Christianity? I do not wish

What strange things we're hearing from China Nowadays!

—American Paper.

on Chinese Immigration; "if they had any, they are not worth the saving."

The Chinese idea of salvation and of religion does not coincide with that of Christian missionaries. These divines profess that there is no salvation except in Christianity. Their theory is that there is one God which is Jehovah, one incarnation which is Jesus Christ, one Church which may be Catholic or Protestant, though strangely enough it is not to be Russian, Greek, or Armenian

as the control of these institutions is concerned, there is no real difference of opinion among the rival governments in China. They have awakened, at long last, to what they feel a missionary menace.

Recent reports from China indicate that while a few missionary colleges put padlock on their doors, most of them have complied with the government terms and are now functioning. That was inevitable. Canton Christian College, now called Lingnan University, Central China University in Wuchang, and the University of Nankin have bowed to the government measures. Indeed, all but five of the seventeen leading Christian Colleges have surrendered to the national pulse of China. The stiff-necked rebellious gentlemen of the cloth quote figures to prove that China is "beneighted" by uncontrolled alien institutions. There is an obtuse sense of decency. The "heathen Chinese," however, stands firmly by his guns and let the foreign intruders answer him with statistics. China will not be bluffed or bullied into a resignation of its rights and independence.

India may view the course of events in China with considerable interest and profit. India is swarming over with all those who choose to peddle what they call Christian religion and education. The country is pretty nearly overrun with them. What sort of control has the nation over them? The Indian tax-payers, who are overwhelmingly non-Christians, are required to pay 30 lakhs of rupees a year to support the Ecclesiastical Department, which is Anglican. It is a monstrous injustice, a colossal wrong. If they cannot control this Department at present, they ought to have at least a deciding voice in the running of the foreign missionary institutions on which large sums of public money have been and are now being spent. A sober attempt to Indianise the teaching staff, or to adapt the foreign teaching of the missionary school to Indian national requirements has long been overdue. The educational system of a

country should be, by every right and law of commonsense, an integral part of the national life.

VI

America is being watered with missionary tears. The devotees of American Christianity are wrathful because they apprehend that the whole Christian structure is under fire in the Orient, especially in China. It should be recorded that many sane minded Americans have long since abandoned the vision of a Christian China, "a nation" of yellow-skinned with white Christian souls. They perceived that Christianity in their own land is living in an atmosphere of hatred, greed, superstition and defeat.

There are in the United States 186 Christian sects, and only 30 per cent of the population attend church. Worse than that, the clerical worthies are speaking to smaller congregations, and the pulpit is reaching fewer customers every year. According to the most recent report of interchurch Conference at Philadelphia the churches of this country are losing membership at the rate of 50,000 a year. Christianity is fighting for its life.

Every time science takes a forward step, the creeds of the rev. clergymen lose something. Their God may be in the holy Bible, but seldom he steps out of it. The cloudy mysticism of Christianity is nowhere converted into an actual way of life except by some small groups of persons. "When the test comes", remarks Mr. H. L. Mencken, who is not only the foremost literary critic of the Republic but a shrewd observer of the American scene, "it always turns out that the majority of Christian men actually believe in something far more elemental. The hell they fear goes back to Pleistocene times, and so do the demons. And the God they profess to revere is hard to distinguish from the Grand Juju worshipped in the swamps of the Congo." Can anyone blame China for revolting against such a deity?

alism. It is here that the dervishes of missionary religion rise in alarm.

The trouble in China cannot be put down to the perversity of the Chinese, and let it go at that. One thing we need to get into our thinking is that there is an amazing amount of hypocrisy and preposterousness connected with the foreign exploitative domination as well as missionary work. The go-getting missionary is being definitely challenged because he is considered as the advance agent of imperialism. There is vigour and bite in the challenge. The man of God relies upon unequal treaties with special privileges, which are beyond the reach of the Chinese law. "From being a heroic lonely enterprise," remarks Reverend Edward Thompson of Oxford, "foreign missions have become praised and petted by imperialism". The high-powered rev. missionary is a forerunner of the Western imperialism, inasmuch as the preaching of the "Word of God" and other extra-curricular activities become a charming enterprise supported by machine guns and poison gas of the Western powers. The Chinese would be blind if they did not see that foreign merchants, missionaries, and politicians all spell the same thing—foreign domination.

There are over 7,000 'shock troops of God' in China. Many of them are victims of the psychology of "superiority complex." Edward H. Hume, until recently President of Yale-in-China, states in an article in the *New York Times* that the missionaries enjoy together with all their fellow-nationals, such privileges as the right of extraterritorial jurisdiction, exemption from taxation if he lives in a concession or an international settlement, lower tariff rates on goods he imports from abroad, and the right of refuge on the gunboats of his country.

In addition to all these, there are certain privileges accorded only to Christian missionaries, but not granted to their fellow-nationals, and are not guaranteed by treaty to the representatives of other religions, such as Buddhism and Mohammedanism. These Christian missionary privileges, enumerates Mr. Hume, "include the right of travel and residence in the interior, away from the so-called open ports, the right to purchase or perpetual lease of property in the interior, the right to protect Christian converts from persecution and the right for Christian converts to be exempt from taxes levied for support".

Christianity, in the minds of the Chinese leaders, has thus become a foreign-protected religion. Why shouldn't the missionaries, they demand, depend solely on the freedom of conscience guaranteed to citizens under the Chinese Constitution? They insist that spiritual progress should be based upon spiritual, and not on military or naval forces

V

It is asserted that Christian missionaries are in China primarily to educate Chinese. A high falutin balderdash. Leaving out the Catholic educational institutions, which may not be considered Christian by certain Protestant sects, the Protestant higher educational institutions number 24 and their total enrolment in schools of all grades is just short of 300,000. What have the Chinese nationalists got to say against them?

It is maintained that the Christian school is a denationalizing force, tending to denature the patriotism of the students and making them "imperialistic running dogs", "foreign slaves". It minimizes, if not totally ignores, the importance of Chinese literature and culture, and overemphasizes English language and foreign culture. Again, the contention is made that the Christian school is an agency whose major interest is to proselytize the younger generation. The Christian brand of education is incompatible with aggressive patriotism and nationalism. The self-respecting China must, therefore, protect itself against the insidious influence of the institutions under foreign auspices.

Drastic measures have been taken to bring foreign institutions, in name as well as in fact, under the government control. "These regulations", summarizes a writer in *Asia* magazine, "require that mission schools adapt the government curriculum standards, submit to government inspection, be managed by a board of directors of which the majority shall be Chinese, employ a Chinese president and only such foreign staff as the directors shall request. There is to be no compulsory religious instruction, whether in church or in class room". There is a vast amount of wisdom embodied in these regulations. They were issued by the Nationalist government for all missionary and private schools in Nationalist territory, but they are also substantially identical with those given out by the Peking government. Indeed, as far

Bose, Kalicharan Banerjee, Surendranath Banerjee were names to conjure with in their days, and the good which the first and the third did to the cause of Indian political regeneration, cannot be lightly esteemed. As for being the greatest all-round Bengali of the modern age, there can be no question to whom the honour belongs. Rabindranath Tagore is not only one of the foremost poets of the world, but is one of our foremost political thinkers, and many of C. R. Das's ideas on rural reconstruction and on the necessity of cherishing our indigenous culture and the genius of our civilization are derived from Rabindranath, who of all living Bengalis is most deeply steeped in the spirit of that culture of which he has been the most sympathetic, as well as the ablest, exponent in prose and verse that modern India has produced.

The greatest disservice that has been done to the younger generation of Bengal by the movement of which C. R. Das was the head is the love of claptrap and cheap notoriety which it has produced and the growth of something like a conviction among them that the track of long years of patient preparation and arduous toil in order to fit oneself for public service in one's chosen walk of life can be covered in a few brief months of intensive political agitation, and that emotional enthusiasm is a substitute for real hard work and strenuous endeavour. Mr. Prithwis Chandra Ray was one of those few Bengalis who did not disdain to live laborious days to prepare himself for political work, and it is all the more deplorable that in appraising the worth of his hero he has permitted himself to indulge in the language of hyperbole which can only mislead the youthful aspirant to political success. Mr. Gokhale took a saner and more serious view of politics, but unfortunately, his Servants of India Society or any other society of devoted public workers has not been able to take root in Bengal.

Long ago, Gladstone, to whom no one will deny the quality of statesmanship, comparing himself with Tennyson, who was the recipient of the same civic honours as himself, said as follows at a public gathering:

Mr. Tennyson's life and labours correspond in point of time as nearly as possible to my own, but Mr. Tennyson's exertions have been on a higher plane of human action than my own. He has worked in a higher field, and his work will be more durable. The public men play a part which places us in view of our countrymen; it is our business to speak, but the words which we speak have wings and fly away and disappear. In distant

times some may ask with regard to the Prime Minister, "who was he, and what did he do? We know nothing about him." The work of Mr. Tennyson is of a higher order. The Poet Laureate has written his own songs in the hearts of his countrymen that can never die.

In our patriotic zeal, we must not forget what Emerson said, viz., "that country is the fairest which is inhabited by the noblest minds." Nor should we forget his truly patriotic contempt for the shallow Americanism whose prototype is so common among us in India.

"I hate this shallow Americanism which hopes to get rich by credit, to get knowledge by raps on midnight tables, to learn the economy of the mind by phreology, or skill without study, or mastery without apprenticeship. We countenance each other in this life of show, puffing, advertisement, and manufacture of public opinion, and excellence is lost sight of in the hunger for sudden performance and praise."

And elsewhere, addressing the American scholar, he says

"It becomes him to feel all confidence in himself, and to defer never to the popular cry... the world of any moment is the merest appearance. Some great decorum, some fetish of a government, some ephemeral trade or war, or man, is cried up by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and honourable of the earth affirm it to be the crack of doom. In silence in steadiness, in severe abstraction, let him hold by himself, add observation to observation, patient of neglect, patient of reproach, and bide his own time, happy enough, if he can satisfy himself alone, that this day he has seen something truly. Success treads on every right step."

This is the kind of success which leads on to greatness, and he alone is entitled to be called great who, not born a genius, has trodden the difficult path to such success. We should learn to appreciate

"Labour, that in lasting fruit outgrows.
Far noisier schemes, accomplished in repose."
(Matthew Arnold).

And above all, we should always remember that in trying to achieve success leading to greatness, "not failure but low aim is crime" (Lowell).

It is well for us to remember these words and not to forget our sense of proportion in estimating the worth of a popular hero of the moment. Whether in the case of the thinker or the man of action, the supreme test of his worth is the enduring results of his work. A man may die young, but his thoughts and activities may influence untold

LIFE AND TIMES OF C. R. DAS*

By "VIKRAMPUR"

WE give below the full title of the book, which has been printed in England, and well-printed but for a few glaring errors in the spelling of personal names, in order that the reader may understand at a glance the claim that is made on its behalf by its able author, who was a class-mate of C. R. Das, and who unfortunately did not live to see the fruit of his labours in the cause of his friend and his country. The personal memoir has been interwoven with the political history, and, except towards the beginning and the end of the book, is not much in evidence. And 'a complete outline of the history of Bengal' resolves itself into a brief resume of the political history of India as a whole. This part of the work has been well done, and gives us a very good, if rapid, summary of the main currents of Indian politics during the period in question. The illustrations, though few, are well-executed and well-chosen and the binding and get-up are good.

The short preface gives in four paragraphs, a brilliant picture of the alleged attainments of modern Bengal in all the spheres of life, and begins thus:

"During the life-time of Deshbandhu Chittaranjan Das, Bengal had covered the track of centuries and casting off the traditions and langour of the feudal and the Middle Ages, pushed herself forward as one of the most advanced and progressive provinces of Asia."

This patriotic eulogy seems to us to be truer in potentiality than in actual achievement, and in the very first chapter of the book, and elsewhere, the author has made no secret of the fact that Bengal has not taken very kindly to social reform, which is long overdue.

We observe with regret that the author has not been able to shake himself free from this journalistic habit of indulging in super-

latives. It is always 'all Bengal' that thinks in a particular manner, 'all India' that does this or that, 'the whole of educated India' that is shocked or moved, the entire mass of the country that acts, and so on. One should have expected greater restraint in the use of words in a writer of the author's reputation.

The very first words of the book are:

"Chitta Ranjan Das was perhaps the greatest Bengali in the first quarter of the twentieth century and the founder and builder of the best organised school of political thought in India."

We shall presently have something to say on the latter part of the claim, but as regards the first part, the claim set forth seems to us to be so preposterous as to furnish its own refutation. Something may be excused to a friend writing so soon after the death of his hero, when a proper perspective is in the nature of things impossible to obtain, but the statement cannot be said to make any reasonable approach to the verdict of history. Had it been true, the bankruptcy of Bengal in great men would have been even greater than it is. Fortunately Bengal is not so hopelessly sterile as Mr. Ray's extravagant admiration for his friend would indicate. Even C. R. Das's native land of Vikrampur in the District of Dacca, on which, by the way, our author bestows a well-deserved tribute, has produced one who in real greatness far outshines Chitta Ranjan. We need not add that we are here referring to Sir J. C. Bose. Even among politicians, with whom alone the subject of Mr. Ray's memoir may fitly be compared, Bengal has produced men in many respects his superior, however much he may have surpassed them in other respects. To confine ourselves to Vikrampur, Manomohan Ghose and his more gifted brother Lal Mohan Ghose, were political leaders of no mean merit, and in oratory, which plays so large a part in politics, the latter had no superior. The contribution of another able son of Vikrampur, Guruprasad Sen, who joined politics late in life, to the history of Hinduism, marks him out as a thinker of outstanding merit. Outside Chitta Ranjan's own native district, Ananda Mohan

* *Life and Times of C. R. Das : The story of Bengal's self-expression. Being a personal memoir of the late Deshbandhu Chitta Ranjan and a complete outline of the History of Bengal for the first quarter of the twentieth century. By Prithvir Chandra Ray. Price Rs. 6. Oxford University Press, 1928, with seven illustrations and appendices, pp. 313.*

foreign bureaucracy that stands between us and our rightful place in the sun."...

"It is on freedom first and freedom last—freedom from foreign rule and yoke—that the young revolutionaries have set their hearts and eyes. Poor revolutionaries! What a pity they do not see that so long as we do not put our own house in order and look facts in the face, realize our

own responsibilities for the development of a greater and a more united civic and national consciousness, and practise to a larger extent the virtues of forbearance and self-restraint, short-cuts will be of no use and their heart's desire for freedom will recede further and further, as does a mirage in the desert."

THE CAUSES OF THE SECOND AFGHAN WAR

BY MAJOR B. D. BASU, I. M. S. (Retired)

II

LORD Northbrook was succeeded in the viceroyalty of India by Lord Lytton. Regarding this appointment a contemporary historian writes:—

"Mr. Disraeli gave the country another little surprise. He appointed Lord Lytton Viceroy of India. Lord Lytton had been previously known chiefly as the writer of pretty and sensuous verse and the author of one or two showy and feeble novels. The world was a good deal astonished at the appointment of such a man to an office which had strained the intellectual energies of men like Dalhousie and Canning and Elgin. But people were in general willing to believe that Mr. Disraeli knew Lord Lytton to be possessed of a gift of administration which the world outside had not any chance of discerning in him. * * * There was a feeling all over England which wished well to the appointment and sincerely hoped it might prove a success."

But the people soon came to know the reason of Disraeli's choice of Lord Lytton. "The writer of pretty and sensuous verse" pledged himself to carry out what Lord Northbrook had declined to do. Accordingly on the eve of his departure from England, Lord Lytton was furnished by Lord Salisbury with instructions

"to find an early occasion for sending to Cabul a temporary mission, furnished with such instructions as may perhaps enable it to overcome the Ameer's apparent reluctance to the establishment of permanent British agencies in Afghanistan."

The reasons assigned for coercing the Ameer to receive Christian officers as Residents or Agents are two, viz:—

1. That the Russians were swallowing up all the independent principalities in Central

Asia and that they were intriguing in Afghanistan. It was, and even to this day is, alleged that Russia's move in Central Asia means some day the invasion of India by the Slavs.

2. That the Muhammadan Agent at Cabul did not possess a sufficient insight into the policy of Western nations and therefore could not be trusted.

The fear of France or of Russia has always been the cloak used by the British statesmen and Governors-General of India to conceal their political designs for robbing States of India and Asia of their independence. But at the time when the Ameer was being coerced was there any just ground for this exhibition of Russophobia? Speaking in the House of Commons on May 5, 1876, Mr. Disraeli said:—

"Russia knows full well there is no reason why we should view the natural development of her Empire in Asia with jealousy, so long as it is clearly made aware by the government of this country that we are resolved to maintain and strengthen both materially and morally our Indian Empire, and not merely do that but also uphold our legitimate influence in the East. Russia, so far as I have had any influence in the conduct of our affairs, has been made perfectly aware of these views, and not only that, but they have thought them consistent with a good understanding between the two countries. I believe, indeed, that at no time has there been a better understanding between the Courts of St. James and St. Petersburg than at the present moment and there is this good understanding because our policy is a clear and frank policy."

From the first minister of the Crown, then, the public were assured that Russia did not threaten the supremacy of England

generations and inspire them to rise to the height of their manhood and uplift the level of the race to which they belong. The extravagant and bold claim made on behalf of C. R. Das in the opening sentence of the book is not borne out by what the author says in summing up his hero's achievements.

C. R. Das, according to his biographer, "remained a destroyer and could not become a builder, try as he might." "He failed to apply his own splendid gifts to any work of enduring good or benefit to his country...Towards renaissance and spirituality in India he contributed very little to which subsequent generations of Indians may look for inspiration." He was "in his youth a *bon vivant* and lavish with his money, and unscrupulous in his political methods, who had publicly declared that all means no matter what, would always justify the end..." According to the author his outstanding contribution to the public life of Bengal was the organization of "the most powerful school of political opinion in the country" and lay in the fact that he "left behind him a party which for the first time in the history of India knows its mind and can gather courage enough to follow its convictions."

Had the author lived a little longer he would have found reasons to modify his opinion of the strength and vitality of this party. It was held together by hopes which are fast crumbling away and by methods which were not always above board, and the weakness of a structure welded together, not by any constructive vision, but by self-interest and hatred and zeal for destruction, is becoming more and more manifest. If dyarchy has been scotched in Bengal, it has not been killed, and if, moreover, as the author further says, Chitta Ranjan succeeded in tearing to tatters the prestige and authority of the Anglo-Indian government, the ground was thoroughly prepared by the non-co-operation movement, on the crest of which Mr. Das rode to whatever success he attained.

Mr. Ray considers Lord Ronaldshay's theory of a cultural reaction among educated Hindus as more imaginary than real. We agree in this view.

"Young India," says Mr. Ray, "has drunk so deep of the new and heady wine of modern materialism that the metaphysics of quiescence and the philosophy of fatalism can no longer drug or dope her into a life of somnolence or slumber... The prophets of reaction and revivalism are considered back numbers today among all classes of our people, and their wild denunciations of modernity carry conviction nowhere."

But the career of his hero, who began life as the son of Brahmo parents, and wrote on his return from England poems full of

"a passionate delight in beauty, a restless joy of life, an insatiate yearning to probe the pleasures and pains of existence to their deepest depths," and through the mazes of an atheistical philosophy passed on to "the glorification and idealization of the life of the harlot," and later on came under the influence of Vaishnavism, only to emerge during the last days of his life, as a spiritual disciple of the head of the Satsang Asram at Pabna (p. 221), is not calculated to subvert Lord Ronaldshay's pet theory, especially as C. R. Das was certainly not the first, nor, we are afraid, will he be the last, educated Indian to betray such "evolutionary" tendencies.

This, however, is not the whole picture, and it would be just as wrong to close our estimate of C. R. Das on this note as it would be to call him the greatest figure in Bengali life. Undoubtedly, he was the most dynamic personality in modern Bengali politics, and in his power of organization, vigour, pushfulness, and fearless devotion to his purpose, he far surpassed his colleagues and rivals in the field of politics. He had many loveable qualities in spite of his autocratic temper, to which the author alludes at one place, and could win the hearts of his followers by his open-minded generosity and loyalty. Not only did he sacrifice his wealth but he sacrificed his talents, his health, and his very life-blood to the cause which he had made his own. There can be no doubt that during the last few years of his life he bestrode the political arena of Bengal like a Colossus, and won a place in the hearts of his people which was unique and unprecedented. In the beautiful words of Rabindranath:

"The best gift that Chitta Ranjan has left for his countrymen is not any particular political or social programme, but the creative force of a great aspiration that has taken a deathless form in the sacrifice which his life represented."

For the rest, there are many things in the book that will amply repay perusal, and the author's views on social and economic questions, particularly the latter, will provoke thought and sometimes opposition. The author's views on the political situation may be briefly indicated by the following two extracts:

"We have now learnt that most of the sufferings of our life—political, material, and economic—are due to the faults of omission and commission of our rulers, that most of the conditions in which we now live are removable, and it is only a

step to the invasion of Candahar, for, such was the procedure adopted in the first Afghan War. In the interview which the Turkish emissary had with the Ameer, the latter said regarding the occupation of Quetta by the British:—

"If an armed man places himself at the back door of your house, what can be his motive unless he wants to find his way in when you are asleep?"

The Ameer responded to the request of the Viceroy and sent his confidential Minister Noor Muhamad to Peshawar to hold a conference with Sir Lewis Pelly. The first interview between the envoys took place on the 30th January, 1877. Sir Lewis Pelly told Noor Muhamad that

"The acceptance of the principle that British officers may reside in Afghanistan is absolutely necessary as preliminary to the commencement of negotiations. This point being granted, other details can be discussed and settled hereafter."

Noor Muhamad gave his reasons why English officers should not reside in Afghanistan. He said:—

"In the first place, the people of Afghanistan have a dread of this proposal, and it is firmly fixed in their minds and deeply rooted in their hearts, that if Englishmen or other Europeans once set foot in their country, it will sooner or later pass out of their hands."

Sir Lewis Pelly intimated to Noor Muhamad that as the *sine qua non* was declined, the conference could not proceed; but he agreed to refer the matter to the Viceroy and await his further instructions. The Viceroy's answer was transmitted by Sir Lewis Pelly to Noor Mahomed in the form of a letter on the 15th March, 1877. By that time Noor Mahomed had become dangerously ill and he died on 26th March 1877. There is no necessity for dwelling at length on this letter from Sir Lewis Pelly to Noor Mahomed. It contains threats to, and insinuations against, the Ameer. On 30th March 1877, Lord Lytton telegraphed to Sir Lewis Pelly to close the conference and leave Peshawar. It is only necessary here to observe that at the time when Lord Lytton telegraphed to Sir Lewis Pelly to

"close conference immediately, on ground that basis on which we agreed to negotiate has not been acknowledged by Ameer; that Mir Akbar not being authorised to negotiate on that basis, nor you on any other, conference is terminated *ipso facto*."

The Viceroy was fully aware of the fact that

a fresh envoy was already on the way from Cabul to Peshawar with instructions to accept all the conditions of the British Government. It was unfortunate that Noor Mahomed died before the conference was over. His surviving colleague Mir Akbar had no instructions from the Ameer. Noor Mahomed insisted on being heard and on having his arguments transmitted to Lord Lytton. It is quite possible, nay probable, that he was authorised by the Ameer to admit the 'fatal preliminary condition' as a last resort. On this ground only we are able to account for the hurried despatch of another envoy as soon as the news of the death of Noor Mahomed reached the Ameer. The Viceroy should have awaited the arrival of the new envoy before closing the conference. But he was in an indecent haste. In the secret despatch from the Government of India dated Simla, May 10, 1877 to the Secretary of State for India, Lord Lytton wrote —

"At the moment when Sir Lewis Pelly was closing the conference his Highness was sending to the Mir Akbar instructions to prolong it by every means in his power, a fresh envoy was already on the way from Cabul to Peshawar, and it was reported that this envoy had authority to accept eventually all the conditions of the British Government. The Viceroy was aware of these facts when he instructed our envoy to close the conference."

In this despatch Lord Lytton and his colleagues composing the Government of India considered it to be a proper diplomatic move to suspect the loyalty of the Mahomedan wakil Ata Muhammad. He is accused of "stupidity" and "disloyalty" and also of insufficiency. For, they wrote —

"But of all that was passing at Cabul we knew less than ever; for the reports of our own Agent there had become studiously infrequent, vague, and unintelligible."

Lord Lytton's abrupt closure of the Peshawar conference has been justly characterised by Colonel Hannay in his well-known work on the causes of the Second Afghan War, as the "tragic prologue to a still more tragic drama". Not only were the negotiations broken off, but the wakil who had represented British interests in the court of the Ameer, was withdrawn from Cabul, on account, no doubt, of his "stupidity" and "disloyalty"! From all these acts the Ameer was led to infer that the Government of India meant war. The occupation of Quetta, the demand of stationing Christian officers in Afghanistan, the breaking off of negotiations

in India. Russia occupied those regions where England had no *locus standi* of any sort. As to the will of Peter the Great which is alleged to enjoin upon Russia the invasion of India, all the intelligent world knows it to be a fact that this document was written to Napoleon's order at the time when he was preparing to invade Russia.*

As to the Muhammadan gentleman who acted as the British Agent at the Court of the Ameer being incompetent or untrustworthy, we have already quoted the opinion of Lord Northbrook and his colleagues composing the Government of India that there was no evidence to show that he did not perform his duties satisfactorily. As will be narrated further on, even Lord Lytton was so pleased with the efficient manner in which Ata Muhammad had performed his duties that he (Lord Lytton) presented him with a watch and chain and 10,000 Rupees, "in acknowledgement of the appreciation of the Government of his past faithful service."

Where was then the necessity of coercing the Ameer to receive a British Resident or Agent in his Court? From the consideration of the case in all its bearings we are led to the conclusion that the object of the Disraeli Cabinet was to convert the Ameer's dominions into British territory. This is not improbable, considering the character of the Prime Minister. He looked upon England as an Asiatic power and inaugurated a spirited foreign policy. He resumed the "forward policy" of Palmerston. He tried to efface the humiliation resulting from the military failure of the first Afghan War. The grave loss of prestige of 1840 was to be retrieved by depriving Afghanistan of its independence.

On his assuming the Viceroyalty of India Lord Lytton ascertained through Ata Muhammad, whether the Ameer was willing to receive Sir Lewis Pelly as envoy. The proposal appeared to the Ameer to be something like a bolt from the blue. As was to be expected, he expressed his unwillingness to receive a British officer as an Agent. He assigned three reasons for his refusal, viz:—

First, that the persons of Englishmen could not be safe.

Secondly, that European officers might make demands which would give rise to quarrels; he appealed to the treaty rights, saying that the

Kabul Government had always objected to European officers "from farsightedness."

Thirdly, that if the English came, Russians will claim to come too.

However, the Ameer suggested that Ata Muhammad should see the British authorities and explain matters to them. Accordingly, Ata Muhammad came to Simla and conferred with the Viceroy in the month of October, 1876. Ata Muhammad narrated the Ameer's grievances and his (Ameer's) objections to the location of British officers in any part of Afghanistan. Then the Viceroy told Ata Muhammad to convey faithfully to the Ameer his threats. The Viceroy told Ata Muhammad to inform the Ameer that

"Our only interest in maintaining the independence of Afghanistan is to provide for the security of our own frontier. But the moment we cease to regard Afghanistan as a friendly and firmly allied State, what is there to prevent us from providing for the security of our frontier by an understanding with Russia, which might have the effect of wiping Afghanistan out of the map altogether? If the Ameer does not desire to come to a speedy understanding with us, Russia does; and she desires it at his expense * * * His (the Ameer's) position is rather that of an earthen pipkin between two iron pots."

Ata Muhammad was dismissed by the Viceroy with gifts, as mentioned before, 'in acknowledgement of the appreciation of the Government of his past faithful service' and was furnished with a document called an 'aide memoire' in which were mentioned proposals which should form the basis of the treaty which the Viceroy was anxious to conclude with the Ameer. Lord Lytton suggested to the Ameer to send his envoy Noor Mahomed to Peshawar to hold a conference with Sir Lewis Pelly (at that time Commissioner of Peshawar) to open negotiations concerning the proposed treaty. The Ameer was also invited to attend the forthcoming Imperial Assembly at Delhi.

The Wakil Ata Muhammad returned to Kabul and just at the time when he was conveying the threats of the Viceroy of India to the Ameer telling him that his position was that of "an earthen pipkin between two iron pots" the Ameer was not a little alarmed by the hostile attitude of the British Government towards his Indian frontier. He saw that the Indian Government occupied Quetta on the 2nd November, 1876. About the same time bridges were formed over the Indus, and British troops were moved in the direction of Afghanistan. The Ameer looked upon the occupation of Quetta as "the first

* See Colonel Sir George Sydenham Clarke's "Russia's Sea-power," published by John Murray, London, 1878, page 175.

step to the invasion of Candahar, for, such was the procedure adopted in the first Afghan War. In the interview which the Turkish emissary had with the Ameer, the latter said regarding the occupation of Quetta by the British:—

"If an armed man places himself at the back door of your house, what can be his motive unless he wants to find his way in when you are asleep?"

The Ameer responded to the request of the Viceroy and sent his confidential Minister Noor Muhammad to Peshawar to hold a conference with Sir Lewis Pelly. The first interview between the envoys took place on the 30th January, 1877. Sir Lewis Pelly told Noor Muhammad that

"The acceptance of the principle that British officers may reside in Afghanistan is absolutely necessary as preliminary to the commencement of negotiations. This point being granted, other details can be discussed and settled hereafter."

Noor Muhammad gave his reasons why English officers should not reside in Afghanistan. He said:—

"In the first place, the people of Afghanistan have a dread of this proposal, and it is firmly fixed in their minds and deeply rooted in their hearts, that if Englishmen or other Europeans once set foot in their country it will sooner or later pass out of their hands."

Sir Lewis Pelly intimated to Noor Muhammad that as the *sine qua non* was declined, the conference could not proceed; but he agreed to refer the matter to the Viceroy and await his further instructions. The Viceroy's answer was transmitted by Sir Lewis Pelly to Noor Mahomed in the form of a letter on the 15th March, 1877. By that time Noor Mahomed had become dangerously ill and he died on 26th March 1877. There is no necessity for dwelling at length on this letter from Sir Lewis Pelly to Noor Mahomed. It contains threats to, and insinuations against, the Ameer. On 30th March 1877, Lord Lytton telegraphed to Sir Lewis Pelly to close the conference and leave Peshawar. It is only necessary here to observe that at the time when Lord Lytton telegraphed to Sir Lewis Pelly to

"close conference immediately, on ground that basis on which we agreed to negotiate has not been acknowledged by Ameer; that Mir Akbar not being authorised to negotiate on that basis, nor you on any other, conference is terminated *ipso facto*."

The Viceroy was fully aware of the fact that

a fresh envoy was already on the way from Cabul to Peshawar with instructions to accept all the conditions of the British Government. It was unfortunate that Noor Mahomed died before the conference was over. His surviving colleague Mir Akbar had no instructions from the Ameer. Noor Mahomed insisted on being heard and on having his arguments transmitted to Lord Lytton. It is quite possible, nay probable, that he was authorised by the Ameer to admit the 'fatal preliminary condition' as a last resort. On this ground only we are able to account for the hurried despatch of another envoy as soon as the news of the death of Noor Mahomed reached the Ameer. The Viceroy should have awaited the arrival of the new envoy before closing the conference. But he was in an indecent haste. In the secret despatch from the Government of India dated Simla, May 10, 1877 to the Secretary of State for India, Lord Lytton wrote.—

"At the moment when Sir Lewis Pelly was closing the conference his Highness was sending to the Mir Akbar instructions to prolong it by every means in his power, a fresh envoy was already on the way from Cabul to Peshawar, and it was reported that this envoy had authority to accept eventually all the conditions of the British Government. The Viceroy was aware of these facts when he instructed our envoy to close the conference."

In this despatch Lord Lytton and his colleagues composing the Government of India considered it to be a proper diplomatic move to suspect the loyalty of the Mahomedan wakil Ata Muhammad. He is accused of "stupidity" and "disloyalty" and also of insufficiency. For, they wrote—

"But of all that was passing at Cabul we knew less than ever; for the reports of our own Agent there had become studiously infrequent, vague, and unintelligible."

Lord Lytton's abrupt closure of the Peshawar conference has been justly characterised by Colonel Hannay in his well-known work on the causes of the Second Afghan War, as the "tragic prologue to a still more tragic drama". Not only were the negotiations broken off, but the wakil who had represented British interests in the court of the Ameer, was withdrawn from Cabul, on account, no doubt, of his "stupidity" and "disloyalty"! From all these acts the Ameer was led to infer that the Government of India meant war. The occupation of Quetta, the demand of stationing Christian officers in Afghanistan, the breaking off of negotiations—

when the Ameer was willing to consent to that fatal preliminary, and the withdrawal of the vakil from his court showed the Ameer that the Government of India were determined to carry out the threats they had held out to him, for he had been told by the Viceroy of India that if he refused English residents he would "isolate himself from the alliance and support of the British Government" that "his position was that of an earthen pipkin between two iron pots," and that

"The moment the British Government cease to regard Afghanistan as a friendly and firmly allied state what was there to prevent them from providing for the security of their frontier by an understanding with Russia, which might have the effect of wiping Afghanistan out of the map altogether?"

The Ameer was justified in his apprehensions, for Lord Salisbury, in his despatch to the Government of India, dated October 4, 1877 sounded a distinct note of war. This noble Marquis wrote:—

"If he (the Ameer) continues to maintain an attitude of isolation and scarcely veiled hostility, the British Government stands unpledged to any obligations and in any contingencies which may arise in Afghanistan will be at liberty to adopt such measures for the protection and permanent tranquility of the North-West frontier of Her Majesty's Indian dominions as the circumstances of the moment may render expedient, without regard to the wishes of the Ameer Sher Ali or the interests of his dynasty".

The imputation of 'scarcely veiled hostility' to the Ameer by the Christian Marquis reminds one of the pretext of the muddled stream made use of by the wolf in his intention of devouring the lamb. Where was the hostile act on the part of the Ameer?

But it was not long before a "contingency" did arise in Afghanistan which served as a handle to the people of England to declare war on the Ameer of Cabul. This 'contingency' arose out of the despatch of a mission to Cabul by Russia. Correspondence used to pass between the Ameer and the Governor of the Russian provinces on his frontier. The Government of India and the Foreign Office in England as well as the British Ministry were fully acquainted with this fact. The Ameer always used to forward to the Government of India the letters he received from the Russian Government. This intercourse between Russia and Cabul had never been looked upon with suspicion till Lord Lytton's time. From the parliamentary papers on Afghanistan and Central Asia, we learn that

the Government of India, when the Earl of Mayo was at its helm, apprehended nothing but good from the interchange of friendly communications between the Ameer of Cabul and the Russian Governor of Turkestan. The Ameer saw Russia absorb all the khanates of Central Asia. He naturally dreaded Russia as much as, if not more than, England. It was, therefore, that in the early seventies of the nineteenth century whenever the Ameer received any letters to his address from the Russian Governor of Turkestan, he used to forward the same to the Government of India, requesting the Viceroy for a draft of appropriate and advisable reply. Lord Mayo advised the Ameer to reply to the Russian Governor, whose letters must be "a source of satisfaction and a ground of confidence to His Highness." But Lord Lytton and Disraeli's ministry, when they wanted to justify their unrighteous conduct in forcing a war on the Ameer, discovered that his Highness was intriguing with Russia against England!

The Russian Mission came to Cabul, uninvited by, but with the permission of, the Ameer. The arrival of the Russian Mission in Cabul took place some time towards the end of May or beginning of June, 1878. The events which were occurring in Europe should be borne in mind with reference to this Russian Mission in Afghanistan. In the war between Russia and Turkey, the Turks were completely prostrated. Russia seemed likely to carry all before it as the road to Constantinople was clear. It is now a well-known fact that the Turks would not have gone to war with Russia, had they not been promised help by England. But the Turks never received this help. The continental people of Europe are seldom without a fling at *Perfidie Albion* (when they refer to England). The present writer has heard intelligent Turks declare that they were betrayed into war with Russia by England. However, Lord Beaconsfield knew how to create new sensations. He could not or rather did not like to assist Turkey. But when the Parliamentary session opened in 1878, the speech from the throne announced that Her Majesty could not conceal it from herself that, should the hostilities between Russia and Turkey, unfortunately, be prolonged, 'some unexpected occurrences may render it incumbent on me to adopt measures of precaution.' One of the 'measures of precaution' adopted against Russia's ambition was the concentration

of troops from India at Malta. This was a complete surprise to the stay-at-home natives of England. But this very circumstance made Russia effect a diversion by sending a Mission to Cabul. Russia knew all that had passed between the Government of India and the Ameer of Cabul; how the latter was being coerced to receive British Residents in Afghanistan; how he at first declined, and, at last when he was about to yield, the British Government would have nothing to do with him and threw him overboard, and withdrew their Agent from his Court. Knowing all these facts it is not surprising that the Governor of Russian Turkestan, without the knowledge of the Imperial Government at St. Petersburg, sent a Mission to Cabul; that the authorities at St. Petersburg knew nothing about this Mission is clear from the denial made by the Russian Government on July 3, 1873 of ever sending a mission to Cabul. There were other reasons which might be urged in justifying the action of the Russian Governor of Turkestan. At the time when Russia and Turkey were at war, the Sultan of Turkey sent an envoy to the Ameer of Afghanistan. The envoy had passed through India. It was alleged by Russia that the object of the envoy's Mission was to preach a religious crusade amongst the Mussalman population of Central Asia, and, through the Ameer of Afghanistan, to induce the Ameer of Bokhara to excite the populations of Central Asia to revolt against Russia. The Russian Government complained to the British ambassador at St. Petersburg, who brought the matter to the notice of the Foreign Secretary. The Foreign Secretary, Lord Derby, took no notice of the complaint and evaded the request of Russia, about advising 'the Ameer of Afghanistan to abstain from any action which could endanger the peaceful relations of the two states' (that is, Afghanistan and Bokhara), by replying that,

"At the request of the Porte, a Turkish envoy to Afghanistan was allowed to pass through Indian territory, but that Her Majesty's Government have no reason to suppose that the object of his mission was to preach a crusade in Central Asia."

Then, again, two British officers were

travelling in Central Asia inciting the Turkoman tribes to hostilities against Russia. The names of these two Christian officers are Captain Butler and Captain Napier. About the success of these officers, the *Times* of January, 1879, quoted the following from the *Bombay Gazette* :—

'It is reported that Major Butler, the Central Asian explorer, who has just returned from Turkestan, has been so successful in his interviews with the Turkoman chiefs that they are willing to co-operate with the British either against the Afghans or the Russians.'

Taking all these circumstances into consideration we are of opinion that the Governor-General of Russian Turkestan was fully justified in sending a Mission to Cabul. For, what was the object of the Mission? The Parliamentary Papers on Central Asia have furnished us with an answer. On page 141 of *Central Asia*, No 1 (1878), it is stated that

"The Turkestan (Russian) Governor General nourished no ill-feeling against Afghanistan, and meditated despatching an embassy to Sher Ali Khan, by which means our (Russian) relations with the latter would in all probability become defined one way or the other, either in an amicable or hostile sense, everything would depend on the straightforwardness and good sense displayed by the Ameer."

The anxiety displayed by the Governor-General of Russian Turkestan to define the relations of the Ameer of Cabul with Russia "one way or the other, either in an amicable or hostile sense," was due to the fact that he was afraid of the British invasion of the Russian possessions in Central Asia through Afghanistan. The same Prime Minister who had ordered Indian troops to Malta as a threat to Russia, contemplated attacking Russia in Central Asia. *The Pioneer* published the following letter from its Simla Correspondent, dated August 28, 1878 :—

"I believe it is no longer a secret that, had war broken out, we should not have remained on the defensive in India. A force of 30,000 men having purchased its way through Afghanistan, thrown rapidly into Samarkand and Bokhara, would have had little difficulty in beating the scattered Russian troops back to the Caspian, for, coming thus as deliverers, the whole population would have risen in our favor. In the feasibility of such a programme the Russians fully believed."

(To be concluded)

SOME ANTHROPOLOGICAL PROBLEMS IN INDIA*

By B. S. GUHA, Ph. D.
Zoological Survey of India

WRITING in the year 1903 Dr. John Beddoe, one of the most eminent English anthropologists of his generation, spoke of "the enormous and almost incalculable mass of anthropological materials that India offered to the student".† During the decade that has followed Dr. Beddoe's writing a considerable mass of valuable information has been gathered both by Government initiative and private enterprise, but the work done has been chiefly of the 'survey' kind. Such a survey is essential as a preliminary step for furnishing the first general outline of the entire field of operation but its value depends not so much for the picture it offers, which by reason of its covering a large ground is apt to be superficial, but for enabling us to realise the gaps in our knowledge and directing our attention to the spots where deeper and more exact enquiries are likely to be most successful. And no properly planned anthropological research can be said to be complete until this work of reconnaissance is followed up by intensive investigations. The great work of the Sarasin brothers on the Veddas may be cited as an example of what a study of this kind ought to be. In India proper a survey of the physical characters of the population has been undertaken by Risley, Thurston, Waddell; and in a few instances more exact and definite enquiries have also been made, such as those of Ujfalvy, and Stein in North-western, and Lapicque and Schmidt in Southern India. Due, however, to the lack of specially trained men and a want of proper appreciation of the value of such work intensive studies have not yet taken place in India in any systematic manner, with the result that our knowledge of the somatic characters of her people is seriously defective. Fortunately, at present

there are signs of a better understanding of the importance of such studies in this country and a more fully equipped agency for the work is also available. In order, therefore, that investigations conducted in future should bear the utmost results it is first of all necessary to know the main desiderata in the existing data and understand the problems that have been brought to the front for solution. Consequently, it will be my endeavour in the present address to set forth the chief gaps in our knowledge and bring to your notice the points which hold the keys, as it were, to the entire question.

The materials at our disposal regarding the physical characters of the people of India concern almost exclusively the living population. Of the races that lived during the long prehistoric period, revealed by extensive finds of artifacts throughout the country, we know practically nothing. In taking stock of our knowledge it will be necessary at the start to confine ourselves to the former and then determine how far its final solution depends on a proper unfolding of the racial history of the past.

The outstanding problems concerning the former are:

(1) *The correct affiliation of the aboriginal population of India.* There seems to be a general agreement regarding the dominant type among these people, which is characterised by a long head, flat broad nose, short stature, wavy to curly hair and very dark complexion. The eye is open and round and the face orthognathic. The researches of the Sarasin brothers in Ceylon, of Rudolf Martin in Malay Peninsula, and of Dr. Fritz Sarasin in Celebes, have shown that it is racially akin to the Veddas, the Sakais and the Todas of the above-mentioned regions and together with the Australians form a very primitive and extensive racial family which at one time occupied a great part of the Southern World. Judging from its areas of occupation, which are either marginal or inhospitable hills and forests, to which it must have been driven by invading

* Being the Presidential Address of the Anthropology Section of the Fifteenth Annual Meeting of the Indian Science Congress, held in Calcutta in January, 1928.

† Preface to L. K. A. Iyer's *The Cochins and Caste*, Vol. I, page iv. 1909, Madras.

races—there is no doubt that the race is very old in India. We have, however, no positive archaeological evidence of its earliest occupation—the only early site which has definitely disclosed this type does not go beyond the stage of iron in Southern India. The point that has to be considered, is, as to whether these people really form a homogeneous race in spite of linguistic and cultural differences or that there are more than one racial type concealed among them? The presence of a Negrito element in the aboriginal population of India has been suspected for a long time, but no definite evidence of its existence has so far been found. Thus, in the opinion of the Sarasin Brothers, "no one has yet succeeded in finding woolly hair in India," (*Ergebnisse naturwissenschaftlicher Forschungen auf Ceylon* Bd. III p. 335) a view which has also received the supports of Turner (*trans. Roy. Soc. Edin.* Vol. XL, p. 114), Lapicque (*Rev. Scientifique* VI July 1906), Thurston (*Tribes and Castes of S. India*, Vol. I, Introduction) and Risley. To quote the last named author's words, "although the terms 'woolly' and 'frizzly' have been loosely applied to the wavy hair, not uncommon among the Dravidians, no good observer has as yet found among any of the Indian races a head of hair that could be correctly described as woolly".* Our evidence, therefore, as to the character of hair among the aboriginal population of India is by no means positive.

While the general type is certainly wavy or curly, instances of woolly or frizzly hair may actually occur (though not found so far) among some of these people or as is likely their reported presence may really be due to superficial observation and the failure to distinguish between extremely curly and genuine woolly or frizzly hair. The question, however, cannot be decided, until samples of these hairs are collected and submitted to microscopic examination by competent persons. Regarding the presence of a negrito element in the Indian Continent, it has been further argued, and with a certain amount of plausibility, that even if the present inhabitants do not show any such trait, its presence in the Andaman Islands is a strong point in favour of its having been in India at one time. A careful enquiry among the Andamanese tribes, however, does

not show any relic of migration from India. All the evidences strongly point to their movement from Further India where in the Semangs we have still living a kindred tribe. To settle the question beyond doubt a search for communal cemeteries and other possible ancient sites in India is necessary, to find out if there is any skeletal remain which shows definite Negrito characteristics.

Aside from the question of the existence or otherwise of the Negrito element in the aboriginal population of India so far as the two main linguistic divisions of these tribes are concerned, namely, the Austro and the Dravidian, all the evidence available, in my opinion, go to support Risley's contention of their fundamental Somatic unity. There is no important physical character in which the Austro-speaking tribes of this group differ from that of the Dravidian speaking ones. Consequently, it would considerably clear up the issue if the Somatic and Ethnic characters of these people are not mixed up but are treated independently. It will in that case not only narrow down our field of enquiry and effect a speedier solution of the entire problem of their cultural origins but may possibly also supply us with important materials regarding their migrations and contact with other races.

(2) A more intricate problem, however, is the settlement of the so-called Dravidian question. To put it briefly, are there sufficient materials for us to ascribe a definite physical type to the people that may be supposed to have introduced Dravidian languages in this country? At the present time the Dravidian-speaking peoples are concentrated in Southern and Central India, with the exception of the Brahmins, who are physically akin to the other tribes of Baluchistan. Leaving them aside, therefore, the former present at least three distinct racial elements, namely, a dolicho-platyrrhine or Vedda-Australoid type, a dolicho-leptorrhine or Mediterranean type and a brachy-leptorrhine or Alpine type.

The measurements published by Thurston and others comprise 120 Telugu-speaking people from South Canara, 550 Malayalam-speaking people from Malabar, 571 Tamils from Madras and Tinnevelly, two Canarese groups of 410 and 290 individuals from Mysore and the district of Bellary and Karnool respectively, 358 Telugus from the

* *The People of India* by Sir H. Risley

same districts, 147 men from the Nilghiri Hills and 385 people belonging to the various jungle tribes. Analysis of the above data on regional lines shows that the main concentration of brachycephaly is in the North-Western part of the Madras Presidency, between latitudes 16 and 12 North and up to longitude 78 E; south of latitude 12, on the western Coasts, and the Nilghiri Hills the people appear to be predominantly dolichocephalic; on the East from Madras downwards dolichocephaly is dominant again. In other words, the Deccan proper or the Tableland between the two Ghats seems to be characterised by brachycephaly, whereas in the region south of it, including the two coastal strips, dolichocephaly is supreme. In the Northern brachycephalic region, again, there is either a predominance of or a tendency towards leptorhiny. In the dolichocephalic Western region leptorhiny is dominant but in the South-Western part the tendency is towards platyrhiny—a characteristic marked in the lower classes throughout the Presidency and is most strongly emphasised among the jungle tribes. In short, the dominant type in the North-West appears to be brachyleptorhine, in the South-West dolicholeptorhine, whereas in the South-east it tends to be dolicho-platyrhine.

In discussing racial affinities, language is not regarded as a safe guide, but in the present case a consideration of the physical data in the light of linguistic affiliations of the different groups considered, yields certain interesting results, as it shows, that the languages, which indicate the greatest influence of Sanskrit, are spoken by peoples exhibiting marked differences from those whose languages reveal much less evidence of such influence. Thus Tamil, which is certainly least influenced by Sanskrit and is the oldest of the Dravidian tongues, is spoken by the people in the South-eastern part of the Madras Presidency, from Madras to Cape Comorin and extending on the West as far as the Nilghiris, and who are on the whole, among all the groups of whom we possess metric data, the nearest approach to the dolicho-platyrhine type dominant among the jungle folk.

When we come to Telugu, which is the second most important Dravidian language and shows a comparatively larger Sanskrit influence, we find it to be spoken by people between Madras and Ganjam up to latitude 16 North and extending as far as the Bellary

and Anantpur districts or longitude 78 on the West, who are much more brachycephalic and leptorhine. A comparison with the Tamil-speaking people shows that the mean cephalic index of 358 Telugus is 77.9 or 27 units higher than the mean index of 571 Tamils, which is 75.2 only. If, however, a comparison is made with the Canarese, and the Marathi-speaking peoples of the same districts, whose languages show either a marked influence of or is derived from Sanskrit, a striking contrast is at once noticeable. The mean Cephalic Index of 290 Canarese is one unit and that of 90 Marathis 35 units higher than that of the Telugus. On the other hand, the mean Nasal Index of the latter is 8 points and 1.6 units higher than those of the Canarese and the Marathis. Lastly, Malayalam, which shows strong influence of Sanskrit, is spoken by people in the South-western coastal belt of the Peninsula, who are markedly dolicho-leptorhine. Similarly, within each linguistic division, if the Brahmans are compared with other groups, the former are found to be much more leptorhine than others.

Taking the two factors together it shows :

- (1) an increasing association between brachycephaly and leptorhiny accompanied by a falling tendency in the cephalic index with a rising tendency towards platyrhiny and
- (II) a close association of Sanskrit influence with leptorhiny.

We have, unfortunately, no metrical data east of Longit de 78 but a consideration of them shows that the Southernmost extension of the brachy-leptorhine type goes as far as latitude 12 or roughly the point where the Ghats merge into the Nilghiri Hills, forming the Southern boundary of the Deccan proper. Whether the movement of this type reaches as far as the Ghats on this side we are not certain. North of latitude 16, along the Western littoral, we find the extension of this type up to Gujarat. Whether there has been a gradual deterioration of this type (as is probable) in this southward movement, our materials are not enough to come to a definite conclusion, but, there appears to be no doubt that in its movement from the West to the East there has been a gradual falling off of this type. In the light of the deductions mentioned above we may reasonably infer that this falling off in the brachy-leptorhine type has been due to the inter-generation with a dolichoplatyrhine element with which it increasingly came in contact.

We may take it, therefore, that the brachy-leptorhine type is an intrusive racial element from the North-west moving along the margin of the Western Ghats up to latitude 12 and has gradually diminished as it progressed Southwards where the fundamental type presumably has been dolicho.

This would bring the original somatic characters of the Telegu and Tamil people into one group, the former losing its characteristics gradually towards the west as it came into contact with the broad-headed invaders, the latter, except in isolated classes, preserving its almost native purity today. In the course of his investigations Thurston* observed this difference of headform among the inhabitants of Southern India; for writing in 1909 he remarked "whatever may have been the influence which has brought about the existing subbrachycephalic or mesticephalic types in Northern areas, this influence has not extended Southward into the Tamil and Malayalam land, where Dravidian man remains dolicho or sub-dolicho." We have seen the light thrown by language on this question which is supported by our regional analysis of the existing materials, and which, therefore, may be regarded as the probable reason. It cannot, however, be considered as beyond doubt, until the anthropometry of the Telegu country east of longitude 78 as well as the skeletal materials in the numerous prehistoric sites in the Deccan confirm it. It is fortunate that under the leadership of Mr. Ghalam Yazdani, who is energetically excavating the ancient archaeological remains in the Nizam Dominions, we may soon be able to find some human crania which will supply conclusive evidence on the whole problem.

Similarly though the association of Leptorhiny with Sanskrit language is indicated, the presence of the dolicho leptorhine element in Malabar as the result of this influence, cannot be regarded as certain until the excavation of prehistoric sites of this region reveal human crania which support the above hypothesis. The skulls found by Mr. Rea at Adittavallur, in the Tinnevelly district, however, show a distinct tendency towards platyrhiny, as well as a low cranial vault and prominent supra-orbital regions characteristic of the Veddah-Australoid

group. Material help can be furnished here by trained philologists, if they have the hardihood to undertake field investigations of the languages of the aboriginal tribes of Southern India who are reported to speak corrupt forms of Dravidian languages in the same way as has been done in the Red Indian languages of North America. For the researches undertaken by the pupils of Pater Schmidt* in the Australian languages just before the war, indicate the possibility of a relationship between the Dravidian, Papuan and Australian languages, though nothing positive can be said till intensive investigations take place in this country. If such a relationship can be shown to exist by future research, the entire Dravidian problem will be solved, as a definite correlation will then be established between it and the Veddah-Australoid race. The evidence of physical anthropology as indicated above tend on the whole to support this view which was first propounded by Risley and Turner. The Mediterranean affinities of the Dravidian culture, disclosed in recent researches in that case can be regarded as due to culture migrations without connoting anything about the race. Whether such a theory is borne out or not, there is no evidence either somatic or archaeological for the view that has lately become fashionable in India and which seeks to make the Dravidian man responsible for the Indus civilisation as well as that of Sumer, for both of whom are, intimately associated with brachycephalic people as the recently discovered skulls in the Pre-Sargonic sites at Kish† and El-abaid and Mohenjodaro indicate.

(3) The third problem deals with the existence of the 'Arya-Dravidian' race. In describing the population of the United Provinces of Agra and Oudh Risley called them 'Arya-Dravidian', i. e., the result of the admixture of the Aryan and Dravidian-speaking races, on the ground that the data published by him, show the preponderance of a type marked by dolichocephaly and increased Nasal Index. In studying the distribution of racial types in North-western part of India, the available metric data indicate that the dominant element in this

* The Tribes and Castes of Southern India, Vol. I, Introduction.

* Die Gliederung der Australischen Sprachen Anthropos, p. 251, 1912

† Excavations at Kish by S. Langdon, pp. 115-125, Paris, 1924.

region is characterised by dolichocephaly and true leptorhiny, which is present throughout Northern Rajputana, the Panjab and Kashmir, also probably including Afghanistan, and extending in varying proportion as far north as Yarkand. The skulls found at Sialkot, and the recently excavated sites of Nal and Mohenjo-daro reveal the same characteristics. So the present racial element may be said, to be the continuation of the type dominant from the earliest known times. As disclosed in Risley's measurements there is a sharp break in the eastward extension of this type which does not go beyond the boundaries of the Punjab in any appreciable extent. The question, therefore, is whether this represents the real state of things, or, the break is to be regarded as unreal, considering the known facts of history? Now, the anthropometrical measurements published in Risley's name were actually taken by Mr. Chandi Singh, a clerk in the office of Mr. J. C. Nesfield, then Inspector of Schools, who supervised him.* In the year 1896, however, Surgeon Captain Drake-Brockman, F. R. C. S., M. D., took a large series of measurements of the various castes in the United Provinces, under the auspices of the local Government. The detail individual measurements are not available but the averages are published by Sir William Crooke. So far as the stature and cephalic index are concerned, there is not much difference between the two series, but when the nasal index is considered a great difference is at once noticed. The mean nasal index for 420 Rajputs and 455 Brahmins as measured by Dr. Brockman are 63.8 and 99.1 respectively, whereas the average nasal index for 100 Rajputs and 100 Brahmins published by Risley are 77.7 and 74.6 respectively. In attempting to determine the comparative reliability of these conflicting sets of measurements, not only the high medical qualification of Dr. Drake-Brockman and the much larger series examined by him have to be taken into consideration but also the fact that neither Mr. Nesfield nor his assistant Chandi Singh can in any way be regarded as having had any training in anthropometry, and it is well-known that the correct measurement of the nasal length requires considerable anatomical training. On the other hand, it may also be possible that the technique employed by

Dr. Drake-Brockman in his measurements was somewhat different. The only skull of known antiquity found at Bayana near Agra tends to support Dr. Brockman's conclusions rather than those of Risley. It is time, therefore, that the importance of this question is realised and an intensive investigation is undertaken into the racial composition of this region, as Risley's current theory as shown above is open to serious doubt. Besides, as definitely determining the limit of the eastward extension of the racial type dominant in the Punjab, such an enquiry will clear up many obscure points in the racial history of the entire Northern India.

(4) The fourth problem is the distribution of the Brachycephalic Alpine type. A survey of the physical characters of the present population of India shows that along the entire Western littoral from Guzarat down to Coorg we find the concentration of the brachycephalic Alpine type. This element is dominant among the Guzarati, Marathi and the people of Coorg. As we have already seen, in the south it does not extend beyond latitude 12, and beyond longitude 78 E in the Deccan, as far as our present knowledge indicates. In Upper India, however, from Benares eastwards up to Behar we find the gradual increase of a broadheaded element whose maximum intensity is seen in the population of Bengal. In Bengal proper this dominance of brachycephaly is associated with leptorhiny specially among the upper classes where the leptorhine element is greater than in any other part of India outside the Punjab, if the data published by Risley are to be trusted. In accounting for this brachycephalic factor in Bengal, Risley supposed the influence of a Mongolian race seen on its outskirts. An examination of the Mongolian tribes along the boundaries of Bengal shows that they are not homogeneous. The brachyplatyrhine element is predominant in the south-eastern part bordering on Burma, whereas in the Brahmaputra valley it strongly inclines towards the dolichoplatyrhine, the brachyleptorhine type being dominant only along the Sikkim and Nepal borders. In Bengal on the other hand, the main concentration of the brachyleptorhine element is in the southern or deltaic region with gradual decrease towards the North and the East. Besides, the Bengal type is differentiated from the Lepcha and kindred tribes, in whom alone of all
